Many queer contradictions appear in the series of outbursts which made up the bulk of President Truman's Jefferson-Jackson Day speech at Washington. For example, there was his threat to tour the country again and crusade against pressure groups which twist and misrepresent the measures the people voted for.

That sounds promising, until it becomes very evident that the labor lobbies (some of which have gone so far as to propose subsidizing their Congressmen by additional cash payments from labor organization treasuries) were nowhere mentioned as among the pressure groups. Neither were the various agricultural blocs with their farm subsidy programs. Neither were the divers Leftist movements, cults or Fronts.

Quite obviously, in the Truman vocabulary pressure groups means all individuals and associations, in or out of Congress who do not jump to the President's command, or who venture to oppose any fraction of the reversible Truman Program, or who supported some other candidate last year.

And there is that part about the measures the people voted for. The people didn't vote for any measures. They voted for candidates—or against them. More of them voted for Mr. Truman than voted for any other candidate, but more of them voted against him than for him. That is a matter of official record. Most illuminating instance of the fact that those who voted for Truman were not voting for specific measures in the recent declaration from the farm States to the general effect that we did not vote to have the Taft-Hartley Act repealed. We want it kept on the books—and we're the folks who swung the agricultural areas of the Middle West for you.

Again, it is a bit confusing to find Mr. Truman declaring that "your government is pledged to use all its resources to maintain the economic health of the country and prevent depression." As we recall the presidential campaign, Mr. Truman was pledging that his administration would use all its resources to halt or curb or otherwise do something constructive about inflation and the high cost of living. Can he possibly be serious in declaring that the same measures he advocated to keep prices from going higher should now be applied to keep them from going lower? Can he really pour the proper medicine for overeating and malnutrition out of the same bottle?

But strangest of all the contradictions in the President's Jefferson-Jackson Day pronouncement is his continuing misapprehension about the scope of his own job.

"Despite (the obstructionists') efforts to confuse * * * we can and will provide a better life for our people."

Government is properly concerned not with individual lives but with general public welfare and all that pertains to it. At least, in a free democracy that is what government should be. In a fascist, sovietized, or other totalitarian type of state control, individual actions are subject to government supervision, direction, and interference. That is the fundamental difference between such systems and that which this Nation's founding fathers wrote into our Constitution.

A free government can, and should, guarantee to every individual equal opportunity to create for himself, by his own efforts, and without official interference, as rich and full and rewarding a life as it lies within his power to provide. But until and unless ill fortune makes an individual a public charge, or he makes himself a public menace, the government has no more right to regulate his life for what it regards as a better one than it has to make it worse.

Mr. Truman was elected to be Chief Executive—not ruler—of his country. It is his job to carry into execution the popular will. His notion that it is now the people's job, through the people's Congress, to carry out Mr. Truman's will is putting the cart before the horse with a vengeance.

He appears blandly unaware of the fact that the present Congress was elected by the self-same voters who elected the President. That election gave Mr. Truman not one scintilla more in the way of a mandate than it gave the Congressmen. If he and the Congress now differ as to what that mandate was, the issue lies between him and the Members of the Senate and House. It is very definitely not a matter to take to the country in a special train with a look-what-those-bad-boys-on-Capitol-Hill-are - doing-to - me sketch.

Mr. Truman had a right to smite the Eightieth Congress hip and thigh with campaign oratory. He was on logically solid ground when he said "See what comes of having a President who represents one party and a Congress whose majority represents the opposite party. This Eightieth Congress, dominated by Republicans, is the worst in the history of the country. Elect me and a Democratic Congress and we'll show you how to get things done."

But he has no right to complain of this Congress to the people unless he concedes this Congress the same right to complain to the people about him. He and this Congress were elected to work together for the good of the country. If it is his idea that the only way to work together is for the Congress to be obedient to his every command, he stands in need of enlightenment about certain fundamentals of the American system of government.

Hon. William H. Lewis

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a recent article by Mr. Westbrook Pegler, concerning the late Honorable William H. Lewis, of Boston. A friend of mine has asked me to insert this article in the RECORD, and I am very much pleased to comply with his request, because I knew Mr. Lewis for many years and held him in high esteem.

His career was not only distinguished, but it symbolized the opportunity afforded to every young man in this Nation of ours who is possessed of ability, ambition, and determination, regardless of his origin or racial derivation, to rise to high public and professional position.

As the article states, Mr. Lewis was a unique figure. An outstanding athlete in his youth, he steadily advanced in his chosen career in the law until he was recognized as one of the leading lawyers of New England. He was especially well known as a successful trial lawyer and shortly before his death gained a brilliant victory in a difficult and prominent case. If he was ever handicapped in any way by reason of his race, that fact was never acknowledged by him or apparent to his friends and followers, which were legion.

He not only made a great record for himself, rising as he did to high station in his life's work, but he also made a great and lasting record of brilliant achievement for the fine race from which he was sprung. He served the Nation faithfully and well. He adorned his profession. He enjoyed the respect and esteem of all who knew him. The example of his life and accomplishments will serve as a deep and lasting inspiration for his fellow citizens of every race and creed, but particularly for his fellow citizens of the Negro race for whom he furnished such strong, constructive leadership. He was a gentleman through and through; a credit to his profession, his race, and country. I join with his family and friends in mourning his irreparable loss.

FAIR ENOUGH

(By Westbrook Pegler)

William H. Lewis, of Boston, was a Negro son of Virginia slaves who became one of our great citizens by force of character. A good body helped him along, to be sure. A puny young man could not have played football at Amherst and Harvard as he did, being captain for a year at Amherst and for a day at Harvard, in the barbarian era when casualties ran so high that Columbia and other schools took up quoits and beanbag instead.

Mr. Lewis made every inch of the way the hard way and in football it was the harder because he played center at both schools.

Center was then called center rush, for the open game had not been developed and the forward pass was not even a gleam in the eye of Jesse Harper, the coach who unveiled

the Notre Dame passing combination of Rockne and Dorais at West Point in 1913.

Football was a game of strength and courage divided into 30-minute halves, and a coach who took a man out for anything less than a broken leg humiliated him and made an enemy to be met behind the signboard.

The tackles and guards and the center wore wide belts with handles on them which the back grabbed, to be pulled or towed through the mischief, and the newspaper artists depicted these giants with haystack haircuts sprouting through lattice-work head guards.

Harvard, Yale, and Princeton were the big three of American football, and the All-America selections by Walter Camp, which began after Mr. Lewis' playing days were over, were confined to those three until along toward 1910.

Then Camp put Lewis on his theoretical all-time All-America out of respect for his play at Harvard after his Amherst career.

I read occasionally an earnest, pious, often angry little paper now known as the Catholic Inter-Racialist, formerly called the Harlem Friendship House News. It has only recently come forth on newsprint after a clumsy start on mimeograph. It expresses the effort of a group of priests and laymen in Harlem, one of the worst slums in the world, to awaken hope and confidence in the Negroes of this New York ghetto where vice, squalor, discrimination and communism have made terrible progress, and religion often is only a front for some further mockery by the Communists.

Unlike some other appeals to the Negro, this one seems to me not to condone the extravagance in liquor, gambling, and other frivolities which are overlooked or excused as escapes by the sordid professionals of the political field of welfare work.

It appeals to his dignity and faith or a latent instinct for religion and it fights for his right to a decent job according to his ability, neither overrating nor low-rating him because he is a Negro.

Mr. Lewis came up when the Civil War was still a bitter feud and the ashes of Southern ruins were still warm.

There may have been a little more cordial welcome to a homeless Southern Negro boy in New England then than there is today, although things seem to be about even.

To be sure, New England had led the Abolition movement, but New England was full of hypocrisy and the North easily fell into the habits of discrimination.

Mr. Lewis probably had about the same problem that a Negro boy from Berkeley, Va., across the water from Portsmouth, would face today if he landed in town broke to earn his first year's tuition at Amherst, washing dishes in hotels and restaurants.

This young Negro not only made the Amherst varsity, apparently in his freshman year, 1888, and played on through until he went to Harvard in 1892, but won prizes in oratory at Amherst and was football captain and class orator in his senior year.

The records are vague, but he is believed to have been captain of Harvard for one game against either Penn or Penn State.

If so, he was a Negro captain in the Ivy League a half century before Levi Jackson, now captain of Yale.

Lewis was a big man of reddish or copperish tinge, with splayed ears the size of your palm that lay flat against his big head, and he had a pipe-organ voice that could do the business in his practice of criminal law.

And, although, as most lawyers admit, criminal practice tends to lower a man's reputation, Mr. Lewis died exalted in the esteem of most of the Massachusetts bar.

His funeral, from St. Cecilia's Church, in Back Bay, was attended by men whose names are a roster of the leadership of our most cultured community.

It is not disparagement of Joe Louis, Bill Robinson, and a number of other respected Negroes of the present to call attention to the dramatic magnitude of Mr. Lewis' success and his conquest of handicaps, including prejudice.

Fine as they have been, he was greater, and he died comparatively unknown.

If Joe Louis came from a cabin in a cotton field, William H. Lewis came from circumstances much worse. He was born in the worst turmoil of the reconstruction days if not during the war itself.

And if the Negro was a rarity in those days in northern cities, he was also expected to be a buffoon and to keep his place, and the humor of the day ridiculed and classified him.

Mr. Lewis went to the city council of Cambridge in 1899, only 12 years after he landed in Boston, just a boy, busted, a Negro, and still to get his learning.

After 3 years of that he went to the legislature for three terms, starting in 1903.

Theodore Roosevelt made him assistant United States attorney over a hellish row by the opposition, and in 1911 Taft made him Assistant Attorney General.

Mrs. Lewis, a Wellesley graduate, whom he married in 1893, died of cancer in 1943 and in her last days called to her side a nun who had shown her great devotion.

She embraced the Catholic religion on her deathbed and Mr. Lewis became a convert in 1944. His father had been a Baptist minister.

I write of Mr. Lewis not from the clips from the morgue, but as one who had known and silently admired him since a first meeting in 1915.

I have met many of the great men of my age and he was really one of them.

Ruhr Trustees

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Washington Post:

RUHR TRUSTEES

General Clay would be perpetrating a fraud if he approved the list of 12 Germans just nominated to form the new Steel Trustee Association in the Ruhr. A trustee, as defined by Webster, is one entrusted with property for another. At least half the names submitted to the American and British military governors by Dr. Hermann Puender, chief executive of the bizonal economic administration, are those of men representing the old Nazi ownership of Ruhr industries. By approving them as trustees, General Clay would be entrusting the property of the old owners back to themselves. We cannot believe that the general would deliver such an affront to the allied peoples who suffered twice in a generation from the warmaking power of Ruhr industries.

The trusteeship plan was outlined in the military government decree of November 10, designed to put the coal, iron, and steel industries back under German management. The former Nazi assets, held by the occupying authorities since the surrender, were to be turned over to a Steel Trustee Association of 12 Germans named by the military governors. This group was to draw up plans for dividing the steel industry into smaller units than those of prewar days. Ultimately each of the new companies would get its share of the old assets under its own trustees, and the 12-man group would become a trade association.

The procedure makes sense; it is like that of a bankruptcy proceeding here. But a bankruptcy court in its right mind does not usually appoint as trustees the very men who brought the enterprise in question to ruin. One of the 12 proposed Ruhr trustees, Guenther Sohl, was a director of Krupp's, and was active in managing much of the wartime steel industry of Hitler's Reich. Another, Henrich Dinkelbach, was one of Hitler's chief advisers on tank production before and during the war and is on the books of the occupation authorities as a former member of the Nazi Party.

Clearly the job of reorganizing the vast and complex German steel industry will require experts, but expertness is not enough to fit a German for power. In the six-nation London agreement of December 28, the Western Allies promised to prevent persons who furthered the aggressive designs of the Nazis from acquiring ownership interests or positions of direction and management in those industries. General Clay cannot approve the 12 names submitted to him without defying and flouting this solemn commitment. It would be a godsend to Communist propaganda all over Europe if we gave power back to those who misused it more than once and who will misuse it again if we give them half a chance.

The Drive for Pensions

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Chicago Sun-Times for February 21, 1949, entitled "The Drive for Pensions," and an article by Frank Smith which appeared in the Sun-Times for February 20, 1949, entitled "Only AVC Against Vet Pension Plan":

[From the Chicago Sun-Times of February 21, 1949]

THE DRIVE FOR PENSIONS

From its beginning the American Veterans Committee has sought to represent veterans as citizens rather than as members of a special class. You have to hand it to AVC for following that line through the most difficult trials. AVC is the only major veterans' organization which is opposing the principle of general veterans' pensions.

A bill to pay $90 a month from age 65 to all veterans of World Wars I and II has been reported favorably by the House Veterans' Affairs Committee. Passage at this session is unlikely, but it's going to be a live issue for some time to come. The AVC position is worth attention.

AVC opposes the bill, not because it opposes public responsibility for old-age security but because it considers this to be broader than a veterans' problem. Men who have been disabled by war service, and widows and orphans of servicemen, deserve aid, it holds, since war has deprived them of the full means of support.

But general pension legislation, says AVC, amounts to a demand for social security for a special group, singled out not on the basis

of special need but because it is composed of men and women who, being of a certain age at certain times in their country's history, were able to fulfill the duty of every citizen to defend his Nation.

An expanded social-security program is urged by AVC to provide adequate support for the aged. But it should apply to all who need help, and not only to veterans.

Veterans' pensions would cost between two and three billion dollars a year for the next 70 years. That annual outlay is far more than the entire Federal expenditure last year for social welfare, health, and security.

The Government already is spending more than $5,000,000,000 a year on veterans' benefits. That's a lot of money. Any substantial additions to it must be judged by what is wise national policy for all the people.

[From the Chicago Sun-Times of February 20, 1949]

VETERANS' NEWS—ONLY AVC AGAINST VET PENSION PLAN

(By Frank Smith)

The proposed general pension bill for veterans, which was reported out by the House Veterans' Affairs Committee during the week, has met open opposition from only one ex-servicemen's group, the American Veterans Committee.

Testifying before the committee, Joseph A. Clorety, Jr., AVC national vice chairman, said that members of his organization strongly favor a broadened social-security program for all citizens approaching the end of their lives, and declared security for such was a public responsibility.

"The proposed pension bill," he added, "is in fact a partial program of social security, with the distinction that it asks for social security for a special group, singled out not on the basis of special need, but because it is composed of men and women who, being of a certain age at certain times in their country's history, were able to fulfill the duty of every citizen to defend the Nation."

Clorety quoted figures of Veterans' Administrator Carl R. Gray, based on the original Rankin-American Legion $60-at-age-60 bill, which subsequently was amended to provide $90 a month to all veterans of the two World Wars when they reach 65. He pointed out that the then contemplated first year's cost of $1,839,000,000, would be considerably more than the 1948 cost for old-age assistance to 2,498,259 recipients.

Under the compromise bill, the initial yearly cost would be approximately $129,000,000, but would rise eventually to an estimated $6,000,000,000 at its peak.

Clorety ended his testimony by declaring the country owes veterans a right to readjustment, adequate care for the disabled and liberal support for widows and orphans of veterans, but not a hand-out which has the effect of a boomerang endangering the stability of our economy as a whole.

The average ex-serviceman, he said, is a citizen, interested in the problems of all citizens who need protection of Government in illness, old age, and in the absence of employment. In other words, he said, the veteran's interests are identical with those of the country.

News of the proposed pension got a different reaction from a Chicagoan who served in the Philippine Insurrection. Abraham H. Merar, 1263 Pratt Boulevard, auto accessories manufacturer, who served with the old Eighth Cavalry in the islands during 1905–07, has written his Congressman and Veterans Administrator Gray asking why the pension bill isn't written to include overseas veterans of all wars and campaigns. Merar, who is only 62, says he is not interested in payment for himself, but claims there are many needy vets from combat days in the Philippines who are shut out from such benefits.

Pension Politics

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under permission to extend my remarks, I wish to include the following editorial from Sunday's edition of the Wisconsin State Journal, published at Madison, and which is one of Wisconsin's best-known and most widely read newspapers:

JOHN RANKIN, the Democratic Congressman from Mississippi, has placed the entire National Congress on the spot. He has introduced a bill—and jammed it through his own committee—calling for a $90-a-month pensions at age 65 for the 18,000,000 American veterans of both World Wars.

President Truman has let it be known there is no place in the administration budget for veteran pensions.

Most economy-minded Members of Congress are against it.

But most observers believe the bill will pass the House of Representatives, whose Members are up for election every 2 years. The measure may have a rougher time in the United States Senate, where only one-third of the membership must try for reelection in 1950.

It is a tragic reality that Congress will not consider the veterans' pension question on its merits. Most of the men who are elected to the jobs in Washington will look at this from the point of view of men who want to be reelected. It is unfortunate, but under our system things work out that way. Few men ever have won elections by shocking and irritating voters with repulsive reality.

This newspaper has spoken out before against a veterans' bonus, and this pension-for-all-veterans proposal is much the same as a bonus. It still is our view that a blanket proposal like this is a bad thing for the Nation as a whole, and is a particularly poor deal for the veterans of World War II.

The worst part of Mr. RANKIN'S bill is that to collect at age 65, an American merely must have served at least 90 days in the armed forces. There is no other criterion, or standard of eligibility. A millionaire would get his $90 every month, just the same as the veteran who is penniless. President Truman would collect for his service in World War I. So would Congressman RANKIN. The bill does not specify that the veteran must be suffering economic hardship before he can collect. The $20,000-a-year man and the $2,500-a-year veteran would get the same amount.

Because of this, the Government of necessity would have to scrimp, and cut down on aid to veterans who really need and deserve Government help regardless of their age. We believe that to be wrong.

A basic flaw of the Rankin pension plan is that it puts a certain group of Americans into a separate class. It excludes from that favored group the man who might have had infantile paralysis as a boy. It excludes others because they had a heart murmur, or poor vision, or the kind of mind that put them in an atom laboratory rather than a uniform. It sets apart—for a special reward—those who for the most part had nothing to say about going to war.

These remarks in no way indicate a lack of appreciation for the hardships and service given by the young Americans who were in the armed forces. This newspaper has fought and will continue to fight for adequate educational aids, vocational training, and loans for housing for veterans of World War II. We believe that veterans who suffered physical disabilities are entitled not only to the very best hospitalization, but also substantial financial remuneration. We believe widows and orphans of veterans should be granted the financial protection they would have had if their breadwinner had not been taken from them. We believe that no worthy veteran ever should be allowed to be in want or distress.

But a cash hand-out to all veterans of all wars is an economic and political mistake.

One important thing to remember about the Rankin bill is that the biggest beneficiaries would be the veterans of World War I. They are the ones who now are passing the 65-year mark. The money for those pensions would have to be provided by taxes upon all of us—including World War II veterans, who won't be eligible for benefits for some 40 years.

The cost of this program is staggering, and estimates of the eventual total cost are astronomical. Another war, with more names added—indiscriminately—to the pension lists would be a body blow to our economy, and to our very form of government.

In the event of another war, incidentally, America could expect to have thousands upon thousands of civilian casualties, from bomber raids and guided missiles. Should these war victims, too, be added to the pension lists?

It is our view that worthy veterans of all wars who need Government help should get it, regardless of cost.

But we are opposed to a political hand-out, forced by a high-pressure campaign. Passage of the Rankin pension bill in its present form would be bad news for America.

Chinese Art Objects Belong in the Peiping Palace Museum

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. SADOWSKI. Mr. Speaker, this morning I received a letter signed by various Chinese students and alumni associations protesting against the proposed shipping of priceless Chinese art objects to this country. I saw the United Press dispatch several days ago stating that the Nationalist Government proposed to send this priceless collection to the United States.

I do not think that we should become a party to this deal. This art collection represents Chinese culture over the centuries and belongs to the Chinese people and not to any group of Chinese politicians.

At this point I wish to include the letter which I received:

FEBRUARY 27, 1949.

The Honorable GEORGE SADOWSKI,
House Office Building,
Washington, D. C.

DEAR SIR: A United Press dispatch from Shanghai on January 28, 1949, reported that a collection of 8,600 priceless Chinese art objects from the Peiping Palace Museum are being shipped to this country and are to be housed at the Library of Congress. Shocked by this news, we hasten to point out the consequences which this shipment will engender.

The national art treasures of China have been pilfered many times. The warlords used to trade them for material support from foreign powers. When Japan invaded China, many of these treasures were taken as war booty and shipped to Japan. Each time, such pillage has caused deep resentment in the Chinese people.

We do not know whether the United States has sponsored the present shipment. We loathe to think so. But in any case, it will be resented by the Chinese people just the same. For the sake of the traditional friendship between China and the United States, we sincerely hope that you will see to it that these art treasures of China are not shipped to this country.

We are aware of the vigilance with which you safeguard your national treasures. We think that it is within reason for us to ask you to respect the vigilance with which we safeguard our national treasures.

Respectfully yours,

Chinese Learned Society; Chinese Students Christian Association in North America, New York Chapter; Association of Chinese Scientific Workers in America, Chicago and New York Chapters; Tsinghwa University Alumni Association in U. S. A.; Nankai University Alumni Association in U. S. A.; Yenching University Alumni Association in U. S. A.; National Peking University Alumni Association in U. S. A.; National Peking Normal University Alumni Association in U. S. A.; University of Shanghai Alumni Association in U. S. A.

What Makes a Good Politician

EXTENSION OF REMARKS

OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. MURRAY of Tennessee. Mr. Speaker, I wish every Member of Congress would take the time to read the article on the subject What Makes a Good Politician, which appeared in the Civil Service Leader on February 22, 1949, by the former chairman of the Democratic National Committee and former Postmaster General, James A. Farley, who is a great American. The article is timely and is full of sound advice to anyone in political life. I had the pleasure of being associated in the Post Office Department with Mr. Farley while he was Postmaster General and I admire his wonderful traits and qualities. He is a true patriot, an outstanding citizen, and an able, conscientious, truthful, successful politician.

The article follows:

DON'T REPEAT THIS—FARLEY TELLS WHAT MAKES A GOOD POLITICIAN

What makes the good politician?

Is there any grouping of personal qualities and set of rules which characterize the good politician?

What is it that men like Roosevelt, Al Smith, LaGuardia, Tom Dewey have which captures the imagination and support of people?

To get an answer to this query "Don't Repeat This" went to the old master himself—former Postmaster General James A. Farley, now head of the Coca-Cola Export Corp.

WHAT IS POLITICS?

Big Jim sat back, feet on his desk. He thought carefully. Then he said, "Let me first give you a definition of politics which I have carried with me for a quarter century. It was written by Andrew Oliver in Boston more than 150 years ago." It goes like this:

"Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures—neither is there any in which by a mere loss of nerve he may do widespread harm—nor is there another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all the temptations and degradations that beset it, politics is still the noblest career any man can choose."

THE 10 RULES

The astute Farley then gave his own rules—10 of them—for the making of a successful politician.

1. He must have a good personality.

A primary requisite of the politician is that he must attract people. The wishy-washy, the forbidding, the unsparkling character cannot get far in politics. Al Smith's smile captivated people, and they loved him. Franklin D. Roosevelt's charm was legendary, and he had the ability to disarm almost anyone with his smoothness. Even Fiorello LaGuardia, in a different way, had a vibrance that got under the skin of people and made them admire and like him.

2. He must have what we call character—that is, he must be a substantial human being.

Only a man who can impress his constituents with his character can continue to build up confidence. And he can sometimes do this even when certain other qualities are lacking. Senator Robert A. Taft is an example.

3. He must work hard.

Things don't just happen. The successful politician works hard at his tasks, makes sure that he has left no job undone. Sometimes the job is understanding and fighting for a tough piece of legislation; other times it is doing small favors for little people. Politics is a field in which idlers cannot last long.

4. He must be able to get other people to work for him and with him.

The best politicians build up corps of aides who will go through hell for them. Governor Dewey's team has stuck with him since he first entered government, and so strong is its loyalty that not even successive defeats have alienated its members from him. Politicians who haven't this particular quality may go a certain distance, but rarely very far.

5. He must be truthful.

Jim Farley places this characteristic high among the qualities needed by a successful politician. The politician who says one thing to one man, and an opposite thing to another, the officeholder whose word cannot be relied on, the political leader who tries to gain his ends by other than honest means—these types create resentments which fester long and rarely heal. Big Jim admits that some untruthful men have gone far in politics, but they are the exceptional personalities whose other characteristics are so outstanding as to overcome completely this defect.

6. He must have native ability, and he must be able to see and use ability in others.

Hacks and even nincompoops are common in politics. They get there because they have done the party chores or know how to take orders from their stronger sponsors. But such men cannot be classified as successful politicians. The successful practitioner must be a man of ideas, must have the intelligence to meet new and unique situations, must be able to direct his subordinates so as to get the best out of them.

7. He must be aggressive—but not to the point of being offensive.

This requires intuition. The good politician will know just how far he can go in attack before it boomerangs. Like the salesman, he knows intuitively if his story is getting across. Shyness is death to a politician.

8. He must have a feeling for what people want.

The politician must be able to sense a situation, like a doctor administering to a patient or a reporter sniffing after a news story. LaGuardia was an example of this quality. He know how to capitalize on the housewife's needs, how to scream at corruption effectively. F. D. R. had it, too, in great measure.

9. He must be able to make decisions.

Truman turned things his way at the Democratic Presidential convention when he took the floor late at night after his nomination, when the party seemed at low ebb, and made a fighting speech which set his course. From then on, with solid resolve, he was able to speak clearly and decisively. The ability to make decisions is one of the most important in politics, because events won't wait for him who can't make up his mind.

10. He must understand the meaning of the word "compromise."

Never compromise a principle, says Big Jim, but in politics one advances one's principles often by accepting less than one had tried to get, and then moving forward from there. But compromise is a delicate thing—"an individual has to live with himself," says Big Jim. And if the compromise means one isn't going to be able to sleep nights as a result—then don't do it, he advises.

GENERAL PRINCIPLES

The man who steered F. D. R.'s political course through two Presidential elections talked about some of the general principles he had learned during his long career in politics.

"People go into politics for lots of reasons," he ruminated. "Some of the best do it not for business or for personal advancement, but because they like it. Some like baseball, some like cocktail parties, some like politics—call it a hobby. * * *

"One of the great attributes of politics is showmanship. The politician who has showmanship can get away with a lack of many other qualities. * * *

"Examples of successful politicians are Al Smith, Jimmy Walker, Franklin D. Roosevelt. All of them were sympathetic to the underdog, all of them had personal charm.

"Smith was a great story-teller, extremely approachable, gave people a feeling of confidence, created the impression he was their friend.

"Jimmy Walker, too, was a great story-teller. Moreover, he had what few people realize he had—a great mind. He could hear a case, grasp the core of it, and then present the points better than the man who was expounding it. Jimmy's weaknesses were in other directions."

And Don't Repeat This adds that Jim Farley himself is an example of the good politician. Here are some of his secrets: He keeps everything completely organized, so that he is able to make the most effective use of his time; he answers every letter; never neglects an appointment—and always keeps it on time; remains available to as many people as he can; never acts "uppity"; always tells the truth, and tells it straight—this is an important principle with him.

TRUTH IN POLITICS

Jim Farley's ideas on the importance of truth in politics:

"The man who does not tell the truth is distrusted and shunned, and rightfully so. There are those whose first instinct is not to tell the truth even when it best serves their own purposes, just as there are those in whom the dog of ambition is pursued by a rabbit of conscience. Truth is by far the easier as well as the more respected course.

"I had an early lesson in this from Charles F. Murphy, leader of Tammany Hall, whom many might regard as a strange preceptor. I approached him after Smith was first elected Governor of New York, after a campaign in which I played a small part. I felt entitled to the post of secretary of the State Industrial Commission. My sights were not, I modestly felt, fixed too high. Mr. Murphy told me that while he was impressed by my earnestness and ability, he felt I lacked experience for the place, and that it should go to someone else. I was a bit bitter for a time, but as disappointment died, the more reasonable Mr. Murphy's attitude seemed to me. As a result I have never concealed the truth from an applicant for a position. In the end I always found him as grateful as I was.

DON'T GET INVOLVED

"In rare instances where one cannot tell the truth, because he is bound by his word not to reveal confidences or advance information, it is not necessary to become involved in complicated evasions or falsehoods. Again the easier method is to acknowledge that you are sorry but just can't answer the question. The passing of one's word is the execution of a sacred bond. It is so with most men in political life as it is with the great majority of men everywhere."

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF

HON. ABRAHAM RIBICOFF

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend my remarks, I include therein a resolution accepted and adopted by the Common Council of New Britain, Conn. This resolution memorializes the Congress of the United States to pass the General Pulaski Memorial Day resolution now pending before us. Since Friday, March 4, 1949, marks the two hundred and first anniversary of the birth of the renowned Polish-American hero, Gen. Casimir Pulaski, this resolution is a most timely one and the Common Council of New Britain, Conn., should be commended for its awareness and interest in the service this great man rendered our Nation.

After all, this hero who died on October 11, 1779, from wounds received in fighting for American freedom should be especially remembered. It was not his fight. He was not an American. Yet, there coursed through his blood a love of liberty and freedom that brought him to the side of our great patriots in their struggle to establish this great Nation.

The memory of this great Polish hero who made the supreme sacrifice for American freedom and liberty will ever be revered by the people of America.

It is only proper that Congress recognize his sacrifice and pass the resolution when it comes before us.

The resolution by the Common Council of New Britain is as follows:

FEBRUARY 25, 1949.

Mr. ABRAHAM A. RIBICOFF,
United States Representative,
Washington, D. C.

DEAR SIR: Your attention is called to the following resolution, accepted and adopted by the common council at its meeting held Wednesday evening, February 16, 1949, on motion of Alderman Kotowski. Motion seconded by Alderman Zapatka. Returned to the city clerk, February 24, 1949, without the approval or disapproval of the mayor.

"Resolution 95

"Resolution memorializing the Congress of the United States to pass and the President of the United States to approve, if passed, the General Pulaski's memorial day resolution now pending in Congress

"Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

"Whereas the 11th day of October, 1779 is the date in American history of the heroic death of Brigadier General Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

"Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11th of each year as General Pulaski's Memorial Day; and

"Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

"Whereas the Congress of the United States of America has by legislature enactment designated from October 11, 1929; to October 11, 1946; to be General Pulaski's Memorial Day in United States of America: Now, therefore, be it

"Resolved by the Common Council of the City of New Britain, and State of Connecticut:

"SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

"SEC. 2. That certified copies of this resolution, properly authenticated be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from Connecticut."

I. K. WERWINSKI,
South Bend, Ind.

Attest:

H. E. SCHIEF,
City Clerk.

Celler Bill, H. R. 1344, Displaced Persons

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Immigration Subcommittee of the House Judiciary Committee on March 2, 1949:

I offer my bill as one who has lived with the DP problem since its inception, who served through many months of wearisome hearings on DP bills, and who struggled through many sessions of the Immigration Subcommittee during the Eightieth Congress, as one who helped pilot the Fellows bill past many shoals and through the House, and as a member of the committee of conference of both Houses on the Fellows and Revercomb bills.

The question before us no longer is whether we are to have legislation to meet the displaced-persons problem. That question was answered first by the Eightieth Congress with the enactment of the Displaced Persons Act of 1948; secondly, by the displaced-persons plank in the Democratic platform of 1948; and, thirdly, by the President's statement in his state of the Union message, wherein he stated, "We should also open our doors to displaced persons without unfair discrimination."

What confronts us now is the necessity to enact DP legislation that will be adequate, fair-minded, nondiscriminatory, and workable, none of which requirements is met by the existing law.

When on June 25, 1948, the President signed the Displaced Persons Act of 1948, he stated that he did so "with great reluctance." He stated that the bad points of Senate bill 2242 (Revercomb-Wiley bill) "form a pattern of discrimination and intolerance wholly inconsistent with the American sense of justice," and concluded with the sentence: "I have signed this bill, in spite of its many defects, in order not to delay further the beginning of a resettlement program and in expectation that the necessary remedial action will follow when the Congress reconvenes." With good reason, the President singled out such defects as the dateline of December 22, 1945, the provision for the mortgaging of future quotas, the 40-percent preference to displaced persons from "de facto annexed areas," the requirements of assurances of employment and housing.

The defects of the bill worked out in conference between the House and the Senate were patent from the outset. It was obviously unworkable and unashamedly discriminatory and I did not hesitate to say so when the conference report came to the floor of the House though I was one of the conferees. All these misgivings have been amply borne out by the experiences of the Displaced Persons Commission, charged with the responsibility of administering the act. More displaced persons could and did enter the United States under the President's directive of December 22, 1945, than under the so-called Revercomb bill. Under the President's directive of December 22, 1945, approximately 42,000 displaced persons were admitted to this country. (That directive was terminated by the Revercomb bill as of June 30, 1948. Although assurances were validative for 27,667 families (55,000 to 60,000 persons)). Under the present act as of December 31, 1948, there had been admitted into this country 2,499 displaced persons, after one-fourth of the life of the act had already expired. I would hardly call this "a fair share" when England for one example has taken 100,000 and Canada for another 43,000. It is estimated that a total of 400,000 were resettled up to January 1, 1949. Also it is estimated by the State Department that as of January 1, 1949, there were 770,000 displaced persons in Italy, Austria, and Germany; 502,000 of these displaced persons were in camps and assembly centers.

Briefly, the administration bill which I introduced calls for:

1. An increase in the number of eligible displaced persons from 200,000 to 400,000, over a 4-year period.

2. The moving forward of the cut-off date from December 22, 1945 to April 21, 1947.

3. The 40-percent limitation for de facto annexed areas be eliminated, and in lieu thereof there be a provision to assure the

selection of displaced persons without discrimination as to race, religious, or national origin.

4. The elimination of the 30-percent preference for agricultural pursuits with agricultural pursuits remaining within the occupational preferences.

5. The deletion of the assurances for employment and housing, using the sufficiency of assurance against becoming a public charge.

6. The discontinuance of charging visas to future quotas.

7. The removal of in-camp priority.

8. The amendment of the provision relating to adjustment of the status of displaced persons already in the United States to cover those arriving by January 1, 1949, and to make final the Attorney General's action in such cases.

9. A revolving fund to be established for loans to recognized voluntary agencies to meet the expenses of reception and transportation of immigrants from ports of entry.

10. Provision to be made for recent political refugees, 15,000, within the cover of the 400,000, whose admission into the United States is in the national interest.

11. No issuance of visa to anyone who advocated or assisted in persecutions of others for race, religion, or national origin.

I would like to discuss these points briefly.

1. Increase of number: Four hundred thousand has been the estimated fair share of the United States. If we are to attack the whole problem, not piecemeal, if we are to encourage other less fortunate nations to aid in the dissipation of this problem and if we are to eliminate a burden now resting heavily on our occupation forces, and, at the same time, while acting in true humanitarian fashion, eliminate the cost of maintaining these camps carried by the American taxpayer, then it is essential that we extend the life of the act to cover a 4-year period and increase the number to 400,000. If we don't, we will find it necessary to act again and again. If we retain the 200,000 figure, we have merely narrowed the problem; we have not dissipated it. Remember 770,000 still remain displaced in Italy and the western areas of Germany and Austria.

2. The cut-off date: If the date were advanced, at the very least, to April 21, 1947, it has been estimated that 95,000 more displaced persons would become eligible. It penalizes certain religious and national groups, particularly those of the Jewish faith who fled from the eastern European countries, primarily Poland, into Germany and Austria in 1946 and 1947, and those of the Catholic faith who fled Communist-dominated countries. The International Refugee Organization, as well as the Army authorities, accepted these people as refugees and gave them in-camp care and maintenance. To withhold eligibility from these groups is not only unfair, but hinders the work in clearing out these camps. It must be remembered that only the most desultory records were kept prior to April 1947 and it has been a most difficult administrative tangle for the Displaced Persons Commission to unravel to determine time of entry. The result has been greatly unjust. I would not be adverse to advancing the date to January 1, 1949.

3. The 40-percent limitation for de facto annexed areas: Nobody has been able to determine precisely what the language of the act means when it states that not less than 40 percent of the visas issued must "be available exclusively to * * * persons whose place of origin or country of nationality has been de facto annexed by a foreign power." It can be interpreted to cover more than the Baltic countries and Poland, east of the Curzon line. Again, does "place of origin or country of nationality" refer to "national origin," as used in our immigration law, or does it mean place of residence at the time of first becoming displaced, or the country of present nationality? None of this is clear. But, more than that, it has placed the whole program out of joint. Forty percent of the visas must be withheld from all other groups, no matter how many there are otherwise eligible. There have been nowhere near 40 percent applying from these areas for these exclusive visas. That means that a certain percentage of visas are going to waste and the whole program retarded while a search is made to put this exclusiveness to the use called for by the act. Again, here is a discriminatory advantage being given to certain national groups to the detriment of other groups equally deserving.

4. The 30-percent preference for those engaged in agricultural pursuits: Like the limitation just mentioned, this preference retards the issuance of visas on the whole. It means again a search for persons qualified under this preference. Actually, during October and November of 1948 only 11 percent of all visas issued went to agriculturists. Thus, we have a preference all out of proportion to either the need or demand. We take these two preferences, 40 percent to those of the annexed areas and 30 percent to the agriculturists, and it is not difficult to see how unbalanced the proportions are to the detriment of otherwise eligible displaced persons. While not denying the value of agriculturists to our Nation, there are other occupational pursuits that have contributed richly to our development.

5. Employment and housing assurances: Job and housing restrictions have never before been placed on those seeking entry into the United States. The assurance that they will not become public charges has been heretofore deemed sufficient. Yet, it has been seen fit to impose these conditions on the most hapless group of people contemporary history has seen—people who have been buffeted about by the currents of malicious and inhuman political creeds. The job assurances because of general applicability affect most seriously housewives, elderly people, and school-age children over 16. The existing law does not call for job assurance for only the head of the family but for each applicant individually. It is necessary, therefore, even for a grandmother of 75 to have a job assurance. This carries the job assurance to the point of absurdity. It has resulted in splitting families, which is certainly contrary to the general immigration policy of the United States. It has, again, retarded the program, since many have refused to accept visas if threatened with separation from the family—a refusal most human and understandable. Moreover, it has been found that many employers, though anxious to fill labor shortages with displaced persons, hesitate to make such sponsorship for people unknown or unseen. Moreover, the assurance of transportation from port of entry to the point of resettlement has likewise made small-business men and farmers reluctant to undertake sponsorship. We know that the job-assurance provision was dictated by fear—fear that our expanding economy could not absorb additional workers—a fear entirely unwarranted. Every worker, be he native or immigrant, is a consumer as well, and, in that sense, a creator of more jobs. He takes a job in one specific field, but his earnings inure to the benefit of numerous industries. Mr. William Green, president of the American Federation of Labor, stated in his testimony before the Immigration Subcommittee on H. R. 2910 (Stratton bill): "We do not believe that the admission of as small a number as 400,000 over a period of 4 years will seriously affect our employment or unemployment problem."

Mr. Philip Murray, president of the Congress of Industrial Organizations, presented his viewpoint on the same bill, stating: "Let me say for the record that we in the CIO can find absolutely no basis in fact or reason for the fear that admitting 100,000 immigrants a year for 4 years would jeopardize the jobs of American citizens. * * * I do not think it is the true friends of labor who will argue that our economy cannot stand the addition of less than one-tenth of 1 percent of the number of our population annually for 4 years without creating unemployment."

Let me say here and now it is a poor advertisement of the United States we broadcast to the world if we so belittle our strength, our vitality, and our resources. I wish to point out as well that we have more to fear from short labor supply of bricklayers, plumbers, pipefitters, and electricians, all of which categories can be supplied by displaced persons, in meeting the critical housing situation than from the occupancy by displaced persons in existing housing. Most displaced persons find living space with relatives, others on farms where they room and work, others in rooming houses, the availability of which testify to no displacement of our citizens. The wide distribution of displaced persons over the whole of the country, a fact I shall come to in a little while, places no strain on available housing. I say it is unfair to place these restrictions on one group of immigrants when no other immigrant is required to meet these conditions.

6. Charging visas to future quotas: I object to the mortgaging of future quotas. There are many refugees outside of the DP centers in many parts of the world—in Lisbon, in Habana, in London—who have waited many years for quota numbers. Why these should be penalized while waiting in line, while we treat with an emergency situation, is more than I can understand. The specific DP problem with which we are concerned has no relevance to the annual quota system and should not be tied together. This is a special problem and should not be solved at the expense of other people. Under this provision, the small-quota countries find their pitiful allotments further reduced to the extent of 50 percent for as much as a hundred years, and in some instances, more than that.

7. In-camp priority: Under the present act, those who were located in a displaced-persons camp or center on January 1, 1948, are entitled to a second priority within the preferences. This discriminates against those who sought to support themselves in the local economy rather than depend upon the United States and the International Refugee Organization. The removal of this priority would be an act of justice to those who left the camps in reliance upon the assurances of responsible United States military authorities that they would not be penalized in resettlement opportunities. It must be remembered that many left to search for lost relatives, children, and spouses.

8. The status of displaced persons already in the United States. Under existing law an alien who entered the United States prior to April 1, 1948, can apply to the Attorney General for an adjustment of his immigration status, if otherwise admissible and is deemed a displaced person. The number has been fixed as 15,000. To date, the number of applicants for adjustment of status has fallen far below that of 15,000. It is, therefore, proposed that the eligibility date in that regard be moved forward to January 1, 1949, making a far greater number eligible, yet keeping the over-all figure of 15,000 intact. My bill further proposes that the Attorney General's action be final in such cases, thereby eliminating congressional action on each case. For this committee to process thousands of individual cases and then present them to the floor for consideration with a report on each one would not only entail the hiring of additional skilled help, but might very well hamper seriously the consideration of general legislation on the floor. This provision is a curious mixture for Congress to swallow. It can hardly be called a legislative function or the most efficient manner of approach.

9. A revolving fund of $5,000,000 to be established for loans to voluntary agencies for resettlement purposes: This is intended to aid those voluntary agencies which have not highly organized backing and which have recently entered the field of aiding the resettlement of displaced persons admitted to the United States. Many of these agencies have been handicapped in taking their sponsored groups from point of entry to the point of resettlement in and out of continental United States. This will aid in the wider distribution of DP's throughout the country. Such loans, you will note, are not to mature later than June 30, 1953. The $5,000,000 is to be advanced temporarily by the RFC pending suitable appropriations by Congress.

10. Eligibility of political refugees to enter the United States in the national interest: This section (f) is an addition of 15,000 within the 400,000 ceiling. This provision has been included upon the recommendation of the Department of State so as to enable the Department to avail itself of the special skills and intelligence of persons who fled from Communist-dominated countries since April 21, 1947.

11. The provision which permits no issuance of visa to anyone who advocated or assisted in persecutions of others for race, religion, or national origin is self-explanatory.

One further change has been made. That provision of the present act making 50 percent of the German and Austrian quotas available exclusively to persons of German ethnic origin is transferred to the regular immigration laws on recommendation of the Displaced Persons Commission. The present act calls for the use of the German and Austrian quota for such purpose for the period of June 30, 1948, to July 1, 1950. Efforts will be made, I understand, by those favoring the provision to extend the time to July 1952. As I have indicated before, on the floor of the House, I firmly oppose this provision in its entirety. I would like to quote the opinion of the Department of State on this provision:

"Officers of the Visa Division of this Department had conducted considerable research in an effort to ascertain whether the term 'German ethnic origin' could be construed or defined in an administratively feasible and workable definition of practicable use in issuing or refusing visas. The results of that research indicated that any definition based exclusively on a common understanding of the word 'ethnic' would be neither administratively nor politically feasible."

I believe I have covered all the changes called for in my bill, H. R. 1344. At this point I want to stress the tremendous interest existing all over the country in this legislation. If the impression has been spread that the displaced persons are unwelcome and unwanted by the American people, that impression has no basis in fact. Assurances from State and voluntary agencies for named displaced persons at the rate of approximately 3,400 families per week. So widespread is the interest and the demand for the displaced persons that governors of the following 18 States have established commissions or committees for the resettlement of displaced persons: California, Connecticut, Colorado, Illinois, Kansas, Kentucky, Maine, Massachusetts, Maryland, Minnesota, Nebraska, New York, Oregon, Pennsylvania, South Dakota, Vermont, Wisconsin, and Wyoming. Moreover, displaced persons have gone to and settled in 34 States, the District of Columbia, and Alaska. In many cases immigrants listed New York and other eastern cities, which were merely forwarding points to their ultimate destination.

I have no wish to make an emotional plea for these helpless people. I believe the record and the facts speak for themselves. We are committed to a liberalized, nondiscriminatory Displaced Persons Act. To provide otherwise would be to deny the record, the facts, and our pledges.

I believe H. R. 1344 to be a good base from which to proceed to that end. I do, however, propose additional amendments.

1. A provision to make eligible as displaced persons 7,000 Shanghai refugees. With the Communist victory in China, I need not stress the urgency of this situation. The IRO has undertaken a program of rescue, fully aware of the emergency. There were some 13,000 refugees in Shanghai, approximately 5,000 refugees of World War II, mostly of the Jewish faith and about 8,000 White Russians who had fled from Russia after the revolution. With the threatening dangers of the Communist incursions, the IRO set to work to save them. Some 3,000 were given visas to Israel and are now on their way to the new Republic. Four thousand seven hundred and fifty Shankhai refugees, mostly White Russians, have been given temporary refuge on the Philippine Islands under an agreement between the IRO and the Philippine Governernment which provides for a 4-month refuge for not more than 6,000 refugees. About 5,000 still remain in Shanghai. It is estimated that of these 5,000, about 1,000 will refuse to leave and about 500, because of illness, cannot be moved. Among the some three-thousand-odd still to be rescued some 400 have close relatives in the United States. The 4,750 now in the Philippines will have to be permanently resettled elsewhere. The United States will be called upon to take a share of these. I am, therefore, offering an amendment to H. R. 1344, the Celler bill, to permit 7,000 Shanghai refugees to enter the United States as eligible displaced persons. These 7,000 are not in addition to the proposed 400,000. They come within that ceiling. It would be immoral to ignore the plight of these dispossessed human beings.

2. I, likewise, offer another amendment to H. R. 1344 the Celler bill which provides for the issuance of not more than 15,000 visas to those who after September 1, 1939, and before January 1, 1949, entered an area outside Italy, the American sector, the British sector, or the French sector of either Berlin or Vienna or the American, British, or French zones of either Germany or Austria, persons of predominantly European national origin displaced from the country of their birth, or nationality, or of their last residence as a result of events subsequent to the outbreak of World War II, and who cannot return because of persecution or fear of persecution on account of race, religion, or political opinions.

My daily mail is heavy with these stories of personal tragedy where political and religious refugees live in great insecurity in countries of Europe or the Americas with no right of permanent entry, thus deprived of the opportunity to grow new roots or earn a livelihood. For obvious reasons, they fear the deportations that threaten them daily. From France, from Spain, from Portugal, from Cuba, I get these stories of uprooted humanity. Again, I want to make this clear. This does not increase the over-all number of 400,000. Under my bill, H. R. 1344 and my proposed amendments, this would be the break-down in figures:

Czechoslovakians	2,000
Orphan children	3,000
Eligible DP's in the national interest	15,000
Shanghai refugees	7,000
Refugees outside DP zones	15,000
Total	42,000
Leaving for DP's in the zones as of Apr. 21, 1947	358,000
Total	400,000

In closing, I wish to quote from the President's message to Congress, delivered personally, at a joint session of the Eightieth Congress on July 27, 1948:

"In our relations with the rest of the world, action is also needed at once, and can be taken quickly, to afford additional proof that we mean what we say when we talk about freedom, humanity, and international cooperation for peace and prosperity. Three measures are involved:

"First, the Displaced Persons Act in its present form discriminates unfairly against some displaced persons because of their religion, land of origin, or occupation. These provisions are contrary to all American ideals. This act should be promptly amended to wipe out these discriminations. Furthermore, the present act permits the entry of only 200,000 persons and charges them against future immigration quotas. I believe strongly that the act should provide for the entry of 400,000 persons over a 4-year period, and they should be outside the normal immigration quotas. The act can and should be amended promptly."

There was some talk about abolishing the DP Commission and setting up a one-man administration, regardless of its merits or lack of merits that would entail delay and confusion and would be most inexpedient. One does not swap horses crossing a stream.

This is an emergency—an emergency that is costly. We want to dissipate the problem as quickly as possible. Changing the type of administration set-up would only hinder and delay.

Following are the texts of the three proposed amendments to H. R. 1344, the Celler bill:

AMENDMENTS TO H. R. 1344, SUBMITTED BY MR. CELLER

"Amendment No. 1:

"Page 3, line 18, substitute 'subsections' for 'subsection' and after '(f)' add '(g)'; substitute 'are' for 'is.'

"Page 4, after line 19, add the following:

"'(g) "Eligible displaced person" shall also mean a displaced person or refugee as defined in annex I (except paragraph 1 (b) of section A of part I thereof) to the constitution of the International Refugee Organization who on or after January 1, 1938, entered the city of Shanghai, China, as a displaced person or refugee, and (1) who was residing in such city as a displaced person or refugee on July 1, 1948, and (2) who is qualified under the immigration laws of the United States for admission into the United States for permanent residence, and (3) for whom assurances in accordance with the regulations of the Commission have been given that such person, if admitted into the United States, and the members of such person's family who shall accompany such person and who propose to live with such person, shall not become public charges, and such assurances shall be sufficient for the purposes of all immigration laws of the United States. The spouse and unmarried dependent child or children under 21 years of age of such an eligible displaced person shall, if otherwise qualified for admission into the United States for permanent residence, also be deemed eligible displaced persons.'

"Amendment No. 1-A: On page 5, line 13, substitute a comma for the period after the word 'act' and insert the following: 'and not more than 7,000 visas shall be issued to eligible displaced persons as defined in subsection (g) of section 2 of this act.'

"Amendment No. 2: Page 9, line 6, insert the word 'hereby' after the word 'is'; substitute a period for the comma as it appears after the word 'repealed'; strike out the balance of line 6 and the language appearing on lines 7 through 14, inclusive.

"Amendment No. 3:

"Page 10, after line 21, add the following:

"'SEC. 12. A section is added to the Displaced Persons Act of 1948, to be numbered section 14, and to read as follows:

"'"SEC. 14. Not in excess of 15,000 visas issued pursuant to this act shall be made available to applicants for immigration visas who (1) on or after September 1, 1939, and before January 1, 1949, entered an area or country outside Italy, the American sector, the British sector, or the French sector of either Berlin or Vienna, or the American zone, the British zone, or the French zone of either Germany or Austria; (2) establish that they are persons predominantly of European national origin displaced from the country of their birth, or nationality, or of their last residence, as a result of events subsequent to the outbreak of World War II; (3) that they cannot return to any of such countries because of persecution or fear of persecution on account of race, religion, or political opinions; and (4) that they have not acquired the right of permanent residence in any other country. The spouse and the unmarried dependent child or children under 21 years of age of any person who establishes his eligibility for immigration into the United States under the provisions of this section, shall also be granted such eligibility: *Provided*, That assurances in accordance with existing immigration laws and regulations have been given that such persons, if admitted into the United States, shall not become public charges."

"'SEC. 13. Section 14 of the Displaced Persons Act of 1948 is hereby renumbered to section 15.'"

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, March 3 (legislative day of Monday, February 21), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an article by J. M. Eleazer, extension information specialist, Clemson College, S. C., which appeared in the State newspaper of Columbia, S. C., on February 27.

This article is entitled "Consumers Aware of Need for Tax-Free Margarine."

Mr. Eleazer, a brilliant writer of beautiful and simple prose, has been selected as the outstanding agricultural journalist in the United States for the past 2 years by the American Association of Agricultural Editors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSUMERS AWARE OF NEED FOR TAX-FREE MARGARINE

(By J. M. Eleazer, Clemson extension information specialist)

A soybean that does not shatter. We have that now.

Cottonseed, an unsung major food product. We have had that a long time.

Producers of nutritious protein feeds and vegetable food fats, these oilseeds grow in importance as populations thicken.

Years ago, when it didn't matter, taxes, thought to be prohibitive, were levied against one of the chief products of vegetable oil, margarine.

That rocked on for a long time with little notice. For we were a young and rich country. We were still in that fabulous era during which we as a country lived by animal fats and proteins almost entirely. And when this lowly margarine from a plant threatened lordly butter from an animal, we would have none of it and slapped multiple taxes upon it. The vegetable oils from which it was made was largely imported then, so who cared?

That went on for about two generations. The cry against the inequity grew among those who must eat until at long last it looks like this unjust tax against a wholesome, nutritious, and plentiful food will soon be removed. We grow practically all of the oil going into margarine now.

In the meantime, we have had a great war. Butter has been so scarce at times that we couldn't get it, even if we could pay for it, twice the price of margarine, its full equal in every respect. Milk is a great food. And we are told that all we produce and more is needed as such for drinking, ice-cream making, evaporating, drying, etc. And despite the very high price that butter has been its production continues to go down in the country. And that despite the fact that the multiple taxes on margarine still hold.

Artificial coloring is put in both butter and margarine. Pound for pound, the scientists tell us that they are identical in food value. Yet to get a pound of wholesome colored margarine, do you know the taxes that you pay? In fact, you pay all of them, for such taxes are usually passed on to the man who eats it.

To start and go backwards with it, you pay 10 cents tax on that pound of colored margarine. The retailer you buy it from has to pay a retail license of $48 a year. The wholesaler he got it from has to pay a license of $480 a year to supply it. And the fellow who makes it has to pay $600 a year for that privilege. All of this goes to the Federal Government. And, on top of that, many States have additional taxes on it. And in 19 States they won't allow it to be sold at all.

No wonder the consumers in this country are waking up and asking that this gross discrimination against a good and needed food be removed. For the leading scientists of the country have declared the fortified margarine, that's on your grocer's shelf, to be the full and complete equal of good butter in every nutritional respect. And it has been selling for about half the price of butter, despite these taxes.

Once margarine was made largely from low-grade animal fats, oleo oil principally. It was then that folks started adding the oleo to the word margarine. Now it is made almost wholly from clean, sterile vegetable oils, and there is no room for the prefix oleo. It is margarine, and nothing else. Webster's dictionary defines "margarine" as "artificial butter." And Congress in the Margarine Act of 1878 wrote out the following: "The word 'margarine' shall mean all substances, whether compounds or otherwise, prepared in imitation of butter, and whether mixed with butter or not."

Rayon and wool imitate cotton in that they often carry the same color and serve the same purposes. Yet we in the cotton country, nor anywhere else I know of, don't tax rayon and silk. Vegetable fats imitate hog lard in that they serve the identical purpose of lard and are made to look like it. Yet the hog growers do not have an unfair advantage over those vegetable fats in the form of taxes because the product looks like lard.

In this world that needs food, it is high time to remove this tax on a human food source that is easily capable of enlargement as fast as humanity needs it. And the growing needs for dairy products will likely take care of them in any volume of production that now seems possible.

And to bring it home to us here, that margarine you buy at your store no longer comes from low-grade oleo oil nor from foreign vegetable oils. It comes from your own cottonseed oil grown in your county and from soybean oil perhaps grown in Calhoun, Orangeburg, Beaufort or Edgefield Counties.

And Dr. Wilds at Hartsville says the oil content of cottonseed can be increased by breeding. And he and John Wannamaker at St. Matthews and others are breeding better-yielding soybeans that don't shatter. The future is interested in this thing. For, remember, the voice of history says, as populations thicken in a country, it becomes necessary to eat more and more plant fats and proteins and relatively less from animal sources. So why continue to tax the things that must sustain us more and more?

Nomination of Mon C. Wallgren

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial column from the Kelso (Wash.) Kelsonian-Tribune of February 24, copies of several letters which were written to members of the Senate Armed Services Committee, and several letters which have recently been received by the junior Senator from Washington, all of which bear on the question of confirming Mr. Mon C. Wallgren to be Chairman of the National Security Resources Board, which is presently before the Senate Armed Services Committee. The documents are similar in vein and point of view to several thousand others which have come to my desk.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

[From the Kelso (Wash.) Kelsonian-Tribune of February 24, 1949]

IN LITTLE OLD KELSO AND ELSEWHERE

(With the editor)

Mon Wallgren, rejected by the Democratic voters of this Democratic State at the last election, has been named by President Truman to head one of the most powerful and important boards of the Nation, the National Security Resources Board.

The appointment must have Senate approval, and Senator HARRY CAIN, who knows well the reasons for Wallgren's rejection at the hands of the voters in his own home State, is raising his voice against that approval.

Wallgren's appointment, in the opinion of this humble writer, will be a tragedy. Not that he is a sympathizer for a foreign government; not that he has ever been proven dishonest; not that he is necessarily worse than other politicians before him. But his appointment will add another deep crack to that great cornerstone upon which democracy is built: Confidence in Government.

Through wars, civil and foreign, through strife and economic confusion, this confidence of the American people in their Government has carried the Nation through. It is the very thing upon which our Government is founded and without which this, or any government, cannot survive.

At no time in our national history has there been such crumbling and cracking of this rock of national confidence as we of this generation have seen in the past decade and a little more.

When did it begin? Each man has his own answers. Possibly proposed packing of the Supreme Court, that move to inject partisan politics into the very heart of our constitutional democracy marked the beginning of the crumbling of confidence for some. Possibly, it was Pearl Harbor. There the confidence of each of us was dealt a blow. Government had failed us, somehow. The national security had been jeopardized. Errors in judgment? Or the inefficiency of little men in jobs too big for them? Little things, big things, some doubly clear in retrospect. Henry Wallace, once almost our President, still crying the virtues of the nation that is threatening the peace of the world.

The wealth of the Nation only recently going in trainloads, boatloads over our own port dock to build the Russian machine with which we may some day be forced to cope.

Secret pacts, secret promises, secret treaties. Presidents paying their respects at the funerals of the heads of proven corrupt political machines.

Many things have undermined our confidence in government in recent years, but most of them point up to a single weakness; small men in jobs too large for their capabilities.

The appointment of Mon Wallgren to the Security Resources Board will be a tragedy. Not just because he may have built up a questionable fortune on a $6,000 a year salary, or yet because he tolerated the John Coffee's, the Hugh DeLacy's, or the Jerry O'Connell's—but more because he was tried by the people of the State of Washington and found wanting; singled out by the Democratic voters of this State in a Democratic year as a man who should be purged.

His appointment by President Truman will brand Truman as a small man willing to go against the wishes of an entire State, even to trifle with the national security, that his personal friend might continue to feed at the public trough.

Confidence in Governments. A little—as long as there are Senators in Washington who will raise their voices in championing a rightful cause.

CLARKSTON, WASH., *February 25, 1949.*
ARMED SERVICES COMMITTEE,
Washington, D. C.

GENTLEMEN: Your deliberations concerning the approval of the appointment of our former Gov. Mon C. Wallgren has been watched with considerable interest by me.

Since the press indicated your desire for any information that will assist your committee in arriving at a fair and impartial conclusion, I feel it my duty to put in my two bits' worth.

I am an ex-president of the Asotin County Young Democratic Club and, of course, supported Mon while he was in the Senate and for his first term as governor of our State. However, almost from the start of his term as governor Mr. Wallgren applied his Capitol Club program against about 800 State employees, and don't let anybody fool you that this was for entertainment only. A State employee with the horticultural department occupied a section of my office for many years, and we know the score. If you cared to bother, you can undoubtedly secure 800 affidavits from most of these State employees verifying the Governor's racket.

Much as I dislike to go back on Mon, my conscience compels me to do so. The Democrats of the State of Washington elected nearly all other State officials last fall except that of governor. They chose the lesser of two evils and picked Langlie. What do you think? Anything the State Democratic Committee may have told you does not express the sentiment of the Democrats of Washington as a whole.

Personally, I do not think Mon is qualified for the position he seeks, much as I would like to see a man from our State get it. Had President Truman known all the facts, he would not have made the appointment.

Sincerely,

A. N. ROGNSTAD.

RICE, WASH., *February 25, 1949.*
Senator HARRY CAIN,
Washington, D. C.

DEAR SENATOR: Although I am a Democrat I want to commend you for your fight to prevent the appointment of Wallgren to the high office for which he is totally unfitted. He just doesn't know enough and, in my opinion, is not to be trusted. Our party turned him down for governor, and if Truman had any sense, he wouldn't appoint a dead duck to any high office. So, Senator, give him what Truman said he was going to give the Republicans—h—.

Yours very truly,

W. A. HARRIS.

P. S.—I don't think any more of Truman than I do of Wallgren, both are unfit for the offices they hold and have held.

PUYALLUP, WASH., *February 24, 1949.*
Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: Your attack against the appointment of Wallgren to the chair of the NSRB meets with my relieved and most hearty approval. But I am shocked and disgusted that you must fight alone such a glaring affront to the best interest and security of the country.

Having left my health and blood in the Philippines, I had earnestly hoped, with 140,000,000 others, that Pearl Harbor was a lesson learned. But it seems you're virtually alone in Congress in recognizing where stabs in the back start.

Brother, it may be lonesome and some people may tell you it isn't politic, but stick by your guns and there will be many others, beside myself, who won't forget. Your courage right now means more to the security of our country than the UN.

I am taking the liberty of addressing some pointed questions to your inert senior colleague who seems more intent upon nullifying your vote (and thereby effectively denying this State representation) even than upon contemplating the mildew on his political bread and butter.

Permit me also to express myself to you, under separate cover, on an astounding set of facts and conditions which may, under pressure of congressional duties, have escaped your notice. They are immediately concerned with our national security and present a grave doubt that sufficient time remains to prevent the tragedy of their present course. I feel I can rely upon your demonstrated courage and determination to effect early action.

Sincerely yours,
FRANK C. JACKSON, Jr.,
Veterans' Instructor,
Vocational Agriculture,
Pierce County School District No. 3.

SEATTLE, WASH., *February 25, 1949.*
Senator HARRY P. CAIN,
United States Senate,
Washington, D. C.

DEAR SENATOR: Like thousands of others, we are following very closely your most commendable actions in making your fight against ex-Governor Wallgren.

I am a laboring man, was employed in machine jobs and shipyards on the waterfront in Seattle during the entire war period, as well as before and after, and as such associated with all kinds of people, and I wish to assure you that you are correct in your accusations and your thoughts about Wallgren catering to and favoring to a large extent fellow travelers and undesirable citizens.

I am sorry I am unable to give you more definite facts, figures, dates and names, because all those fellows work pretty much under cover. In all the gangs in which I worked, however, there was that element who had under discussion a great many times the name of Wallgren and Coughlin, and others of that kind.

I am a Seattle citizen and have been such for over 30 years, and have always been steadily employed in various activities, usually that of a machinist.

Yours very truly,

B. P. DONCETT.

W. R. ROWE FARMS,
Olympia, Wash., February 27, 1949.
Hon. HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

DEAR MR. CAIN: The enclosed clipping by Associated Press News Service gives me grave concern in the matter of the appointment of Mon C. Wallgren to the office of Chairman of the National Security Resources Board.

As just an ordinary citizen, a taxpayer and a voter, I should like to ask how Mr. Wallgren, who started his political career as a poor man is able to spend $60,000 or more in building a luxurious home in California as described in this press release. You undoubtedly know that, as Governor of the State of Washington, Mr. Wallgren received a very modest salary, indeed.

Income tax and present-day living expenses being what they are, it is difficult for those of us who are struggling through an ordinary existence to understand how Wallgren, whose known career is that of political office, has $60,000 to fling about in just one interval of sumptuous living.

One can possibly ignore and discount current and noticeably repeated rumors of graft connected with Mr. Wallgren's immediate past as governor of this State, but it is asking too much of a voter to fail to question how a modestly paid political office can enable a public servant to spend several times his known legitimate income on such evidences of wealth and luxury—particularly when that man—Mr. Wallgren—is being proposed as administrator of the task of governmental purchasing and stock piling of strategic materials running into a value of millions of dollars—an opportunity for private gain "on the side" if there ever was one.

Mr. Wallgren owes it to the American public and to the faith which Mr. Truman apparently has in his integrity to provide public accounting of such evidences of wealth acquired during his reign in political office. If the information carried in the news report referred to herein is false, that too—in fairness to Mr. Wallgren—should be a matter of public record.

You are to be strongly commended for your attitude in scrutinizing the qualifications of Mr. Wallgren for as strategic a national office.

The time is long since overdue at which the best interests of the American people will be put above private friendship and political expediency in the selection of high public officers.

Respectfully yours,

KENNETH MCCLARTY.

[From the Olympia (Wash.) Daily Olympian of February 26, 1949]

WALLGREN DESERT RANCHERO TO BE READY FOR USE SOON

PALM DESERT, CALIF.—The new home of Mon C. Wallgren, former governor of the State of Washington, will be ready for occupancy within a month in this winter resort.

The swimming pool, 20 by 50 feet, is completed and a crop of dates is ready to be harvested. Producing palm trees, 35 feet

tall, were moved in from groves in the Coachella Valley and replanted about the home site.

Construction started December 1 and work is being rushed, 7 days a week and almost around the clock, to finish the house in time for use this season.

Gossip at this new desert resort is that one of the first guests in the Wallgren home will be President Truman.

The home is of ranch style, with approximately 3,000 feet of floor space. Cost will be in the neighborhood of $60,000.

It has a large living room with Arizona flagstone fireplace. The left wing has a large master bedroom, with private bath, and the guest bedroom, also with private bath. The right wing consists of dining room, kitchen, utility room, maid's quarters, and car port. The living room will have a plate-glass bar.

The building is of frame and stucco construction.

Flagstone planting areas surround the home and there is a large quartered concrete patio in the rear. It is only a block from a popular club.

Two years ago Palm Desert—12 miles south of Palm Springs on the road to Indio—was sun-baked wasteland. General Patton trained his tank forces in the area before going overseas. Sixteen hundred acres were subdivided and several hotels and about 25 homes built.

PORTLAND, OREG., *February 28, 1949.*

Senator KNOWLAND,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KNOWLAND: On Thursday, February 24, you were quoted in the newspapers as stating that the confirmation of Mon Wallgren's appointment hinged upon whether or not he had been "soft" with Communists in his State administration by allowing their infiltration.

First of all, sir, please let me assure you that northwesterners are more concerned about the corruptions to follow upon this man's appointment than they are about the infiltrations so often mentioned. For as to the infiltration of Communists in Washington's politics the word is abused—many of them just took over. It is common knowledge in this part of the country that the Communists enjoyed real and substantial power in the State of Washington during Wallgren's administration. While that is true, it is also possibly true that many of those early-day Communists lost their relish for that doctrine after they had gained their great power and new revenues.

But this letter, Senator, is motivated by the faint hope that you and Senator CAIN might really "take the wraps off" the whole matter and expose the real matters of abuse rampant in Wallgren's State administration, to show how his new Board's functions will be operated. People from the State of Washington, if able to be present at your hearings, could testify at length of first-hand knowledge about the spoils and depravations worked upon the people of Washington during his administration.

If it is not already too late, I should like to urge that Senator CAIN be encouraged to display the facts known to many about the following matters:

(a) Pay-offs to the then-governor's personal representatives stationed in State departments, by citizens who were willing to buy extra privileges, or to pay for legal privileges to be otherwise withheld from them. This would include the revenues taken in by these personal representatives of Wallgren for licenses to be issued under legal process of various regulatory bodies of that State.

(b) Kick-backs by State employees who were paid large salaries with the express understanding that certain percentages were to be returned to the proper persons.

(c) The appointment of teamsters' representatives to high State offices, resulting in a Beck administration of much of the State's authority.

(d) State purchases, especially of liquor, at premium prices, from many liquor companies with the express understanding that the premiums were to be returned to the governor himself.

(e) Participation by Wallgren in the financial interests of the racing industry. He should not deny his association and participation in these affairs with one Joe Gottstein.

(f) Efforts to steal the Metropolitan Building properties from the State university.

If the committee considering this appointment is more serious than the newspapers would lead one to believe, it is certain that it can easily secure all of the evidence it may need to assure itself that this man is not fit for the important position to which he has been appointed by the President. If it is only interested in Communist infiltration, the committee should rest, for the Communists were more successful than they had hoped to be, and it will require more time than he will have for Governor Langlie to get them out of the State's administration.

It is hoped that Senator CAIN will be urged and assisted by his colleagues to go into other important matters, such as those mentioned above, so that the people can be fully apprised of what they may reasonably expect to follow in Wallgren's administration of the National Resources Board.

Yours very truly,

JEFFREY P. BROWN,

(Copies to: Senator HARRY CAIN, Senator WAYNE MORSE, Senator GUY CORDON.)

SEATTLE, WASH., *February 22, 1949.*

Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR CAIN: Your opposition to the appointment of Mon C. Wallgren, repudiated Governor of the State of Washington, as Chairman of the National Resources Security Board, meets with our wholehearted approval.

It is an insult to the intelligent voters of the State of Washington for the President of the United States to choose a man for this important post of stock piling and conservation whose 4 years as Governor were characterized by extravagance and a marked desire to waste natural resources—as witness his efforts to control school timber free of any check on its sale. The latter program was nipped by alert Washington voters who by initiative action effectively stopped this bold attempt to remove safeguards set up to conserve this valuable and important part of our State school system.

Although it is true that our type of Government has always lent itself to the spoils system and a desire to reward party wheel horses in this instance particularly, the complexity of this position requires far more than the ability to remain on the public pay roll as qualification.

While we of the West are always eager to see western men appointed to Government positions, we are also jealous of the integrity of the men so appointed. We feel that confirmation of Wallgren to this office certainly cannot add to the efficiency of Government which we are hoping to achieve.

Please continue your fight to block this appointment which is obnoxious to the people who have lived in Washington State with Wallgren as Governor.

Yours very truly,

DOROTHY D. DICKINSON,
GEORGE L. DICKINSON,
(Mr. and Mrs. George L. Dickinson).

SEATTLE, WASH., *February 22, 1949.*

Hon. MILLARD TYDINGS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TYDINGS: As chairman of the committee holding hearings regarding fitness of former Governor Wallgren for the position to which President Truman appointed him, you have a very real responsibility to the citizens of this country.

The simple truth of the matter is that Mr. Wallgren, through politics, has risen to positions of prominence far beyond his mental capacity to handle the work in a satisfactory manner.

As Governor he was absent from the State a great deal, but tried to give the impression that he was busy about matters pertaining to the welfare of this State.

On the mere matter of his acquiring considerable wealth during his years in office, you have ground enough for a very far-reaching inquiry. The stories we hear cannot be without foundation. Most of the citizens of this State whom I know, feel that you would not have to scratch very hard or very deep to turn up plenty which would show that he is not a suitable man for the office for which he has been named.

Sincerely yours,

HUGH P. BRADY.

(Copy to Senator HARRY P. CAIN.)

Rent Control

EXTENSION OF REMARKS
OF

HON. WILLIAM P. BOLTON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. BOLTON of Maryland. Mr. Speaker, I am opposed to rent control. I am opposed to it—

First, because I think it is doing more harm than good to the American people.

Second, because it was originated as a war emergency—the war is over and the necessity for rent control has long since passed.

Third, because I firmly believe that if rent controls are removed, there will be thousands of rental properties immediately available which have not been placed on the market before because of rent-control difficulties.

Fourth, because I believe the removal of rent controls will stimulate the building industry and innumerable new housing units will be built at once.

Fifth, because the resultant number of housing units available will take care of the rent-control problem through the old policy of supply and demand.

Sixth, because I am opposed to Government controls of any kind which interfere with the free-enterprise system which made this country great.

Seventh, because I believe the property owner has a right to a fair return on his invested capital, free and unhampered by Government red tape and rent controls.

The property owner is today suffering from a tremendous economic disadvantage. In relation to the rest of the economy his income has dropped approximately 6 percent since before the war.

Let us for a moment look at the income of an aged couple who invested their life savings in order that they might have an income for their old age. Rentals have remained practically frozen since 1941 while repair and maintenance charges more than doubled. The over-all increase in rents on residential properties since 1941 is 4 percent—living expenses have risen 64 percent. The average weekly wage increase for industrial workers is 70 percent higher than in 1941. Food costs have practically doubled, clothes are 74 percent higher, coal and oil 33 percent, fuel and utilities combined, 15 percent, and still the property owner is expected to meet all of these rising costs on only 4 percent increase in his income on rental property.

I am told that about a half-million rental housing units in this country have been withdrawn from the housing market by owners. They have been discouraged by the unfair competition of the Government against them and have decided not to rent rooms or apartments which were formerly occupied.

Approximately 50 percent of the houses which were rented prior to 1942 have been forced into sales by owners who are no longer able to bear the increased costs and who have decided to abandon the field.

Hundreds of thousands of new construction projects, planned since the war, have been abandoned because of the Government policy of increasing costs of everything the property owner buys and yet, freezing his income.

Per capita occupancy of living space has decreased because it is now possible to buy a considerably greater amount of living space with the same share of income than was possible in 1941.

Free economy in this country, as well as anywhere else, is governed by the law of supply and demand. The point of equilibrium is reached when the desire to buy and the desire to sell are equal. But equilibrium can be disturbed by a number of things, including change in the demand pattern because of a change in income. If incomes go down while prices stay fixed, the demand will decrease; if incomes go up, while the price stays constant, the demand will increase. In other words, people will be willing and able to buy more of a commodity which stays cheap, if their incomes are going up. That is exactly what has happened in the rental housing field. The price of rental space has stayed practically fixed since 1941—wages and other items have increased by leaps and bounds. It has been possible, therefore, for consumers of rental housing to occupy more space. As people left to enter the war or move to production centers, the remaining population absorbed the housing that was thereby made available. That resulted in an artificial shortage of rental properties. We have built more new housing since the end of the war than the rate of our population increase. There is today a surplus of rental properties all over this country. In other words, the supply exceeds the demand, so why should there be further necessity for rent control? I, for one, do not believe there is such necessity and I intend to vote against further extension of rent control when this bill is presented to the House for a vote.

Home for Every Family

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 3 (legislative day of Monday, February 21), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Home for Every Family," published in the Washington Post of March 3, 1949. The editorial, which relates to Senate bill 1070, is a most excellent one, and I hope it may be read by every Senator.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOME FOR EVERY FAMILY

Seldom has a bill gone before the Senate with such impressive endorsement as the new housing measure carries. It was introduced by Senator ELLENDER for himself and 21 other Senators of both parties. Apparently it reflects a consensus of constructive thinking in Congress. If so, that is a fact of great significance, for the bill lays down a national housing policy that is at once sound, practicable, and forward-looking.

In the present bill the Senate Banking and Currency Committee has abandoned the effort to deal with all phases of housing legislation. That is a logical consequence of the failure of last year's all-inclusive bill. This time the committee is concentrating on a declaration of national housing policy, authorization of Federal assistance to local communities for slum clearance and low-cost housing assistance for low-cost farm housing and a comprehensive program of research. We think farm housing also might well have been left for separate consideration, since it has very little relation to urban housing. But that detail scarcely detracts from the appealing nature of the bill as a whole.

The objective at which the bill aims is a decent home and a suitable living environment for every American family. Of course, this does not mean that Congress intends to provide homes for every family now inadequately housed. The primary reliance is upon private enterprise. Private industry will not only be encouraged to serve as large a part of the population as it possibly can. Government assistance is to be given, notably through sound financing and research in building materials and methods, to enable private builders to satisfy a larger share of the total demand for housing. But the bill also clearly recognizes the public responsibility for clearing slums and blighted areas and providing good low-cost housing for families who cannot afford to live in decent privately owned quarters. Public housing with Federal assistance is to be undertaken, as in the past, only when local communities demonstrate the need for it and devise appropriate plans. In every instance the initiative will have to come from the communities themselves.

This is necessarily a slow process, but in our opinion it is the only sound basis on which a public housing program can rest. We think the committee has done well to give first emphasis to a long-range attack upon the slums and to the housing of families that will necessarily be displaced when the transformation process begins. In some instances, indeed, as in the District of Columbia, new housing will have to come first to avoid the overcrowding of existing insanitary shacks beyond the danger point. If the general policy outlined in this measure is properly understood, we surmise that it will draw overwhelming approval.

Assessment by American Medical Association

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 3 (legislative day of Monday, February 21), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Doctors' Revolt," published in the Washington Post of March 3, 1949. This editorial deals with the action of the New York County Medical Society in regard to the compulsory assessment of the American Medical Association.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DOCTORS' REVOLT

Reversing a vote taken at its January meeting, the New York County Medical Society voted last Monday against the $25 assessment levied by the American Medical Association on each of its 140,000 members. As the Manhattan group is the largest local affiliate of the AMA, this move, though it is not the first of its kind, may have wide repercussions. It reflects the growing dissatisfaction within the rank and file of M. D.'s over the generally standfast policies of the AMA leadership, and incidentally proves to the hilt, as Dr. Frothingham has contended all along, that the $25 levy is not compulsory.

To be sure, the New York body was probably moved in considerable part—and rightly—by indignation over the infamous Dan Gilbert letter of last December. Copies of this vicious attack on the national health insurance plan were sent to all doctors by the National Physicians Committee, a lobby group that has no official connection with the AMA but has been several times endorsed by it. The letter was addressed "Dear Christian American" and contained a number of veiled appeals to religious prejudice. The National Physicians Committee covering letter called it one of the few really vital pronouncements of an age.

This is the kind of propaganda the doctors would be better off without, and we think the AMA would serve the medical profession best by unequivocally repudiating the National Physicians Committee for this blunder. Such an action would reinforce the testimony of the AMA's own 12-point health plan that the organized medical profession is not wedded to deep reactionism but realizes that in a changing world there is need to find new and better ways of dealing with old problems. Doctors should have open minds on human affairs as well as on scientific developments.

Labrador-Quebec Iron Ore

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, March 3 (legislative day of Monday, February 21), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an advertisement of the M. A. Hanna Co., which appeared in the Washington Post of March 1, 1949, under the heading "Labrador-Quebec iron ore."

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

LABRADOR-QUEBEC IRON ORE

The iron-ore tonnage shown by exploration and drilling so far is about one-third in the Labrador concession and about two-thirds in the concession in Quebec. However, the Labrador concession covers a total of about 18,000 square miles, while the Quebec concession covers about 3,800 square miles, and there is much more territory in Labrador than in Quebec which is entirely unexplored. Explorations to date have proved with reasonable accuracy the existence of about 300,000,000 tons of very good grade direct-shipping open-pit iron ore and manganiferous iron ore. It is located about 300 miles from the Gulf of St. Lawrence and requires the construction of 360 miles of railroad with transshipping docks at Seven Islands, Quebec, on the St. Lawrence River.

It is a big undertaking and may involve the expenditure of as much as $200,000,000 for mining and railroad equipment, power development, railroad and dock construction, town sites for the large number of people involved, etc. This will take a number of years, and progress is slow, but we believe that the discovery is of sufficient importance and the ore possibilities of such magnitude that eventually this will become an important source of iron-ore supply for some of the blast furnaces and steel plants of Canada and the United States. Additional exploratory work will be continued, and as the properties develop plans for the future will be made.

One important item of consideration is the development of the St. Lawrence seaway. The distance by water from Seven Islands to Erie, Pa., on the southern shore of Lake Erie, is almost the same as the distance from Duluth, as our Lake Superior ores now move. The entire distance from the Gulf of St. Lawrence to any lake port is now available for transportation in our regular standard lake vessels, except for about 90 miles of intermittent rapids. If these rapids can be made navigable by the prompt completion of the St. Lawrence waterway project, the ore can be moved economically and competitively to the central industrial districts of Canada and the United States.

Through our various connections, we are interested in the ownership of large reserve tonnages of Lake Superior iron ore. We are not unmindful of the importance of such reserves nor do we contemplate the early exhaustion of shipments from that district, but continuation of the declining trend of shipments of high-grade direct-shipping ore from Lake Superior is inevitable. Expensive underground mining must be increased and even more expensive beneficiation processes must be developed to make a useful product from lower-grade Lake Superior reserves. They will be required as a source of iron-ore supply for the future, but they can best be supplemented by shipments of high-grade open-pit direct-shipping ore from Labrador and Quebec to fill the needs of the great iron and steel businesses of Canada and the United States now located in the Great Lakes Basin area.

This district is the heart of the greatest industrial area on this continent, and it is to the interest of every business and every citizen of both countries that it may continue to have an ample supply of iron ore cheaply transported to it by water to supply the many industries dependent upon iron and steel. The Great Lakes waterway will continue to serve this important district, but now that this new source of direct-shipping high-grade iron-ore supply has been definitely established the St. Lawrence waterway should be undertaken promptly to make it equally available. It is essential for business in times of peace and it would be indispensable for both countries in the unfortunate event of another war.

G. M. HUMPHREY,
President, the M. A. Hanna Co.
CLEVELAND, OHIO, *February 15, 1949.*

Internal Revenue Collections in Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., February 18, 1949.

Hon. JOSEPH R. FARRINGTON,
House of Representatives,
Washington, D. C.

DEAR MR. FARRINGTON: In reply to your request we are presenting a statement of the relative position of Hawaii and the various States in respect to internal-revenue collections. Two tables are enclosed, one shows total collections and the other per capita collections in the United States, Hawaii, and Alaska during the fiscal year ending June 30, 1948.

Total collections from all States and Territories in 1948 increased 7 percent from fiscal 1947; total collections from Hawaii increased 2 percent. In 1948, collections from Hawaii accounted for about .3 percent of the United States total. Collections in Hawaii increased for all classes of revenue except miscellaneous revenue which includes excess-profits taxes.

The total revenue collected in Hawaii in 1948 exceeded that collected in 12 States and Alaska. (See table 1.) The States are: Arizona, Idaho, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Dakota, South Dakota, Utah, Vermont, and Wyoming. Hawaii also ranked above these States in revenue collected in the fiscal years 1944 through 1947.

Collections of revenue on a per capita basis were greater in Hawaii than in 24 States during fiscal 1948. Hawaii maintained the same relative position held in the previous year.

The States in which per capita collections were smaller than those in Hawaii are: Alabama, Arizona*, Arkansas, Florida, Georgia, Idaho*, Iowa, Louisiana, Maine, Mississippi*, Montana*, New Hampshire*, New Mexico*, North Dakota*, Oklahoma, Oregon, South Carolina, South Dakota*, Tennessee, Texas, Utah*, Vermont*, West Virginia, and Wyoming*. (An asterisk indicates that both total and per capita collections were smaller in the State than in Hawaii.)

Sincerely yours,
ERNEST S. GRIFFITH,
Director, Legislative Reference Service.

TABLE 1.—*Total collections of internal revenue by the United States in each State, the Territories of Hawaii and Alaska, and the District of Columbia, fiscal year 1948*

Alabama	$276,943,829

Revision of the Social Security Act

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. BOLTON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made before the Ways and Means Committee of the House by Mr. J. Milton Patterson, director, Maryland State Department of Public Welfare, in reference to the pending revision of the Social Security Act. Mr. Patterson, an outstanding citizen of Baltimore, has been director of the Maryland State Department of Public Welfare for 15 years and during that time has built up our welfare system in Maryland until it is one of the finest in the United States. His statement is as follows:

At the outset I want to emphasize my belief that among the most important legislation before the Congress is the extension of the old-age and survivors insurance system. I hope the day will come when we will have an insurance program that will almost wipe out the need for public assistance except in the way of services and temporary financial assistance.

The Maryland Legislature has been very explicit about granting assistance to able-bodied persons able to work, and funds have not been provided for this purpose except on a very temporary basis. I think there is a feeling in my State that employable people should be provided with employment, and that in our democratic way of life, they should not have to receive any part of their living from public assistance. That is the reason I believe in the extension of the insurance program, and I am hopeful that the leaders of this country in industry and in Government will never permit the American system again to go back to the granting of doles to people who want to work.

In relation to the propositions that are before the Congress for the improvement of the public-assistance programs, I would like to state that I have been a member of several committees of the American Public Welfare Association that have been working on this problem for several years. The recommendations that have resulted from that work are embodied very largely in the Public Welfare Act of 1949, incorporated in H. R. 2645, introduced by the Honorable AIME J. FORAND, of Rhode Island.

In practically all of the studies that have been made it has been shown conclusively that a mistake was made in the original Social Security Act in making no provision for dependent children needing care in foster homes and for persons between the ages of 16 and 65 who are incapacitated or who for other valid reasons are not able to provide for themselves. These groups are just as much in need as those receiving old-age assistance, aid to dependent children or public assistance to the needy blind. It is for this reason that I have been one of the advocates of correcting this discriminatory situation by provision for those outside the realm of the present law.

Today I am presenting my views as director of the Maryland program and in relation to the laws that are on the statute books of Maryland which furnish the framework within which we operate our welfare program.

At the 1945 session of the Maryland Legislature a resolution was passed requesting the Maryland Representatives in the Congress to urge certain amendments to titles I, IV, and X of the Federal Social Security Act:

1. To make provision for general assistance to those in need who were not covered under the three categories now provided in the law.

2. To remove the maximum amounts that put a ceiling on grants to those receiving aid to dependent children.

3. To provide for uniform residence requirements.

4. To provide for reimbursement to the States for direct payments to doctors or hospitals for medical care.

5. To make uniform Federal matching of administrative costs by providing 50 percent of the cost of administration for all of the programs administered under titles I, IV, and X of the act.

Since that time the Maryland laws have been amended to provide that in the event that future Federal legislation shall require as a condition for Federal matching that the State plan include the items mentioned above, then the State would be able to take advantage of any such Federal changes with the effective dates of such Federal enactments.

There are two or three provisions in H. R. 2645 on which I would like to comment in relation to the Maryland program.

Section 1404, subsection (a) (4), if I understand it correctly, would make it mandatory that a State plan include "standards directed toward enabling each recipient to secure the essentials of living, including necessary expense for seeking and maintaining employment through assistance and his other income and resources." I believe that a lot of unnecessary work would have to be done at the Federal level to interpret these words, instead of leaving to the States the responsibility for setting standards for the basic items that should be included in any budget.

Subsection (a) (9) (A) of the same section requires the plan to include "methods relating to the establishment and maintenance of personnel standards on a merit basis." I believe in the requirement of a good merit system as conducive to efficient administration of the program. I believe, however, that the Federal requirements should be established and used in order to recognize the existence of a good merit system that may already have been developed over many years covering all State departments within a given State; and that such a merit system can be tested in order to determine whether it does or does not essentially measure up to acceptable standards. I believe in the training for personnel necessary for efficient and effective administration of a program to carry out its full intent and purpose. I think, however, that a State should have freedom as to the way in which it carries out such training, so long as it is shown that the program is carried on efficiently and effectively by the persons who are employed therein.

Coming from a State that pays into the Federal Government considerably more money than it receives, I attach to this statement a chart showing the amount expended per inhabitant for public assistance payments for the fiscal year ended June 30, 1948. For instance, the United States average for old-age assistance was $7.20 per inhabitant. In Colorado it was $30.98, whereas in Maryland it was $2.12.

If the present law does not give the Federal agency some right to control these expenditures, then there should be authority vested in the agency to see that there is more uniformity in expenditures in order to control so much of the Federal money going into so few States because of the liberality of the program. There should be some middle ground. There is a question whether we can afford in this country a national program of public assistance for the aged at the rate it is administered in some of the States.

I am glad that the Congress is taking up immediately this very vital matter that affects the welfare of so many of the people of our own country. There are many who feel that it would be much better to spend more money that will result in a better way of life to human souls, than to spend more for destructive purposes or for the building of a superman that might destroy the American way of life.

Category	Maryland	National average
OAA	$2.12	$7.20
ADC	2.18	2.26
ATB	.09	.27
GPA	.89	1.27
Total	5.28	10.80

Our Social-Security Program

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an editorial from the New Castle (Ind.) Courier-Times, issue of February 26:

OUR SOCIAL-SECURITY PROGRAM

In spite of all the criticism leveled at our social-security laws on the one hand and all of the attempts being made to extend them on the other, on the whole we have a rather sound, effective, and just set of laws on the subject.

The Courier-Times was a pioneer in the matter of social-security legislation. We were talking about the need of the country for social-security laws when the whole idea seemed as speculative as rocket service to the moon.

The intent of social-security legislation from the start was that the orphaned, the aged, the blind, those unemployed through no fault of their own, and others who were helpless might find aid; and that through the giving of such aid the economy of the Nation might be balanced in such a way that depressions would be forestalled.

Many of the present proposals to extend compensation under social security to unreasonable limits can be regarded only as an attempt by another pressure group to raid the Treasury. The truth about the social security set-up today is that compensation for the unemployed has gone as far as it can without encouraging idleness, while the aged and the orphaned who are truly our helpless, receive less than enough upon which to exist.

Our country can be strong and our standard of livin_ high only as we produce. If we are to produce, we not only must leave the incentive that will cause us as individuals to give back to society in service full value for what we receive, but there must be encouragement to invest savings to provide the means and machinery by which our production is kept at a high level.

Our social-security program is one of the soundest parts of our Nation. It has not yet undergone the supreme test of a depression. For the good of the country and our welfare as individuals, it ought not to be pushed to the point that the Nation is impoverished trying to support it, and the structure becomes so immense that it is weakened by its own weight.

A Union Man Looks at Rent Control

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including a copy of a letter received from a constituent and an outstanding labor leader in my district. He discusses rent control and his ideas should be considered in any approach to imposing a continuance of rent control upon the American people:

FEBRUARY 23, 1949.

RACINE JOURNAL TIMES,
Racine, Wis.:

Within the past few days Federal Housing Expediter Tighe Woods has asked Congress to legislate a rent-control formula that would give landlords a fair return. There just ain't no such animal.

Bureaucrats, instead of dreaming up insoluble problems for Congress, ought to quit trying to perpetuate these miserable rent controls that are keeping 2-person families in 10-room homes and 10-person families in 2-room homes. The best way I know of for a bureaucrat to expedite housing is to go buy himself a saw and a hammer and start expediting.

There is no such thing as a legislatable fair price, a legislatable fair wage, or a legislatable fair rent. Fairness is not a matter of laws or averages, but of opinion—opinions of buyers and sellers. Hence there will be as many different opinions as to just what constitutes a fair price, a just wage or a fair rent as there are buyers and sellers and renters. Trade thrives best and a community is most prosperous when in its market place there is no irresistible compulsion against buyers and sellers. The only compulsion that is really irresistible is the force of government.

I should think that anyone, whatever his work may be, if he has any sense of fairness or justice at all, would agree that no one should be irresistibly forced to sell against his will.

Locally, as elsewhere, there are certain alleged labor leaders who want Federal rent controls continued. They are therein subscribing to the notion that it is proper for the government to force someone to give up his services for a government-set price. Would these same New Dealers protest if their dear Mr. Truman should use his inherent powers to set all union wage scales to, say, 50 cents an hour? Suppose that after you put up a squawk, Mr. Truman still declares that 50 cents per hour is a fair price for your work. Would that be fair?

We are all buyers and we are all sellers. Those who are wondering about rent controls ought to think that over carefully.

F. LEE DECHANT.

The Forgotten Man: The Small-Business Man

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. PLUMLEY. Mr. Speaker, yielding to requests—and I am not too unwilling—I am putting into the RECORD, under consent heretofore granted, what I said about and to the forgotten man, the small-business man, who has made this country great.

In this speech, made on December 8, 1948, to a group of small-business men in Stowe, Vt., I was thinking out loud about the problems besetting the small-business man today. On March 1 the Bennington (Vt.) Banner carried an editorial commenting on and quoting my speech, and I am including that editorial herewith:

SOAK THE RICH

One of the unfortunate developments of the present day and generation is the widespread desire to get the best of anyone supposed to have money. In courts the juries almost always assess a heavier verdict against an insurance company than they do against an individual. The insurance company is supposed to be rich and has no friends. Of course the theory is wrong, but it is prevalent everywhere and affects the sale of real estate in a country town.

Small business is hit by the same theory. Folks have read in the newspapers about the vast profits made by some of the great business firms and get the idea that nearly all business is profitable, and that stores and factories make a lot of money. The reverse is true. Actually a few concerns make a lot of money and may be smart enough to prevent the Government getting the money away from them in taxes; but according to alleged experts, the net profit of business is less than 3 percent and, if railroads are included, the net profit is around 1½ percent.

A group of small-business men in a meeting in Stowe recently were addressed by Congressman PLUMLEY, and the following is a part of his brief talk:

Never before have the American people been so small-business conscious. This is an outstanding fact of wartime America, shared by those at home and in our armed services. Such widespread understanding of the role of small business in winning the war and in achieving a prosperous economy afterward, is our surest safeguard for continuing and perfecting our free, competitive enterprise system—the American way of life.

Reaching such a conviction is no wartime accident. Nor is it a passing fancy. Its roots are firmly embedded in the historic traditions and developments of these United States. It expresses the yearning of our people to make their own way independently, accorded by their government that equality of opportunity which is their birthright, under whose rules of the game they may become economically strong, even in an age of increasing concentration of economic power expressed in the form of giant corporations and mass production. It recognizes the tremendous social and economic force which small business has become in America. It demands that small business be preserved and strengthened by freeing it from all uneconomic hindrances, all unfair coercive practices, all unsound Government restraints.

Small business, as with other concepts which are universally understood and accepted in American thinking, eludes precise definition. Yet, whether measured in terms of sales, number of employees, assets, or type of management operation, people easily distinguish between small and large business. To them small business means a particular combination of social values, a pattern of civil life, a growing, free society, a healthy competitive business community. It is the small-business man, the individual enterpriser, the owner-operator who has become so closely identified with the many hundreds of villages and cities of this land that he is the very foundation of the home town's growth and development. He it is who starts from scratch to found a business, borrows and puts money into the local bank, develops the know-how and does the pioneering which generates so many of the plans upon which our phenomenal industrial structure has been reared, employs his fellow townsmen, supports the schools, churches and civic institutions. The whole community is traditionally stamped for good or ill by its small-business men—the town takes its character from their enterprise, thrift, and civic-mindedness.

So I am glad of this opportunity to talk to you representative small-business men of Stowe, and of Vermont, today.

I am not a pessimist nor an alarmist but I know as do the businessmen of America that no nation, no more than any individual can spend itself into a prosperity that is not unreal, effervescent, ephemeral, and self-destructive. A nation is but the aggregate of the individuals of which it is composed. That increased prosperity under and by virtue of which this Nation over the years became what it was prior to the New Deal did not originate in economic governmental planning nor enforced governmental regulation. The theory that relief and doles and farm subsidies produce genuine or lasting prosperity has been tested and failed so many times in days gone by as to have been exploded. No people ever did or can spend itself into properity, I say again.

Genuine prosperity stems not from increased consumption, superinduced by grants, of the taxpayers' own hard-earned money, to himself, but by increased production, which is to say, by the encouragement of private enterprise, individual initiative and the growth of small businesses.

The sound and continuous growth of this country, which made it great finds the reason for its being in the constant influx into the economic system of new enterprises which put one man to work, then two men, then hundreds of men—then hundreds of thousands of men, not in governmental in-

terference with a man's business from the "diaper to the shroud."

There is nothing which so completely discourages and retards the growth of private business as government interference, competition, regulation and the incident strangulation of the individual who would gladly risk his capital to furnish employment, to pay wages, to distribute the proceeds of the pay envelope to all worth-while causes.

The Government under New Deal policies with its unnecessary restrictions, its red tape, its persecutory programs, has retarded the investment of money in private enterprise in the development of new industries, the while it has insisted there should be no relief of or from the tax burden the people bear.

That which gives me greatest concern looking forward to a continuation of the New Deal program is the outspoken hostility, in many Government departments, to the development of private industry. There are too many men in high places whose real intent and purpose and desire is to change our system to a form of State socialism, while they spread a doctrine of hopelessness about the future of private enterprise, condemn those who have insisted upon the continuance of the policies which have made the country great; call themselves liberals—when in fact their program is as radical, iconoclastic and anarchistic as any of those which in days of old buried five civilizations, which followed substantially the program they outline for us to undertake—to continue to our own destruction.

The Government should keep out of business to the limit.

Regulation of private business should be reduced to a minimum.

The wage-hour laws should be continued substantially as set up in the Taft-Hartley Act. There should be no repeal of it. There should be no return to the Wagner Act under which little business cannot survive.

The idea of Government regulation of wages is repugnant to our theory of government and contrary to any collective bargaining theory. There should be plenty of head room between the floor and the ceiling for the initiation, development, and growth of new industries and small business everywhere in these United States. The law, with slight amendments, provides such room today.

Small business asks for no subsidy; contemplates no raid on the Treasury; demands no special favors, privileges, or advantages. It asks to be let alone.

It asks for just consideration, equal opportunity, reasonable credit facilities, fair taxation, fair competitive standards, the elimination of the unfair and unequal methods of competition and monopolistic practices the small-business man, under the New Deal, has been compelled to face, and some certain definite assurance that it shall have a fair return for the risk it assumes, that is to say a right to operate at a reasonable profit.

All these it should have. All these it must have, and soon.

It is strange but too true that the neglect of the problems of the small-business enterprises contributed very largely to the wrecking of the economic situation and democracy, as it is known in Europe.

We should not tolerate the same mistake. We must not let such a catastrophe happen here.

However, "the question forever arises," said Froude, "how far the unwise should be governed by the wise; how far society should be protected against the eccentricity of fools, and fools be protected against themselves."

One answer to the question Froude asks is found in the historic statement of Abraham Lincoln to the effect that "while you may fool all of the people some of the time, and some of the people all of the time, you cannot fool all of the people all of the time." The quicker all of the people realize, as some 22 million of them did at the recent election, that they are being led into a fool's paradise, the sooner the problems which now confront, confuse and confound small business, will be satisfactorily solved.

The School-Lunch Program

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 3 (legislative day of Monday, February 21), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Mrs. Theodor Oxholm, chairman of Spokesmen for Children, Inc., dealing with the school-lunch program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SPOKESMEN FOR CHILDREN, INC.,
New York, N. Y., February 17, 1949.

DEAR SENATOR LANGER: We understand the usual amount of $75,000,000 for school lunches will be included in the agricultural appropriations bill when it comes before the Senate this spring. In view of the increased enrollment due to the thousands of war babies who entered school last autumn and those who will swell the ranks this autumn, we believe the grant should be increased to $100,000,000.

We prepared the enclosed fact sheet to show what percentage of the children benefited by school lunches a year ago and how great a share of the cost was borne by the people voluntarily. Although the law at the present time only requires funds to be matched dollar for dollar, almost every State is contributing more, some States six times more. With several hundred thousand more children entering school this autumn the need will be much greater and it is apparent that an increase in the appropriation to $100,000,000 will be necessary, if the need is to be met adequately.

The popularity of school lunches is due to the desire common to most of us to see American children well-nourished or at least assured of one square meal a day.

The Senate has always supported this popular program and we ask that you give serious consideration to the need for a larger appropriation.

We are interested to know your thinking on this matter.

Sincerely yours,

MARY H. OXHOLM, *Chairman.*
(Mrs. Theodor Oxholm.)

Facts about the national school-lunch program, 1947–48

[All figures from the U. S. Department of Agriculture]

State	Percent of children participating	Percent of schools participating	State appropriation	Matching funds from sources within State[1]	Federal indemnity	Number of schools aided by sec. 32[2]	Number of schools aided by sec. 6[2]

[1] "Matching funds from sources within State" indicates penny milk, lunchroom sales, contributions by organizations and State appropriations. While figures for 1946-47 are latest available, provisional reports indicate States did equally well in 1947-48.

[2] Secs. 6 and 32 of the Agricultural Act allow for distribution of fresh and dried fruits, fruit juices, canned fruits and vegetables, fish flakes, cheese, peanut butter, jam, dried eggs, nut meats.

[3] Local, $475,000.

[4] Biennial appropriation.

[5] Not in program this year.

[6] Amount unspecified.

The Vegetable Kingdom Versus the Mineral Kingdom in the World of Finance

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. WHITE of Idaho. Mr. Speaker, in response to a unique and interesting brochure that has come to the desk of the Members of Congress entitled "Americanism Honest and Free," I include the first paragraph here with my reply:

AMERICANISM HONEST AND FREE

FARMINGTON, CONN., *February 12, 1949*

FELLOW AMERICANS: Your money or your life? Which? What good is your money? The more you make, the less of it you can keep. If you save it, you lose it. Your Government, like a thief, while you sleep, steals it by Marxist taxation, steals its value by inflation, steals your freedom by socialization. Can we ever make government honest again? Yes, we can—but you will have to help.

Yours, in truth,

E. S. HALL,
Connecticut Yankee in King Harry's Court, Working for You and the Vast Majority.

REPLY

TO A CONNECTICUT YANKEE AT KING HARRY'S COURT, INCLUDING ALL THE FINANCIAL BARONS THAT SEEM TO HAVE GOVERNMENT FAVOR:

DEAR CONNECTICUT YANKEE: When the Yankees of Connecticut came into the Union the United States of America had good money, current with the merchant and acceptable all over the world. There was no price on gold and no price on silver—27 grains of standard gold was a dollar and 416 (that ratio was later changed) grains of standard silver was a dollar, both gold and silver were legal tender in payment of all dues, public and private—the price of all other commodities, including labor and service, adjusted themselves to the value of the dollar—the price level of that day was stable because the continued increase in the volume of gold and silver coined into money by the mint kept pace with the growth of population and commerce, estimated to approximate 3 percent annually. There never has been a better money system devised in any country—it is true using the paper equivalents of the gold and silver coins for circulation purposes was safe, stable, and more convenient. In later years competition grew up in the money world between the vegetable and mineral kingdoms. The inflow of paper currency manufactured by the Bureau of Engraving from an unlimited supply of vegetable fiber and green ink controlled in volume by the exigencies of the Government and the demands of the banks under a managed currency system with limitless possibilities of inflation and interest yield to the banking concessionaries. This new kind of money came into competition with the old tried and true money system embracing the coinage of the precious metals, gold and silver, that supplied a volume of money in circulation automatically regulated by the inflow of new dollars coined from mine output of the precious metal.

The answer to your question, "Can we ever make our Government honest again?" is "yes," by returning to the money system our country had when your State of Connecticut came into the Union—bimetalism that provided for the unlimited coinage of all the gold and silver brought to the mint will give to the people an honest monetary system, the foundation of honest government dealings.

Protection Against Fraud

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, most timely now as committee hearings on the oleo bill proceed is the following letter which I have received. It comes from Milton H. Button, director of the Wisconsin State Department of Agriculture, and I believe it clearly points out the necessity of legislation along the proposal of the Andresen bill, rather than the Rivers and Poage bills. So that my colleagues too may read the views of Mr. Button on this important subject, I include the following letter in today's RECORD:

WISCONSIN STATE DEPARTMENT
OF AGRICULTURE,
Madison, Wis., February 28, 1949.

Hon. GLENN R. DAVIS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DAVIS: Efforts now being made to repeal all restrictions on the manufacture and sale of oleomargarine present extremely serious implications to the consumer, to the dairy industry, and to all citizens of the Nation.

Those who are interested in the long-range aspect of the matter, question the logic of a Congress that appropriates many millions of dollars for a program designed to preserve the priceless heritage of soil fertility, and simultaneously considers the adoption of legislation that will change our Nation's agriculture from a grassland animal-husbandry structure, to a row-crop soil-depleting type of agriculture that will inevitably destroy our irreplaceable top soil. The problem is basic and serious, and it must be given major consideration by all statesmen of Congress.

The Wisconsin Department of Agriculture is charged by statute with the duty of protecting consumers against fraudulent advertising and imitations. In this capacity it is our contention that the advertising of yellow oleomargarine with pictures of cattle, dairy barns, and pasture scenes, accompanied by phrases and slogans designed to make the consumer believe oleomargarine is a dairy product is a direct, intentional, and flagrant violation of the fraudulent advertising statute.

The United States Food and Drug Administration and the Federal Trade Commission have refused to give attention to this problem or are powerless to cope with it.

The oleomargarine industry has sought and received permission to imitate, synthetically or otherwise, the desirable qualities of butter. They are now imitating the distinctive butter flavor and texture, they are adding synthetic vitamins, they are packaging their product in cartons similar to those used by the butter industry, and have appropriated for themselves the age-old butter trade-mark, its yellow color. These facts indicate that oleomargarine was developed and is being marketed as an imitation product. Historically, this Nation has protected consumers against such deceptive imitation.

For many years new legislation has been designed to provide additional protection against fraud and imitation to the consumer. This policy has been extended to include the interests of the producer and manufacturer.

Now great forces are at work to destroy this protection that we have taken for granted. The oleomargarine industry is asking that the controls against imitation and fraud that now exist in other industries be removed from its particular product.

In the main, other nations of the world maintain the consumer controls that the oleomargarine industry is attempting to avoid in the United States. Some nations maintain a tax or fee as we do. Some enforce the statutes relating to fair trade practices in labeling and advertising. Some require the addition of ingredients that will make identification immediately possible for the consumer. Some have controlled the matter through the establishment of a State monopoly which has removed the opportunity for unreasonable profits. Some do not permit the manufacture of yellow oleomargarine. Still others protect the consumer by rigid and arbitrary price-fixing schedules.

To summarize, the methods vary but other nations do afford consumer protection. We are looking to you and your associates in the Eighty-first Congress for legislation that is in keeping with the principles and traditions of consumer protection.

Sincerely yours,

MILTON H. BUTTON,
Director.

The Rankin Pension Bill

REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. BYRNES of Wisconsin, Mr. Speaker, how much will the Rankin pension bill cost?

The answer to this question is of concern to Members of this House—equal concern to veterans.

After some difficulty, I have managed to obtain an estimate from the Veterans' Administration. They advise me that the total cost, during the next 50 years, will be an approximate $109,000,000,000. Their figures take into consideration, rather generously, the fact that 10 percent of the eligible veterans are not expected to apply and make allowance for the duplication of existing and future disability claims.

It is regrettable, Mr. Speaker, that the committee, and particularly the chairman of the committee, which reported this legislation has done more to confuse the issue of total cost than it has to clarify it.

The printed hearings, for instance, contain not one word concerning the cost of H. R. 2681. The committee report, for instance, contains only a short statement concerning the estimated first

year's cost of two sections of the bill. We have no evidence to show that the committee which reported this measure had any idea as to its total cost.

On the contrary, a week after the bill had been reported, the chairman of the committee took the floor to present the official estimate of the Veterans' Administration. During the course of his remarks, the chairman was careful to minimize the official estimate by a series of statements which fail to stand up when the footnotes to the official estimate, which he failed to insert, are taken into consideration. The next day, the committee issued an analysis of the bill, including the table and its footnotes, but again failed to provide an estimate of total cost.

In view of the chairman's constant attempts to belittle the total cost of this measure, and in view of the committee's reluctance to give us a clear constructive analysis of the cost of this measure, I am including as part of my remarks a clarifying correspondence I have had with the Veterans' Administration, as well as the complete table referred to earlier:

FEBRUARY 25, 1949.

CARL R. GRAY, Jr.
Administrator of Veterans' Affairs,
Veterans' Administration,
Washington, D. C.

Re analysis of H. R. 2681.

DEAR MR. GRAY: In the CONGRESSIONAL RECORD for February 24, on page 1498, there appears a projected cost estimate of H. R. 2681, prepared by your Department. It is included as part of the remarks of Representative JOHN E. RANKIN, chairman of the House Committee on Veterans' Affairs. A copy is enclosed for your information.

I would sincerely appreciate receiving from you the following:

1. A copy of the report of your Administration concerning the projected cost of H. R. 2681 as it was submitted to the House Committee on Veterans' Affairs.

2. An explanation of the factors taken into consideration in arriving at your projected cost estimate.

3. An analysis as to the accuracy of the following remarks of Mr. RANKIN in reference to your cost analysis:

"When you deduct * * * the amount some of these veterans would receive under old-age pension laws in the various States and the amount many of them would be receiving under other veterans' laws for various disabilities, the amount would be reduced far below the estimate of $2,000,000,000 for the year 1980."

"In 1995 the total number of veterans living, it is estimated, will be only 5,810,000."

"The peak cost will be reached in the year 1990 when the cost, it is estimated, will be not more than $4,446,000,000. And this is not taking into consideration the deductions just referred to from State old-age pensions and disability compensation."

"Then let me remind the House again that from these totals must be deducted the amounts that would be paid these men in old-age pensions in the various States, and also the compensations that would be paid to disabled veterans under other pension laws.

4. An estimate of the total cost of the measure for the years 1950 through 2000. This is to establish the accuracy of the following remark of Mr. RANKIN:

"The total cost of this measure will, of course, nowhere approximate the reckless figure of $150,000,000,000 given by the so-called American Veterans' Committee. That exaggerated estimate appears to have been manufactured for propaganda purposes."

5. Any revised estimate or other information pertaining to the projected cost of H. R. 2681.

If the computation of any of the above information which I have requested will seriously delay the forwarding to me of a substantial part of the remainder, I would sincerely appreciate receiving the information requested as it becomes available rather than in its entirety.

Sincerely yours,

JOHN W. BYRNES,
Member of Congress.

MARCH 1, 1949.

Hon. JOHN W. BYRNES,
House of Representatives,
Washington, D. C.

DEAR MR. BYRNES: This is in reply to your letter of February 25, 1949, requesting information concerning estimates of cost furnished the Committee on Veterans' Affairs by the Veterans' Administration on H. R. 2681, Eighty-first Congress, "A bill to provide pensions for veterans of World War I and World War II based on non-service-connected disability and attained age, and for other purposes," and an analysis as to the accuracy of certain statements made by the chairman, Committee on Veterans' Affairs, page 1498, CONGRESSIONAL RECORD, February 24, 1949.

The information requested is furnished in the categorical form presented in your letter.

"1. A copy of the report of your Administration concerning the projected cost of H. R. 2681 as it was submitted to the House Committee on Veterans' Affairs."

Comment: The projected cost of H. R. 2681, as furnished the committee, is identical as to dollar amounts with the tabulation (including footnotes) of estimated cost appearing on the reverse side of the enclosed committee print. In this connection reference is made to columns 2 and 4 of the printed tabulation which has to do with the number of veterans. It should be stated for the year 1950 the figures 69,700 veterans of World War I and 5,300 veterans of World War II represent the estimated number of veterans affected in the estimated cost. However, the remaining figures as to numbers of veterans in columns 2 and 4 represent the estimated number of eligible living veterans and not the estimated number of veterans affected in the estimated cost given. In other words, columns 2 and 4 were added by the committee from previous statements furnished them, but the Veterans' Administration gave the estimated numbers affected only for the year 1950. The numbers of veterans, therefore, appearing in columns 2 and 4, with the exception of the year 1950, would be reduced by the factors indicated in the footnotes to the table.

"2. An explanation of the factors taken into consideration in arriving at your projected cost estimate."

Comment: For an explanation of the factors taken into consideration in estimating the cost, reference is made to the footnotes following the printed table of estimated cost.

"3. An analysis as to the accuracy of the following remarks of Mr. RANKIN in reference to your cost analysis."

First quoted paragraph reads as follows:

"When you deduct * * * the amount some of these veterans would receive under old-age pension laws in the various States and the amount many of them would be receiving under other veterans' laws for various disabilities, the amount would be reduced far below the estimate of $2,000,000,000 for the year 1980."

Comment: The cost estimate includes only the additional benefits provided by H. R. 2681 in excess of the estimated compensation, pension and retirement pay payable by the Veterans' Administration under existing legislation.

Second quoted paragraph reads as follows:

"In 1995 the total number of veterans living, it is estimated, will be only 5,810,000."

Comment: The figure of 5,810,000 is the estimated total living veterans age 65 or more with sufficient service to be entitled under proposed legislation (total estimated living veterans in 1995 is approximately 11,979,000). Some of the 18,800,000 veterans referred to would not live to age 65 to benefit under proposed legislation, others would benefit at one time or another yet pass away before 1995, others would lack requisite service for entitlement, and still others would probably elect to benefit under other legislation instead of under proposed legislation.

Third quoted paragraph reads as follows:

"The peak cost will be reached in the year 1990 * * * when the cost, it is estimated, will be not more than $4,446,000,000. And this is not taking into consideration the deductions just referred to from State old-age pensions and disability compensation."

Comment: As indicated above, the cost estimate—approximately $4,446,000,000 in 1990—has already taken into consideration the deductions for disability compensation, but not any deductions from State old-age pensions.

Fourth quoted paragraph reads as follows:

"Then let me remind the House again that from these totals must be deducted the amounts that would be paid these men in old-age pensions in the various States, and also the compensations that would be paid to disabled veterans under other veterans' laws."

Comment: As indicated above, these totals have already had the deductions made for the compensations or pensions that would be paid to disabled veterans by the Veterans' Administration under other laws.

"4. An estimate of the total cost of the measure for the years 1950 through 2000. This is to establish the accuracy of the following remarks of Mr. RANKIN: 'The total cost of this measure will, of course, nowhere nearly approximate * * * the reckless figure of $150,000,000,000 given by the so-called American Veterans Committee. That exaggerated estimate appears to have been manufactured for propaganda purposes'."

Comment: It is not possible in such limited time to prepare an exact estimate of cost of proposed measure for the years 1950 through 2000. However, the sum of the cost for each fifth year as printed on page 1530 of the CONGRESSIONAL RECORD for February 24, 1949, if multiplied by five would give the approximate magnitude of the total cost from 1950 through 2000. Such calculations would result in an approximate cost of $109,000,000,000. It would therefore appear that the quoted figure of $150,000,000,000, as the total cost of the measure, is high.

"5. Any revised estimate or other information pertaining to the projected cost of H. R. 2681."

Comment: No revisable estimate or other information, except as follows, is available.

With reference to sections 3 and 6 of the bill which would liberalize the income limitation for death pension purposes, World War I and World War II, and as to World War II death pension, remove the requirement of service-connected disability at time of death, no estimate of cost has been made.

Sincerely yours,

CARL R. GRAY, Jr.,
Administrator.

Estimated cost

[Prepared by Veterans' Administration]

Year [1]	World War I		World War II		Total cost
	Number of veterans	Cost	Number of veterans	Cost	
1950	69,709	$56,813,000	5,300	$5,598,000	$62,411,000
1955	413,069	330,697,899	11,246	9,296,234	339,994,133
1960	1,270,920	993,832,644	29,271	25,089,622	1,018,922,266
1965	1,915,653	1,472,603,256	132,889	109,775,942	1,582,379,198
1970	1,350,804	1,004,418,166	345,619	280,880,444	1,285,298,610
1975	771,192	555,336,245	970,026	779,337,251	1,334,673,496
1980	343,248	246,495,914	1,919,059	1,508,131,052	1,754,626,966
1985	110,617	79,437,406	3,661,047	2,844,203,127	2,923,640,533
1990	23,240	16,688,484	5,757,437	4,429,355,363	4,446,043,847
1995	2,567	1,842,343	5,807,926	4,389,880,795	4,391,723,138
2000			3,694,425	2,697,919,441	2,697,919,441

[1] Figures are for the year specified and not 5-year totals.

NOTES

1. This estimate includes cost of:
   (a) Cases of veterans age 65 or more not otherwise entitled.
   (b) Increase in payments to veterans age 65 or more entitled under existing legislation to non-service-connected pension.
   (c) Increase in payments to veterans age 65 or more entitled under existing legislation to service-connected compensation.
   (d) Payments to those veterans in need of regular aid and attendance.
2. This estimate is based upon the following assumptions. (These assumptions cannot be proved, but are believed most valid as a basis for presenting a long-range estimate):
   (a) The number and age distribution of living veterans is based upon official Veterans' Administration estimated living veterans.
   (b) Data in 1948 revealed that of the estimated living World War I veterans aged 75 or more, 26 percent of them were on the non-service-connected pension rolls; aged 70 to 74, 20 percent on such rolls; aged 65 to 69, 17 percent; and progressively lower percents at lower age groups. It is assumed that basically the same percents of the living in each age group will, for both World War I and II, be entitled at future dates under existing legislation.
   (c) Based upon World War I and World War II history to date, it is assumed that 8 percent of the living World War I veterans, and 10.5 percent of the living World War II veterans will be on the service-connected compensation rolls at future dates, and their age distribution will be the same as that for all living veterans of that war.
   (d) It is assumed that 7 percent of the World War I veterans on the non-service-connected rolls will be entitled to the $120 rate for regular aid and attendance. It is assumed that by 1975 the World War II proportion so entitled will also be 7 percent, with lower percents so entitled in earlier years.
   (e) It is assumed that because of an unusually high degree of patriotic feeling, or because of unwillingness to accept a gratuity, or because of lack of knowledge of their entitlement, that at all times, 10 percent of the eligible veterans will not apply for nor receive any benefit to which they would be entitled under proposed legislation

The Farmer and the Planned Economy

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article appearing in Human Events on February 23, 1949, written by Mr. James A. McConnell, a farmer of up-State New York, who is general manager of the Cooperative Grange-League-Federation, Inc.:

THE FARMER AND THE PLANNED ECONOMY

(By James A. McConnell)

Out on the farms, we hear the echoes of a rumbling debate in Congress. One group of legislators is for price supports at straight 90 percent of parity. Another is for a flexible system of price supports at a lower range. All of this is sharpened by the recent breaks in the commodity markets. But the real question is far broader than merely the size or range of price support for a given crop.

After World War I, beginning in 1920, the bottom fell out of prices and the farmers of this country slid down into a nightmare of distress and bankruptcy. Nor was that the first such experience. They had been through it three times before, each time following a great war. Deflation invariably hits the farmer first and hardest.

When World War II broke out, recollection of the last postwar agricultural trouble was fresh in mind. So when the Government again called upon the farmer for all-out production, Congress took pains to assure him of stop-loss price supports which should be in force for at least 2 years after the war.

Moreover, the Government arbitrarily held food prices down, during the war, at the same time subsidizing consumers. So the wartime origin of price supports seemed to have double-barrelled justification. Then, too, people say that we can't afford to jeopardize the national food supply by allowing unduly low prices to discourage production.

By last year the policy had gone beyond a mere matter of wartime or postwar insurance. Farmers looked about the world and noted the system of subsidies building up on all sides. The really efficient producers saw themselves being penalized by economic arrangements that put a premium on inefficiency and on curtailed production. They had seen labor and business and industry beginning to orient themselves within a kind of socialistic system—large groups even voting, time after time, for more of the same. And now the mass of farmers, too, had enjoyed a real taste of manna from Washington. It tasted as good to them as to others.

To make a long story short, the farmer—for all his individuality—began to get thoroughly entangled in the system of bureaucratic dispensation, whereby the Government extracts wealth from the people and redistributes it to producing groups in accordance with plans and formulas of its own devising. It is the managed economy, so-called, but it is actually modern camouflage for a despotic system as old as time.

II

It is only fair to note that the farmer's part in this picture is not entirely of his own choosing. He is now in a small minority.

There are some five and one-half million farm operators, all told, in this country today, against 16,000,000 labor-union members, for instance. There are some 2,000,000 heavily producing, efficiently operated farms which produce about 85 percent of the marketable food of the Nation. There are some three and a half million other farms. So the producers of food for market are really a minority within a minority. Labor and industry and other large groups rule the roost and the farmer figures that he has to come along, if he is to survive.

But the very fact of his minority position gives the farmer something to ponder, as he sees himself being drawn into a socialistic system. And the American farmer is doing considerable thinking right now. He is slowly discovering certain facts about the controlled economy which rightly make him dubious, notwithstanding the temporary purse appeal of these hand-outs from Washington.

The farmer has discovered, among other things, that governmentally planned economy is always the enemy of the efficient producers. Its efforts, under pressure of the greater numbers, usually penalize the efficient; are usually exerted in behalf of the less efficient. The dictators of the managed economy would certainly gage their decisions with an eye to the three and a half million rather than the 2,000,000.

The managed economy is a system governed by political pressures rather than by the rational influences of free markets. Government officials are responsive to pressure groups. Their decisions must be trimmed at all times to please the largest group or the heaviest pressures. With his farm business at the mercy of pressure-group politicians, the efficient farmer finds himself stripped of the rightful advantage given by skill and good management. One recalls that the Russian despots liquidated their best farmers and started over.

By this same token the bureaucratic system itself is inefficient. The official, or the planning committee, can never act with as good judgment as comes from the composite decision of millions of farmers, expressed through free markets. There, mistakes of judgment constantly occur, but are almost instantly corrected. When the bureaucrat makes a mistake it may take months and an overwhelming protest sentiment to get it corrected. The controlled market is often deliberately disadvantageous to the producer, because consumers have more votes.

Eventually it becomes necessary for the bureaucrats to employ coercion against producers. In every piece of legislation brought forward to implement a system of this kind, the coercive powers of government are written prominently into it. The police state is never more than one jump behind the planned economy.

III

The managed or controlled economy is the enemy, not only of all independent production, but also of all private handling of either crops or supplies by the individual farmer. If the farmer can dispose of his own products as he sees fit, or can buy his own supplies where and as he chooses, the principle of central control cannot be maintained. So the bureaucrats take the farmer's product, do all the storing and handling of it and allocate machinery, feed, fertilizer, and supplies. That's substantially the way it works today in democratic England.

The moment central control is substituted for the decisions of the free market, regulation of production becomes a clumsy alternation of stop and go. One moment the bureaucrat uses the taxing power to offer a subsidy to stimulate production. The next moment he is employing the coercive powers of government to put the brakes on production. Either way the people foot the bill.

There simply is no substitute for free prices as the efficient regulator of production and consumption. Rising prices automatically stimulate production and curtail consumption. When prices fall, the effect is just the opposite. A great function of the price mechanism is to guide production and consumption. Subsidies destroy this function. Then the planners step in and substitute their own judgment, using more subsidies and coercion to carry out their will. Meanwhile, the real equating of supply and demand goes on in black markets. In every regimented economy the black market is standard equipment.

Can American farmers, on purely economic grounds, afford a system that is governed, in the last analysis, by pressure groups? Agriculture has only 19 percent of the population now and its relative position is declining. Great industrial and labor groups are rapidly becoming dominant. Already the farmer is in danger of a permanently tighter squeeze on the costs side than ever before. In free markets he can fairly well protect himself, in normal times.

But under a Government-controlled system, the farmer is bound, by reason of his minority status, to get the short end of the stick.

IV

We who live in the Northeast are aware that this minority position becomes double precarious for farmers in our region. We are only a segment of a minority. Northeastern farmers do have the great advantage of nearness to big markets. In free and open competition that fact alone is a strong bulwark. But with a Government-controlled agriculture, the location advantage of northeastern farms could quickly be wiped out by a readjustment of freight rates and other differentials. And by the same means other regions might just as easily find themselves injured.

But the stakes, East or West, North or South, are higher than the dollar sign. The American farmer for over a century and a half has been one of the truly free men of the world, and it is as such that he has become the most efficient producer of food and fiber in all history.

Our farm tradition is one of independence, of individualism, of unshackled personal and intellectual vigor. This is not a heritage easily come by, nor one to be lightly tossed away under the inspiration of some smart partisan of totalitarian government.

A wonderful measure of individual liberty and of the personal dignity that goes with it have been attained in this country. They represent the fruits of centuries of struggle by our forefathers against despotic systems. We would do well to think long and hard before we yield an inch of this hard-won achievement.

This is the social stake. The moment we allow government to put our economic system under full bureaucratic control, that moment we turn back the clock of progress within our society. The drift toward statism is an easy road, a pleasant one in the early stages, of public hand-outs and promises. And as surely as we follow it, our children's children will be serfs of the state.

Farmers can tolerate minor distortions of the free economy and live with them. Moderate price supports which operate as stop-loss insurance during abnormal readjustment periods—as after a great war—may even steady the ship and be helpful. But if regimentation were fastened upon us as a permanent system it would be intolerable. If we are to have price supports, they should be flexible and moderate. They must not be made the excuse for a system of controlled production, which is the stepping stone to despotism.

For a Mess of Pottage

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted, I am including a newspaper report of a statement I made on November 14, to which some folks who had fooled the farmers with promises took forceful exception.

The truth is it took no prophetic vision to foresee what was going to happen and, in fact, has happened, as appears from the following statement of J. A. Livingston, in the Washington Post of February 11, 1949.

The account of the Burlington (Vt.) Free Press of my warning to Vermont farmers follows:

[From the Burlington (Vt.) Free Press of November 15, 1948]

PLUMLEY WARNS FARMERS TO PUT HOUSE IN ORDER—TELLS WASHINGTON COUNTY GROUP PRICES ARE GOING TO DROP

NORTHFIELD, November 14.—Representative CHARLES A. PLUMLEY last night warned Washington County farmers that there is a growing feeling among nonagricultural groups that "agriculture is largely responsible for high prices." He urged each to "put his house in order against the storm that is brewing."

Representative PLUMLEY was speaking at an informal meeting of farmers. He said he was unable to take so optimistic a view of the immediate future for farmers as does Senator GEORGE D. AIKEN.

SAYS PRICE TO FALL

Figures submitted to him as a member of the Committee on Appropriations for Agriculture, he said, indicate that "farm prices are headed downward from 20 to 40 percent, incidentally involving the lowering of the parity level now flexible between 60 and 90."

The proposed Truman program, he continued, "contemplates amendments to the Aiken-Hope bill which will have it hardly recognizable by its authors, and will do agriculture no good."

ISSUES WARNING

"Those folks who voted for Truman in order to enjoy present prosperity are liable to realize that subsidies and support for prices come out of the people who are already bled white and cannot always supply the wherewithal. That day is not so far off as some think it is."

Representative PLUMLEY said, "The nonagricultural groups are already charging that agriculture is largely responsible for high prices, maintained and sustained by the subsidies and supports of which they complain. Right or wrong, if that theory assumes tidal-wave proportions, and it is gaining size and force every day in spite of everything said to the contrary, it will make it necessary for farmers to be very cautious about overextension and overexpansion, to say the least.

"The figures I have examined and accompanying statements definitely show a trend toward a day of reckoning involving the necessity for every wise farmer to put his house in order against the storm that is brewing."

"That is the way I see it," PLUMLEY concluded. "I may be wrong, but I am afraid I am not."

I quote Mr. Livingston's article below:

[From the Washington (D. C.) Post of February 11, 1949]

BOOM SERVED FARMER FIRST, DEFLATION SERVES HIM DITTO

(By J. A. Livingston)

The breaks in wheat, corn, hogs, and other commodity prices make this much clear: The farmer's postwar boom is over. And, as a corollary, his squeeze is on.

Already, seven major agricultural products are down 35 percent from their postwar highs. And even if the decline goes no further, the net income of farmers in 1949—the money farmers will have to spend on tractors, combines, automobiles, electrification, housing, clothing, and other of the gentler things of living—will shrink perhaps 17 percent.

High postwar costs began to close in on farm prosperity last year. Because of bumper crops and high prices, gross farm income was up $900,000,000 to a record high of $35,600,000,000. But farm expenses went up more—from sixteen and nine-tenths to eighteen and two-tenths billion dollars or one and three-tenths billions. Result: Farm operators ended up with $400,000,000 less net income—seventeen and four-tenths billions as against seventeen and eight-tenths.

The rush of selling has carried an important cash crop, such as wheat, as much as 33 percent from its postwar high; steers, 40 percent; cotton, 19 percent. The following table makes clear that the record-breaking cash receipts of 1948 are improbable in 1949:

Product	High price	Recent price	Percent decline
Wheat (bushel)	$3.115	$2.080	33.2
Corn (bushel)	2.808	1.129	59.8
Hogs (hundredweight)	31.200	20.000	35.9
Steers (hundredweight)	36.375	21.500	40.9
Cotton (pound)	.394	.318	19.3
Barley (bushel)	2.755	1.310	52.5
Wool (tops) (pound)	2.015	1.640	18.6

Causes of the declines vary. In corn, lack of storage space caused liquidation. In wheat, most of the 1948 harvest had been sold or borrowed against, so Government support of the market was not heavy. In hogs and cattle, prices had been high—relative to consumer purchasing power. Now, the wholesale price and the retail pocketbook for meat will be in closer alinement and Government support buying is likely to check the drop in cotton.

Prices now prevailing in the cash and future markets for major products are not indicative of what the farmer will receive during 1949. Government support suggests an upswing before the marketing season gets under way—unless, of course, weather is superfavorable, and harvests are unusually big. But at the moment, over-all farm production is expected to be somewhat below last year.

That will squeeze the farmer. For prices will be down, too, and gross farm income could easily shrink 10 percent. To be sure, production costs will be off. A smaller volume of crops and livestock requires less hired manpower, less fuel, and so forth. And, of course, as income slips, farmers will tend to spend less on maintenance. But costs are not likely to drop as fast as gross receipts. Perhaps expenses might be pared to seventeen and five-tenths billions from eighteen and two-tenths. On those assumptions,

here's what agriculture's profit and loss account in 1949 will look like:

	1949	1948	Decline
	Billions	*Billions*	*Percent*
Gross income	$32.0	$35.6	10
Product costs	17.5	18.2	4
Net for farm operators	14.5	17.4	17

Even with that reduction farmers will be relatively well off. This seems likely to be the fourth best farm year dollarwise, surpassed only by the years 1946, 1947, and 1948. Net income will rise to three times 1939 level and twice 1929.

Moreover farmers are still strong financially. Total assets as of January 1 amounted to $130,000,000,000, against which were claims of $5,100,000,000 in mortgage debt and $6,100,000,000 in miscellaneous debt. Thus proprietors' equity amounted to $119,000,000,000 as against $113,000,000,000 on January 1, 1948, and $44,000,000,000 in the beginning of 1940.

The reversal in farm income fits an economic pattern. After the war farm prices went up first and fastest. Now they're going down first and fastest. The resultant squeeze on earnings of farmers is likely to be more severe than the squeeze on industry generally. Because industrial prices didn't go up as fast as farm prices they may not come down as fast either.

The Late James Stuart Douglas

EXTENSION OF REMARKS

OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. PATTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Arizona Daily Star of January 3, 1949:

JAMES S. DOUGLAS DEAD—FATHER OF UNITED STATES DIPLOMAT—PIONEER ARIZONA MINING MAN SUCCUMBS AT HOME IN MONTREAL—SERVED RED CROSS IN FRANCE IN WAR—AMBASSADOR ARRANGES RITES

MONTREAL, January 2.—James Stuart Douglas, 80, father of Lewis W. Douglas, United States Ambassador to Britain, died at his home in Montreal.

James Stuart Douglas was born at Harvey Hill mine, Magantic Township, Quebec, Canada, June 19, 1868. He was a son of Dr. James and Naomi (Douglas) Douglas. His father, a distinguished mining engineer, prominently identified with early copper-mining developments in Arizona and the Southwest, brought his family from Canada to the United States in 1875.

The son attended school at Phoenixville, Pa.; Toronto, Canada, and New York City. He farmed at Manitoba, Canada, until 1889.

MOVES TO BISBEE

James Douglas moved to Bisbee in 1890, intending to farm, but soon turned his attention to mining and became an assayer for the Copper Queen Consolidated Mining Co.

In 1891 he became assayer and timekeeper for the Commercial Mining Co., in Yavapai County, and for 8 years thereafter was superintendent for the same corporation at the Senator Copper Basin and Big Bug mines.

From 1900 to 1909 he was superintendent of the Picacho mine, a Phelps Dodge subsidiary in Sonora, Mexico. This mine produced a considerable tonnage of high-grade gold ore. At the same time he was superintendent of the Montezuma Copper Co. at Nacozari, Sonora, Mexico. There, through his efforts, great improvements were made in mining and metallurgical practice.

RESIDENT OF DOUGLAS

He moved with his family to the border town of Douglas in 1909. Here he maintained his residence until 1938.

Earlier, in 1902, he had organized and become president of the Bank of Bisbee, later holding the same position in the Bank of Douglas, which he also established.

During the Carranza revolution in Mexico in 1913 he was manager of the Cananea Consolidated Copper Co., at Cananea, Sonora, Mexico. The previous year he investigated the development work on mining properties in the Verde mining district of Arizona.

With George E. Tener, of Pittsburgh, and others, he furnished the money for development purposes to the United Verde Extension Mining Co. This acquired ground contiguous to Senator Clark's United Verde copper mine.

MINE PROVED BONANZA

The United Verde Extension Mining Co., of which Douglas remained president from the time of its organization by himself and Louis E. Wicher in 1912, produced more than $150,000,000 in gross copper, gold, and silver values and paid more than $50,000,000 to its stockholders. The mine ceased operations in 1938.

In September 1917, as a dollar-a-year man, Douglas went to France for the American Red Cross to be in charge of stores the Red Cross had throughout France. In recognition of his services to France during World War I he was decorated by the French Government as a chevalier of the Legion of Honor. This decoration was awarded in 1927.

Following his war service, and for years thereafter, Douglas was a close personal friend of Georges Clemenceau, the French wartime Premier, in whose honor the United Verde Extension smelter town in the Verde Valley was named.

BECAME CANADIAN AGAIN

Douglas had received his final papers as an American citizen at Prescott in 1896. When he retired from active business in 1938, he resumed his Canadian citizenship and took up residence in Montreal, where he had lived since.

He was a member of the Episcopal Church. In politics he was a Democrat.

Douglas was married November 11, 1891, to Miss Josephine Leah Williams, daughter of Lewis Williams, metallurgist and superintendent of copper-smelting operations at Bisbee. Mrs Douglas died in 1941.

Mr. Douglas was much more than a miner. He was a banker. He took pride in doing a good job of banking. His banks never borrowed a dime during the depression. When the bank moratorium was declared, he kept his banks open. Not until Governor Moeur threatened to send the National Guard to close them, did he finally close for the period of the bank moratorium.

As his fabulous mine was liquidated, and old age came on, Mr. Douglas closed out his interests in Arizona and retired to Montreal, near his birthplace in the province of Quebec. A year or so ago he returned to Arizona for a visit. And now his son, Lewis, on leave from his duties as ambassador in London, returns to the State of his birth to take a brief rest on his ranch near Sonoita. The homing instinct seems to work toward birthplaces.

Mr. Douglas' personality was unique. He was rough and gruff, but kindly. He would carry his passion for avoiding waste to the point where he saved the envelopes of the letters he received, slit completely open on all sides and then use the backs of the envelopes to write notes to his friends. He would send Christmas greetings in printed form, so they would go at second-class mail rates. At times he would ride the day coach between Tucson and Phoenix, rather than go in a Pullman. "Why should I waste the money," he would remark.

One of the classic stories about him, which he later said was true, and which he was prouder of than any other story, dealt with his long-time right-hand mining executive, George Kingdon. At the time of the story Kingdon was manager of the railroad running between Douglas and Nacozari, Mexico. Mr. Douglas was manager of the Phelps Dodge mine there.

The story tells about how Mr. Douglas was waiting for the train to come in. While he waited, he took a short walk along the tracks and found a stray spike. Picking it up, he walked back to the railroad station. When the train came in from Douglas, George Kingdon was aboard. When he alighted, Mr. Douglas met him, and holding up the spike, said to Kingdon, "See how wastefully you are running this railroad, when you allow a spike to be wasted."

Not to be outdone, Kingdon replied, "Why, boss, I sure am glad you found that spike. I have had six men out on the track for a week looking for it."

Economy and avoidance of all waste was Mr. Douglas' pleasure. He had fun out of it. And that is why he is still called, "Rawhide Jimmy." That means he lacked bailing wire and used rawhide to tie things together. And so as long as the romances of mining in Arizona are told, James S. Douglas, "Rawhide Jimmy," and his fabulous United Verde Extension mine will be a part of them.

What Are We Doing About Cancer?

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement:

WHAT ARE WE DOING ABOUT CANCER?

I. HOW MANY PEOPLE DIE OF CANCER IN THE UNITED STATES?

1. The No. 2 killer of our people in 1947 was cancer.[1]

2. One out of every eight people who died in 1947 died of cancer.[1]

3. Nineteen million, thirty-eight thousand, five hundred people now alive will die of cancer unless new treatments and cures are found.[2]

4. One hundred and eighty-nine thousand eight hundred and eleven persons died of cancer in 1947 in the United States, or 1 out of every 8 deaths.[1]

II. HOW MANY PEOPLE ARE SUFFERING FROM CANCER IN THE UNITED STATES?

1. In 1937 it was estimated that 930,000 people were suffering from cancer and other tumors.[3]

2. About 555,000 people are under treatment for cancer at any one time.[4]

(a) About 325,000 new patients develop cancer each year.[5]

3. About 1 out of every 5 people now alive in the United States will have cancer at some time in his life.[6]

Footnotes at end of speech.

III. WHAT IS BEING DONE TO HELP CANCER SUFFERERS?

1. Only about 1,834 special cancer beds are available in both private and public hospitals in the United States, for the estimated 555,000 patients under treatment.[7]

(a) In contrast with this, 86,429 special beds are available for tuberculosis patients;[8] tuberculosis killed 48,064 people in 1947, while cancer killed 189,811.[1]

2. We have only about 150 cancer-detection clinics, for people with no apparent symptoms, in the United States; or 1 detection clinic to every 935,000 people.[9]

3. We have only about 404 registered cancer treatment and diagnostic clinics, of which 32 are cancer diagnostic (only) clinics in the United States.[9]

(a) This is in contrast with the fact that there are 3,069 counties [10] in the United States, and a large majority of counties should have some type of cancer clinic.

4. There are only 10 public hospitals, having 1,159 beds, which are concerned only with cancer.[11]

IV. HOW MUCH MONEY IS AVAILABLE FOR RESEARCH TO FIND NEW TREATMENTS AND CURES FOR CANCER?

1. About $10,487,000 for research and $8,000,000 for construction of research facilities, divided as follows (appendix I):

(a) Government funds: Congress has appropriated approximately $6,060,000 (exclusive of Atomic Energy Commission figure, which is not available but not exceeding $5,000,000) for cancer research, plus $8,000,000 for construction of research facilities at various institutions, during the fiscal year 1948–49 (appendix I and footnote 12).

Non-Governmental funds: Voluntary agencies spent approximately $4,402,000 (appendix I).

2. This means that we are spending about $55.25 per cancer death annually, or $19.07 per known case.

(a) In contrast, the National Foundation for Infantile Paralysis allotted $1,779,576.81 for research in 1947, or nearly $1,000 per death.[13]

(b) Congress appropriated $29,716,877 for the Department of Agriculture in 1948, for research in the control and cure of plant and animal diseases.[14]

3. In a Nation-wide poll, 82 percent of the people questioned said they believed that $200,000,000 should be spent by the Government for cancer research.[15]

V. HOW MUCH MONEY HAS THE AMERICAN CANCER SOCIETY RAISED FOR EDUCATION AND SERVICE TO CANCER PATIENTS, AND FOR LAY AND PROFESSIONAL EDUCATION IN THIS FIELD?

1. The American Cancer Society and all its State and local divisions raised about $10,021,000 for this purpose in 1948, over and above the amount raised for research.[16]

(a) This is in contrast with $832,862 raised nationally by the society in 1944, and $372,057.17 in 1943, when no funds were allocated to research.[16]

VI. HOW MUCH IS THE GOVERNMENT SPENDING FOR ESTABLISHMENT OF CANCER CLINICS AND SERVICES?

1. The National Cancer Institute, United States Public Health Service, has about $2,500,000 for the year ending July 1, 1949, for grants-in-aid to States for establishment of clinics and services to cancer patients.[12]

(a) This makes a total of about $12,500,000 for service and education in this field, from both voluntary organizations and Government funds, to be spent over a 14-month period.

2. In contrast to this, the United States Public Health Service alone has available for grants-in-aid to States to establish clinics and services—$15,008,507 for control of venereal diseases, and $6,790,000 for tuberculosis control.[14]

Footnotes at end of speech.

(a) Twelve thousand six hundred and seventy-one deaths were attributed to syphilis in 1947 and 48,064 deaths to tuberculosis; but cancer killed 189,811 people in the same year.[1]

VII. HOW DOES THIS COMPARE WITH WHAT WE SPEND ON OTHER THINGS?

1. In contrast with the total of about $10,487,000 which is available from public and private sources, for cancer research:

(a) We spend approximately:

(1) One hundred and sixty-five million dollars for phonograph records.[17]

(2) Two hundred and eighty-seven million two hundred thousand dollars for flowers, seeds, and potted plants.[18]

(3) Eighty-five million dollars in nonvending coin machines (receipts minus pay-off).[18]

(4) Thirty-two million four hundred thousand dollars for veterinary service and purchase of pets.[18]

(5) Sixty million six hundred thousand dollars for monuments and tombstones.[18]

VIII. HOW DO DEATHS FROM CANCER COMPARE WITH DEATHS FROM OTHER DISEASES?

1. The No. 2 killer of the United States is cancer. Only diseases of the heart and arteries cause more deaths.[19]

(a) Nearly four times as many people died of cancer as of tuberculosis in 1947.[19]

(b) Nearly 330 times as many people died of cancer in 1947 as died of infantile paralysis in the same year.[19]

(c) Two and a quarter times as many people died of cancer during World War II as were killed in action in the armed forces.[20]

IX. IS CANCER PRIMARILY A DISEASE OF OLD AGE?

1. No. Of 182,005 deaths in 1946 from cancer and other malignant tumors [1]—

(a) Ninety-two thousand two hundred and ninety-five, or over half, were under 65 years old.

(b) Fifteen thousand five hundred and seventeen, or almost 9 percent, were under 45 years old.

(c) Two thousand seven hundred and twenty-eight, or about 2 percent, were under 25 years old.

X. WHAT ARE THE LEADS IN THE FIELD OF CANCER RESEARCH?

1. There are leads in cancer research in many directions, including:

(a) Uses of radioactive materials, both as methods of treatment and as research tools.

(b) Use of nitrogen mustards in the treatment of leukemia and Hodgkin's disease.

(c) Antibiotic substances and chemical compounds which affect cancer tissue.

(d) Use of hormones, particularly estrogens and androgens, in the treatment of several types of cancer.

(e) Study of nutrition.

(f) Improved methods of surgery, new methods in the use of X-ray, and many other specific studies.

APPENDIX I

FUNDS AVAILABLE FOR CANCER RESEARCH

Government funds:	
1. National Cancer Institute, U. S. Public Health Service for fiscal year 1948–49: [12]	
(a) Intramural research	$2,760,000
(b) Research projects (grants-in-aid)	3,000,000
Total	6,060,000
2. Medical Department, U. S. Army (annually, approximate) [21]	25,000
Total Government funds	*6,805,000
Nongovernmental funds:	
1. American Cancer Society for fiscal year beginning September 1, 1948,[16]	$3,200,000
2. Damon Runyon Memorial Fund (for 1948) [22]	702,000
3. Other voluntary agencies throughout the country, annually, amount [16]	500,000
Total nongovernmental funds	4,402,000
Total all funds (approximate)	10,487,000

Footnotes at end of speech.

*Exclusive of Atomic Energy Commission figure, which is not available, but not exceeding $5,000,000.

[1] U. S. Bureau of Vital Statistics (1 out of 7.61 in 1947; 1 out of 7.66 in 1946).

[2] 13 percent of the total deaths in 1947 were caused by cancer; 13 percent of 145,000,000 (estimated United States population) is 19,038,500.

The Blizzard of 1949

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my own remarks in the Appendix of the RECORD, I include a report by W. A. Johnson, secretary-treasurer of the Nebraska Stock Growers' Association, on the blizzard of 1949.

Mr. Speaker, western livestock men have been taking it on the chin this winter in more ways than one. There has been a big loss of livestock from the storms. There have been losses from the shrinkage in the cattle. There will still be losses because the calf crop will certainly be diminished. These losses have all hurt, but the big loss comes from the sharp drop in livestock prices. The price of all livestock has been on the skids. The operating costs have not come down with the lowering of prices. They have actually gone up because of the high cost of feed, labor, and other costs.

Mr. Speaker, I would call your attention to the fact that different Government agencies have bought huge amounts of fresh meat from Argentina to be used in Japan and Europe. I would also call your attention to the fact that this country is obligated to take about 150,000,000 pounds of canned meat from Mexico. The Government agencies have not used the powers they now have to prevent a disastrous price decline in all livestock.

When the story is finally told the winter of 1948–49 may turn out to be the period of the fastest reversal of agricultural good times in our history.

The report follows:

THE BLIZZARD OF 1949

(By W. A. Johnson, secretary-treasurer, the Nebraska Stock Growers Association, Alliance, Nebr.)

The blizzard of 1949 will long be remembered as the worst storm to hit Nebraska. Many people have called this blizzard the State's greatest catastrophe. Seldom, if ever, has such a storm played such havoc with the economy of a great livestock-producing State.

Realizing the inadequacy of individuals, counties, and even the State to meet such an emergency, the office of the Nebraska Stock Growers Association spent several days appealing to the Governor, Senators, Congressmen, stockyard companies, and many others for immediate help for ranchers. It was emphasized over and over that the problem was too big for any county or State to handle—that it needed national attention on a big scale.

During many telephone conversations, taking hours and hours, the association stated that it viewed the situation as extremely grave and felt that it should be turned over to the Army in order that all available equipment be rushed into the ranching areas as quickly as possible to open blocked roads and to open ranch trails—in fact to cut a checkerboard of life-lines through Nebraska's snowbound cattle country—to avert a major catastrophe for the State.

The association was calling for speed and more speed when President Truman directed the Army to take over and to send "all-out" aid to the disaster area. General Pick was placed in command to head the Fifth Army operations and "Disaster Operations Snowbound" became a reality.

Immediately an army of bulldozer equipment, operators, truckdrivers and mechanics began moving into the snow-blocked cattle country of Nebraska to assist in every way possible to avert a calamity from reaching tragic proportions.

Operations Snowbound has moved ahead rapidly and hundreds of miles of roads and trails have been opened, including trails to haystacks and trails for moving cattle, making it possible to provide thousands of cattle with feed. Ranchers have been guiding the tractor operations to the area where the cattle are and then the crew opens paths for the cattle and to the sources of feed.

Tractors, bulldozer equipment, of all types and sizes, moved in massed assault in every direction across Nebraska's cattle country, battling one of the worst winters in history.

Death losses which, as measured by the direct effect of the original storm, were fairly light, are mounting daily. But still more serious is the increase in the potential loss caused by subsequent storms. Today the primary question is not: "How great has the livestock toll been?" but rather, "What will be the final loss?" Ranchers frankly fear a serious cut in the spring calf crop.

Usually the effects of a catastrophe are exaggerated at the outset, but in this case, the situation became steadily worse as one costly storm followed another. The storms and repeat storms, the frigid days and nights continuing week after week, means the loss of dollars upon dollars in economic livestock operating units.

The loss to stockmen not only comes from the thousands of dead cattle but the effect of the blizzards will be even more devastating in the terrific shrinkage of livestock, the weakened condition, and resultant disease and death. No amount of money can repay the stockman for the swath these storms have made in his herd.

People can count on a general effect on the industry, an effect that cannot be measured until the spring thaws reveal the number of cattle now under drifts and the number of cattle that will make it through the winter after suffering a heavy shrinkage and weakened condition.

The seriousness of the situation emphasizes a fact that is not often appreciated by the general public. The business of livestock production is hazardous. A man may spend a lifetime of work and investment, improving his product and making his operations the most efficient possible; only to have all of his accomplishments virtually wiped out by the vagaries of nature. At the same time, the stockman has little control over the market for his product—as has been demonstrated the past few months.

Yet, the rancher or the farmer, the feeder, or the breeder, stays at the business year in and year out, taking the good with the bad—cussed and maligned by part of the public when the stockman fights back against anything he believes is aimed at his individualism.

The Fifth Army's Operations Snowbound in the battle of the drifts made wonderful progress. The work of the tough bulldozer has made many snakelike paths to haystacks and erratic cross-country meanderings of trails to ranch homes. These trails have meant life to thousands of stockmen—it meant the saving of thousands of head of livestock. Now, Operations Snowbound is rapidly being terminated in Nebraska, having accomplished its mission of opening up a vast snow-blocked area. It has been a big job, well done—thousands of miles of trails opened by bulldozers to feed supplies and farm and ranch yards and thousands of cattle liberated and given access to feed and water supplies.

Only the efforts of a number of people prevented a major catastrophe. It is almost an impossible feat to give to those men, who fought the blizzards with every tool at hand, through the long hours of blinding snow and freezing cold, the credit to which they are entitled.

Air travel, considered by many as a luxury, proved its worth during the storm. By reason of air travel, ranchers could be notified of the whereabouts of isolated cattle and were able to proceed directly to them to provide feed and water. Telephone operators are to be commended for their splendid work and wholehearted cooperation in meeting many emergencies.

Mercy trips to carry food, supplies, and medicine to isolated individuals were made. At the same time many hundreds of pounds of needed commodities were delivered by weasel, truck, and airplane; to say nothing about the number of sick people who had to be removed by snow-traveling equipment to points where medical aid was available.

The governor of Nebraska and the State legislature are to be commended for their assistance regarding the emergency which existed, and for taking the necessary steps to abridge the emergency until the President declared this is a disaster area and put it in charge of the Fifth Army.

The words of appreciation by the people of Nebraska for Operations Snowbound and for the efforts of the Fifth Army engineers and their personnel are those of praise and credit for having done a good job. Many stockmen are of the opinion that the relief efforts of the Army have saved the country from an otherwise impossible situation with disastrous economic losses. The willingness of officers and other personnel to cooperate fully with local officials in different areas in accomplishing the huge task has been highly complimentary.

In the opinion of the officers and members of the Nebraska Stock Growers Association, the Army under the capable direction of General Pick has done an outstandingly fine job in Nebraska. Its work has been done rapidly and efficiently. When people have been asked for their opinions on Operations Snowbound, it has been a "swell job, we never could have handled the situation without the speedy, efficient, and complete action of Major General Pick and the personnel under his command."

"Voice of America"

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a transcript of a radio broadcast entitled "Living Conditions in the U. S. S. R. Through Norwegian Eyes" over the Voice of America which is typical of the program now being sent out over this station and is a striking contrast to the type program sent out when the radio industries controlled or participated in

the preparation of the program. Mr. George Allen, Director of the Voice of America at this time, has done a commendable job in this respect.

LIVING CONDITIONS IN THE U. S. S. R.—THROUGH NORWEGIAN EYES

NARRATOR. Recently—on February 10 to be exact—the Soviet labor paper Trud strongly attacked a report made by six Norwegian trade-union officials who had visited the U. S. S. R. at the invitation of the Soviet Federation of Trade-Unions. The report was called out of focus, shocking, and slanderous. Equally violent criticism has been heaped upon it by the Norwegian Communist press.

The report which has provoked such heated reaction is a factual eye-witness account of a visit which took place last August and early September. The Norwegian delegation included three union officials, the secretary of the Norwegian Federation of Trade-Unions, the chairman of the Norwegian Chemical Workers' Union, and the secretary of the Norwegian Seaman's Union. In addition there were three representative workers, a seaman, a crane driver, and an iron worker. The editor of the Norwegian labor paper was asked to serve as secretary to the delegation.

According to their report, these seven labor leaders had a very interesting tour, which took them to Moscow, from August 19 to 21, to workers' rest homes in Sochi on the Black Sea for 3 days, to Stalingrad for 2 days, back to Moscow for a week, then to Leningrad, and then home again. The 3 weeks' tour was packed with the usual experiences of official tourists—receptions, visits to sports contests, to the theater, the opera and the ballet, to hospitals and rest centers, and of course numerous visits to factories. Time was also given for sightseeing and window shopping and for conferences with government officials.

In summarizing their impressions, the Norwegian labor leaders naturally commented on the matters of special interest to workers everywhere—union organization and conditions of work, social and cultural benefits, prices and the general standard of living.

The report describes the Russian trade-union organization in these words:

VOICE. "The Soviet trade-union movement is organized on the basis of industrial unions. But the Russian trade unions cannot carry on a wage dispute because the whole wage system is fixed in connection with the state's economic planning. The trade-union organization, therefore, with its great financial resources, concentrates on social, health, and cultural matters."

NARRATOR. With regard to these health and welfare activities, the Norwegian delegation reported that the customary annual vacation is 12 days. Allowances are given for illness, disability, and pregnancy; old-age pensions are paid at a fixed age, 60 for men, 55 for women. Both allowances and pensions are dependent upon seniority. "Together with many other activities," the report states "this serves to bind the workers to certain trades."

And the report continues:

VOICE. "The delegation obtained a very good glimpse into health-resort activities when it visited Sochi and its surroundings. The health resorts, most of them built in the 1930's, were magnificent. The stay usually lasts 28 days and the charge is from 900 to 1,800 rubles. Usually anyone who visits the resort pays 30 percent of this amount, while the rest is paid by the trade-union organization or by the state. The demand for such resorts is, of course, very great and very few are able to enjoy them compared with the total number of wage earners. It is stated that in the last season visits to health resorts amounted to 512,000 and in other vacation resorts to 1,000,000, while the number of trade-union workers is 25,000,000.

NARRATOR. On the subject of wages the Norwegian labor delegation has this to say:

VOICE. "All wage earners are divided into 30 different wage groups according to their work. Within each group there are several wage categories. Thus in the metal industry there are eight categories with a prescribed wage of 1½ rubles in the first, to 4½ rubles in the eighth.

"These are the wages paid for filling a certain norm. The whole wage system is, however, built on the principle of individual piece rates. In addition there are bonuses. The bonus system is highly developed and leads to great differences in pay. At a concern where workers receive an average wage of about 800 rubles a month, wages of about 2,000 to 3,000 rubles are also paid, and some even up to 10,000 to 14,000."

NARRATOR. Consideration of wages naturally leads to a discussion of the general standard of living. How much does the average wage of 800 rubles a month buy? The Norwegian labor leaders noted official prices for bread, macaroni, sugar, meat, eggs, tea, coffee, beer, vodka, clothing, cigarettes and similar commodities. These observations led the delegates to the following conclusion:

VOICE. "If the Norwegian standard of living is set at 100, the Russian standard cannot be set higher than 60."

NARRATOR. In greater detail, the members of the delegation observed that:

VOICE. "Food supplies are now ample so that the greater part of the population surely gets sufficient nourishment by bread, potatoes, and vegetables. But prices on meat and meat products, butter, cheese, fish, canned foods, and so forth are so high compared with wages that only very few can afford to buy such articles. Little is left for clothing and footwear and these are especially expensive. The population seems to be physically fit and sufficiently nourished but poorly dressed and as regards footwear, the situation seems to be exceptionally bad.

"The greatest problem so far as the standard of living is concerned is probably the shortage of houses. Overcrowded houses, old, dilapidated, and badly maintained houses are seen everywhere and not only in war-damaged areas. These bear witness to a housing situation which must be a very important social problem."

NARRATOR. And the report continues:

VOICE. "At present there is no rationing of ordinary consumer goods and shops in cities like Moscow and Leningrad are well supplied. The prices however are high.

"One consequence of these high prices is that an ordinary family cannot live on the husband's earnings alone. Women are employed in labor to an extent which is quite unknown in Norway. They can be seen in great numbers in street and construction work, doing heavy labor at construction sites, and as dock workers and in industry.

"There are of course groups with a high income, which can enjoy quite a solid standard of living. But not the great masses of population. Besides, several of the most-needed consumption articles cannot be obtained in sufficient quantities."

NARRATOR. Another observation was made with regard to taxes. In the U. S. S. R. most all taxes are paid by consumers when they buy goods in the stores.

VOICE. "Direct taxation is low because the big state expenditures are covered by indirect taxation in the form of high prices. Of a total state budget of 420 milliard rubles taxes on industry amount to 100 milliard rubles and sales taxes provide another 280 milliard."

NARRATOR. The delegation followed its analysis of current living conditions with some observations on the general state of recovery in the U. S. S. R. The delegation was greatly impressed by the recovery accomplishments in such cities as Stalingrad and Leningrad. In their own words:

VOICE. "On the whole recovery has been concentrated on production and on the erection of public buildings. As far as we can understand, big results have been achieved in these fields. As an example may be mentioned the large tractor factory at Stalingrad which had been completely razed but which has now been rebuilt with greater production than before. Public buildings, schools, and hospitals have also to a great extent been rebuilt. People live in ruins and very primitive temporary houses, and in Stalingrad even in regular caves and trenches.

"The population has to put up with hard toil and low-living standards during the recovery period. It has no opportunity of demanding a higher standard. Hardly any country exists where the authorities so firmly keep the standard of living low in order to insure quick recovery as in the Soviet Union."

NARRATOR. The final section of the Norwegian trade-unionist's report deals with what the delegates call a "few scattered impressions." With regard to art, the Norwegian labor leaders say:

VOICE. "Little is to be seen of modern art production. Both the public and the artists themselves evidently value more highly Russian and foreign art from the times preceding the First World War. The same applies to architectural style. All these style elements from Russian and foreign architecture often have a pretentious effect. This applies to public structures as well as to living houses. Obviously, this highly increases the costs of building activities. Members of the delegation repeatedly suggested that the Russians should concentrate more on the building of good, simple houses instead of wasting their time in embellishments that enhance the costs and retard house building by perhaps 50 percent. But there was little understanding for such views."

NARRATOR. With regard to productivity, the Norwegian labor leaders say—

VOICE. "Working ability varies immensely. At some places of work accomplishments of the highest order may be discerned. But on the average the output is lower than the ordinary output in a number of Norwegian trades. This is one of the reasons for the frequently fantastic figures cited for accomplishments surpassing the ordinary by the so-called Stakhanov workers.

NARRATOR. With regard to war psychology——

VOICE. "A great fear of war is dominant, and this is in many ways evidenced in the life of the community. The uniformed population is a common feature in the streets and uniformed cadets of 14 and 15 years of age are even to be seen. In many concerns it was forbidden to give information that otherwise would be ordinarily given. Thus, the tractor factory at Stalingrad refused to give figures for the number of workers and the amount of its production. In planes, it is prohibited for the passengers to study the landscape by means of maps."

NARRATOR. With regard to contact with foreigners——

VOICE. "The isolation toward the outer world is dense and thorough. Foreign influence in art and science is discouraged. The Russians endeavor to prove that the honor of the greatest progress in various fields is due to them, that for instance not Edison but a Russian invented the first electric lamp. In the history of the Russian revolution the role played by such oppositionists as Trotsky, has been completely obliterated, and the role of the western Allies in the Second World War has been completely eliminated.

"All relations with foreigners are viewed with deep distrust by the authorities. In

the beginning of 1948 a law was enacted prohibiting Russians from receiving visitors in their homes or calling on foreigners."

NARRATOR. With regard to domestic police——

VOICE. "In addition to the military, the various police bodies are a very prominent feature in the streets. In the big towns they are seen everywhere and in great numbers, at public buildings, in squares, streets, museums, on every subway station, railway station, and even at football games.

"The biggest assembling of military and police was seen by the delegation in Moscow at Zhdanov's funeral. The procession crossed the big square in front of the hotel and up to the Red Square. Behind the casket walked the Polit Bureau of the Communist Party, headed by Stalin and Molotov. On the big square facing the hotel there was not one single civilian but big detachments of soldiers and police. The delegation had a very good view from the hotel but it was forbidden to step out on the balconies, and doors and windows were ordered to be kept closed.

"We know nothing corresponding to this apart from conditions in an occupied country during war. No doubt this can partly be ascribed to the fact that there still are a couple of hundred thousand German PW's in the country."

NARRATOR. In conclusion, the Norwegian delegates warmly praised the individual Russians with whom they had come in contact. They said that practically all were simple and sympathetic people, who contributed powerfully to the belief that if nothing unforeseen occurs, the Soviet Union will gradually attain a more felicitous phase of development than the one existing there today.

Tax Increases

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mobile Register, Mobile, Ala.:

TRUMAN ADMINISTRATION CLAMORS FOR ALL MANNER OF TAX-RAIDING

The Truman administration is striking out in every direction for more taxes of one kind and another.

At the moment the administration is trying to persuade Congress to increase postal rates and social security taxes. It took both these proposals to Capitol Hill at the beginning of this week.

And, of course, the President had already called on Congress for an outright direct tax increase of $4,000,000,000.

The American people are being put on notice by many sources that the tax-raiding involved in the Truman program would hit them hard.

In Cleveland, Ohio, Monday night, Senator ROBERT A. TAFT, Republican, Ohio, estimated that the Truman legislative program would lead to a $50,000,000,000 Federal budget immediately and a $60,000,000,000 budget within 5 years.

Are the American people able to foot an annual tax bill of that enormous size in order for the Truman administration to engage in a lot of folly?

Representative JOSEPH W. MARTIN, Jr., Republican of Massachusetts, leveled recent sharp criticism at the tax treatment the people are receiving.

He said: "We are still paying the burdensome excise taxes at the full wartime rates—25 percent for cable and radio messages, 25 percent for leased wires, 20 percent on telephone messages, 20 percent on electric light bulbs, 20 percent on jewelry and luggage, 10 percent on toilet articles. These are wartime tax rates. * * * They should be rolled back at once to the prewar rates."

That isn't all Mr. MARTIN had to say about taxes.

In view of the fact that the Truman administration is calling for an increase in social security taxes on employees and employers, Mr. MARTIN'S remarks concerning revenue from these taxes should hold more than casual interest.

"Besides the budget receipts," he said, "the Federal Government takes in about $2,000,000,000 a year in old-age pension and retirement taxes.

"Those taxes are not in the budget—but the money is spent as fast as it comes in, for the routine expenses of government—and all the social security fund gets is a Treasury I O U—a special form of Government bond, for the social security trust fund.

"That trust fund now amounts to more than $10,000,000,000—and there is not one penny of cash in it—just Government bonds.

"When funds are needed to pay the pension contracts the money will have to be taken from the people a second time—either in additional taxes or in new forms of Government debt.

"So the social security liabilities will be paid twice by our people—once in the direct pay-roll taxes and a second time in the conversion of the bonds now in the trust fund to make cash available for the pensions."

Mr. MARTIN went on to take this whack at the repeated tax-raiding demands heard in Washington.

"The people get no opportunity to put their own financial houses in order at home, because the Federal tax collector is always standing at the door, for more, more, more."

Mr. MARTIN spoke a mouthful.

The Truman administration is clamoring for more tax money on every hand.

It wants to raise the social security tax rate by 50 percent on employes and employers alike, beginning next July 1, and then, effective next January 1, it wants to double the rate.

Mr. MARTIN says his view is that "we already are skimming off too much of the national income for Federal taxes," and many an overburdened taxpayer must feel the same way about it.

But there is no sign that the Truman administration shares that view.

What Will the Pacific Northwest Do?

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Capital Journal, Salem, Oreg.:

WHAT WILL THE PACIFIC NORTHWEST DO?

The battle is on to decide whether or not Pacific Northwest resources will be laced into the strait-jacket of Federal bureaucracy: Will a Columbia Valley Authority be established?

The position of the Capital Journal has been made repeatedly clear on this question of the moment. This newspaper fears big government and the bungling bureaucracy that goes with it. It believes in the Jeffersonian theory of delegating only as few powers to the Federal Government as is possible.

This reasoning is based on the theory that what eventually destroys rights and liberties is an all-powerful national body. Each power relinquished by a State or region to the Federal authorities is one more added to the colossus of big government.

In this connection, it is to the point to quote Thomas Jefferson:

"What has destroyed liberty and the rights of man in every government which has existed under the sun?

"The generalizing and concentrating of all cares and power into one body, no matter whether the autocrats of Russia or France or the aristocrats of a Venetian senate."

The best intentions of a federal power can break down through the years so that chaos and incompetence take the place of the grandiose promises to come originally from the paternal government.

While realizing what a supergovernmental control means in the long run, the Pacific Northwest cannot spend its time throwing rocks at the idea of a CVA. An alternative regional program, administered and controlled in the Pacific Northwest, must be offered—or a CVA is inevitable.

This is the responsibility of the moment in our region. The leadership can be found in one of several places, including either one of the governors of the States of Oregon or Washington.

Will the Pacific Northwest respond to the challenge and threat of a CVA with a constructive, regionally operated program? Or will this area submit to a growing colossus of big government?

Russia Again

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a brief article which I wrote several days ago for the newspapers of my congressional district, under the column Congressional Sidelights, which may prove of interest to others. The article follows:

RUSSIA AGAIN

News was permitted to pass the iron curtain of Russia this week to the effect that Anna Louise Strong, the American writer who embraced communism sometime ago and has spent the last several years in Moscow, has been arrested by the Russian Government as a spy. There is more behind this, I am sure, than the brief news article discloses.

I met Anna Louise Strong in the American Embassy at Moscow in the early fall of 1945. My committee had just arrived in Moscow. The American Embassy officials advised us that the foreign correspondents in Moscow would like an interview, at a press conference. As chairman of that committee, I agreed to this interview. We had scarcely gotten seated in the conference room when an

American newspaperman, whom I had known in Washington, came up and whispered to me to be on the alert. That a number of these members of the press there were pro-Communists. He particularly warned me against Miss Strong, telling me that while she was a native American, she was, in fact, a Communist. And, therefore, I should be careful in answering her questions. Miss Strong demonstrated, by her line of conversation, that she was thoroughly sold on communism. In fact, she has made repeated trips back to America since that time to try to spread the doctrine of communism.

With the knowledge that I have of Miss Strong and of the Russian Government, this arrest of her by the Russian Government is proof to me of the doctrine which I have been preaching since my stay in and study of conditions in Russia more than 3 years ago. And, that is this: Russia preaches but does not practice communism. Communism is a front for the present Russian dictatorship government, just as fascism was a front for Hitler's dictatorship of Germany. Russia is one nation that does not practice communism. Communism is more in the nature of an idealism, a religion with a real Communist. Genuine Communists are crusaders. There are more sincere Communists in France or China, for instance, than in Russia. Russia is a police state whose citizens are taught communism but are not permitted to practice it extensively.

Louise Strong was an idealist. She believed in communism, she believed in the communism of Marx and Lenin. Evidently, she realized that her faith in communism and in Russia was being betrayed. Being an idealist, a crusader who was willing to fight for her ideals, she ran into trouble with Mr. Stalin's politburo. Mr. Stalin preached communism but failed to practice it. Hence, Anna Louise Strong has learned what other idealists and crusaders have learned when they came face to face with the Government of Russia. That, if you believe in practicing communism as well as preaching it, you will soon find yourself the victim of the secret police of a great police state.

Social Security

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication:

Hon. FOSTER FURCOLO,
Washington, D. C.

DEAR CONGRESSMAN FURCOLO: We respectfully urge you to place in the CONGRESSIONAL RECORD certain statements that we believe to be the foundation for old-age retirement and America's program of security for everyone.

We believe that individual rights should be checked with the United States Constitution and that all Government issues concerning problems from the cradle to the grave, covered by income taxes beneficial to the health, relief, insurance, retirement, pensions of the aged, blind, veterans, disabled, professionals, industry, business, labor, unemployed, and 165,000 systems as shown by the United States census report.

We believe that all issues present or future concerning the above-listed may be handled as one unit and that we the people as a whole may have the same security of equal rights.

The Declaration of Independence tells us that governments were instituted to secure these rights. We believe:

1. The Social Security Act should be amended by changing the name to America's Security Act, and the obligation should be made national without depending upon the State legislature or any State administration.

2. Financial security and rights of the people are not matters of charity. The aged are among those who made America the great country it is today. They helped create the high standard we enjoy in the United States today. The fact that the young people will have economic security is a debt this country owes to many of the people who today are the aged. That is why the aged themselves must have security as a matter of right and not as charity.

3. Security should not be based on need or a person's resources, because everyone is tax collected for protection from the cradle to the grave.

4. All relief, assistance, insurance, retirements and pensions to become equal and constitutional must come under the same name and security.

5. All individual security which has been ruled by the United States Supreme Court to be a national obligation should be paid direct from Washington to eliminate overhead costs of State and local governments. This will help make the plan become self-supporting in the near future, will save double taxation and reduce all taxation and the many campaigns of the heart, cancer, Red Cross, Community Chest and other drives.

6. Every person wants to be independent. Funds that were provided to relieve want and fear have not been used for that purpose but have been used to provide jobs. Under the States handling grants are made and then taken away overnight, but the income tax doesn't stop.

7. Privacy guaranteed by the Constitution is violated when bank accounts or savings are gone into or other attempts are made to restrict ownership of property. Relatives are questioned and threats have been made of court proceedings if relatives would not help provide support. This has been true even where both the applicant and the relative were paying income tax. Case workers and investigators spreading the fear of charity, welfare, and pauperism and every other means deprive all the people of equal rights. As a result, many thousands who have never applied for their protection are entitled to back pay or a return of income taxes collected.

8. Under the first amendment of the United States Constitution, the States and local governments have obstructed justice due individuals.

9. The above declared rights are the basis for which governments were instituted, as we know from the Declaration of Independence.

The above statements are subscribed to by Dr. Ralph H. Clark, president, Northampton, Mass.; Mrs. Lena Purnell, trustee, Amherst, Mass.; Mrs. Rossana C. Faulkner, director, Springfield, Mass.; Mr. and Mrs. Fred Farr, directors, Holyoke, Mass.; Mr. and Mrs. Eugene O. Lampron, directors, Northampton, Mass.; Mr. Chich West, national organizer (blind), Palmer and Holyoke, Mass.; Mr. George H. Douglass, treasurer and director, Springfield, Mass.; Mr. and Mrs. Thomas A. DellaPenna, national organizer, Holyoke, Mass.; Mr. and Mrs. Claude A. Blair, chairman on State and national affairs, Springfield, Mass.

Veterans' Hospital Construction Program Endorsed by Veterans of Foreign Wars

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. SADOWSKI. Mr. Speaker, recently the Veterans' Administration announced the cancellation of the construction of 16,000 veterans' hospital beds which the VA had previously recommended to be constructed and which recommendation had been approved by the Federal Board of Hospitalization, the Director of the Bureau of the Budget, and the President of the United States. Now, the order for cancellation adversely affects the construction program in 18 or 20 States and if the order stands it will mean that badly disabled veterans in need of hospitalization cannot receive hospital care from their Government.

The State of Michigan particularly will be hard hit. We are desperately in need of facilities to take care of tubercular and mental cases. I am very pleased to see that the National Welfare and Service Committee of the Veterans of Foreign Wars has full cognizance of this situation and has unanimously passed a resolution on February 18, 1949, at a meeting held in Washington requesting that the cancellation order be rescinded.

The same selfish groups that tried so hard to sabotage the veterans hospital program after World War I are active again peddling misinformation and evidently they have been successful in reaching the President of the United States. I submit, Mr. Speaker, that the veterans' hospital construction program was gone into very thoroughly, and was approved after full hearings and careful deliberations. Both the House and the Senate approved the program, and likewise, as I have previously stated, the construction program was approved by the Federal Board of Hospitalization, the Bureau of the Budget, the Veterans' Administration, and the President of the United States.

We have made a solemn pledge to the veterans to take care of them when they are sick or disabled. This pledge must be kept. At the national convention, the Democratic Party had come out for a broad and generous program to give hospitalization and medical assistance to all of the citizens who are in need, and then 6 months later the VA recommends the cancellation of the veterans' hospital construction program. Does this make any sense? Let us smoke out these boys who are always so eager to balance the budget by taking it out of the hides of the veterans. These same budget balancers never say a word when it comes to dumping billions of dollars into Europe and Asia as they have done in the last couple of years and as they intend to do in this session of Congress. Our first obligation is to the citizens of our country, and particularly to our veterans who hold a

unique and warm spot in the hearts of our people, and our people will never wish to see a man or woman, who has served our country in the hour of need, be compelled to beg for hospitalization or medical attention.

I wish to include the resolution adopted by the Veterans of Foreign Wars as a part of my remarks. It follows:

Whereas the Administrator of Veterans' Affairs has announced the approval by the President of the United States, of a reduction of the veterans' hospital-construction program to the extent of 16,000 beds located in various sections of the United States; and

Whereas all of these beds were found to be needed and were recommended by the Veterans' Administration after a thorough study of the entire country; and

Whereas the previous recommendations of the Veterans' Administration for the construction of these beds received the approval of the Federal Board of Hospitalization, the Bureau of the Budget, and the President of the United States; and

Whereas there is even a greater need for these beds today than there was at the time they were recommended and approved by the United States Government officials; and

Whereas it is impossible in most sections of the country to secure adequate hospitalization for the veterans now seriously ill and needing hospital care; and

Whereas it is our opinion that the 16,000 beds recently eliminated from the construction program and additional beds for veterans in the various sections of the country are greatly needed to insure adequate hospitalization of those men who have offered their lives for our country: Now, therefore, be it

Resolved, That the national welfare and service committee of the Veterans of Foreign Wars of the United States, request and urge the President and the Administrator of Veterans' Affairs to cancel the order recently issued for the elimination of these 16,000 beds; and further that the Administrator of Veterans' Affairs be urged to expedite the construction of these and any other beds required for adequate care of America's disabled veterans; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to the Administrator of Veterans' Affairs, and to appropriate committees and Representatives in the Congress of the United States.

The UN Genocide Convention

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raphael Lemkin:

THE UN GENOCIDE CONVENTION

(By Raphael Lemkin)

On the 9th day of December 1948 the General Assembly of the United Nations in Paris adopted unanimously the convention to outlaw genocide. Shortly thereafter, 21 states, including the United States, signed the convention at a solemn ceremony in the Palais de Chaillot. This action of the United Nations was hailed by the Assembly's president, Dr. Herbert Evatt, as a significant advance in the development of international criminal law. Prompt ratification of the convention by the parliaments of the world was urged by many of the delegates.

Genocide is both a new name coined by the author from the Greek "genos" meaning tribe or race and the Latin "caedere," to kill, and a new legal formulation for the ancient crime of mass annihilation of religious, racial, national, and ethnical groups.

History is full of genocide cases. The destruction of Carthage, the attempt to destroy the early Christians by the Romans, the massacre of the Slavs by the Teutonic knights, the pogroms of the Christians in the Balkans in the nineteenth century, the murder of more than a million Armenians in the First World War, and the destruction of more than a million Moslems in 1947 in India are a few examples. In the last war, more than 3,000,000 Poles, a great number of Czechs, Yugolslavs, more than 6,000,000 Jews, and almost all Gypsies were destroyed by the Nazis.

The Nuremberg Tribunal dealt with this problem, but in its judgment took rather a restricted stand. Only crimes committed in connection with or during an aggressive war were punished. The Tribunal failed to give a legal formulation for the crime of genocide and to establish a precedent for a new international crime applicable in war and peace. Therefore, the United Nations had to take the initiative in declaring genocide an international crime, and in establishing its legal structure so that it may be applicable not only in relations between an occupant and a defeated enemy, but also in normal conditions among sovereign states.

On the 11th of December in 1946, the General Assembly adopted unanimously a resolution sponsored by Cuba, India, and Panama, declaring genocide an international crime and calling upon the United Nations to enact an international convention for the prevention and punishment of this crime. The United States delegation took a leading part in the work on this resolution. Mr. Adlai Stevenson of the United States delegation moved for the inclusion of the genocide issue on the agenda of the Assembly and Mr. Charles Fahy served as rapporteur of the subcommittee on genocide.

According to this resolution, a draft convention of genocide was prepared by the Secretary-General of the UN with the assistance of three experts in international and criminal law and then after submission and discussion by various organs and by the 1947 Assembly, this draft was revised by a special subcommittee of the Economic and Social Council under the chairmanship of the United States delegate, John Maktos. This draft was again discussed by the Economic and Social Council in July and August of 1948 in Geneva and then for more than 2 months in the Legal Committee of the Assembly in Paris, where again the United States delegation headed by Mr. Ernest Gross played an important role in the final formulation of the Convention.

DEFINITION

Genocide is defined in Article II of the Convention in the following manner:

In the present Convention, genocide means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such:

(a) Killing members of the group;

(b) Causing serious bodily or mental harm to members of this group;

(c) Deliberately inflicting on the group, conditions of life calculated to bring about its physical destruction in whole or in part;

(d) Imposing measures intended to prevent births within the group;

(e) Forcibly transferring children of the group to another group.

This article consists of a general part which defines intent and enumerates the groups protected and a second part which enumerates the specific acts used for the commission of genocide.

The Genocide Convention deals with crime and, therefore, the general principles of criminal law apply. In criminal law the intent is of paramount importance. Article II requires that intent should be a specific one, namely, to destroy a racial, religious, or national group as such in whole or in part. It is not enough to kill persons belonging to a different race or religion, but these murders must be committed as a part of a plan to destroy the given groups. For example, those Turks who participated in annihilation of 1,200,000 Armenians are guilty of genocide because they acted with the intent to destroy the Armenian Nation.

Every act described in article II of the Convention must be read in conjunction with and interpreted in the light of the specific intent to destroy the group. In particular, this applies to the killings (point a) and to the mutilations and mental disintegration (point b) as caused by imposing intoxicants (as the Japanese did in China). Point (c) of article II deals in a general manner with such conditions as were prevailing in concentration camps or in deportation procedures when people were transported in winter in unheated cattle cars and died or were mutilated on the way. Point (d) deals with sterilizations or compulsory abortions. It should not be confused with birth-control measures undertaken in certain societies with the intent to raise the economic or health standards of the population. Obviously, in this last case, the intent is not to destroy. Point (e) deals with stealing of children such as practiced in the Middle Ages against families of heretics or on Christian populations in the Balkans in the nineteenth century or by the Nazis in the last war. Last year the UN Special Committee for the Balkans received a charge of genocide from the Greek Government against guerrillas who were accused of stealing children from villages in Greece.

The above analysis shows that every act of genocide must be interpreted in the light of a specific intent to destroy a nation, a race, or a religious group as such. Where such specific intent is lacking there is no genocide. Lynchings obviously are not within the scope of genocide because of lack of specific intent to destroy the respective group.

It was agreed that legal intervention must not come too late after great and irreparable damage has been done. Therefore, article III provides that attempt or conspiracy to commit genocide or direct and public incitement to genocide is also punishable.

IMPLEMENTATION

The authors of this Convention were cognizant of the fact that the process of implementation should be moderate and practical. Therefore, existing institutions of law which are recognized and familiar to all civilized nations have been designated for implementation. The only departure from this point of view relates to the international criminal court as mentioned in article VI. However, the matter of this Court has not been settled definitely and is left essentially to future decisions of the United Nations.

Specifically the following ways of implementation have been adopted: Every member state undertakes to punish genocide by its own courts. Genocide will not be treated as a political crime and states will cooperate in extraditing such criminals to the countries in which the crime has been committed. Here the existing institution of extradition has been applied to a new crime.

The international controls of implementation have been taken from existing institutions because the General Assembly wanted to use such instrumentalities on which states had already agreed in relation to other matters. Thus, for example, the International Court of Justice at The Hague will be called upon to settle disputes between the contracting parties in cases of violation or interpretation of the Convention. This is a practical measure known to many international treaties.

Article VIII provides that any contracting party may call upon the competent organs of the United Nations to take such action as they consider appropriate for the prevention and punishment of acts of genocide. Here again reference is made to the existing legal commitments of the Charter and any action of the United Nations must be within the scope of the Charter. It should be noticed that the General Assembly rejected Soviet proposals to limit United Nations intervention to the Security Council. It was felt that in a matter of such great humanitarian and moral importance all organs of the United Nations should be free to act in order to reestablish civilized standards in a given area.

The unanimous adoption of the genocide convention shows that this is a matter of really universal human conscience and that it will be a law which will serve progress and peace.

Streamlining the Federal Government

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following copy of my radio talk over WMEX, Boston, Mass., Thursday, March 3, 1949:

Ladies and gentlemen of the radio audience, one-third of all that you earn goes to the support of not yourself or your family but to maintain the various levels of Government that constitute the United States.

Our country is no longer isolated from the world and its problems. The other day there was a small news story on the front page of most newspapers which did not attract the attention which it deserved. It told of an Army bomber which flew across the United States in 3½ hours. Science is making tremendous progress, but are we making the necessary spiritual, intellectual, economic and social adjustments to keep up with it?

We are trying to but the process is costing us much money. The modern crisis is further complicated by a cold war which requires that we maintain a strong military establishment and pour out vast sums to help other free nations to become self-supporting.

If we did not have to deal with fanatical communism, our people would have more money in their own pockets for their own use. That day will come if we persevere. In the meantime we are faced with the unpleasant but realistic menace of communism. It must be met and mastered by a constructive program which will prove beyond all doubt that a free society, able to make voluntary adjustments, can provide more security with opportunity than any totalitarian state.

We must eliminate the poverty and the despair upon which communism thrives.

We are trying to accomplish this in our own country by a broad program of social security, and by various measures which will keep our economy going forward on an even keel.

We are giving to other nations the tools with which they also can make progress.

These expenditures are necessary for our individual and our national security. This is all the more reason for taking stock to see where we can effect savings. There is no excuse whatever for wasting money through poor organization and poor administration of the vast, sprawling, and overlapping agencies of the Federal Government.

Twenty years ago it cost $4,000,000,000 to run the United States Government. Through depression, war, and recovery the cost has grown until it has reached nearly $42,000,000,000 today. Twenty years ago there were 800 agencies; today there are 1,800.

The following table will give you some idea of bureaucratic duplication: Lending Government funds, 29 different agencies; insuring deposits, loans, 3; acquisition of land, 34; wildlife preservation, 16; Government construction, 10; credit and finance, 9; home, community planning, 12; welfare, 28; forestry, 14; examination of banks, 4; gathering statistics, 65.

Need I go on? It would take a week to describe this traffic jam. Many of you who have had dealings with a Federal agency are veterans of the struggle against entangling red tape, exhaustive delays, and sheer bewilderment.

I wish to make it clear that the Federal employees are not responsible for this, for they, too, are the victims of a Government that just grew like a criss-crossing jungle vine until no one knows where it begins or where it ends.

The emergencies of depression and war, requiring immediate action to meet new problems, spawned this chaos. It has reached a point, however, where we must do a little pruning before we are swamped by this growth.

In 1947 it dawned upon Democrats and Republicans alike that surgery was imperative. The tax-burden once fell upon the rich. But even they didn't have enough to pay the freight. Just look at your withholding receipt to figure how fast and how far Federal taxation has grown in order to meet the appetite of an enormous Government. At $601 of your income the bite begins. Excuse my mistake. It begins with the first package of cigarettes that you buy.

I repeat, much of this program is necessary if we are to survive as a Nation. I also repeat that the proportion of waste and inefficiency in the carrying out of that program is inexcusable.

In June 1947, throwing partisanship aside, the Eightieth Congress voted to set up the Commission on the Organization of the Executive Branch of the Government, to make an over-all study of Federal bureaucracy and to write a prescription to cure it.

Congress provided that 6 of the 12 members of the Commission should be Democrats, and 6 Republicans, so that no one could say that the investigation was aimed at either of the two major political parties in our two-party system of government. To further accent this point, it provided that no report should be issued until after the election.

For further emphasis on its nonpartisan character, it was decided to name Herbert Hoover as chairman. As the only living ex-President and the first to meet up with the problem of bureaucracy during his term, he could measure its growth since then. As an experienced administrator, he knew the difficulties facing President Truman. He knew that the situation would become worse for future Presidents and for the Nation if we failed to bring this cancerous growth under control.

As chairman, he set up 22 task forces, each to study a particular branch of the Government. Three hundred experts from business and from the universities were called in to help. For 19 months they worked. Two weeks ago, the first 5 of the 15 commission reports were made public.

If all the recommendations were adopted, we could save $3,000,000,000 a year, and of greater importance, we could have a more efficient Government. Could any sane American object to this? Only those who put self-interest before national interest. For this is the biggest business on earth. We are all partners in it. If it becomes bogged down in a labyrinth of contradictions, all, all of us will suffer.

There are healthy indications to the contrary. Even though the complete and comprehensive report costs $10 per copy, there has been a rush to buy them from the Government Printing Office. The rank-and-file of American citizens have a conscience. They know that there are jobs which only the Government can do, but they want to see those jobs done right.

One of the principal aims of the report is to save the Chief Executive the time and effort consumed in wading through conflicting reports and recommendations on identical subjects. The purpose is to free him for the truly executive, policy-making responsibilities of the world's biggest job.

It would set up in the Nation's chief office that division of labor and that clear line of delegated authority that is found in every well-run business.

In the maze of bureaucracy that crowds Washington and spills over to all sections of the country, one finds many quaint practices which literally consume money.

An analysis of 600,000 purchase orders issued by 19 civilian agencies revealed that 90 percent of the orders represented only 10 percent of the dollar value of expenditures. It is estimated that 3,000,000 purchase orders are issued annually by Federal buying offices and that half of these orders average less than $10 in value. The multiple forms and red tape involved in putting through such purchases of $10 and under cost more than the purchases themselves.

Why should a female salmon on her way up the Columbia River to perform her maternal functions need the supervision of 12 different Federal agencies? She shouldn't, but she has no say about it. Even the fish are being crowded by a multiplicity of nursemaids who get in one another's way.

Let's turn to the system of cataloging or identifying Federal supplies.

One manufacturer of steam turbines furnished a bearing liner assembly to the Navy at a cost of $63. Catalog research revealed that another supplier furnished the same item, as a replacement part, at a cost of $25. This research also revealed the identity of the prime manufacturer from whom the bearing liner assembly was later obtained for $9.06.

Procurement savings of $115,000 were effected in one Navy bureau through the cataloging analysis of oil seals, which resulted in the determination that 4,500 supposedly different items were actually only 879 different seals.

Extensive identification research on antifriction bearings revealed that bearings identified by 300,000 different numbers were actually only 9,000 different bearings.

The magnitude of the problem is evident when we consider that the Federal Government spends more than $6,000,000,000 a year for supplies, materials, and equipment, and that trend is still on the upgrade. Government spending on this huge scale should not be allowed to continue without more effective control for full utilization of property already owned.

United States agencies, including the military services, own and operate approximately 1,000,000 automotive vehicles. It is clear that effective use of this one type of property alone presents a management problem unequaled in private industry, and almost beyond the comprehension of the average individual.

After poring over the pages of the Commission's huge and startling report, let us pick another example of overlapping at random. Here it is. Forty-seven employees attached to seven separate field services of the Agriculture Department have been working with 1,500 farmers in one county of Georgia. In one Missouri county, a farmer recently received from five different agencies,

"varying advice on the application of fertilizer on his farm" the report says. It adds: "Farmers are confused and irritated."

The size of Federal bookkeeping is such that it sometimes gets out of control. There was one occasion when the Army lost 9,000 tanks and never missed them. They were simply overlooked.

The standard application form used by a person who seeks a job with the Federal Government is No. 57. What about the persistent individual who had to fill out 32 of these identical forms before he was appointed?

Why couldn't one application have been sufficient?

Or the veterans who receive notices that they had been overpaid while in service and would they kindly pay it back as soon as possible. Why do these major mistakes happen so often?

Many businessmen are reluctant to do business with the Government because they have to wait so long for their money. Not that they won't get it if they are patient enough. It's the red tape that sufficates them. Pity the poor Government worker, however, who has to fight his way through this never-ending sea of forms, letters and papers. He is the heroic David battling a Goliath.

Every President since 1902—Teddy Roosevelt, Taft, Wilson, Harding, Coolidge, Hoover, Franklin D. Roosevelt—have tried to organize this mass into something resembling an orderly and efficient business. In each case, the reform fizzled out because one agency head would insist that his unit was indispensable and all the others followed suit. What had started out as a necessity, was soon paralyzed by exceptions.

Never before have we had such a complete, nonpartisan, and scientific analysis of our Federal Government. The reports of the exhaustive survey are still coming in. They point clearly to the need for consolidating the repetitious agencies, for improving the methods of handling personnel, and for establishing a clear line of authority from the President down.

Not simply to save $3,000,000,000, which is nothing to sniff at even in these days, but to insure prompt and efficient service by Government.

The medicine of reform may be hard to take for the few, but it will be good for the many. Bureaucracy will grow and grow until it finally overwhelms us, unless we lop off the deadwood and reorganize Government to conform to sound administrative procedures.

The blueprint is at hand. What are we going to do about it?

You may answer that the responsibility lies with Congress. But Congress is being bombarded even now with telegrams, petitions, and various other forms of pressure to exempt this agency or that agency from the streamlining recommendations.

Congress needs to know where you, the citizens of the United States, stand on this matter.

You will get better Government, and at a price which you can afford to pay, if you speak up in support of those who favor reorganization.

Lithuanian Resolutions

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include the resolutions which were unanimously adopted at a mass meeting held by Lithuanians of Worcester, Mass., under the auspices of the Lithuanian Aid Society, on February 13, 1949, at the Lithuanian naturalization club hall, on Vermont Street, in Worcester.

The resolutions follow:

Whereas Russia, by force of arms and in utter violation of all legal and moral laws, continues to occupy the Republic of Lithuania, to deport and imprison Lithuania's nationals, to commit atrocities against the Government and civil population of Lithuania, to systematically destroy Lithuania's democratic form of government: Be it

Resolved, That the Lithuanians of Worcester, Mass., do most vigorously condemn and protest against Russia's such unlawful by-force-of-arms occupation of the Republic of Lithuania, against Russia's deportation and imprisonment of Lithuania's nationals, against Russia's commitment of atrocities against the Government and civilian population of Lithuania, against Russia's systematic destruction of Lithuania's democratic form of government; further

Resolved, That the Lithuanians of Worcester, Mass., do hereby most fervently petition Harry S. Truman, the President of the United States of America, to use to the utmost the influence of the Government of the United States of America, to the end that all Russian military forces and government be forthwith evacuated from Lithuania, and that Lithuania and her people be liberated and Lithuania be restored as a free and independent republic among the nations of the world, according to the principles enunciated in the Atlantic Charter; further

Resolved, That a copy of these resolutions be forwarded to Harry S. Truman, the President of the United States of America; the Secretary of State, Hon. Dean Acheson; the Senators and Congressmen of the United States from Massachusetts; and to the press.

MICHAEL ZEMAITAITIS,
Chairman.

Our Place in the Far East

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. PLUMLEY. Mr. Speaker, by virtue of permission granted, I am including a letter I wrote the State Department and the answer thereto.

I am putting this correspondence into the RECORD as a matter of protection.

Some years ago while a member of the Military Affairs Committee, I protested the shipment of iron scrap to Japan. I insisted upon the building of stockpiles of necessary material. While I made my position perfectly clear with regard to those two matters, I did not at that time make any statement in the CONGRESSIONAL RECORD. This time, however, I wish my position to be a matter of public record.

For some time I have disagreed with the State, Army, and Navy Departments relative to the policy we have pursued with respect to China.

While chairman of the Subcommittee on Appropriations for the Navy, I sent around the world one very well qualified to make a report to me relative to our situation in the East, for the use of the subcommittee.

I have repeatedly announced my layman's opinion with regard to what should be done by us to maintain a world position we did not seek but which we must either sustain or quit.

Here are the letters which briefly outline my position concerning the present situation in the Far East. I am still compelled to think we are making the greatest mistake possible unless and until we assume the burden of our responsibility.

JANUARY 24, 1949.

Hon. DEAN G. ACHESON,
Secretary of State,
Department of State,
Washington, D. C.

DEAR MR. SECRETARY: Some time ago I informed the Secretary of Defense as to my intense interest in the matter of our lack of proper consideration of what our situation in China soon will be.

Last fall, as chairman of the Subcommittee on Appropriations for the Navy, I sent a qualified representative to China to make an inspection and to report to me the result of his investigation. I have transmitted the substance of the report to the Secretary of the Navy.

I desire to be informed what has been done by the State Department looking toward the acquisition, under some kind of lease arrangement, of Tsingtao.

Tsingtao, German planned and built, "has almost everything to recommend it as a base for military and naval operations. As you know, it is situated on the coast of the strategic Shantung Peninsula and possesses one of the world's most excellent harbors. Here the Germans builded well and their handiwork remains in use even today. The topography of the area with rugged mountains surrounding it ideally recommends itself to military defenses. This fact was patently shown by the first German defense of Tsingtao during the First World War.

"The plain facts are that we are spending limited amounts of money here in the maintenance of our garrison on invitation of the present Chinese Government. Expenditures are made, however, only to that extent which is necessary to maintain it as a temporary makeshift base of operations with no real control over the area. This place has great possibilities for development but as previously indicated we are here merely on invitation and common sense would dictate that it would be foolhardy to expend large sums to install those permanent installations so necessary for the creation of a modern naval establishment unless there were assurances forthcoming that we alone would be the recipients of the benefits of our own handiwork. In my judgment the acquisition of Tsingtao under lease arrangement should be attempted. It would require hard work and delicate diplomacy but it is well worth that try. Such an accomplishment would be of tremendous benefit to the United States of America.

"Tsingtao definitely lies across the Russian path southward down the coast of China. Developed it would stand as a powerful checkmate to Russian communism at Dairen, Manchuria, and Vladivostok. Most important of all is the fact that it would be a toehold for America on the China coast in the event that all of China falls into the hands of the Chinese Communists. I am not one who believes that Russia will absorb China if this should take place. I do believe, however, that the Chinese Reds will, if they obtain the ascendency, need economic aid and that should we be so located we would still be in a position to approach them—and they approach us—in the channels of trade. I am also not so sure but what this Chinese brand of communism in due time if properly

handled could be changed to something less than Red. It is well worth noting that past events indicated that millions of Chinese are susceptible to the persuasion of economic conditions. At least the chances of modification or conversion of Chinese communism would be far greater than if we were nonexistent on the China coast.

"Most diabolical would be the withdrawal of American forces from China and the subsequent establishment of leased Russian bases along the Chinese coast provided by a Chinese Government friendly to and in obligation to Red Russia. To face such a situation, the United States as I see it would be forced to expend untold billions in Japan, Okinawa, Guam, and the Philippines or else be reconciled to a withdrawal from the Western Pacific. The latter would be a most dangerous step."

We should, if it now be possible, negotiate a lease of the old German base at Tsingtao, rebuild and modernize it, and that at the earliest possible moment.

We should not continue to be so inconsiderate of our own welfare as we were when, against the protests of many, we continued to ship scrap iron to Japan, neglected to afford ourselves a second waterway route from the Atlantic to the Pacific transisthmus, anchored our fleet in the harbor of Oahu as a target and an invitation to the massacre which occurred.

I feel very deeply about the matter of the lease of the fortifications at Tsingtao, as I have felt concerning the other matters to which I refer, and I am writing this letter as and for a matter of record in that respect.

Yours very truly,

CHARLES A. PLUMLEY,
Member of Congress.

FEBRUARY 4, 1949.

The Honorable CHARLES A. PLUMLEY,
House of Representatives.

MY DEAR MR. PLUMLEY: The receipt is acknowledged of your letter of January 24, 1949, indicating your interest in the acquisition by the United States of the city of Tsingtao under a lease arrangement with the Chinese Government and asking that you be informed regarding the steps which the Department of State has taken to that end.

The Department of State had not previously been aware of your deep concern in this problem and your views have been received with interest. They have been made available to the immediately concerned officers in the Office of Far Eastern Affairs who are available for consultation with you at any time about the problems involved in your suggestion that this Government acquire Tsingtao under a lease arrangement. This Department has not been informed by the National Military Establishment that such action is desirable for military purposes and has taken no steps looking toward the negotiation of such a lease. Thank you for making your views available and be assured of this Department's interest in receiving them.

Sincerely yours,

CHARLES E. BOHLEN,
Counselor.
(For the Secretary of State.)

Unemployment Claims Personnel

REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. SADLAK. Mr. Speaker, on February 15 and 16 when we were considering the first deficiency appropriation bill for 1949, I called to the attention of the House and urged the need from the well of this House for a larger appropriation to provide the necessary personnel to handle the unemployment claims that were being filed by the many persons who had to wait in long lines before reaching the desk of the one to whom such were to be submitted.

I expressed then, and I renew that hope as fervently now, that the growing unemployment, particularly as it was increasing in my district, the State of Connecticut, was not a definite trend toward long and extended lay-offs. Nonetheless, I would be derelict in my duties and obligations if I did not at this time bring to the attention of my colleagues notice to the fact that the figures submitted on February 16, namely 54,451 unemployed in Connecticut now, as of March 1, continued upward to 56,120, substantiating further my assertion that more people are needed to handle these claims and more of the money should be immediately sent back to the States because it was originally assessed and collected for the purpose of providing the necessary personnel to handle these claims.

I trust that the membership of the House and particularly the members of the Appropriations Committee will be mindful of these facts when the first deficiency appropriation bill is returned by the other body for conference and acceptance in the House. Mindful, also, of the fact that our failure to provide sufficient funds to handle the claims is resulting in hardship for the many unemployed who cannot afford to wait from 5 to 9 weeks before they commence to receive unemployment checks.

Your attention and consideration is invited to the latest report of the Department of Labor, Employment Security Division, State of Connecticut, prepared for research and statistics as of March 1, 1949. Also, to the excerpts from the Hartford Times of Tuesday, March 1, entitled "For Job Benefits," stressing the point that I made during the discussion of the bills that as much time is necessary for the processing of partial claims as is required for the handling of full claims, together with one more excerpt from the New Haven Register of Tuesday, March 1, confirming the fact that unemployment keeps rising in New England.

[From the Connecticut Department of Labor, employment security division]

JOBLESS CLAIMANTS REACH 56,000

The number of jobless claimants for unemployment-insurance benefits in Connecticut continued upward to 56,120 during the week ended February 26. This is the highest total since the end of the war reconversion lay-offs which reached a peak of 67,467 during the week ended January 26, 1946. The claim load was 110 percent more than the corresponding week a year ago and 161 percent over mid-October when the present upward trend began.

Partial continued claims numbered 2,834, which is 6 percent of the continued claims taken during the week.

Initial claims, which represent new unemployment, totaled 6,909 as compared with 7,004 for the previous week and 2,779 a year ago.

New Haven with 9,172 claimants surpassed Bridgeport with 8,770 for the third straight week. Hartford was next with 7,073 followed by Waterbury with 6,274. The other 15 offices were each under 3,000.

Lack of work lay-offs in 7 textile mills totaled 1,000 and in 2 electrical appliance concerns 600. Other lack-of-work lay-offs of over 50 were reported in the machinery, hardware, bearings, and paper-box industries.

The Ansonia office reported a lay-off of 35 by a pocketbook plant and 50 by a rubber-products concern due to lack of work.

In the Bridgeport area, an electrical appliance manufacturer laid off 200 due to lack of work.

A Danbury hat company laid off 30 due to lack of work.

In the Danielson area, 1 textile company laid off 375 and 3 other textile mills a total of 115 with lack of work the reason in each instance.

The Hartford office reported a lay-off of 25 by a meter manufacturer due to lack of work.

In the Meriden area a bearings factory laid off 80 due to lack of work.

A Middletown hardware plant laid off 30 due to lack of orders.

In the New Britain area an electrical-products company laid off 400 and a machinery manufacturer 150 due to lack of work.

The New Haven office reported a lay-off of 275 by a boat manufacturer due to reorganization.

A New London printing-press concern laid off 65 due to lack of work.

A Norwalk footwear concern laid off 100 because of fire.

In the Norwalk area a woolen-textile mill laid off 300 and a cotton-textile mill 200 due to lack of work.

A Stamford chemicals concern cut production and laid off 25.

In the Thompsonville area an air-lines concern reduced operations and laid off 40.

A Torrington sporting-goods manufacturer laid off 75 due to lack of work.

In the Waterbury district a clock company hired 50. A paper-box company placed 50 on a week-on week-off basis. A rubber-products factory laid off 35.

[From the New Haven Evening Register of March 1, 1949]

UNEMPLOYMENT KEEPS RISING IN NEW ENGLAND—245,000 NOW IDLE—GENERAL TREND IN CONNECTICUT IS UPWARD

BOSTON, March 1.—Unemployment has been on the increase generally in New England since October and there are approximately 245,000 persons out of work in the six-State area, a survey showed today.

Month by month unemployment has increased up to January in all States, and there has been a leveling off during February only in Massachusetts.

Since July of 1947, the highest amount of workers seeking unemployment compensation in Massachusetts was 129,000 in January. A representative week in February indicated 126,489 persons idle, an increase of 43.54 percent over the comparable period of 1948.

The general trend in Connecticut has been upward from an October figure of 25,500, to a February 15 mark of 58,300.

Rhode Island reported about 18,000 fewer persons working in production jobs compared with a year ago. Of this total, 13,309 lost jobs in textile plants, the State's principal industry. February lay-offs were announced in a rubber footwear plant as well as textile shops and the New Haven Railroad.

MAINE REPORTS RISE

The Maine Unemployment Compensation Commission says 24,381 persons sought benefits in the week ending February 19. This compared with 16,516 for a like period a year ago. Maine figures indicated an increase of 1,841 unemployed over January.

In that State shoe and textile industries were heavy contributors, but shoes and cottons were reported as picking up again. Lumbering was perking up too and greater employment in this field was expected with the arrival of spring.

New Hampshire reports a 18,500 figure for February unemployment compared with 17,000 for January and 10,500 for February last year.

Vermont officials said 6,520 persons were paid unemployment compensation in a representative week last month. The number of persons out of work in Vermont a year ago was about 3,925, according to compensation figures, indicating a sharp increase.

[From the Hartford Times of March 1, 1949]

FOR JOB BENEFITS

The advent of "short time" in many factories in Connecticut has resulted in a great increase in claims for partial unemployment, Commissioner of Labor John J. Egan announced today.

Workers are considered partially unemployed when their weekly earnings are less than their benefit rate plus $3. A benefit rate is approximately one-half a normal week's wages up to a maximum of $24. Workers who do not earn $3 more than their benefit rate and who are employed less than the full workweek, should file claims at their local unemployment office.

Workers on part time who do not know their benefit rate should wrie to the Administrator, Unemployment Compensation Department, 285 Broad Street, for this information.

Partial payments are provided for in the Unemployment Compensation Act and are arrived at by deducting a worker's short-time earnings from his benefit rate. In making the deduction, $3 and any fraction of a dollar of earnings are disregarded, thus giving a bonus to the partially unemployed worker. In addition, dependency benefits may be claimed, the same as if the individual were totally unemployed.

Partial payments are designed to relieve the distress caused when factories are forced to go on "short time."

Workers on a week-on week-off basis will also be eligible for unemployment compensation.

Food for Thought on Veterans' Pension Legislation

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. VAN ZANDT. Mr. Speaker, there are some who are critical of veterans' pension legislation. While they may be sincere in their opposition, I am calling to their attention the Washington Newsletter distributed this week by Representative PAUL W. SHAFER, of Michigan.

Congressman SHAFER's statement on the veterans' pension issue provides much food for thought on the part of all of us.

Congressman SHAFER's Newsletter follows:

This week let us take up the issue of the veterans' pension legislation which will soon be considered by the Congress.

So far as can be recalled, very few Americans have ever been against pensions for our veterans. Certainly, voting pensions for veterans is an old American custom. Congress voted pensions for veterans of the Civil War, and so did most Southern States provide pensions for the boys in gray who fought on the wrong side of that conflict.

Congress voted pensions for veterans of the Spanish-American War.

Now that Congress is being asked to vote pensions for men and youth who fought in World War I and World War II, President Truman has the temerity to come out and say there is a limit to the amount of money the Federal Government can spend.

No one ever heard him say that about the huge sums voted for Europe in the years since the late war ended. On the contrary, he has consistently supported the highest figure mentionable when it came to funneling money to the nations of the world, much of which, we now learn, has found its way into Russia, with whom we are fighting a cold war.

Mr. Truman never mentioned that there was a limit to the funds in the Treasury when he plunked for the British loan, which, incidentally, has been spent, forgotten, and never considered for repayment. He never mentioned any limit on Treasury funds in connection with spending in Greece and Turkey or in connection with his not-yet-unveiled bold new program for throwing American dollars to the wind in Asia, Africa, and South America.

Mr. Truman has never mentioned that there is a limit on Federal money to be thrown into the South to build up schools for people who refuse to pay taxes to construct their own schools, or that there is a limit on Federal money that can be wasted in huge boondoggling projects throughout the West and far West.

Yet when the veterans of World Wars I and II want pensions, President Truman voices his opposition and, for the first time during his service as United States Senator, Vice President, and President, he has intimated that he might believe there is a limit to the amount of money the Government might spend.

It is refreshing to hear of Mr. Truman's awakening, to say the least, but it does seem strange to many Members of Congress that he should wait until a veterans' pension bill is to be considered to make his pronouncement.

The pension bill now before Congress is admittedly far from what it should be, but it is freely predicted in Washington that it will be amended in line with suggestions of the American Legion, the Veterans of Foreign Wars, and other service organizations and will be passed by the House.

Those who quarrel with Congressmen who vote for the pension bill will expect to be reminded of the billions of dollars that are being wasted throughout the world, and that possibly there might be less global spending if some of those dollars are funneled into the pockets of the American veterans and thence into the economy of the country.

PAUL SHAFER.

Increase in Vehicle Accidents

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I received from Mr. Vernon Whitt, of Fairfield, Ala., concerning the inexcusable and rapid increase in vehicle accidents in this country. This is a condition which should and must be corrected. The figures are appalling. I want to call this tragic state of affairs to the attention of all the responsible leaders in Congress and all responsible citizens throughout the country. I urge each of you to give serious consideration to this shocking traffic situation with this thought in mind: These deaths are avoidable.

The letter follows:

FAIRFIELD, ALA., *February 17, 1949.*

Hon. LAURIE C. BATTLE,

Congress of the United States, Ninth District of Alabama, Washington, D. C.

DEAR SIR: I am very much distressed at our rapid increase in the vehicle accidents occurring in our State and throughout the country, and thought I would write you concerning thic matter.

In the interest of safety on our highways and to help curb the fast-mounting list of accidental deaths it seems to me that some drastic steps should be taken immediately on this subject. I wish to give you the following comparative figures on the number of persons killed by vehicles (supposedly on our national highways), for the period 1941–47.

1941	39,969
1942	28,309
1943	23,823
1944	24,282
1945	28,076
1946	33,411
1947	32,300

You will note from the above that our vehicle deaths were low during the war years, and while it was true our rubber for tire manufacture for civilian use was limited and tires were recapped again and again, and our automobiles were old and parts were hard to get, etc., but during that time we had a "war speed" limit which I personally feel was a large contributing factor to the decline in our vehicle deaths. Everyone felt it their patriotic duty to stay within the law and conserve the rubber, for we had a war to win. Now we have a fairly good supply of rubber but yet we are allowing our vehicles to speed much too fast for the safety of all concerned, and continue murdering our people on our highways, at a much higher rate apparently than during the time we were in war, and at a faster rate even than in the thick of the war itself.

While I realize that in many instances emergencies arise which require fast speeds, but in cases where emergencies do not exist, it seems to me that a maximum speed limit should be set for say 50 miles per hour, on our highways and a reasonable and safe speed for our residential city-limit areas. I frankly believe that if the public were told that a heavy penalty would be placed upon the violators, who had no reasonable excuse for such fast speed, that it would have a very good effect and certainly a decided change would be effected in our vehicle deaths.

While statistics are not yet available for 1948, it is my understanding from highway officials that the number of deaths will be higher than 1947.

I merely bring this to your attention in the hope of bringing about some reduction in our serious accidents which are currently occurring here in our State and elsewhere, and trusting that some measures can be taken at an early date which will create more interest and action in the States' safety programs, and get the State and local officials to help bring about an appreciable reduction in the precious lives lost on our highways. This has been a matter that has been of deep concern to me for the last several months, as I narrowly escaped serious injury or death and I have seen some very serious accidents and deaths resultant to fast-speeding cars, and blind-curve passing, and intoxicated drivers.

Yours very truly,

VERNON WHITT.

The Give-Away State

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer for February 23, 1949:

THE GIVE-AWAY STATE

The utopian dream of a land in which nobody is under compulsion to work and plan for his own future or that of his family runs through the expanded social-security program which President Truman has submitted to Congress.

In this happy land, half the people will be receiving Government checks for one thing and another, while the other half will be on the Government pay roll, supervising the distribution of welfare funds.

The old-fashioned virtues of thrift, perseverance, and hard work no longer will be necessary in order to enjoy the more abundant life.

Work? No one need work at all. The Government will take care of those who are needy and in want. Of course the amount of Government aid now proposed is comparatively small—$50 a month for one person, $50 for the first dependent, and $20 for each additional dependent—but that can be increased.

Some people may insist on working to avoid boredom. The Government will tax them a maximum of $96 a year to begin with—more later—and when they are 65 they will be able to retire on a maximum pension of $150 a month. In the case of women, retirement pensions would begin at age 60. Later, of course, retirement ages could be lowered and pension payments increased.

In the long run this might be more expensive than private insurance, but why should anyone bother to take out insurance any more. The Government will do all the insuring.

No longer will it be necessary for anyone to save anything for a rainy day. The Government will compensate everyone who is sick and disabled, and under the provisions of another measure, which is still to come, the Government will pay all hospital and medical bills; and if the precedent established in England is followed in this country, the Government will even supply everyone who is baldheaded with two wigs a year, and pay the cost of dry-cleaning them.

The farmers will just love the Truman social-security system. It will be better than Henry Wallace's scheme of destroying the little pigs and plowing under the corn and cotton. It will be even better than the program of paying farmers for not raising crops, or the existing arrangement of price supports.

All the farmers will have to do is to pay 2½ percent of their incomes every year to the Government—at the start, that is. In a few years the rate will have to be increased. But what difference will that make? No longer will the farmers have to worry about prices or markets or droughts or storms. The Government will take care of them when they get to be 65 years old, provided they quit work at that time.

Doctors, lawyers, small-business men (it doesn't say how small they have to be), and everybody else is to have the benefit of this Government insurance. All they will have to do is to pay part of their incomes to the Government in taxes. Nobody will have to worry about anything again. The Government will take care of everything.

The cost? A trifling $6,000,000,000 a year for the first 5 or 10 years. After that it will be more. Then the Government will decide whether to raise the rates or just take the extra money out of general taxes. It won't make much difference. The only question will be whether the Government should take money away from some of the people all of the time or from all of the people some of the time in order to give it to all of the people all of the time.

There may be a few difficulties still to be ironed out. For one thing, President Truman said at his news conference last Thursday that he had never heard of a proposal to extend Federal aid to all poor people, but that provision is in one of the bills he submitted to Congress.

Before passing the bills Congress ought to make sure there isn't anything else in them that the President doesn't know about.

This program is supposed to constitute social security. Social disintegration would be a more accurate name for it. It has been dreamed up to bring into existence the human-welfare state. The give-away state would be more appropriate.

Health Insurance

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. YATES. Mr. Speaker, Leo A. Lerner, the editor and publisher of the newspapers owned by the Myers Publishing Co., has long held an enviable reputation as one of the most respected citizens of the city of Chicago. Under his guiding hand the 23 north and northwest side community newspapers of the company have consistently carried out high standards of public service and established themselves as a force for the cause of truth and justice in the city.

In 1946 Mr. Lerner was given the national merit award of the Decalogue Society of Lawyers, an award which had previously been won by the late Wendell Willkie, Marshall Field, Frank Knox, and Bishop Sheil, giving recognition to the intense devotion to and accomplishment for the good of the community.

Mr. Lerner's editorials are widely read throughout Chicago. They are characterized by power and keen analysis of public affairs, for Mr. Lerner has an unusual capacity to simplify even the most complex issue.

I believe Mr. Lerner's recent editorial on the need for health insurance, which appeared in the February 27 issue of the Lincoln Belmont Booster, is particularly interesting. The article follows:

THE FIRST COLUMN
(By Leo A. Lerner)
THE STORY OF A PEANUT

Doctors are always asking me why it is necessary for the country to have medical health insurance when there is no proposal to nationalize other kinds of private enterprise. One doctor wanted to know why we don't nationalize the steel mills, or the power industry, or the telephone company. Why, he asks, are we picking on the poor doctors?

He even asked me how I would like it if the Government were to socialize the newspaper business. I think part of the answer can be given in the story of a peanut.

On Christmas Day of last year a little boy less than 2 years old, named Stewart Lawrence, swallowed a peanut in his home at Cleveland. Stewart's father, Conrad, aged 20, was the owner of a retail appliance business there.

Papa Conrad was called home when Stewart started choking over the peanut. Of course, the doctor was also called immediately and little Stewart was rushed to the hospital and operated on.

The peanut was removed, but Stewart didn't recover so rapidly as expected. He stayed in the hospital, he had to have special nurses, and his folks had to pay the doctor bill, the hospital bills, the medicine bills, and the nursing bills.

A few days ago, because Stewart's condition did not improve, it was decided that Stewart must have a second operation—the outcome of which his parents are anxiously awaiting.

But here is the pay-off: Since the day that Stewart swallowed the peanut, his father has gone broke trying to keep up with the medical costs of saving his little son's life. He has lost his appliance business, he is $1,700 in debt, and whether baby Stewart lives or dies it will probably be many years before the young parents will be able to pay off the costs of the tragedy that started with a peanut.

This is a true story. The picture of baby Stewart and his mother appeared on the back page of the Chicago Daily News recently. But the story is not untypical of thousands of such cases that are happening around us all the time.

A very close friend of mine lost a $200,000 business and is now working as a hiker in a parking lot because of the illness of one of his children. The boy is still sick, but the doctors, the hospitals, and all the other beneficiaries of medical costs have eaten all the money that my friend could gather, beg or borrow.

If the doctors want to prevent what they call socialized medicine their problem is to figure out how to save the American people from the threat of financial ruin when illness strikes the family.

The phone company may be a monopoly, but the average phone bill is only $4 or $5 a month and seldom breaks anybody.

The railroads may give poor service and need to be vastly improved, but you can still go to New York for $40 or to Milwaukee for $1.80.

United States Steel may hike the prices and thus add to the cost of living, but each individual can decide for himself just how much he can afford to buy of things made of steel, and the steel monopoly never confronts him with any emergency that will put him in the poorhouse.

If you need one of our newspapers you can buy one for a few pennies and you can place an ad in it for around $1.50.

But should your baby swallow a peanut you suddenly find yourself at the mercy of a system where everybody is nice and kind and decent and friendly, but where the total costs practically eat you up alive.

I have recently seen four-bed rooms in hospitals so crowded that it is impossible for visitors to walk between the beds. Yet the patients in those beds are paying $8 a day and many of them do not have hospitalization insurance and cannot get it.

It is not unusual for a man of modest circumstances to be charged as much as $1,000 for an operation. When the doctors say he needs the operation, what can he do but promise to pay and thus mortgage his life and future?

Some surgeon who is not the family physician, but an impersonal operating surgical machine, may do three to four such expensive operations in a single day.

The point we all seem to be missing in discussing medical insurance is that illness comes unexpectedly like an accident, and that when it comes, people are unprepared for it. Illness used to be thought of as an incapacitating phenomenon, but in modern social terminology it must be considered a catastrophic phenomenon. Even a mild heart attack, or some sickness that can be controlled in its physical aspects, may create an uncontrollable economic shock.

The solution obviously is to set up insurance on the accident of illness, the way we set up insurance for the accident of fire, or a tornado, or flood, or an auto mishap.

In that way we will take the element of desperation out of the results of any accidents to the human body, the same as we now do for plate glass.

What's good enough for plate glass ought to be good enough for people.

When the American people say they want a medical insurance system (five polls taken in the last few years say that a majority of them do), they are not expressing any disrespect for the doctors or for the splendid men in the medical profession. They are merely saying, "What can we do to protect ourselves against the poverty that might strike us if we or our loved ones should get sick?"

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to a resolution adopted unanimously by an association representing 26 private colleges in the State of Indiana, of which Dr. O. P. Kretzmann, of Valparaiso University, in my district, is the president, wherein they express their views on the proposal for rendering Federal aid to education. This resolution, which was adopted during a series of meetings held in Indianapolis, concluded in January 1949, is as follows:

We, the members of the Indiana Association of Church-Related and Independent Colleges, consisting of 26 colleges and universities throughout the State, reaffirm our belief in the present American system of education, consisting of State-supported, church-related, and privately endowed elementary and secondary schools, colleges, and universities, each complementary to the other, with their diversity and competition maintaining the freedom which is the chief ornament of all.

We hold that this freedom would be threatened by any general Federal subvention of higher education, which would involve a great immediate financial burden, and, we believe, ultimate regimentation and control.

We, therefore, unite in supporting the following specific propositions:

1. We advocate adequate financing of State-owned colleges and universities through State taxes.

2. In general, we oppose Federal aid to all institutions of higher learning. Any financial support of education from the Federal Government should be for specific purposes, for individual scholarships, or granted on an outright single-gift basis.

Properly administered, this would not involve regimentation or control.

3. We believe that private institutions of higher learning should continue to look to churches, foundations, individuals, business corporations, and other nongovernmental sources for financial support.

Murray-Wagner-Dingell Bill

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hugh Thompson on the Murray-Wagner-Dingell bill at the Amherst Central High School, Snyder, N. Y., February 24, 1949:

Gentlemen, every year 325,000 people die unnecessarily because of inadequate medical care or because they are unable to pay for a doctor. Every year the Nation loses 4,300,000 man-years of work through bad health. Every year the Nation loses $27,000,000,000 in national wealth through sickness and partial and total disability. During the war 5,000,000 men were declared physically or mentally unfit for the armed services. No nation can allow these conditions to exist if it has the means to correct them. Our prosperity and our national physical well-being depends heavily upon maintaining our health at the highest level. Any attempt on our part to reduce sickness and premature death and promote individual and community welfare will certainly be worth the effort.

Through the years we have lengthened the life of every individual born by 20 years through preventive medical care. And the most important single reason for this improvement has been through the development of modern medicine. Scientific medicine is newer than electricity.

Not too many years ago many hospitals were little better than pesthouses and filthy—not anything like the modern, clean, scientific workshops they are today. But this record good as it sounds leaves plenty of room for improvement. Of the more than 3,800 deaths that occur daily in the United States nearly 900 or 23 percent are preventable. Do you know that each year 1,400,000 people die in this country? Certainly most of these deaths could not be prevented. They have either reached old age or they die because of unavoidable accidents or catastrophies, or the largest group because medical science does not have the means to save them. However, some of these deaths do not have to occur if we had enough medical manpower and hospitals available and a better system of financing the care for these patients. Our present total of 1,400,000 deaths could certainly be reduced. However, we cannot arrive at any exact estimate of the number of lives that could be saved each year but certainly we could prolong the lives of several hundred thousand each year. For example: It has been estimated that out of 170,000 deaths from communicable disease, which includes pneumonia, that occurs every year, we should be able to save about 120,000 with the knowledge and skill we now have. Of the more than 600,000 deaths from cancer and heart disease each year we should be able to save 115,000. The fuller use of safety measures and better education would permit us to save perhaps 40,000 of the 100,000 deaths yearly from accidents. Of all infant deaths that occur we have some evidence that at least from 30,000 to 110,000 who now die every year could be saved. And the 400,000 who die each year from the several hundred diseases which claim these lives we could probably save in the neighborhood of 20,000. These are some of the lives we could save if we were able to assure every person in the country that he would receive the health and medical service that he needs, regardless of the level of his personal income.

At the present time less than 20 percent of our people are able to afford all the medical care they need. About half of our citizens whose incomes are $3,000 per year or less find it almost impossible to pay for even routine medical care. Another 30 percent of our families with incomes between $3,000 and $5,000 would have to make sacrifices or go into debt for one severe or chronic illness. And remember this condition helps to limit the number of doctors who will go into the profession. It also places high barriers in the path of building adequate facilities. This is what we are confronted with as a nation through our inadequacies in health facilities, their results, and the cost in needless deaths and suffering. We must make a decision.

We can continue the present system which is slowly eating away the vitality of our Nation or we can strike out boldly with a plan to bring ourselves around quickly into line with our national and individual needs.

To us there can be but one alternative, and that is the establishment of a national health-insurance program which will increase the facilities for hospitalization and the personnel to man these hospitals. A program of education to bring about the increase of from 190,000 active doctors today to at least 240,000 and from the present supply of dentists, which is 75,000 to approximately 100,000, increase our present supply of nurses from 318,000 to at least 500,000, and increase our hospital beds from the present capacity of 900,000 beds to at least one and a half million. These are staggering assignments for any nation, but this is the minimum need required to give us proper medical attention. The bill that is proposed, known as the Murray-Wagner-Dingell-McGrath bill, will do just this. That is why it is so necessary to have it passed at this time.

I cannot pass up this opportunity of also going into the question of mental health. This is one of the diseases which is always hushed up. But—do you know that over half the patients in our hospitals on any given day are mental patients? Approximately 600,000! Do you know that every year there are 150,000 committed to mental hospitals in the United States? Do you know that over 2,000,000 men were turned down during the war because of mental disorders? Do you know that there are 8,000,000 people in the United States suffering from mental illness?

These figures are appalling, nevertheless, they are true, and we must face the facts. And we can expect these figures to go up since mental illness increases with age and the average age of our population is continually rising. So this problem also must be tackled, and since it is included in the legislation proposed in the Murray-Wagner-Dingell bill, then it becomes more necessary for us to press for the enactment of this legislation.

Now after explaining the needs for such legislation and the inadequacies of our present system for caring for the sick you get to the point of how much it is going to cost. Well—as I stated it cost the United States in man-hours lost $27,000,000,000 yearly in national income. Then let us compare what the cost would be to ourselves as individuals remembering that none of

the moneys expended under this program would come out of our general tax program. The system of collecting the moneys would be incorporated in the social-security program which collects 1 percent of our earnings to protect us and give us a pension after 65. Well, the cost of a program to protect us while we are healthy and extend our lives so that we may enjoy the benefits of social security by living longer would cost each individual 1½ percent of our earnings. More than that it gives the protection to every member of the family, and the services include hospitalization for any sickness, the best of surgical or medical care that could be provided, the best in medicine, dental care, eyeglasses, and hearing aids. This is what you would buy for 1½ percent of your annual earnings. To me it is well worth it.

The charge by the medical profession that this is socialized medicine is entirely false and a misrepresentation. Under socialized medicine or state system the Government owns and operates all hospitals and the practicing physicians are employed by the Government on a salary basis like the firemen and policemen and they come under Government supervision. Clearly, no such system is proposed under this plan. Freedom of choice is left open to the doctors and to the hospitals as to whether they will participate. The method and rate of payment is left up to the community organization which they belong to like the Erie County Medical Society. The only charge proposed or advocated by this program is that instead of the patient paying as he has, the doctor would be paid out of the insurance system at a rate and by a method to which he agreed. This is thoroughly American and it is upon the same principle that he presently collects from the Blue Cross or the Blue Shield for his services. The funny thing about this is the doctors forget to mention that they are performing the same kind of services today in the administration of immunization treatment or venereal-disease therapy.

The doctors talk about this plan being compulsory. It is only compulsory in one aspect, and that aspect is that all persons would pay a stipulated percentage—1½ percent—for the services and the benefits under the system. It is only compulsory in the same form as the unemployment insurance and the old-age and survivors' insurance and who would want to destroy that system today and who would say that is socialism?

The old argument of the doctors is that the power is left in one man. Under this bill no such system is proposed and the actual administration of the program would remain clearly with the citizens and the localities as to the method of handling finances.

The doctors argue that it would cost a lot of money. At present the expenditures for national health are somewhere between five and five and a half billion dollars, but only those who are sick pay this bill. Wouldn't it be much easier even if the expenditures were twice that amount to have all the people pay their share on the basis of their ability to pay? The most that any family head earned, $4,800 per year, he would have to pay $1.40 per week or $72.80 per year. The average working man would pay $39 per year which would give full coverage. Each individual would have free choice of doctor and hospital and the doctor would have free choice of the patient to reject or accept and to determine the fee to be charged.

But let us consider the statement of the medical profession against this bill. They say the individual would not have the free choice of the doctor. It is a very ridiculous charge, but it is more ridiculous when you consider that many people today do not have a free choice of physician for two reasons: (1) In many sections of the country there are not enough doctors to meet the needs, and (2) many millions of people do not have the money to pay doctors. Where is the freedom of choice for these people? In those areas where they have few if any doctors and those who cannot afford to pay, in one case they must choose the doctor that is available and the other must choose the doctor that charity provides.

A plan such as is contemplated in this bill would certainly provide greater freedom of choice because it would help assure a better supply of physicians in underprivileged areas and prepayment would entitle millions who cannot pay to have the services of a doctor of their choice.

Another argument the doctors raise is that this bill establishes a program under the dictatorship of a Surgeon General. Well, who is better qualified to direct this program than a doctor which the Surgeon General must be?

Doctors Resent AMA Levy

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Herald Tribune on February 22, 1949:

DOCTORS RESENT THIRD BALLOTING ON $25 AMA LEVY—BROOKLYN GROUP DENOUNCES COUNTY SOCIETY ACTION AS UNAUTHORIZED BY MEMBERS

The Kings County Medical Society started a third balloting on the $25 assessment of the American Medical Association yesterday to the resentment of many Brooklyn doctors who have twice voted it down.

In post cards received yesterday morning by the society's 3,600 members, Dr. Irwin E. Siris, asked not only for a vote on the $25 levy but sounded out doctors' feelings on socialized medicine. The cards also required that the physicians list their names and addresses at the bottom.

The society's members rejected the assessment January 18 by a vote of 148 to 131 in a show of hands, and February 16 with secret ballots, they turned it down again with a vote of 861 to 755, said to be the largest vote in the society's history. The Kings County vote was a glaring departure from the Nation-wide vote of AMA members, which went 85 percent in favor of the levy.

Dr. Herman Bolka, chairman of the physicians committee against the $25 assessment in Brooklyn, said the post-card poll had not been authorized by the membership, that it brought up subjects never previously discussed at society meetings and that the requirement for signatures might possibly lead to intimidation of doctors who were not 100 percent in line with AMA policies.

Dr. Siris said, however, he had authorized the poll himself, "to determine the membership's sentiments so I can guide myself accordingly." He asserted that the cards would be counted Friday by a group representing all factions and that they would be destroyed as soon as it was clear that the tabulation would not be contested.

The post cards carried the following questions: (1) Do you approve of the assessment of $25 levied by our house of delegates? (2) Are you in favor of compulsory health insurance? (3) Do you approve of the 12-point program for the advancement of medicine and public health offered by the AMA on February 13? (4) Have you any constructive suggestions for the improvement of medical care?

Questions (2) and (3) have never been discussed on the floor of the society, and Dr. Siris has no right to ask them, especially in an open ballot, Dr. Bolka asserted. Question (1), he said, immediately destroys the secrecy of the previous ballot.

Dr. Bolka said his group represented doctors who are both for and against compulsory health insurance but who are unanimous in their disapproval of the absence of democratic techniques in the county society and the AMA as a whole.

The Calumet-Sag Channel, Chicago

EXTENSION OF REMARKS
OF
HON. NEIL J. LINEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. LINEHAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me on March 2, 1949, before the House Appropriations Subcommittee on Deficiencies and Army Civil Functions:

Mr. Chairman, my colleagues, I am NEIL J. LINEHAN, an electrical contractor and Representative in Congress from the Third District in Illinois, in which is located some of the area of the Calumet-Sag channel project, and all of which will derive much benefit from this development. I have been requested to appear here, with Congressmen O'BRIEN, BUCKLEY, and O'HARA (all of Illinois) by the South Chicago Trades and Labor Assembly, an organization of business and labor leaders who are foremost in championing worthy civic improvements calculated to advance the welfare of the people of the district they serve.

In a larger sense, I am here as spokesman for every man, woman, and child of understanding age in my district, all of whom are united in the earnest desire that work on this great project should at once be resumed. I might mention here a few of the leaders in our community who have written and wired me to include their names as sponsors of the request for an appropriation for the immediate start of construction in Sag channel permitting vessels on this waterway to pass as they go to and from the dockage at Lake Calumet. Among these sponsors are:

Alderman Thomas J. Corcoran, eighteenth ward; Committeeman John M. Lee, eighteenth ward; Alderman John J. Duffy, nineteenth ward; Committeeman Thomas Nash; Alderman and Committeeman William Murphy, seventeenth ward; Alderman Paul Sheridan; and Committeeman T. J. Moran; County Clerk Michael J. Flynn.

I was born and reared on the east side of Lake Calumet; I have known the area for over 40 years. As a boy playing on the shores of Lake Calumet I envisioned the day when the ships of the world, flying the flags of all nations, would dock in this inland body of water to receive from a network of railroads the products of a great middle western industrial center and locality, and to transport to the Atlantic and from the Mississippi to the Gulf of Mexico. As a Member of the Eighty-first Congress I can conceive of no greater thrill of satisfaction than that which would come to me in being permitted to vote for an appropriation approved by your committee for the beginning of actual work on the project, after the long halt of the wartime years.

We people of Chicago have long favored the development of Lake Calumet and its tributary waterways. As a matter of fact, the Calumet area is the only greater Chicago area available for industrial expansion.

We recommend that area particularly for the location of large heavy industries requiring considerable space. It lends itself exceedingly well to such industry because most of the major railroads pass through that territory, therefore, the changes from rail to water transport has excellent possibilities.

The plan would enable Chicago to take full advantage of increased shipping on the Great Lakes.

The Calumet project would develop unused opportunities for docking space and industrial development along the Calumet-Sag Channel and would establish an interchange harbor in Lake Calumet for deep water and inland vessels.

The Calumet-Sag Channel, which is 9 feet deep, will be widened from its present 60 feet to 225 feet for 16 miles from the junction of the channel and the sanitary and ship canal.

Army engineers plan to widen the Grand Calumet River to 225 feet from its junction with the little Calumet River to the Indiana Harbor Canal in Lake County. From there to Clark Street in Gary, Ind., the limit of the project will be widened to 160 feet.

A channel into Lake Calumet has been dredged as a start toward development of the lake into an interchange harbor. At present the channel is 3,200 feet long, 700 feet wide, and 21 feet deep.

It has been estimated that the volume of shipping now handled on the Calumet-Sag Channel would increase from 1,000,000 to 9,000,000 tons in 5 years after the completion of the project, and will expand to 18,000,000 tons in an additional 10 or 15 years.

In closing I desire to express my appreciation for the opportunity extended me to voice the desire of the people of my district for the resumption of work on this great project. May I emphasize the importance that the appropriation should be available and adequate for the start of actual construction. If the hope of the Middle West is to be realized, it is essential that action not alone be taken but that the action be immediate.

We feel strongly that there is an urgency. Respectfully we petition you to start the long-hoped-for call. Let us start digging.

Lithuanian Liberation

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the resolutions which were unanimously adopted at a mass meeting held by Lithuanians of Worcester, Mass., on February 16, 1949, at our Lady of Vilna parish hall.

The resolutions follow:

Whereas in violation of the principles expressed in the Atlantic Charter to which the Union of Soviet Socialist Republics officially subscribed, Soviet Russia by military force occupied the Republic of Lithuania, and now deprives this Republic of its independent political life, democratic self-government, and membership in the community of nations of the world; and

Whereas since this predatory occupation of Lithuania, Soviet Russia pursued, and continues to pursue, a ruthless policy of planned liquidation, imprisonment, deportation, and dispersion of Lithuania's nationals and the destruction of Lithuania's democratic form of government: Be it

Resolved, That we petition the Government of the United States to initiate proper and firm measures for the purpose of compelling Soviet Russia to conform to the Atlantic Charter and other international agreements and covenants; that the U. S. S. R. armed forces, puppet regimes, and terrorist police forces be withdrawn from Lithuania and the other invaded countries, that their deported nationals be returned to their homelands, that Lithuania and all other occupied countries and their peoples be liberated and that Lithuania be restored as a free and independent Republic among the nations of the world according to the principles enunciated in the Atlantic Charter; be it further

Resolved, That a copy of these resolutions be forwarded to Harry S. Truman, the President of the United States of America; the Secretary of State, the Honorable Dean Acheson; the Senators and Congressmen of the United States from Massachusetts; and to the press.

C. A. VASYE,
Chairman.
CHARLOTTE MITCHELL,
Secretary.

Address by Hon. Herbert R. O'Conor, of Maryland, Before Pennsylvania and Atlantic Seaboard Hardware Association

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Maryland [Mr. O'CONOR] before the Pennsylvania and Atlantic Seaboard Hardware Association at Baltimore, Md., on March 1, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The most gratifying aspect of such a meeting as this, under the sponsorship of the Pennsylvania and Atlantic Seaboard Hardware Association is that busy men handling important matters are willing to listen to a discussion concerning the problems of their Government at the very time when governmental processes are under criticism for lack of efficiency and for wastefulness, it is reassuring to observe that successful businessmen are ready to give attention to these timely questions. And it might be added, untold benefits come to those of us who are entrusted with responsibilities in the functioning of government and who desire counsel and advice which can be gained from first-hand contact with those whom we represent. Of course, there is no reason why a group such as this should not be entitled to demand a report from those who are their servants in governmental posts. You pay the bill and it seems only proper that you have voice in the way that your governmental machinery is operating. We are striving for a reduction in the cost of government and to avoid unnecessary interference by government in private affairs. How better can we learn how to attain those ends than to exchange ideas with the outstanding leaders whose experience and sound judgment ought to be sought most frequently.

It is astounding how different are conditions today than were anticipated only a short period in the past. Five years ago, in the critical days of the war, everyone looked forward to the days of peace which, it was hoped, would follow the war's end. We who had been through the aftermath of World War I should have known better. We all know better now.

These war days of 1944 witnessed a spirit of unity and cooperation among many nations such as never had been known up to that time. Ironical though it seems now, when nations find it so difficult to agree on a way to peace, the peoples of the world then were able to forget their own national ambitions, their inherited dislikes, and to give their unstinted help in friendly cooperation, toward the common goal of victory.

Now, with peace within our grasp, a peace that could bring to all the world freedoms and economic blessings without number, the unity of wartime has given way to a cleavage of ideologies that threatens to split the whole of Christendom. Where, during wartime, national aims were subordinated to the common good, they now run riot. Where once friendliness marked the assemblages of soldiers from all the Allied Nations, today there is an iron curtain that splits Europe as effectively as if there were a gigantic fire door spanning the heart of the Old World, from the Baltic to the Mediterranean.

This communist-spawned division of the world into two armed camps has posed new problems for the United States that call for all the wisdom we can muster if our country, and the whole world, are to find that security against war and violence which all desire so thoroughly. For we find reflected here in America that same disunity of purpose and of aims that marks the world-wide scene.

At home here during the war there was evidenced a spirit of unity that matched the unity of the Allies. Industry and labor forgot their quarrels, agriculture turned to the war effort with a will, and, between them, they enabled America to achieve a record of production of both war material and food that amazed—and saved—the world. Businessmen made the most magnificent contribution of their time, of their energies and of their resources in the interest of our country.

As Chief Executive of a State before Pearl Harbor, during the entire period of the great emergency, and during the early postwar period I was privileged to observe at first hand and at close quarters the magnificent record amassed by labor and management on the war-production front, and by the farmers of our Nation who overcame shortages of equipment and lack of manpower to astound the world while they fed countless millions who otherwise would have had nowhere to turn for sustenance.

Now, back to normalcy as we are, that unity seems to have disappeared, and the old problem of striking a balance between labor and management on the one hand, and between the two and agriculture on the other, threatens to bring chaos upon the national economy. All this despite the fact that the national economy seemed geared to earn for our people a period of prosperity, and of enjoyment of the finer things of life, such as could be imagined in an atomic age where this miracle of achievement could be turned to man's enjoyment rather than to his destruction.

As a result of the disunity throughout the world, therefore, we have vast problems of

war preparations financing. Within the Nation there is further unceasing demand for financing business and governmental facilities so huge as almost to defy accurate conception. All these are superimposed upon the most comprehensive and costly program of veterans' benefits any nation on earth ever dared venture upon.

The thought one cannot escape is this: If we cannot balance our budget in a year of record-breaking national income, what chance will we ever have to strike a balance between national income and outgo? If the budget difficulties were confined to the National Government, it would be bad enough. But the situation is no different on State, county, or municipal levels. Everywhere the story is the same—larger budgets, with constant searching for new and increased tax revenues.

What is the answer? It appears inevitable that the solution will have to include at least two departures from common practices. First, we must put government—all government—on a more businesslike basis. As businessmen, you know how costly and destructive uncontrolled, wild competition can be, yet we have such uncontrolled, wild competition within government, and among the different levels of government. And it adds up to continuing annoyances for businessmen like yourselves, plus, of course, vastly larger taxes than would otherwise be necessary.

I have been a constant advocate of lower taxation because I am firmly of the opinion that the more we eliminate the heavy hand of taxation from private enterprise, the greater will be the incentive for business and industry to redouble their efforts for greater productive effort. By increasing taxation to the highest possible percentages, the Government has discouraged individual initiative. How many times have we heard from indiviuals the understandable statement that after they have earned so much in a given year it is foolish for them to work for additional income because Uncle Sam is ready to take the lion's share of it. Such an attitude is damaging to the economy of this country. America became great through the efforts of private enterprise, because of venture capital, because of the profit motive, and the best thing that can happen for America is to give full play to these laudable American tendencies.

There is competition within Government—different agencies competing in the same field, rendering similar services, maintaining expensive duplicate organizations—and, incidentally, running the taxpayer ragged trying to find out just where to go to get the particular services he needs. Between governments, also, there is duplication and overlapping of services. And, what is much worse and annoying, there is overlapping and duplication of taxation, with two, three, and sometimes more levels of government reaching into the same taxpayer's pocket to share in the same tax moneys.

There is hope, let it be said, that the Federal Government is in for some improvement in its structure and administration. The Senate Expenditures Committee, of which I am a member, right now is passing on legislation for reorganization of the executive branch of the Government, as the result of extensive studies made over the past 2 years by a commission under the leadership of former President Herbert Hoover.

Sweeping recommendations for reform have been made. Undoubtedly many of them would bring more efficient administration, at less cost. Each one of them, naturally, treads on someone's toes, and would entail loss of position for certain numbers of persons—so therefore there is opposition, and undercover pressure to resist adoption of some of the proposed changes. But you cannot consolidate activities and agencies without unfavorably affecting a certain number of people. And you can never reduce the cost of Government without curtailing activities or reducing employee totals.

Every business executive here knows just how such a situation would be handled in his own business. When costs have to be reduced, less important functions are curtailed or eliminated, and unneeded employees are dropped. Government, however, doesn't always work that way. No matter how strong the sentiment for reducing costs, every time some project is omitted or curtailed, every time there is a reduction in force, Congress is swamped with urgent appeals that "my project be not disturbed" or "my friend or relative be retained on the rolls."

Which leads me to the second of my two "musts," if Government costs ever are to come down. Nothing will ever be done to relieve you or taxpayers generally from the current overwhelming burden of taxation until you, the general public, begins to think in terms of less rather than more Government services.

Further, nothing in the way of cost or tax abatement will ever be achieved unless and until we all, as individuals, are willing to see something or someone in whom we are particularly interested eliminated from the budget without trying to make "just this one exception." Am I proposing a major revision of the human equation? Perhaps. But nevertheless I repeat—you can't cut the costs of government without denying to some people something that means much to them.

One essential requisite of any change in attitude toward government is a changed viewpoint on the part of both people and officials of the various States with regard to funds from Washington. The custom has always been to accept grants from Washington somewhat as if they were manna from heaven. They have been looked upon as a gift from out of the blue, so to speak.

But they aren't. They're right out of your own pockets, and think in such terms, particularly you businessmen from the more prosperous eastern section of the country. Any time your State secures funds from Washington for hospitals, for schools, for roads, or for any purpose, you can bet your last dollar that it would have been far less costly for you to have the State levy the necessary funds. Then you would have avoided paying part of the administration costs of some Federal agency. And possibly you would have avoided some annoying—or worse—regulations which practically always accompany the grant of Federal funds.

Yes, we stand at an epochal moment in the world's history. The poet Tennyson aptly expressed it when he wrote: "The old order changeth, and giveth place to new." All over the world today, peoples have served notice that they no longer will be satisfied with conditions of the past. World War II brought to the surface all the yearnings nurtured through years and centuries of submission to an economic order in which many were denied benefits now considered deserved by the great mass of people.

In England, somewhat to our surprise, we have seen the laboring classes decide to forego their cherished individualism for the promised greater security of a socialist regime. In India, Indochina, and throughout the Far East, this striving for improved conditions has occasioned bloody revolution and class struggles. Here in our own country, the unprecedented prosperity of the past 10 years has suggested to our people that poverty and deprivation in the midst of plenty need not be an integral part of the free-enterprise system. As a consequence Americans, too, are raising their sights in the matter of living conditions.

All of us have taken great pride in the vast progress made by America and her citizens under the justly prized American system. But 'way back in our minds there was the tacit recognition, although we did not like to discuss such matters too openly, that there was poverty, degrading poverty, in our midst. We all knew that little children were growing up into frail, sickly adults because of lack of proper food and of adequate medical attention, and that a far too large segment of our population was finding it next to impossible to assure their children of even a minimum education, because facilities, in many areas, had by no means kept pace with increased requirements.

In the matter of public health our people were shocked at the reports from Selective Service headquarters during the war of the inordinately large proportion of selectees who could not be accepted for service because they were not physically fit. Approximately 6½ million men out of less than 18 million physically examined under selective service were rejected as being physically defective. This is more than 35 percent, a shockingly high percentage. And there was little to console any of us, during those war years, in the accounts of vast numbers of teachers who left their high profession because the pitifully small wages they were receiving, compared to the higher wage inducements on every side, left them no alternative, and left the children, who had been dependent upon them, with less and less opportunity for educational opportunities.

Yes; we knew all these things, and therefore there is little reason to be surprised now, when they rise up to plague us, in the form of demands for better health facilities, for increased security, and for improved educational opportunities for all.

The pending legislation now before the Congress of the United States leaves no room for doubt as to the temper of our people with regard to demands for social advancement. There are measures to expand the coverage of social security and to increase benefit payments to a point more in keeping with today's living costs. There are bills to provide improved health facilities in every section of the country, and to make these facilities, as well as the services of the country's medical, dental, and other health professions, available to individuals and families of lowest income everywhere. Not to mention legislation that would seek, through Federal aid to the less wealthy areas, to guaranty to every child, in every section of every State, educational opportunities without which he or she will be cruelly handicapped in life, with our country the great loser thereby.

What are we going to do to meet the challenge which has been thrown down? Equally important is the question, "How are we going to meet it; through what method? We must not sacrifice Constitutional principles to attain an end, regardless how appealing it may be. Our enduring system of democratic, representative government is the last remaining bulwark in a world where dictatorships are the order of the day.

We should be careful not to scrap our basic principles to meet a present emergency. While we should not shirk any responsibility to our underprivileged citizens we must formulate programs within the spirit and meaning of our great Constitution. By such procedure our national resources can be spread more evenly, for the benefit of those who otherwise would be denied basic rights and privileges which are their heritage as American citizens.

It is incumbent upon the lawmakers today, whether on the Federal, State, or local level of government, to have a liberal, sympathetic approach to the consideration of proposals for social betterment. But—and I think it well to lay the utmost possible emphasis upon this point—the legislation as finally developed must be in accord with the constitutional provisions regarding national and State authority. It must safeguard completely the authority of State governments with regard to the purely local matters that are their rightful concern, and not give way to centralization in Washington.

Unless we are careful to recognize the necessity for such a policy and to guard zealously the balance between Federal and State authority in all fields, there is a possibility of waking up some day—and it could be uncomfortably soon—to find ourselves keeping company with England in the field of state socialism. From such a development, may Divine Providence preserve us.

In their far-sighted wisdom, born in large measure of sad experiences suffered in other lands, the framers of our Constitution delegated to the Federal Government these concerns of government which could be handled only upon a mutual basis—defense and foreign relations and trade foremost among them. To the several States were reserved, however, such matters as more closely affected the lives and well-being of their residents. Such everyday affairs, they reasoned wisely, required for their successful handling, an intimate understanding of local and individual needs that could never be met by administration from some remote seat of government.

Thus, in the field of social security, with the Federal Government participating in welfare grants for the aged, the needy, and the blind; and most certainly in the field of education, any legislation passed must, and I emphasize, must, give full recognition to the competence and the authority of the State and local governments. Too many instances are at hand of waste and inefficiency in Federal handling of purely local matters, to permit of any further encroachment by Federal officialdom in local activities.

It is a well-founded theory that the best government is the government that is closest to the people. Conditions vary so greatly from one State to another, from North to South, and as between the East, the West, and the vast sections intervening, that no one set of national regulations touching the actual effectuation of any law's purposes, could be really effective. To attempt to say, from Washington, what must be done in particular cases here, there, and everywhere, is absurd, as well as usually overly costly.

To set up standards of administration is one thing, and where Federal funds are to be supplied, there must be an understanding between the responsible Federal agency and State authorities as to basic handling of such funds. But there the line should be drawn. From long experience in the executive branch of a State government, I say that further intrusion by Federal authority into State functioning is not only unwise, but a constant threat to the prestige as well as to the actual stability of the State government.

Speaking of public health many will agree that there is need for humane treatment of many of our people who do not have the means to avail themselves of medical care with the new techniques and discoveries that should be available for the benefit of the general citizenry.

But let us not make the mistake of adopting a plan by which our medical profession would be regimented. I am unalterably opposed to socialized medicine. While I agree that a better system should be devised I think it can be done without discarding all the advantages which an honorable profession has offered to the country after decades of faithful family physician practice.

Likewise in the field of social security I believe we should extend the coverage and modify our scale of payments to bring them within range of present-day realities. Particularly do I believe that we should proceed on the basis of insurance protection rather than on the basis of a dole for these people. The self-respect and independence of every man cause him to prefer to live under a system whereby he will receive protection in his time of need, not as a beggar, but as the recipient of insurance which he has helped to buy during his working years.

In conclusion, may I invite your continuing interest in matters of national defense so that America can be kept secure from attack either from outside enemies or those from within.

As the world situation is today, the one and only barrier to war is America's armed strength. We must keep that strength at all times equal to, and if possible, superior to the armed strength of any potential aggressor nation. In the air, on the sea and under the seas, and in the mighty scientific weapons of war which have been developed, America must maintain superiority if the civilized world is to be saved from destruction.

We must not be caught napping again. Good will was never a sufficient protection against selfish aggression. We can, and we must work with all our capabilities, through the United Nations, to establish and to make effective every instrument for peace. But until the long-sought day of peace among nations arrives, America must have more and better atomic bombs, more and faster planes, more powerful ships, swifter submarines, more of all the mechanical aids to war than a potential adversary can muster. And we must not disclose the confidential information as to atomic data to any country which has not been willing to meet us half way.

Only by keeping herself so strong that no one will dare to attack her will America keep faith with her gallant sons who lie beneath the white crosses on Flanders field, on sandy beaches of the far Pacific, and in hallowed resting places throughout the entire world.

Flood Control and Rivers and Harbors Work

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement regarding funds for flood control and rivers and harbors work made by me before the Senate Committee on Appropriations in connection with the first deficiency appropriation bill of the Eighty-first Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My purpose in addressing this statement to the subcommittee considering H. R. 2632, the first deficiency appropriation bill in this session for the fiscal year ending June 30, is to request that the committee use this bill as the vehicle for correcting the false economy of the Eightieth Congress on the Civil Functions Appropriations Act for the current fiscal year.

My request is that, insofar as it is possible to do so and to the extent that the Corps of Engineers can use the money efficiently in the months between now and June 30, funds be included in this deficiency bill to make up the reductions by the Eightieth Congress on budget requests for specific rivers and harbors and flood-control projects and for planning activity and other functions related thereto.

I am, of course, primarily interested in those projects in Pennsylvania which were cut by the Eightieth Congress last year in preparing the appropriation for the current fiscal year. At the same time, however, I realize that unfair reductions in the budget requests on rivers and harbors and flood-control projects were not restricted to Pennsylvania projects and I, therefore, would not request any special treatment for my State in this respect, but, instead, suggest that a uniform policy be followed on all projects in which the budget recommendations were ignored or reduced substantially last year.

My testimony will be restricted to the Pennsylvania projects for the reason that I am most familiar with them. I think the subcommittee would be safe in assuming that our experience on some of these budget cuts has been duplicated on other projects in other States. It perhaps might be advisable for the subcommittee to devote a few additional days to this bill in order to investigate the status of all of the projects which were cut in the appropriation bill passed last year.

In this connection, I might point out that you will have before you representatives of the Army's Corps of Engineers to discuss certain of the multiple-purpose projects for which the Budget Bureau has requested additional funds for this fiscal year, and I am sure these representatives are prepared now or could quickly prepare themselves to discuss various other projects in the same category as those in Pennsylvania in whose behalf I am making this appeal.

The particular flood-control projects now included in this deficiency bill were selected, I gather, because of their importance in respect to alleviating the present widespread electric-power shortage in the country. My concern today, however, is primarily with the lives and the safety of our people and with the protection of our industrial plants and other facilities subject to flood damage.

At this point, I think it is relevant to point out that the budget requests appear to be conservative in this deficiency bill for the reason, apparently, that the administration fears a deficit in this fiscal year because of the action of the Eightieth Congress in reducing our tax revenues so substantially in the face of so many compelling foreign policy and military expenditures which we dare not deny. I assume that it was because of this fear of a deficit at a time when our national income is at the highest level we have ever known in our history that the Budget Bureau did not recommend what I am recommending here, and that is the restoration of these cuts—or that part of them which can still be efficiently used in this fiscal year—for flood control and rivers and harbors.

I would like to make two comments in that connection. First, we must all recognize that if a deficit impends, or even if we have no deficit, but have only a very slight surplus to apply to the national debt at a time such as this when our national income is so very high, then we must do something affirmative about it, and that is, raise taxes sufficiently not only to cover Government expenditures but to provide a substantial payment on the national debt. Thus, although any reduction in Federal expenditures can have a favorable result in lessening the possibility of deficit or in increasing the possibility of a small payment on the national debt in this fiscal year, the reductions which could be made are picayune in relation to the gigantic extent of the fiscal problem we face of retiring this simply astronomical public debt resulting primarily from World War II and its aftermath.

My second point is that if the budget recommendations for civil functions activities in the 1949 fiscal year which ends this coming June were realistic and careful estimates, based on thorough investigation and weighing of all of the factors involved—and I believe they were at the time they were prepared and submitted to the Congress—then they must still be regarded as careful and realistic estimates. Thus, I think the

Budget Bureau should have stood behind those recommendations of last year when it prepared the estimates for this deficiency bill. I would have no hestitation in voting to support a deficiency bill which reflected generally the original appropriation requests of the agencies and departments last year on those functions which are included in this bill. Those of us who were in the minority in the Senate last year supported those original estimates and fought for them and, to a large extent, the Senate as a whole approved them. But, unfortunately, the false economy views of the House too often prevailed in the final bills. I should think that all of us who went down the line on the need for these appropriations last year still believe the requests were justified.

It is an altogether different House of Representatives we are dealing with this year from the one we had to deal with last year in regard to the need for adequate appropriations for vital functions of the Government such as flood control and rivers and harbors improvement and maintenance. Therefore, I think that if the Senate committee will proceed to remedy as much of the damage as can be remedied at this date on these projects which were cut last year, the Senate will approve and the House will concur. I certainly think it is worth the effort.

Now, as for some of these projects in Pennsylvania:

FLOOD CONTROL

Williamsport dikes: The budget recommendation for the 1949 fiscal year on this project was $2,244,400. The House last year allowed only $1,900,000. The Senate Appropriations Committee, at my request, restored the full amount of the cut in the appropriation bill when it was before us last spring. Unfortunately, however, the conferees from the House refused to accept the Senate figure, which was the budget figure, and insisted upon the amount passed by the House originally, representing a reduction from the budget of $344,400, or about 15 percent.

Absolutely no explanation was given by the House committee for making this cut originally or for insisting upon this reduction in conference. Several other projects which were cut in Pennsylvania and elsewhere by the House and on which the Senate insisted upon restoration, were restored. Thus, it can be seen that the House did not follow a uniform policy in insisting in conference that some reductions be kept and that others be abandoned.

I do not know, I cannot for the life of me figure out, why the Eightieth Congress House Commitee on Appropriations continually discriminated against Williamsport. This project is a vital project to that community. It was started before the war caused a shutdown in flood-control work. The partially completed dikes were, therefore, of no value at all in combating a disastrous flood in May of 1946 which swept around these uncompleted walls into the heart of the community and caused a flood almost as tragic as the terrible Williamsport flood of 1936, a flood which was so devastating as to have put Williamsport on the Army engineers' list of top priority projects in the early flood-control program.

The House cut this project in 1947 by $600,000 in the so-called economy drive of that year, but the Senate agreed with me to restore the amount and we saved the project's normal speed of operation. It will be recalled that at the time in 1947 when that appropriation bill was before us, there were tremendous floods in the Midwest and the House found it difficult to hold out for its foolish economies on flood appropriations. Last year we were not having so many floods at the time the bill was in conference, and so House economies in some projects were sustained.

The Senate committee and the Senate were convinced last year that this was a good project, a worthy project, a vital project, and that the budget request for it was reasonable and practical. I ask now that this committee stand by the judgment of the committee of last year and of the Senate last year and make it possible for the Engineers to complete by June 30 as much as possible of the original work it had planned to do in this fiscal year. The construction season is still before us and if the full amount of $344,400 is restored to this project, I confidently expect it can be used to achieve the work originally planned in this fiscal year.

The people of Williamsport are vitally concerned about this project. To them it is virtually a matter of life and death, not only for individuals in the flood path, but for the community as a thriving industrial and metropolitan center. When I visited there last month to make a political speech to fellow Democrats, at a Democratic dinner, some of the Republican leaders of the community, including the mayor, came to see me because they knew I was going to make some references to their flood-control project and they wanted to discuss it with me and to express the appreciation of the community for the efforts I have made in behalf of their project and for the generally fair way in which the Senate of the United States has treated them on this project.

If this money is not restored now, it will be very difficult to make up the work which would be lost in this fiscal year. The President's budget on flood-control appropriations for the coming fiscal year starting next July hews rather closely to the original long-range estimates submitted last year by Army Engineers. The total budget for the coming fiscal year is a very large budget, much larger than the one of the current fiscal year, and it may be difficult to try to make up in the next fiscal year for deficiencies in this year resulting from the false economy of the Eightieth Congress. That is why I urge so strongly that this money be appropriated during the current fiscal year as part of the budget of this year.

East Branch Clarion River Reservoir: The circumstances on this project are substantially the same as those in the case of Williamsport. For 2 years in a row the House in the Eightieth Congress cut this important project by substantial amounts; as a matter of fact, the project was eliminated completely by the House 2 years ago in the 1948 fiscal year appropriation. The Senate, fortunately, wrote in a million dollars for it at that time and the money was provided. Last year, when the current fiscal year appropriation was up before the Congress, the engineers asked for $2,000,000, but the House provided only $1,700,000, or a reduction of 15 percent. I came before this committee last March to appeal from this cut and I am appreciative of the fact that the Senate committee and the Senate voted to restore the $300,000. As in the case of Williamsport, however, the House conferees refused to accept the Senate figure and the cut stood.

For substantially similar reasons to those I cited above in the case of Williamsport, I urge that that $300,000 now be made available for the period between now and June 30, or at least as much of it as the Army engineers sincerely believe they can use efficiently in these months to accomplish the work originally planned in this fiscal year on this very important project for the defense of Ridgway, Johnsonburg, St. Marys, and the Elk County flood area generally. If this is done this reservoir should be well on its way toward 50 percent completion, so that completion would be possible perhaps by mid-1951, at the end of the 1950 fiscal year. That, indeed, would be a great barrier in our defense against the devastation of floods and their attendant destruction of human lives.

Flood-control planning: One of the serious blunders of the House in the Eightieth Congress in both 1947 and 1948 was to cut the funds available for planning work on authorized flood-control projects which are not yet in the construction phase. In 1947, for the 1948 fiscal year, the Senate reversed a 50-percent cut in planning funds voted by the House and succeeded in providing the money for a reasonable degree of advance planning work on the Bear Creek Reservoir, the Turtle Creek Reservoir, Tyrone, and the Lackawaxen River Basin. Last year, however, when the House again cut planning funds, this time by 25 percent, the Senate was unable to obtain full restoration of the cut. This has meant substantial reduction in the amount of work which had originally been recommended by the engineers on Turtle Creek and Tyrone and also the Shenango Reservoir and the Lackawaxen system. This money should be restored. It represents comparatively small amounts of ten and fifteen thousand dollars, at the outside, in each case. All of these projects are important ones and it is important that the Congress permit the engineers to proceed expeditiously with the advance planning work so that at the moment appropriations are available for construction, this work can get under way promptly. There is recurring talk of the need for a shelf of public-work plans ready to be put into use in case of a decline in employment, and I subscribe to that theory and I always have. Preparations of this kind prevent the distortion of public-works activity in time of economic recession into made-work and leaf-raking undertakings.

In the case of these particular projects, they are not merely desirable public works in times of unemployment, they are urgent programs for the safety of our people and of our communities and will, no doubt, be put into construction in the years soon ahead, regardless of whether we have to engage in any public-works activity for employment reasons. Thus, I earnestly urge that these planning funds be restored.

RIVERS AND HARBORS

Delaware River improvement: This long-range continuing program for the widening and deepening of Delaware River channels to provide for the newer-type cargo vessels and also to provide sufficient anchorage space to accommodate the vast amount of tonnage moving in and out of the port of Philadelphia, is of vital importance to the Nation's third largest city. Yet, the House, both in 1947 and 1948, refused to provide any money for this work, and in both years the Senate had to come to the rescue of Philadelphia and its maritime industry by providing the full budget amount. A cut of a little more than a half-million dollars, however, was made in the final approval for the current fiscal year, and I ask that this money be restored.

I have numerous letters from Philadelphia business interests describing the difficulties at the port and the anchorages and urging corrective action. Not only have we not gotten sufficient money to continue this widening and deepening program, but the maintenance funds for the engineers were cut rather severely last year and shoaling is taking place at an alarming rate.

This is an urgent project and I sincerely urge that the Senate stand by its original judgment of last year and restore this half-million-dollar cut, or as much of it as the engineers can use efficiently to carry out their original program in the remaining months of this fiscal year.

In this connection, I think consideration should also be given to providing additional maintenance funds to the engineers for the rest of this fiscal year.

I discussed this project in great detail when I appeared before the Senate Subcommittee on Civil Functions March 19, 1948. If any supplementary information is needed, I shall be happy to provide it.

Erie Harbor: Also in connection with the maintenance appropriation, I would appreciate it if the committee would determine from the engineers what additional work could be done on the Erie Harbor in this fiscal year if additional maintenance funds are provided. The budget originally provided $139,000 for Erie, but my information is that only about $70,000 or $80,000 could be allocated out of the final appropriation for work which is of great importance to Erie.

CONCLUSION

I have repeatedly stated before this committee in past years and on the Senate floor, and most Senators, I think, have agreed with me, that our flood-control and rivers-and-harbors programs are among the most important domestic activities of the Federal Government, are essential to safety and commerce, and are in no sense whatsoever boondoggling or made-work. From my knowledge of the Pennsylvania projects there is no "pork" in any of them; they are vital to the communities which they serve and to the State and its economy.

Since Pennsylvania provides such a large share of the Federal revenues, and since losses from floods are legitimate deductions from income taxes, thus reducing those revenues whenever a sizable flood strikes any part of the State, and since so much of our heavy industry is in flood-vulnerable areas, these expenditures are as sensible as any investments the Federal Government can make.

Address by Hon. W. John Kenney Before the Hampton Roads Maritime Association

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very able address delivered by the Under Secretary of the Navy, Hon. W. John Kenney, before the Hampton Roads Maritime Association at Norfolk, Va., on February 24.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Congressman Hardy, Mayor Darden, President Seawell, of the Hampton Roads Maritime Association, members, and distinguished guests, as my plane descended today I was again impressed by the glorious sight of the ports of Greater Hampton Roads; the storage, terminal, and handling facilities; the piers, warehouses and grain elevators; the Army, Navy and Air Force installations; the drydocks and the shipyards and the ships—Naval ships and Merchant ships; ships at anchor, under way, and in reserve.

No American can gaze down upon this composite symbol of industrial and commercial achievement without pride and without confidence in our country's might. The emotions which Virginians must experience, particularly those who have taken part in the planning and developing of this area, I will not attempt to define.

The wartime record of the ports is so well known that I need pay only collective and passing tribute to their vital contributions to the winning of World War II. Their war and postwar accomplishments have been impressively set forth in terms of facts and figures in the Maritime Association's Annual for 1949.

But from where I sit in the Navy section of the Pentagon, the ports take on a significance outside the scope of cold statistics. From a Navy viewpoint, strictly from the point of view of national defense, I visualize them as a great reservoir of sea power, actual and potential. I do not refer to the present only. I am looking back to both world wars and ahead. The ships built here, whether carriers, cruisers, or destroyers; whether cargo vessels, oil tankers, or passenger ships, all are essential both to the peacetime and wartime needs of our country.

The great new aircraft carrier, the U. S. S. *United States*, about to be built in nearby Newport News, will be a great advance from the 200-foot frigate which bore the same name and which was launched 151 years ago.

Although the designers of this mighty carrier drew upon the lessons of World War II, they did not fall into the error of designing a ship to fight the same kind of war all over again. They looked back only so that they could better see ahead.

Carrier-based air forces take with them all necessary components for immediate action and sustained air operations. The great extra range for naval aircraft is built into the carriers themselves. Their planes arrive at combat zones—no matter how far distant—with tanks full and flyers fresh.

No other nation has this form of air power. It gives our country great advantage, not only in event of war but in the support of our national policies anywhere.

In the initial and highly critical stages of a war, the Navy's air power can buy time during which the weight of the Air Force and the Army can be brought forward. This modern power—more correctly, air-sea power—is not a duplication of the land-based air power of the Air Force. It is additional air power, tailor-made to sea and amphibious operations. In short, naval mobile air power is the other arm of our national air power.

Our minds are storehouses of impressions of the wartime devastation of air power. Current headlines, photographs, news reels, and spectacular air shows contribute to mass respect for, and appreciation of, its potential fury. The sight and sound of our planes flashing across the skies fill us with pride, fill us with confidence, and with a vague and pleasant sense of security; and this is certainly proper. But, the accumulative effect of this should not lull us into a false sense of security.

Today Americans are searching for simple solutions and easy roads to victory—victory without pain and sorrow—victory without denial of the comforts and without the loss of life—that have always accompanied, and will always accompany wars. This search has led in some cases to extreme views.

As General Bradley, Chief of Staff of the Army, recently stated: "If we construct air power at the fatal expense of ground and naval arms, then we may foolishly be forced to desert our allies and foresake our capacity to wage a sustained blow."

The Chief of Staff of the Air Force, General Vandenberg, has also said: "It has always been, and is now, our belief that the security of our Nation depends on the proper combination and employment of our land, sea, and air arms. We do not believe that a strategic air offensive alone will win the next war, if it comes."

In spite of our great technological advances since VJ-day, war within our lifetime is not going to be a push-button struggle. War will require the concerted efforts of all three services—in fact, all of us, man, woman, and child.

And in our preparation for war we must never forget the merchant marine. It is essential not only to our Nation's economy but to its national security. This country is wholly dependent on imports for many of its essential materials—manganese, chromium, tungsten, iron and copper ores. These materials are vital to our existence and they must constantly be brought to us across the seas—in ships. The merchant marine is the backbone of the logistic support of our land, sea, and air forces. The armed services cannot carry out their assigned missions without sufficient troop transports, cargo vessels, and oil tankers. These vessels must be appropriately designed, readily available, and capable of being swiftly produced.

In World War I, $3,000,000,000 in emergency ship construction were required and the program was not completed until after hostilities ended. World War II required an outlay five times greater and did not reach its peak for 3 years. It would be folly to assume that we again will have as much time to prepare for war.

In both world wars friendly maritime powers furnished us with greatly needed ships. Although these nations today are building better and faster merchant vessels in quantity, there is no guaranty that they would be available for our use in the event of another war, and especially so if these nations were overrun by enemy forces. Therefore, we should not rely on others to provide the ships that may mean the difference between victory or defeat.

In our planning, the menace of the high-speed, long-range, and deadly "schnorkel" submarine of today must be taken into account. Despite improved antisubmarine equipment, weapons, techniques, and tactics, ships inevitably would be sunk by underwater attack. How many is anyone's guess. For a long time after the start of World War II, ships were being sunk more rapidly than we could build them.

Consequently, next time, if there be a next time, we must have faster cargo ships, faster tankers, faster troop ships, and plenty of them. The Maritime Commission already has taken a realistic and forward-looking step toward this objective. It is a step which also may provide a possible answer some years hence to the worrisome problem of the block obsolescence of our Liberty and Victory ships of the last war.

The step I refer to is the building of two prototype cargo ships by the Maritime Commission to meet requirements based upon the wartime experience of the Navy. One of these ships is designed to meet the general cargo-lift needs of any future emergency; the other will represent the commercial version of a wartime auxiliary vessel used by the Navy as attack cargo ships and attack transports. Both should have peacetime commercial uses, particularly the strictly cargo-type vessel. Private industry already has expressed interest in it. The President and the Congress have given this prototype project enthusiastic approval and support. It is hoped that actual construction of these two vessels will get under way this summer, and that eventually they may be turned out on a large scale by private shipbuilding firms.

Other important steps also have been taken to revive our merchant marine and to keep it vital and flourishing. Chief among them are the recent and pending congressional appropriations totaling several hundred millions for the construction of a substantial number of high-speed tankers, passenger, and combination passenger-cargo vessels.

Among such ships to be built is one of particular interest to the Navy, the 48,000-ton liner ordered by the United States Lines. Her special defense features will, in time of emergency, make her invaluable as a troop transport.

The bid opening of last December 1 indicates that this outstanding ship will be built in this vicinity. Negotiations are go-

ing forward and it is hoped they soon will be consummated. The building of this liner will be a 3-year project and should afford a great measure of employment for this area. More passenger liners are greatly needed to meet our military needs.

Obviously, all the needs of our Military Establishment cannot be met through the medium of ships build by private interests. Nor can private industry be expected to bear the full financial load. Appropriate construction and defense-feature differential subsidies as well as operation-differential payments have been and must continue to be provided by the Government. They are key incentives to attracting private capital and to convincing the American investing public that the upbuilding of our merchant marine is not only essential to the security of this Nation, but also a good business risk.

Private industry appears ready and willing to assume its share of the burden if the Government will extend a fair and reasonable amount of construction-subsidy assistance and assume the total cost of any national defense features incorporated into the design of ships. In fact, practically every major American ship operator seems willing to further the extension of the current ship-construction program.

The current level of employment in both naval and private shipyards throughout the country is far below the level at which emergency shipbuilding expansion could be rapid enough again to meet defense requirements. The Navy estimates that safety level at from 80,000 to 100,000 workers. Today it is in the neighborhood of 50,000.

If a strong and effective nucleus of both ship design and shipbuilding workers is to be a reality, there must be reasonable assurance of definite periods of employment. Our shipbuilding industry cannot develop properly through an occasional shot in the arm. There must be a long-range program.

The ship construction and conversion program of the Navy is a part of this over-all program. At this time it involves a total of 49 ships, of which about one-third represents new construction. To provide the necessary and continual maintenance work on the reserve fleet vessels—laid up at a time when adequate repairs could not be made upon them—a 5-year overhaul program was initiated. In 1948 20 percent, or approximately 400 vessels, were thoroughly overhauled. The same percentage is scheduled for the fiscal year 1949. This program will be continued under the new Chief of the Bureau of Ships, Rear Adm. David H. Clark, who, from his days spent in Norfolk, is well known to all of you, and who succeeded Vice Adm. Earl Mills, retired.

Since the surrender of Japan, our merchant marine has shrunk to less than one-third its wartime size. Coastwise shipping is virtually nonexistent. How it best can be restored is not yet clear, but it is clear that something must be done—and soon.

I have touched upon a few steps that have been taken toward the revival of the merchant marine so necessary for our defense requirements, and for our Nation's economy. These steps are only a beginning.

The sum total of the efforts to date is to reverse a down-hill trend. The climb back will be long and hard. Many obstacles will have to be overcome.

However, because the survival of our merchant marine and a vigorous shipbuilding industry are so essential to our national defense, the National Military Establishment, along with the Maritime Commission, has put its shoulder to the wheel. It intends to keep it there until the job is done.

With the help of all hands, I am confident that it can be done and that it will be done—because it must be done.

Statement by 14 Washington Jurists and Deans of Law Schools on the Trial of Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. O'CONOR. Mr. President, in an unprecedented reflection of outraged public sentiment, 14 leading Washington jurists and deans of law schools have joined in a public statement in condemnation of the recent so-called trial of Josef Cardinal Mindszenty, primate of Hungary.

Among the signers of the document were the deans of the Schools of Law of Columbus University, Washington College of Law, and Georgetown University; the heads of the Columbus University School of Law and of the Catholic University School of Law; a former Associate Justice of the United States Court of Appeals, a former judge advocate general of the Army, a former Solicitor General of the United States, a former United States chief counsel for the prosecution in the trials of Japanese war criminals, the president of the Women's District Bar Association, the former president of the District of Columbia Bar Association, a former assistant United States district attorney, a former dean of George Washington University Law School.

The statement deserves the studious attention of all citizens in view of the tragic miscarriages of justice which have occurred, and the implications contained therein for religious security everywhere.

I therefore ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Protests have been made by representatives of church and state throughout the world, against the religious and political injustice of the simulated judicial proceeding, known as the trial of Josef Cardinal Mindszenty. Further comment is justified upon its legal and juridical injustice, and the extent to which Communist corruption has affected Hungarian law and procedure. Accordingly, we, the undersigned, American citizens and members of the legal profession, mindful of our obligations as ministers of justice, denounce this so-called trial as a brazen attempt by the Communist Party, to prostitute the judicial process for the unjust purpose of fastening guilt upon Cardinal Mindszenty, in order to gain totalitarian domination in Hungary, to destroy religious freedom and influence, and incidentally, to discredit the United States of America.

We propose to point out the appalling conflict between the universal justice of civilized nations and Communist justice in Hungary as exemplified by this trial. The Cardinal Mindszenty case demonstrates the fierce clash between international law and what the Hungarian Communist Party would like it to be; and between the substantive and adjective law of the Hungarian Communist legal order and that of nations belonging to the enlightened portion of the world community. The judicial issues implicit in this case transcend the administration of justice insofar as it involves an individual, a nation, or a church.

International law imposes upon every nation the duty of securing the enjoyment of certain fundamental, inalienable rights of human personality, such as freedom of religious worship, of political opinion, of speech and publication, and of public meeting. These rights are recognized by the preamble and article I, of the Charter of the United Nations, as well as by the Hungarian Peace Treaty, part II, section 1, article 2, and by the Universal Declaration of Human Rights, recently adopted by the General Assembly. But an analysis of the facts connected with the Cardinal Mindszenty case shows that the Hungarian Communist Party has flaunted these essential freedoms.

In the summer of 1948, the Hungarian Communist Party communized the schools. A framework of education was imposed by the introduction of new textbooks and the like, so that the youth of Hungary might be indoctrinated with the destructive principles of godless Marxism. This was a strangulation of the right of religious liberty. It may well have been intended as the first step in an all-out religious persecution.

Civilized nations administering justice under universal concepts of right and wrong recognize the necessity for the existence of constitutional law, written or unwritten. Such law means that no man nor political party is identical with the state, which is subject to a moral order, however legally omnipotent the state may be. Constitutional law protects the individual against the unreasonable exercise of the power of sovereignty possessed by the state.

But the Hungarian state has been unlawfully deprived of its sovereignty by the influence of Soviet arms and made a captive by the Soviet-dominated Communist Party, which has identified itself with the Hungarian state. The Communist Party polled only about 17 percent of the vote in Hungary at the last free election, but it controls the Hungarian state by measures of force and by means of the Soviet Army. Since the Communist Party regards itself as the Hungarian state, there can be no constitutional law so that any opposition to the Communist Party, however reasonable, becomes punishable as criminal. This Communist legal doctrine was a significant factor in the Cardinal Mindszenty case.

It should be observed that the reported plea of guilty or partly guilty by Cardinal Mindszenty, as reported in the press, did not mean an admission of criminal guilt as would have been the case under Anglo-American law. After the report of this plea, evidence was thereafter introduced by the prosecution to prove its case whereas under Anglo-American procedure, sentence would have automatically followed a plea of guilty, though evidence might have been received on the sentence.

The following are data which we deem material and relevant and which have been reported in press releases.

Cardinal Mindszenty was charged with having made a secret agreement with Otto von Hapsburg, next in male succession to the Hungarian throne. He is charged with having met him on June 21, 1947, in a monastery near Chicago, whereby, "after the third world war which was expected soon, the United States would support a Federated Central European Kingdom." Actually Cardinal Mindszenty was seen by thousands in Ottawa on the above-mentioned day, where he attended the Marian Congress. On the evening of June 21, 1947, the Cardinal had dinner with a number of Canadian dignitaries, including Mr. St. Laurent, now Prime Minister. On the basis of the evidence thus far made known, and the Cardinal's denial of any plot to overthrow the Government, it

is not to be believed there was adequate basis for a conviction on the theory of the Cardinal's breach of allegiance to the Hungarian state and people, notwithstanding the Cardinal's opposition to the Government.

The indictment charged Cardinal Mindszenty with the crime of espionage. It was alleged that information was found in a box in his cellar, prior to his arrest, concerning the movement of the Soviet Army in Hungary, Soviet-Hungarian economic relations, and summaries of Hungarian Cabinet meetings. But the bulk of this evidence related not to the Hungarian state, but to a foreign foe, which according to international law is unjustly depriving the Hungarian nation of its right to hold free elections, and to adopt a form of government and establish an economic regime desired by a majority of the people. No proof appeared in the news reports that any illegal use was made of these summaries.

Cardinal Mindszenty was charged with having written a "letter to the envoy (Mr. Selden Chapin), (parentheses added) of a western great power, in which he asked this envoy not to return the Hungarian Crown (of St. Stephen) which was in possession of the American authorities to the Hungarian state." It is possible that the Hungarian Communist Party did not intend to preserve for posterity this famous religious relic which had been given to St. Stephen, the first King of Hungary, by Pope Sylvester II. It is possible that the Communists intended to destroy it. Until ownership of this crown, so cherished by the Hungarian people because of its national and religious association, has been adjudicated by an impartial agency in conformity with law, every individual is legally entitled to advocate whatever disposition of it may seem just to him.

The final charge against Cardinal Mindszenty was that he sold gifts of American dollars, receiving therefor Hungarian forints in excess of the legal currency rate. The cardinal appears to have stated during the trial that members of his household did so; that he assumed responsibility and would make reparations. Surely no one can believe that these facts justified or motivated this trial.

The contrast between the so-called Communist justice and the justice of the civilized world, in relation to the Cardinal Mindszenty case, is also irreconcilable in the sphere of the general setting and spirit of the proceeding, the personnel of the court, and the character of the adjective law followed. Any representatives of news services and diplomatic observers present were allowed only a controlled access to the facts, the defendant, and the court. Secrecy surrounding the trial lent color to the accusations that third-degree methods, or worse, were being used by the Government in preparing its case.

The court, as reported in the press, was made up of five judges, but only one, the presiding judge, was an expert in the judicial process. The other four were chosen without reference to legal education or training, or professional capacity to weigh and evaluate evidence. They were professionally incompetent and politically biased. The report of the conduct of the trial showed that no standards existed for evaluating the weight and sufficiency of the evidence, or of determining its probative value.

Imprisoned by the Nazis for his resistance to their tyranny, and now by the Communists, Cardinal Mindszenty is a martyr to the cause of justice under the law of right reason, as administered by men of good will. Of peasant stock, devoid of wealth, dedicated to an ancient philosophy which proclaims the right of every people to choose its own political form and economic structure, as long as man is acknowledged to be something infinitely above brute creation, Cardinal Mindszenty has never descended to the level of mere Hungarian politics or economics. He was not an active partisan as to the issue of the restoration of the Hungarian monarchy, or of the continuation of the recently enacted agrarian reform, or of any other political or economic question.

In bringing about the conviction of Cardinal Mindszenty, by disregarding moral and penal values, and by rejecting the principle of cause and effect, the Communist Party in Hungary, and its Soviet master, have committed a crime against international society, against the Hungarian people, and against the administration of justice.

As the President of the United States has stated, Cardinal Mindszenty was the victim of a kangaroo court.

Neither Race Nor Creed

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Neither Race Nor Creed," from the New York Times of March 3, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEITHER RACE NOR CREED

When the House Committee on the Judiciary was holding hearings on the bill to lift the barriers to immigration for 250,000,000 Asiatics—the bill which passed the House by a large margin on Tuesday—one of the witnesses was Mike Masaoka, a native-born American of Japanese ancestry whose mother was ineligible for citizenship under the old restrictions. Mike fought in Italy with the Four Hundred and Forty-second Regimental Combat Team, made up of Nisei like himself. They talked of many things in the fox holes outside Cassino, he said, but the No. 1 topic was this: Sure, we wanted America to win the war, but we also wanted America to be the kind of America that it professed to be, and that kind of America would not discriminate against people like my mother, who came here early in the 1900's.

It took a war to break down the artificial barriers of race that were raised years ago under the hysterical spur of the yellow peril. First came the amendment in 1943 to admit Chinese, then in 1946 the lifting of restrictions against Filipinos and Indians. The present bill, which now goes to the Senate, goes the rest of the way to provide for quota entry of Japanese, Koreans, and the island peoples of the Pacific, and to permit naturalization of those already resident here.

No flood of Asiatics is permitted under the provisions of the bill, or the previous ones. The largest quota is 100 persons a year. Its chief first effect will be to permit naturalization of people like Mike Masaoka's mother, who told her sons when war came: "Boys, your job is to go out and fight for these United States, because it is my country." The good effects of the bill hardly are calculable. Despite the low quotas, at least the restriction that implied an inferiority of race will be removed if the Senate follows the House, as it is hoped it will, and passes the bill. Who knows how Japanese-American, Chinese-American relations might have developed had not the people of those two countries had raised against them this bar sinister of color? It is good to have it removed, to return to the principle that our neighbors are as good as we are. The House of Representatives by its action has lived up to the best American traditions.

Armistice in Palestine

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Armistice in Palestine," published in the New York Herald Tribune of February 25, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARMISTICE IN PALESTINE

The armistice between Egypt and Israel came almost as an anticlimax. The basic conditions for this step toward permanent peace in the Holy Land had long been established; already the political problems of the peace were overshadowing the military questions which the armistice was intended to answer. As Israel's Foreign Minister, Mr. Moshe Shertok, remarked, there is a "considerable distance from this first armistice to the last peace treaty." Nevertheless, while troubled Palestine has not been rendered tranquil by a stroke of the pen, the armistice signed yesterday at Rhodes remains the most hopeful event which has brightened the horizon of the shadowed Near East. Its essential drama may be measured, not by considering the distance to a final peace, but by contemplating the long road that has been traversed since the independence of Israel was proclaimed, a little less than a year ago.

Then the new state was virtually unacknowledged and untested; it confronted an Arab coalition which seemed implacably opposed to any settlement that Israel could possibly accept, and which disposed of forces far greater and far better trained than the Israel levies. Opinion in the world at large was confused and diffused; Israel's fate was enmeshed in complex decisions of power politics, and no one could predict what vaster storm might sweep over Palestine's little war and wreck the brave experiment of Israel in the process. Yet a band of steadfast men and women held to their ancient homeland and now have seen their faith confirmed.

The armistice between Israel and Egypt is not political. It does not settle finally the southern boundaries of Israel nor the fate of such a strategic point as Beersheba. Jerusalem and the eastern boundaries must still be debated in the negotiations with Transjordan which open Monday, and, so far as Jerusalem is concerned, the United Nations is an interested party. But by signing any formal agreement with Israel, Egypt made a political decision of primary importance, one which substantially reduces the significance of the outstanding questions. And since Transjordan and Lebanon have indicated their willingness to do likewise, while Saudi Arabia and Iraq are content to abide

by the decisions of Israel's immediate neighbors, the Arab League (Syria alone is recalcitrant; Yemen has not been active in the war) has yielded on the main point—the existence of an independent Israel.

The American role in the drama of Israel's rebirth has not always been one in which this nation can take much pride. But one individual at least, Dr. Ralph Bunche, the acting UN mediator, has deserved well of his country and of the great organization he represented. Both the Israeli and the Egyption delegations have paid tribute to his unfailing optimism, his kindness, patience, and constructive ideas in the difficult task of reducing the armistice to terms which would be agreeable to both parties. Many forces, rational and irrational, and many persons, contributed to the great event at Rhodes, but for Dr. Bunche it is the climax of a career devoted to peace.

Nomination of Mon C. Wallgren

EXTENSION OF REMARKS
OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD several newspaper editorials and letters dealing with the nomination of Mon C. Wallgren to be Chairman of the National Security Resources Board.

There being no objection, the editorials and letters were ordered to be printed in the RECORD, as follows:

[From the Tacoma (Wash.) News-Tribune of February 28, 1949]

THE TRUMAN-WALLGREN CASE

Mr. Truman has no patent on lame-duck appointments—the practice of naming defeated candidates to well-paid posts. It has long been indulged in by Presidents of both parties and is also popular in State governments. Actually, however, there are very few Republican lame ducks, it having been so long since the GOP had control of the White House. The custom has been lightly condoned, though never enthusiastically accepted, as among the care-free vagaries of the American way.

Why, then, the fight against the appointment by Truman of former Governor Wallgren to be Chairman of the National Security Resources Board, which has been carried on almost single-handedly by Senator CAIN? Is it purely politics, as the Democrats charge, or is the post of such vital importance that the Tacoman is justified in his objections?

From the name, National Resources Security Board, the average citizens can't differentiate it from many governmental agencies long accepted as affording a congenial asylum and cushioned refuge for pleasant politicians of undistinguished record, each currently out of a job.

What is the National Resources Security Board? It is a far-reaching agency looking to the integration of the whole of American industry for national defense. The chairmanship calls for an outstanding American whose qualifications for the great post are at once manifest and monumental. According to Marquis Childs, writing in the Washington (D. C.) Post, the Board has been given extraordinary authority by Congress to use Federal money to develop and acquire natural resources and relocate and reorganize industry for the Nation's security. The Chairman, according to this same writer, to show one example of his power, can authorize a contract with a mining company or mine on the representation that important mineral resources are to be exploited. Then the company or the mine can get a loan from RFC for the development.

Actually, the chairmanship of the National Security Resources Board should call for the appointment of a man of the universally recognized caliber of a Dwight Eisenhower, Bernard Baruch, or William P. Jeffers who did such an outstanding job in 1942-43 cleaning up the synthetic-rubber mess and reorganizing it so that it contributed to the war effort in an outstanding degree. Indeed the chairmanship of this Board is considered by many who recognize its importance as comparable to the Presidency itself.

It seems probable that Mr. Truman could have found some innocuous job for his old friend which would have brought quick confirmation, although it seems doubtful if it could have been made to fit so he could occupy his new $60,000 Palm Desert mansion. When national security is involved it is something else. It belies the cry of "politics" hurled against those who ask for a thorough, dispassionate examination of the qualifications of the man in whose hands it would be placed.

[From the Houston (Tex.) Chronicle of February 25, 1949]

QUESTIONABLE APPOINTMENT

Put aside the charges brought by Senator HARRY P. CAIN, Republican of Washington, against Monard C. Wallgren, former Senator and former Governor of the same State, and there is still reason to question the appointment of President Truman's friend and companion to the chairmanship of the National Security Resources Board.

The Board is the vital element in our policy of peacetime preparedness. In it are lodged all of the powers of national defense which are not strictly military in character. It is charged with the responsibility of making our civilian M-day mobilization plans.

It can shape the course of industry to a tremendous extent. It can play favorites or not as it chooses. And yet it will be difficult to tell until the hour of danger strikes whether or not the Board and its chairman have lived up to the responsibilities entrusted to them.

The Board needs a big man, with business experience, at the head of it. It is strictly that sort of a job. The last occupant of the post was criticized on the ground that although he had had experience in big business, it was in a narrow field; that in consequence he was not on intimate terms with enough of the Nation's top industrialists to get the best results for the Board.

How does Wallgren fit into the big-business picture? He was an optometrist until he entered politics. His political career was not distinguished in his home State. He was the only Democrat on the Washington State ticket defeated last fall. He is now supposed to be fitted by training, character, and experience to foresee and anticipate our needs on a scale that will run into hundreds of billions of dollars if the need ever arises.

It is hard to believe that his service as a member of the Truman committee while he was in the Senate, ability as a billiard player, and his intimacy with the present occupant of the White House, invest Mr. Wallgren with the qualifications that he will need in his new post.

[Excerpt from the March 1, 1949, newspaper column of Hedda Hopper, entitled "Looking at Hollywood"]

Raising cain: ex-Senator Mon Wallgren isn't faring so well in Washington since Senator CAIN has put him on the spot, but he's sure making strides with building a home at Palm Desert. Workmen are busy even on Sundays. It's quite a place, and the scuttlebutt down there is that his first house guest will be President Truman.

[From the Walla Walla (Wash.) Daily Union-Bulletin of February 22, 1949]

WHAT ABOUT WALLGREN?

There has been some disposition to regard Senator CAIN'S one-man battle against Mon Wallgren's appointment as chairman of the National Security Resources Board as a personal affair, and little more. Some people in this State have taken the attitude that Wallgren will probably get some political plum anyway. Why not this $14,000-a-year job?

The answer is to be found, partly at least, in the duties he would assume. Because this is a comparatively new agency, the far-reaching importance of the Chairman and the Board he heads are little understood. But the act creating the Security Resources Board spells out extraordinary authority to use Federal money in a variety of ways to develop and acquire natural resources, and relocate and reorganize industry for the security of the Nation.

Take one example of the power of the Chairman. He can authorize a contract to any mining company or individual mine on the representation that important mineral resources are to be exploited. That company or mine can then go to the RFC and get a loan for the development.

Besides the Chairman, the Board is made up of the Secretaries of State, Treasury, Defense, Interior, Agriculture, Commerce, and Labor. These are extremely busy, overworked men and the chances are strong that the Chairman, as the only member without other duties, would run things pretty much as he chose. It has been said that, next to the President's own job, this is one of the most important assignments in the Nation. The future security of the country might well turn on how the assignment is carried out.

As CAIN has pointed out repeatedly in statements to the press and to the Senate committee investigating the appointment, nothing in Wallgren's past would appear to equip him for this important task. He is an amiable companion, a fine fishing-trip companion, and a first-class billiard player, But his work as a Congressman, Senator, and Governor of Washington failed to indicate the sort of ability called for in heading this Board. And there are other disqualifications that may be considered equally important.

Among these are the rather sensational charges made during the last election campaign, by members of Wallgren's own party, concerning the operations of the State liquor law. He was accused of favoring a clique of Democratic lawyers who were influential in obtaining licenses for so-called private clubs where liquor could be sold by the drink. He was also questioned by a former Democratic Governor, in large ads appearing throughout the State, about transactions in which the liquor board was alleged to have purchased a large block of whisky at a price reported to be $7.50 to $10 a case above the market quotations on other better known brands. The extremely important issues raised were never satisfactorily answered.

There was also the matter of the Howard Hughes airplane contracts. When the Senate investigation into those contracts was being made in 1947, Wallgren was listed as one of those attending parties given by Hughes' publicity man, John Meyer. Those parties were charged to the Government as expenses under the cost-plus arrangement, and Wallgren was reported to have attended sessions in New York, Hollywood, and Palm Springs. But only a part of Meyer's expense accounts were available and the public never heard the entire story.

These are things which might be disregarded were Wallgren being named to a less important post, but which can scarcely be called inconsequential in view of the tremendous powers the Chairman of the National Security Resources Board will exercise. The job should not be given to a man concerning whom so many questions as to fitness and background have been raised. Senator CAIN, in spite of the jibes he has taken, is doing a significant service to the country in opposing Senate confirmation.

[From the Arlington (Wash.) Times of February 24, 1949]

POLITICAL PROFITS

We are not too impressed with the evidence produced by Senator CAIN in his attempt to prevent the appointment of former Gov. Mon Wallgren to high Federal office.

What does impress us, however, is the announcement that Mon's new $60,000 home at Palm Springs, replete with swimming pool and transplanted date-bearing palms, is about completed and ready to entertain the President.

A little over a decade ago we met Mon when he was a golf instructor. That fall he was elected to Congress. That was the beginning of the era when profits earned by a legitimate business began to be viewed as loot by the New Dealers in Congress and elsewhere.

We are not accusing Mon, nor do we begrudge his good fortune, but we would like to read the success story of how he amassed such a fortune while still the servant of the people and a member of that group that frowned on profits.

GOP Comes Up Again as Champion of Tax Cut

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. VAN ZANDT. Mr. Speaker, from the columns of the Washington Evening Star Thursday, March 3, 1949, the following column by Gould Lincoln is a timely observation on the tax policy of the present administration.

When one recalls the accomplishments of the Eightieth Congress in reducing taxes, there are many reasons to be proud of the Republican Party's record of relieving the overburdened American taxpayer.

Mr. Lincoln's column follows:

GOP COMES UP AGAIN AS CHAMPION OF TAX CUT—DEMOCRATS SEEN LABELING PROPOSAL AS ANOTHER RICH MAN'S BILL

(By Gould Lincoln)

Republicans in Congress have again put themselves forward as the champions of tax reduction. Their attitude is in direct opposition to that of the Truman Democrats. This time the Republicans are proposing to reduce the so-called excise taxes—which in reality are sales taxes although the Democrats would die before admitting as much.

These taxes fall on the poor those in moderate circumstances and the wealthy alike. They are the taxes which the people pay for telephone service, local and long distance, for telegraphic, cable, and radio service; taxes which they pay every time they travel by train, or buy toilet goods, jewelry, luggage or films, plates, cameras or electric light bulbs; taxes which they pay for admission to the movies and other entertainments. The Republicans propose to educe also the taxes on bowling alleys and billiard tables, and on purchases of furs.

All these taxes are a burden, and the burden is particularly heavy on the little fellow who wants an electric light bulb, or a railroad ticket or a telephone. The Republicans are not proposing to wipe out these taxes entirely, but in most instances they would cut the tax in half or to one-quarter.

A RICH MAN'S BILL

Undoubtedly the Democrats will label the new tax bill a measure to relieve the rich—just as they labeled the Republican income-tax-reduction bill enacted by the Eightieth Congress a rich man's bill. The fact is, however, that 7,000,000 taxpayers who shelled out to the Federal Government under the Democratic income-tax law—all in the lowest bracket—now pay no income tax at all because of the Republican tax-reduction law.

Also, other millions of taxpayers in slightly higher brackets have been relieved of a considerable part of their income-tax burden. And had it not been for the action of the Republican Congress—that "worst of all Congresses" according to President Truman—it is now perfectly clear there would have been no tax reduction at all. Mr. Truman is asking an increase of $4,000,000,000 in tax revenue—not a reduction in taxes. How long the Democratic administration can get away with the idea it is the protector of the pocketbooks of the people is anybody's guess.

Mr. Truman's program calls for billions more in taxes and billions more in Government expenditures. The Democrats argue that the tax money taken from the people will be expended for their benefit. The whole question is whether the people prefer to have their money spent for them as the Government sees fit, or whether they prefer to spend it themselves.

Ever since 1917 and the beginning of World War I, when the Democrats were in power, taxes have been increased except when the Republicans were in power. It was under the Republican administrations of Harding, Coolidge, and Hoover that income taxes and other taxes were cut.

TAXES RISE UNDER DEMOCRATS

They started soaring again when the Democrats, under Franklin D. Roosevelt, took over the Government. They kept right on upward until they reached the highest point in history, and no material step was taken to reduce them—especially the income taxes, until the Republicans regained control of the Congress in 1946. Incidentally, President Truman vetoed the Republican tax bill and it was passed, with the aid of Democratic votes, over his veto.

That's a long high-tax record for the Democrats—extending 32 years. It is true that they faced depression and war—and increases in taxes were necessary. But the real point is that once they got taxes up, they didn't move to bring them down again—even when depression lessened and war ceased. It points up the old New Deal slogan: "We'll tax and tax, spend and spend, and elect and elect." And so far the Truman administration has done nothing, taken no step whatever to lower any taxes on poor or rich. Indeed, the program of the Truman administration looks to such great spending that there is no possibility whatever of tax reduction if the program is carried out.

Furs and jewelry are considered luxuries. There will be no great sympathy for any man or woman who pays $5,000 for a fur coat or $25,000 for a diamond necklace—and is compelled to pay a high sales, or excise, tax on the purchase. The Republicans can easily amend their bill to remove from it any vestige of preferential treatment for the rich who make such luxury purchases. All they have to do is to make the excise-tax reduction on only the cheapest furs and jewelry—the kind of things that are regarded almost as necessities in families of the most moderate means or even less than moderate.

California Propaganda Technique Exposed

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. PATTEN. Mr. Speaker, the much-discussed waters of the Colorado River have caused numerous articles to appear on the subject. Arizona and certain water agencies in southern California have been the principals in this discussion. A great deal that has been written has been misinformation, or of doubtful accuracy. The members of this body from Arizona have seldom used articles from Arizona papers refuting statements of questionable accuracy because the legislation has not yet been taken up by the appropriate committee for consideration. However, the Arizona Daily Star of Tucson made a reply on February 24 editorially to an editorial appearing in the Oceanside (Calif.) Blade-Tribune on January 25, to which I want to call attention. This editorial in the Arizona Daily Star completely refutes the points stressed by the California papers. The editorial is as follows:

CALIFORNIA'S FROPAGANDA TECHNIQUES

An article appearing in the Oceanside (Calif.) Blade-Tribune on January 25, discussing the proposed Central Arizona project, reveals the sort of misinformation special-interest groups in California are spreading among the people of that State concerning the Colorado River controversy.

To show how glaring some of these exaggerations are, we will quote a few passages from the article, then follow each with a statement of fact, not only for the education of Arizonians, but in the hopes that a few fair-minded Californians can be taught the truth about the issues in the controversy.

For example, the opening sentence of the article states:

"Arizona's renewed attempts to promote the huge Central Arizona project in the Halls of Congress may dry up a water supply which could support an additional 5,000,000 southern Californians, and seriously jeopardizes a $550,000,000 investment in Colorado River projects."

The answer to this is that Arizona is not seeking one drop of water to which California is entitled. California, by an act of her own legislature in 1929, limited her use of main-stream Colorado water to 4,400,000 acre-feet of water annually, which is her allotment under the Boulder Canyon Project Act of 1928. The water Arizona seeks would in no way hamper California's use of her full share, which, incidentally, she is not today using.

Another point is that the water Arizona is seeking would be used to save proven agricultural land from ruin. California is seeking additional water to develop the East

Mesa, out of whose 225,000 acres only 5,350 could be economically farmed, according to a report by the United States Bureau of Reclamation and the University of California.

Now look at this statement:

"Water for this speculative land-development scheme can be obtained only by taking it away from California's contracted water."

Arizona is entitled to 2,800,000 acre-feet of main-stream water annually under the Boulder Canyon Act. She is using a mere 400,000 acre-feet of main-stream water. She is asking some 1,200,000 additional acre-feet for the Central Arizona project. If she gets the water, her total use will still be over 1,000,000 acre-feet short of her allotment. Arizona is entitled to use her full allotment of 2,800,000 acre-feet of main-stream flow, and California her allotment of 4,400,000, before any surplus is divided equally, as provided in the Boulder Canyon Act. The water Arizona seeks will not be used speculatively, but to save proven farm land.

As to any water shortage, a total of 5,394,040 acre-feet of water flowed into Mexico, and hence into the Gulf of California, from the Colorado during the 12 months from October 1945, through September 1946, according to a report from the United States Geological Survey. Anyone who has recently visited the portion of Mexico through which the Colorado flows, as we did last month, can testify to the fact that land, once farmed, is being flooded because of the overabundance of water in the Colorado.

Here is another statement from the article:

"Arizona is now using and has authorized projects which will use 3,300,000 acre-feet."

There is no basis for this statement. It is an attempt to misinform Californians in an effort to unite them against Arizona's water plea. Arizona is using 400,000 acre-feet of main-stream water annually. No additional water is being used from the main stream, and no additional use is authorized.

The article also says:

"There just isn't any water left for this costly project."

As pointed out above, the water is available, and Arizona is entitled to twice the amount she is seeking. The demands for the Central Arizona project amount to only about one-quarter of the water passing annually into Mexico, or about equal to the amount that California is wastefully dumping into the Salton Sea each year.

Finally, inspect this remark:

"If Arizona were to get this water, it would be a financial windfall to a few land speculators and would benefit about 25,000 people, as compared to 5,000,000 in this State."

Another example of the gross misinformation being handed the people of California by a small special-interest group.

The land for which Arizona seeks water is owned by thousands of farmers. It is the key to the economy of a valley in which 300,000 people reside. The economy of Arizona and California are closely interrelated. We import manufactured goods from California, and she imports food from our farm land.

Any threat to the economic life of our greatest farming area is a threat to the economy of California.

In all fairness to the Blade-Tribune, it should be pointed out that the facts in the article, quoted in part above are based on an interview with, or news releases from, Ben P. Griffith, secretary of California's Colorado River Association. The Blade-Tribune did not make them up. They are part of a carefully planned propaganda campaign being conducted by a small, special-interest group, and designed to cloud the issues in the river controversy.

Californians, as well as Arizonians, should be better acquainted with the true facts of the controversy.

Another Hidden Tax

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Columbus Evening Dispatch of February 23, 1949:

ANOTHER HIDDEN TAX

In spite of repeated explanations and proof to the contrary, millions of Americans faithfully believe that the regular deductions from their earnings, in the name of social security, represents money that is put aside and placed in trust for them, to be repaid in their old age in the form of social insurance. That is not so. The money is withheld from their pay all right but it is not cached away for the rainy day of old age. It is spent by the Government and only Government obligations remain where this money once was. Social security, in this light, is but another form of taxation, a hidden, but nevertheless real, tax.

This paramount fact should be kept in mind in any consideration of the Truman administration's latest proposal to broaden social security and to increase the amount of money withheld from workers' wages and salaries. If the President's proposal becomes law, the sums withheld will have doubled by next January 1. There is no reason in the world to expect that this added taxation will be treated any differently than it has been in the past. In other words, it, too, will be spent by the Federal Government and replaced with Government obligations—the payment of which remains a matter for future worry and conjecture.

The spendthrift policies of the Federal Government over the past 16 years have been such that even the astronomical taxes now collected cannot keep up with the rate of Federal spending. There is every reason to believe that the people will tolerate no appreciable tax increases. Yet the money to spend must come from somewhere. How convenient a vehicle is the social-security system. In the name of social security, old-age assistance, and so on, as much as $6,000,000,000 a year can be raised, compared with the current less than $2,000,000,000.

If the people accept this disguised tax, more than threefold greater than what they now pay (thinking it's being saved for them), they will have indicated a sublime indifference to whatever their leaders choose to do to them. Indeed the Fair Deal spenders may be pardoned for thinking that they can get away with almost anything.

One cannot but ponder, parenthetically, what the Federal Government would do to an insurance company which accepted regular payments over the years toward an endowment policy for an individual and promptly spent each premium payment as it was paid in with nothing left to show for it but the company's note. What would the Government do to such a company which blithely spent such premiums and as much as announced that it would worry about paying off when the insured reached age 65—if he ever did.

And then what would the Government do to such a company, with such a record of misappropriation of premium funds, if the company blandly declared that it was doubling its premiums with no guaranty that the doubled amount would not be spent just as in the past.

Facts and Fictions About Gold

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I wish to insert some comments by one of the most competent mining research men in the country, Mr. Frank Lilly, of Spokane, Wash. I think his closing paragraph in his discussion of facts and fictions about gold is most important and worthy of the note of every Member of this body—a statement that failure on the part of our Government to use properly the monetary might inherent in gold in an honest hard-money monetary system involves a greater danger to these United States than the atom bomb would be in the hands of a European enemy. His statement follows:

SOME FACTS AND FICTIONS ABOUT GOLD

(By Frank Lilly)

Most widely known of all the metals and the first material thing mentioned in the Bible (Genesis ii: 11), gold is the least understood in the mystery of the power it exercises over mankind.

It is not the rarest metal; it is not the most valuable; it is not the most useful. Cheap brass and burnished copper are just as beautiful.

But gold is the metal which throughout history has been sought above all others. At the mere report of a gold strike men will rush to any part of the world, risking every danger of land and sea.

For gold man has fought and enslaved his fellowman—sacrificed his honor and his life.

It has been cursed as the root of evil.

And yet gold as man takes it from nature's vaults makes the owner richer without making anyone else the poorer.

It is worth as much in the hands of the weak and ignorant as in the hands of the strong and educated.

Its value increases proportionately as the value of all other things decreases.

It has been blessed by charity and used by man to adorn the fair sex and the churches and temples consecrated to his God.

What is the explanation of the tremendous force and scope of gold's power?

The answer can be found only in the historical facts about gold—not in the fictions of uninformed popular opinion fostered by money manipulators and selfish political interests.

What are these facts and fictions? Here are some of them:

It is a fact that throughout recorded history gold is the one thing of which no country or individual has ever had too much—the Midas story is mere fiction.

It is a fact that gold wins wars—it is fiction that they are won by manpower. If the fiction were a fact, either China or India would have dominated the world long ago.

It is a fact that the nation that controls the largest part of the world's monetary gold has throughout history dominated in commerce and maintained the highest culture as long as it had the gold—it is fiction that dominance in either commerce or culture can be maintained merely by a high level of intelligence and education.

It is a fact that the United States now owns by far the largest proportion of the

world's monetary gold—it is fiction that we have too much because actually we now have less gold in proportion to our national debt than when we had only one-tenth as much as we now have.

It is a fact that some of our gold can now be redeemed with paper currency or owned by a United States citizen except those in trades where gold is converted into an article which is sold to Mr. and Mrs. United States at prices which put a value of as high as $500 an ounce on the gold—it is fiction that our paper currency is as good as gold although it should be and must be if we are to maintain our position in world commerce.

It is a fact that international commerce is now conducted on a gold standard basis; it is fiction that we can buy anything anywhere in the world with our paper currency.

It is a fact that gold commands a premium in every free market in the world and, in fact, via the black market, in every country in the world—it is fiction that this market is small because over $4,000,000,000 of gold produced during the last 5 years has not as yet shown up in the world's monetary gold holdings.

It is a fact that natural gold can under a recent ruling of the United States Treasury be bought and sold within the United States—it is fiction that this gold promotes inflation, for it does not circulate as money.

It is a fact that no country whose monetary gold exceeded or equalled its paper currency has ever had either inflation or deflation—it is fiction that gold coins would be wildly spent or miserly hoarded.

It is a fact that gold is the only metal and probably the only commodity that has not increased in price since 1934—it is fiction that the price of $35 an ounce for gold is high because it was formerly priced at $20.67.

It is a fact that President Roosevelt reluctantly and gradually increased the price of gold following increased prices in foreign countries—it is fiction that he was the leader in increasing the price.

It is a fact that both President Hoover and President Roosevelt believed that the gold clause in our Government bonds and currency precluded a possible increase in the price of gold—it is fiction that this clause is still a stipulation in any of our Government bonds.

It is a fact that President Truman has estimated Russia's monetary gold holdings at no more than about $2,500,000,000—it is fiction that Russia has an enormous amount of gold or that it is producing anything like the amount credited to it by skillful propaganda unwisely circulated by a credulous press.

It is a fact that gold production, except for a short period following the discovery of gold in California, has not kept pace with the increase in population—it is fiction that the gold output has really been great.

It is a fact that because there has not been enough gold to go around the value has been legally increased 10 times since 1934 when the price was $4.26 an ounce on the basis of the English pound at $4.87—it is fiction that the price of $20.67 an ounce had prevailed for centuries.

It is a fact that gold sold as high as $165 an ounce in terms of graanback currency in a free market following the Civil War when the currency was, as it now is, irredeemable in gold—it is fiction that this price of $165 was due solely to manipulation by gold traders.

It is a fact that gold, machine guns, and narcotics are the only three things that cannot be freely bought and sold by United States citizens—it is fiction that ownership of gold is dangerous either to the individual or society.

It is a fact that if a citizen were permitted to sell abroad gold produced in the United States, he could at present obtain a substantially higher price than his own Government will pay him—it is fiction that in making a sale abroad one would be paid only in foreign currencies of questionable value.

It is a fact that Senators McCARRAN, of Nevada, and JOHNSON, of Colorado, and Representative CLAIR ENGLE, of California, have introduced bills in the present Congress that provide for a free market for gold—it is fiction that a free market would hamper or endanger our monetary system in any way.

It is a fact, although not generally realized, that gold is the one most important material thing in the life of every man, woman, and child, because, believe it or not, gold is intimately associated with almost every action of our lives—it is fiction to think that it functions only in bank vaults.

It is a fact that no real substitute for gold has ever been found, because gold is to commerce what blood is to the body—it is fiction that anything else is as good as gold.

It is a fact that the poor man's "pocket gold" is silver and that silver has throughout history been prized next to gold—it is fiction that silver is merely a commodity and not an important monetary metal.

It is a fact that the depression of the early thirties would have been prevented if our gold holdings had been promptly revalued in line with world values when the deflation set in during the latter part of 1929—it is fiction to believe that we must wait until deflation again wrecks our Nation's economy before applying the gold cure.

It is a fact that another depression is inevitable unless gold is revalued before disastrous deflation sets in again—it is fiction, as the history of every nation shows, that a bust can be prevented by legislative fiat and a managed I O U type of currency system.

It is an encouraging fact that our leading statesmen and most of the best informed monetary experts of the United States realize that this country must now revalue its gold upward and sooner or later return to the gold standard, the sooner the better—it is fiction that the United States can avoid the ruin that has been the result of every attempt to maintain an irredeemable printing-press currency.

These are some of the many facts and their correlative fictions which so conclusively show the far-reaching ramifications of gold. The metal, therefore, must not be considered lightly either in its relation to money or as the one form of wealth that for over 50 centuries has proven its transcendent power over nations, industry, and man-made laws. To disregard these truths and to fail to use properly the monetary might inherent in gold in an honest hard-money monetary system, involves a greater danger to these United States than the atom bomb would be in the hands of a European enemy.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BOLTON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. BOLTON of Maryland. Mr. Speaker, the civilized world today stands aghast at the mock trial held in Budapest by the Red leaders of Hungary. I do not believe anyone was surprised at their audacity in sentencing Cardinal Mindszenty to life imprisonment, because it was a foregone conclusion that he would be found guilty under the standards set by his Russian persecutors. Russia's heavy hand, having first silenced the Calvinist and Lutheran Churches in Hungary, moved a step further and decided to silence the Catholic Church as well. Methinks, Mr. Stalin has bitten off a larger piece than he can chew in his latest blunder. Let us not condemn the Hungarian Magyars—they are as innocent of wrongdoing as you and I, but, driven by the Red army, with guns at their backs, they have been forced to accept this shameful decision on the part of the Russian barbarians without protest.

We, however, are not under the domination of the Russian hordes, and, please God, we never shall be. We can do somethink about this shocking debasement of human liberties. The United States was a signatory to the Yalta Agreement, and we are morally obliged to see that no cause for further wars be tolerated. We are bound to act in self-defense. We must see to it, through the framework of the United Nations, that this outrage is not repeated in Hungary or elsewhere. If the United Nations cannot stop this sort of thing—what good is it? Is there anything closer to the hearts of men than their religion? How would we, in America, react to the confiscation by an enemy horde of our church properties and educational facilities? The Budapest papers recently carried headlines saying that Julian Huxley, UNESCO delegate, gave his blessing to the Russian confiscation of all Catholic and Protestant church school properties. No one with any judgment believes that Mr. Huxley did anything of the kind, but this is the sort of propaganda which the Russians are broadcasting to the world. The New York Communist daily recently had the nerve to say "whatever happens to Hungary's schools is of no concern to anyone else but those in power." I am afraid the editor of that Red sheet overlooked the fact that it might be of interest to the people who built and paid for those schools.

The recent shocking trial and conviction of Cardinal Mindszenty is only one example of the persecution of the Hungarian people. Persecuted persons by the hundreds are arriving at the Austrian border every day to escape imprisonment or deportation, if not death.

Catholics the world over, as well as millions of others of every faith, were shocked when Cardinal Mindszenty was brought to trial on charges trumped up by the Red leaders but their sense of decency and fair play was outraged at the manner in which the trial was conducted.

We are now witnessing the mock trials of a number of Protestant leaders in Bulgaria, just a repetition of the Mindszenty trial. They were forced by intimidation and threats to sign so-called confessions. Thank God, five of them had the courage yesterday to repudiate those confessions. The daily papers carried a small item on Monday of this week in which it was stated that the Russians had warned the clergy in Germany against entering into political activities.

This is not a war on Catholics or any particular race or religious group; it is an

effort on the part of the Kremlin to destroy religion, to destroy hope, to mold into a pattern described by the Kremlin, all of the downtrodden nations of Europe. I do not fasten the blame for this outrage on the weakling who acted as judge in the cardinal's trial nor those who are trying the Protestant leaders in Bulgaria. Let us put the blame where it belongs: on the shoulders of Joseph Stalin and the members of the Politburo, who issue the orders to their puppets.

I raise my voice in protest, as an American citizen who firmly believes in the Declaration of Independence wherein it states:

That all men are endowed by their Creator with certain inalienable rights and among these are life, liberty and the pursuit of happiness.

It will be interesting to see what the United Nations does about this matter, and I, for one, will be anxiously awaiting their decision.

Federal Gasoline and Oil Tax Repeal

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include House Concurrent Resolution 3 of the South Dakota State Legislature, which was sponsored by my friend, Louis Johnson, of Labolt, S. Dak., and which I endorse:

House Concurrent Resolution 3

Concurrent resolution memorializing the Congress of the United States of America to discontinue the Federal gasoline tax and Federal lubricating oil tax as soon as possible and refuse to reenact such taxes

Be it resolved by the House of Representatives of the Thirty-first Legislative Session of the State of South Dakota (the Senate concurring):

Whereas the Congress of the United States did during the session of the Seventy-sixth Congress increase the Federal gasoline tax one-half cent per gallon making such tax now a total of 1½ cents per gallon despite the fact that every State in the Union now imposes a substantial sales tax on gasoline, averaging in excess of 4 cents per gallon; and

Whereas such Federal gasoline tax during the past calendar year of 1948 has taken from the people of the State of South Dakota in excess of $3,000,000 which largely comes from the producers and from agriculture of South Dakota; and

Whereas such tax at 1½ cents per gallon amounts to approximately 10 percent retail sales tax on such product which is a necessity of the residents of this State; and

Whereas the Federal lubricating oil tax is 6 cents per gallon, and is likewise an enormous retail sales tax on a product necessary to the production of food for the country, and is an unfair and unreasonable imposition upon such necessity; and

Whereas it is the sense of this legislature that it is inequitable and unfair to impose such an enormous sales tax upon a single commodity of this type, which is a necessity to persons engaged in agricultural and producing pursuits; and

Whereas such gasoline tax is a revenue measure peculiarly adapted for the individual States for the purpose of construction and maintenance of adequate highway systems and means of transportation, and administrative machinery is well established in every State in the Union: Therefore be it

Resolved, That the Congress of the United States should discontinue the Federal gasoline tax and Federal lubricating oil tax at the earliest possible time, and should refuse to reenact the same upon their expiration, and should thus leave the field of revenue entirely to the individual States for use in construction and maintenance of the various States' highway systems; be it further

Resolved, That the Members of the Congress of the United States from the State of South Dakota be, and they are hereby urged by the legislature of this State to use their best efforts in opposing the reenactment or continuance of said taxes; be it further

Resolved, That certified copies of this resolution be forwarded by the Secretary of State to each Senator and Representative of the State of South Dakota in the Congress of the United States and to the President of the United States Senate and the Speaker of the House of Representatives to be by them presented to the proper committee in Congress considering or determining such aforesaid legislation.

Gen. Mark W. Clark

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, several days ago the city of New Orleans was pleased to have as its guest Gen. Mark Clark, one of the great leaders in World War II.

In this connection I am including in this insertion the splendid introduction of General Clark at a dinner of distinguished citizens of New Orleans by Col. Eberhard Deutsch, who served with the general in World War II.

I am also enclosing an editorial from the New Orleans Item.

INTRODUCTION OF GEN. MARK W. CLARK BY COL. EBERHARD DEUTSCH

Colonel Lyman, distinguished guests, companions, in October 1942 a small British submarine put out from Gibraltar, and headed southeast across the Mediterranean. Aboard was a little group of Americans, under the command of one of the great military figures of our history.

On the next night, as this vessel lay off a remote spot on the coast of Algeria, these men made their perilous way ashore in tiny collapsible canvas boats over the dark water. There they crept to a little house, kept a rendezvous with a group of French officers, arranged the landings of the American forces in north Africa, hid in a cellar for a day and a night, and finally escaped.

On the 9th of November—the day after the invasion—that same great military leader flew to Algiers, personally took into custody Admiral Jean Francois Darlan, effected an immediate cessation of all French resistance in western north Africa, and became the man of the hour.

Later, as commander of the Fifth Army, he landed his forces at Salerno, captured Naples, crossed the Volturno, established beachheads at Anzio and Nettuno, levelled and ultimately beat down the theretofore impregnable bastion of Cassino, and liberated the eternal city of Rome.

Placed in command of all Allied combat forces in Italy, this indomitable soldier continued his northward sweep. Sienna, Florence, Pisa, Leghorn, Bologna, Verona, Mantua, Genoa, Padua, Cremona, Parma, Como, Milan, Turin, Venice—all fell before him and acclaimed him. And when he reached the Alps, the enemy forces in Italy and Austria under Field Marshal Kesselring, surrendered to this magnificent American leader 5 days before the close of hostilities in western Europe.

He was next appointed military commander in chief of the United States Forces in Austria, and diplomatic High Commissioner of the United States for that country. The fact that, despite the unhappy state of affairs which developed in Berlin, no impasse was reached in Austria, is attributable to the genius of this man of the hour—soldier turned diplomat—who, for his firm and brilliant statesmanship, was now acclaimed man of the year.

It is with a sense of real reverence that I take the privilege of presenting to you that man of the hour and of the year, whom it is my firm conviction history will record as one of the greatest Americans of our generation, Gen. Mark Wayne Clark.

[From the New Orleans Item of Tuesday, February 22, 1949]

GENERAL CLARK

Quite on his own account, and not merely as an outstanding American whose fabulous wartime achievements have made him something of a legendary figure, Gen. Mark Clark is a very welcome visitor to New Orleans. Unassuming and modest, with an unquenchably boyish personality, he is about as far as possible from the accepted type of a saber-rattling swashbuckler.

For this reason, as well as because of his professional attainments, any opinion he may express on matters involving the military situation of the United States in its relations with other lands during a troubled era in world history has a valid claim on thoughtful public attention.

His conviction that the United States must be militarily strong, and must remain so until the uneasy tensions of the moment are relaxed, represents an almost universal military habit of mind. That is only natural. But it is encouraging, indeed, to note the leaven of introspective realism in his conclusions. For example, in discussing the current $15,000,000,000 appropriation for the armed services, he concedes that "this will go a long way if we squeeze out waste and duplication and get the unification we need."

Again, although strictly an Army man, he unhesitatingly expresses the belief that "we need a balanced force composed of Army, Navy, and Air Force. I can't subscribe to the theory that any one of them can do it alone."

That is a refreshing departure from the rigid channeling we have come to associate with the thinking of armed-services professionals or with the notion so prevalent in these days of government-by-gimme that spending for this and that is the all-important desideratum, without thought of the restraints of economy suggested by sound business practice.

In joining the welcome extended to General Clark and his family by New Orleans, we express the hope that he will find his stay here both pleasant and relaxing, as a prelude to his vacation in Brazil.

Mine-Fire Control in Ohio

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. BREHM. Mr. Speaker, I have the highest regard for the United States Bureau of Mines and I am deeply appreciative of the service which that organization has rendered in helping effect mine-safety measures throughout the various States having mining activities within their borders. A short time ago I requested the Chief of the Bureau of Mines to have his investigators make an inspection of a coal-mine fire which was reported to be burning in the vicinity of Sand Run, Hocking County, Ohio.

Just recently I received a detailed report which was compiled by the engineers of the United States Bureau of Mines, and naturally I submitted this report to the daily newspaper at Logan, Ohio, which serves the area in which this mine is located. For the information of all residents concerned and living in this area, the Logan Daily News quoted quite extensively from the report issued by the engineers of the United States Bureau of Mines. This morning I noticed a reply to that report in the Logan Daily News signed by Mr. J. E. Matheny, deputy mine inspector for Ohio.

I have personally known Mr. Matheny for a good many years and can say with authority that he is one of the most conscientious and informed mining inspectors which the Stat of Ohio has ever had. His report will carry much weight with the citizens of this affected area, and since it is so diametrically in conflict with the report of the United States Bureau of Mines regarding this particular mine fire, I feel that it should be published and that the United States Bureau of Mines should reply to Mr. Matheny's statement. Either the United States Bureau of Mines should retract some of the statements issued in their findings or they should get together with Mr. Matheny and after thorough investigation submit a subsequent report.

The citizens living in this area are entitled to a full, factual report.

Mr. Matheny's article addressed to the editor of the Logan Daily News, at Logan, Ohio, follows:

EDITOR, DAILY NEWS:

It is believed that a little further consideration should be given to the article in a recent issue of the Logan Daily News, entitled "Six Mine Fires Burning in Hocking County and Vicinity.". According to the news item, this report was prepared by the United States Bureau of Mines and released to the Daily News by Congressman WALTER E. BREHM.

Early in the report they mention several fires, both active and inactive, but do not explain why some are no longer active. I think that if they investigate far enough they will find that the ones referred to as the "Coal Cut fire" near Kimberly and the 1933 fire at Sand Run finally died out by the aid of nature smothering them with top soil and shale.

In reference to the present Sand Run fire, the report states that this fire can eventually affect an area of eight to ten thousand acres of worked out or partially worked out coal lands, with the United States Forest Service being the owner of the surface. This is a little misleading as the United States Forest Service owns but a very small percent of the total area involved, and the paragraph hinting that the coal is only partially worked out is slightly exaggerated as practically the entire area has been mined over and most of the pillars and crop lines removed.

At present, there are approximately a half dozen small domestic mines working in the area that can eventually be affected by this fire, and none of these mines is closer than three-quarters of a mile to the fire. With the exception of one or two mines, all of them are pillar and crop-line mines and their combined daily production averages approximately 150 tons, and none of them has anything to look forward to so far as future development is concerned, and without a doubt all of them will be worked out and abandoned before the fire can ever reach their workings. If there were any other prospective mining sites in this area they would certainly have been taken up long ago as the small mining companies are constantly looking for suitable mining sites.

Plans and costs are submitted for extinguishing the Sand Run fire. Why not submit the same for the other fires mentioned, especially the one at Carbon Hill, which the report states will eventually threaten the city of Nelsonville? I have every respect for the engineers in the United States Bureau of Mines, with whom I am acquainted, but I doubt very much if they or other such highly trained persons can accurately submit proposed costs of extinguishing such fires, especially where examinations cannot be made of the underground areas affected. However, since the miners in this area have been so hard pressed for employment in recent months, and this may be the forerunner for another WPA fire project which could help relieve the unemployment conditions, I am heartily in favor of it, provided the taxpayers are willing to assume the cost of such a project and the miners are willing to again resort to that sort of wages and employment.

Specific mention is made of the fact that all the vegetation has been destroyed in the area and the smoke and fumes evolved are a definite health hazard to the residents of the community. The vegetation consists mostly of thorn bushes and second-growth scraggly trees that have long ago been damaged by the forest fires that used to occur regularly during dry spring and fall seasons. It would be most interesting for uninformed persons to go view this highly publicized fire and determine for themselves the definite health hazards referred to, and then travel to some of the large mining communities in this and other States and view the mountainous high stone and "gob" dumps that are sometimes located right in the centers of the towns. These waste dumps are constantly burning and discharging much larger volumes of poisonous smoke and gases than can ever be liberated by the Sand Run fire and at the same time there are hundreds of citizens in each such community as compared to about a dozen families in the town of Sand Run.

The dangers to domesticated animals and persons traveling in the vicinity of the fires is also mentioned in the report. It would certainly be interesting to have a count made of the number of domesticated animals (including a few mongrel dogs) owned by the residents of Sand Run. It might be well to mention also that there is no reason for anyone to be traveling in the area affected by the fire.

The article further states that if the fire is allowed to continue to burn uncontrolled, that most if not all the remaining coal in the area will be destroyed together with the reforested area. Before too much emphasis is placed on this, I feel that the Forestry Service should inform the public as to just how much reforesting has been done in the area. This will be found to be rather small. Also the fact should be disclosed that the remaining coal that is endangered represents approximately 30 percent of the original deposits, and is known as pillars that were left during the original mining operations to support the roof while active mining was practiced. Up to the present day no practical or profitable methods have been discovered whereby such remaining coal can safely be recovered.

Emphasis is placed on the success of the famous New Straitsville fire barriers, and the fact that mining operations have been carried on both inside and outside the limits of these barriers. I do not know of a single instance where there is evidence to prove that these barriers have slowed up or stopped the progress of the New Straitsville fire, and as to the mining operations, some of these were in progress prior to the erection of the barriers. Some of them have exhausted their supply of coal, others have opened both inside and outside the barriers, and during the recent great demand for coal considerable crop line coal was mined by strip methods, which is the only method of safely recovering such coal. I personally know of a couple of instances where mining operations have penetrated the fire barriers, and at these points it was found that the noncombustible backfill in the excavated area was very shallow and men were able to step up on the fill and walk great distances with no difficulty. What will happen if and when the fire reaches such points can be left to the judgment of the public.

The article is closed with an apparent effort at trying to blacken the public's opinion toward landowners, coal companies, the State mining department, and others, by stating that they are doing nothing to extinguish mine fires, or minimize the chances of other fires being kindled. Certainly the State of Ohio is doing nothing at present to futilely fight such old fires, as there are no appropriations set up for such work, and I doubt if at any time the State legislature will ever place themselves in such an absurd position as to appropriate such exorbitant fees as would be necessary to carry on such work on wasteland areas. No mention was made of the fact that Ohio's mining department was among the first, if not the first, to equip itself with the most modern equipment available for fighting mine fires where lives and valuable property are concerned. As evidence of this I might mention that about 2 years after Ohio purchased such equipment the chief of the Department of Mines of Pennsylvania traveled into Ohio to view this equipment, with the idea of equipping that State's mining department with similar equipment. In the past few years I have helped to successfully combat several mine fires, both large and small. Some of them locally were the ones at the F. H. Wolfe Mine, McVey & Rosser Mine, and Tropic No. 52 Mine. These and many other fires were extinguished with no help from Federal agencies, therefore they received very little newspaper publicity.

When such fires occur in underground active workings the operators, their employees, and members of the State division of mines combine their efforts to quickly combat such fires with no thought of praise or publicity, as such work is considered in line with their duties and responsibilities.

Ohio can console itself with the fact that it is not the only State plagued with such fires, as many other States have the same

conditions. As evidence of this a person needs to do nothing more than read the February issue of Coal Age magazine. One article in this magazine tells of the troubles encountered by a Pennsylvania anthracite stripping company, while stripping coal in an area where an uncontrolled fire has been burning for the past 16 years.

J. E. MATHENY,
Deputy Mine Inspector.

A-Day, January 1, 1953

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marvin Miles in his column Skyways, printed in the Los Angeles Times, Sunday, January 23, 1949:

SKYWAYS
(By Marvin Miles)

Lost somewhere in tangles of Washington red tape is a vital date—January 1, 1953. Or perhaps ignored is the word. For certainly that New Year's dawn will show up as the days race into weeks and months and years.

For those who have forgotten, January 1, 1953, was labeled A-day by President Truman's personally appointed Air Policy Commission just 1 year ago.

It's the day that divides the future into two clear-cut phases for strategic purposes, the target date (the Commission warned) by which the United States should have an air arm in being capable of dealing with possible atomic attack on this country.

The Commission reported it would be an unreasonable risk * * * a reckless course to rely on other nations not having atomic weapons in quantity by the end of 1952.

CAREFUL RESEARCH

And it pointed out further it would be unwise to assume * * * that other nations will not have the planes and missiles capable of delivering a sustained attack by that same date.

The Commission's study was no haphazard work. For 5 months its members consulted with the highest qualified Government and private sources in an objective inquiry to assist the President in formulating an integrated national aviation policy.

By A-day, the Commissioners agreed unanimously that the United States must have ready for immediate action a counteroffensive force built around a fleet of bombers, accompanying planes and long-range missiles which will serve notice on any nation which may think of attacking us that if it does, it will see its factories and cities destroyed and its war machine crushed.

The strength of the counteroffensive force must be such that it will be able to make an aggressor pay a devastating price for attacking us.

It must, if possible, be so strong that it will be able to silence the attack on the United States mainland and give us the time again to build up our industrial machine and our manpower to go on to win the war.

But such a force does not grow overnight, and the Commission recommended a gradual build-up, starting with 34,000,000 pounds of air-frame weight in the calendar year 1948 and 56,000,000 pounds in 1949 as the first steps in the 5-year program.

WHY THE SLASH?

Now President Truman has recommended but 37,000,000 pounds for fiscal 1950.

Perhaps the Commission was out of line, you say?

Not according to other surveys. The Air Coordinating Committee in 1945 advised 60,000,000 pounds annually to cooperate in the maintenance of world peace. The Congressional Aviation Policy Board recommended 63,000,000 pounds to prevent the loss of a war and 111,000,000 pounds toward the initial strength to mount a successful air offensive. The Stanford University survey set its annual minimum as a base for expansion at 80,000,000 pounds.

What's the reason for the slash?

Has the President learned to his satisfaction that the danger cited by the Commission no longer exists?

If so, why did he scornfully label communism as a breeder of war in his inaugural address last Thursday?

Will his bold new program to help the world's needy areas in any way sidetrack the foreign development of atomic energy and the means of transporting it?

We think not.

It seems to us that adequate air power is as essential in the crusade to save the world from communism as the plan to ease the suffering of poverty-ridden millions.

Yet the budget recommendation would cut America's air strength to a nucleus of a nucleus and toss out the carefully considered recommendations of the various surveys.

We believe the Commission's study still stands as the most clear-cut analysis yet made. The soundly based expenditures it advocates would be infinitesimal against the cost of a total war they might well prevent.

A New Low in Muddy Journalism

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD two press releases which I sent to the House Press, Radio, and Periodical Galleries yesterday:

STATEMENT BY UNITED STATES REPRESENTATIVE ARTHUR G. KLEIN, MARCH 3, 1949

Westbrook Pegler yesterday struck an all-time journalistic low.

With a scatological skill which could spring only from a sick mind and soul, he dripped his brush of corruption across almost every institution revered by Americans.

In less than 1,500 dirty words, he succeeded in spattering with filth American democracy, patriotism, the Roman Catholic Church, motherhood, marriage, the Jewish community, the brave men living and dead who have defended this Nation against foreign danger and internal corruption, the Irish Nation, and every basic principle of human dignity and decency.

If Pegler proved anything, it was that only the American tradition of a free press would provide an outlet to his vileness.

There was a time within the memory of men and women still living when the Hearst newspapers championed human rights. If William Randolph Hearst has left a shred of that love of humanity which once brought his news empire into being, this ancient and outworn plug called Pegler will be retired to his fouled senescence.

All that remains of a once great sports writer is a lethal capacity for throwing foul balls. Yesterday was a day which will live in journalistic infamy.

To true Americans, the three people who suffered most at the viscid hands of this depraved scavenger need no defense or praise at my hands. Certainly Franklin D. Roosevelt lives in glorious memory, enshrined in the hearts of the people of the whole world, and Mrs. Roosevelt occupies a niche of affection in the great heart of the universe which no Pegler can besmirch.

As for the Honorable HELEN GAHAGAN DOUGLAS, she has proved herself, in a life more useful than that of her detractors, a successful wife, a successful mother, a successful politician and liberal leader, a successful actress and singer, a great lady, and a great American. There are many Members of the House of Representatives who disagree with Mrs. DOUGLAS politically; I know of none who does not admire and like her. The putrid drivel of the Peglers cannot hurt her; it can only bring to her defense every decent-minded man and woman of this country.

Neither does Melvin Douglas, who at the age of 42 enlisted in the Army of the United States and served 6 months in the ranks before winning his commission, need defense, and Melvin Douglas sacrificed his career. Pegler has sacrificed nothing but his honor.

STATEMENT BY UNITED STATES REPRESENTATIVE ARTHUR G. KLEIN, MARCH 4, 1949

I am sending to the floor when the House next convenes a concurrent resolution which answers Westbrook Pegler's vicious slurs in the only language he seems to understand, with apologies to my colleagues and to the press for stooping to Peglerism. The text of the resolution follows:

"*Resolved*, That there is hereby created the Joint Commission on the Westbrook Pegler annual award of journalistic infamy. The Commission shall consist of the chairman of the Senate Committee on Rules, the chairman of the House Committee on Rules, the chairman of the standing committees of the press, radio, and periodical galleries of the Senate and of the House, and the poundmaster and the chief plumbing inspector of the government of the District of Columbia. The chief plumbing inspector shall be ex officio secretary of the Commission, and any interested person may submit to him the name of any nominee for the Westbrook Pegler annual award of journalistic infamy, together with any relevant testimony, evidence, exhibits, or remarks, between April 2 and April of the following year.

"2. The Commission shall meet at 11 o'clock antemeridian on the 1st day of April of each calendar year in that part of the Capitol known as the crypt, and shall by open voice vote choose by majority vote the name of the recipient of the Westbrook Pegler annual award of journalistic infamy; provided, that the 1949 recipient shall be Westbrook Pegler.

"3. The Commission may, at its discretion but without cost to the United States, cause a plaque to be manufactured to symbolize the award; and if it elects to do so the following suggested design shall have due consideration: A rectangular shield transversed by a double cross, surmounted by a turkey buzzard rampant on a field of ord, with jackal couchant in the left upper quarter and the symbolic figures of Truth and Decency outraged supine in the lower right quarter.

"4. No member or employee of the Commission shall receive any compensation or reimbursement for his services or for any funds expended, as it is recognized the pleasure of the service will be sufficient reward."

Mr. Speaker, I was warned in advance that I would suffer for these releases. I was told that Westbrook Pegler would

shadow me, investigate me, denounce me, embarrass me, defame me.

I was told he would plant spies in my office and in my home, magnify every fault in my being, and pour out upon me the venom of his ingrown, hate-consumed personality. I was told that I would be made the peg for more and worse attacks against my religious faith.

I was warned that newspapers would not print my rebuttal to the Peglerism which was directed against the privilege and dignity of this honored House.

Nevertheless there are times when a man cannot remain silent if he wishes to keep on speaking terms with himself. This is one of those times.

Jefferson-Jackson Day Celebration

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. MADDEN. Mr. Speaker, I am herewith including excerpts from a speech which I delivered last evening at the Jackson Club of Huron County, Ohio, Jefferson-Jackson Day banquet in Norwalk, Ohio:

The Democratic Party has taken great pride for over a century in commemorating the memory of Thomas Jefferson and Andrew Jackson, two great American statesmen and patriots, who constructed the foundation for a permanent people's party. We Democrats love to recall and narrate the great deeds of these men and other leaders of our party back in the pioneer days. It is well that on occasions we review the fight our party has made for over a century and a quarter in behalf of the people.

Today we cannot refrain from our enthusiasm to inculcate in the minds of every American the deeds and progressive accomplishments of our party under Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman.

Our political history for generations reveals that whenever our National Government becomes submerged by reason of the powerful tentacles of special interest, the people call upon the Democratic Party for leadership. Also when our national economy is destroyed by reason of Republican misfeasance and nonfeasance, the American voter has always summoned a Democratic administration to revive prosperity and insure employment.

The numerous failures and disappointments of Republican leadership in the past have placed the American people on guard. In proof thereof I submit the last five Presidential elections, which testify that the people have learned a great lesson about the operations of their National Government in the last 18 years.

In spite of costly and well-organized political propaganda campaigns, the American people seem to have a way of sifting the chaff from the wheat and voting for the welfare of the masses.

In spite of misrepresentation and false information disseminated during the recent campaign by a great majority of newspapers and radio commentators, the American people demonstrated on November 2 that they were better informed on the operations of our National Government than the "experts."

In the 1948 campaign I told the people of my district and throughout Indiana on numerous occasions that the election of the Republican Eightieth Congress was a blessing in disguise. During the 2-year period of 1947 and 1948 the Republican Eightieth Congress brought back sad memories of the reactionary, regretful 1920's. Millions of young voters who were less than 15 years old in 1930 knew nothing of the sorrow, unemployment, and economic devastation brought on during the last years of President Hoover which culminated 12 years of Republican misrule. That period of reaction was recalled to the older voter and practically demonstrated to the younger voter by the Eightieth Congress.

In one of the greatest demonstrations of political salesmanship in the history of this Nation the Republican record was brought to the minds of all voters on every farm and in every town and city in the Nation by the plain people's advocate, President Harry S. Truman.

President Truman realized that victory was at hand if the people knew the plain facts about their Government. He knew that the forces of special privilege could not win if the people were awakened. The President was greatly aided in his Nation-wide fight by that Democratic stalwart, one of America's greatest statemen and orators, Vice President Alben W. Barkley. The platform adopted at Philadelphia was endorsed November 2 because the people knew Truman and Barkley would fight to enact it plank by plank, and all true Democrats would cooperate with our leaders in the Eighty-first Congress.

The farmers of America knew that President Truman would fight for agricultural price supports and also to continue the program which has given the American farmer his greatest prosperity. No group in our Nation took a more severe beating than the farmer during the "good old Republican days" under Harding, Coolidge, and Hoover. In the dark days of economic reconstruction, immediately after Franklin D. Roosevelt and a Democratic Congress assumed control in March 1933, the leaders of all farm groups were called to Washington for consultation to recommend a legislative program destined to pull the farmer out of the rut of bankruptcy and start agriculture on its gradual rise to its present-day prosperity. We now know that one of the most contributive causes of the 1929–33 depression was the unbalanced agricultural economy. The cost of producing farm products exceeded the market value. This greatly curtailed America's buying power.

The Republican leaders in those days—and also today—abhorred the idea of farm price supports. Appropriations for rural electrification, reclamation, soil conservation, storage granaries, and farm loans are all creatures of the Democratic Presidents and Democratic Congresses. When these facts were brought to the minds of the farmers of Ohio, it explained why Ohio and other farm States turned down Tom Dewey last November.

The other great factor in our victory was that the Democratic Party in the last 15 years knew that labor and the wage earner must have buying power to continue American prosperity.

In 1935 the Democratic Party passed the Wagner Act which gave organized labor and the wage earner a magna carta of freedom enabling them to lawfully organize and collectively bargain with their employers and improve their wages and working conditions.

When the Republicans took control of Congress in January 1947 steps were taken immediately to nullify practically all the progressive legislation that was passed for labor during the Roosevelt-Truman era. Volumes of misinformation and false propaganda were circulated 2 years ago by the National Association of Manufacturers and other special-privilege groups to enact the unfair Taft-Hartley law. These same sources are now repeating this propaganda by means of the press and mails in order to retain the Taft-Hartley Act on the statute books of our Nation.

Last June I distinctly remember hearing Republican leaders of the Eightieth Congress, both on the floor of the House and over the air, challenge President Truman and the Democratic Party to make an issue of the Taft-Hartley Act in the 1948 campaign. President Truman and the Democratic platform, adopted at Philadelphia, accepted the challenge. The people on November 2 spoke emphatically that the Taft-Hartley Act should be repealed. In the Eightieth Congress, as a member of the Committee on Education and Labor, I opposed the enactment of this legislation. The operations of the Taft-Hartley law after its enactment, convinced me that I was correct. President Truman in his veto message said the Taft-Hartley Act would be unworkable—promote chaos and confusion and produce labor-management bitterness. He was correct.

Even Cyrus S. Ching, Chief of the Federal Mediation and Conciliation Service, recently declared in a report to Congress that certain major features of the act have failed dismally in their supposed objective of maintaining industrial peace. Mr. Ching stated that the 80-day injunction period has tended to "delay, rather than facilitate settlement of a dispute." He also said that "the 80-day lid proved to be a warming-up interval for a strike rather than a cooling-off period."

Mr. Ching, a former executive of rubber and transit companies, further said, and I quote: "Fact-finding boards have likewise been a 'flop.' Interjection of such boards has had the effect of interfering with collective bargaining of the parties, particularly in relationships in which it is traditional not to reach a settlement until the eleventh hour."

Further, Mr. Ching stated that the requirement of the Taft-Hartley Act, that in emergency disputes, workers must be polled on the employers last offer, has proved a failure. Workers almost invariably have voted "No" in such cases and the elections, expensive to conduct, have done nothing to promote settlement of disputes—to the contrary, they are a disrupting influence in collective bargaining and mediation.

These criticisms of the act are all the more remarkable because they come from a veteran employer. I mention these facts because the organized propaganda now being circulated to retain the Taft-Hartley Act would have the public believe that union leaders were the only ones in favor of its repeal.

Let me read just one line from Business Week, a magazine not overfriendly to labor, in an article of December 18, 1948, quote:

"Most businessmen are realistic, few are wasting time deploring the imminent doom of the Taft-Hartley Act. To be sure, they worry about the legislation that will replace it, but most businessmen are getting ready to work with a new set of labor-relation rules. The Taft-Hartley Act did fail on one of the most important grounds, by which a law must be judged in a democratic society. That ground is consent. Only the police state can enforce a law which is believed to be unjust by the people it affects."

Time is too short, in my few remarks to review and analyze the numerous restrictive provisions of this antilabor legislation.

One of the great problems facing the Congress and the American people is the increased tax burden brought about by reason of World War II. I think the American taxpayer is entitled to know that 74.6 percent of his tax dollar is spent by his Government for cost of past wars and preparedness against future wars. This cost includes interest on the war debt, veterans' benefits and pensions, and billions which are being invested to curb communism, with the hope of preventing future war; and additional billions that the Government is now spending to maintain an adequate military and air force to protect

our country in case of attack. The American taxpayer cannot avoid his financial obligation caused by past wars. We know that the price of liberty is overlasting vigilance. If the American people want preparedness, which I am satisfied they do, it is going to cost billions, and that cost must be borne by the taxpayers.

There has been, and is, a great deal of demagoguery about the high cost of Government by radio commentators and politicians. I have in mind two radio commentators in particular who constantly compare the cost of Government in 1948 with 1939. At no time do they, in fairness to the Government and the people, inform them that World War II is the true cause for this increase. They carefully avoid informing the public that over five billion of this cost was appropriated by the Congress in 1948, by unanimous vote of Democrats and Republicans, to pay the annual interest on the war debt. They also fail to reveal that in 1948 this same Congress voted unanimously to appropriate over $8,000,000,000 to our Veterans' Administration under the GI bill of rights. This is a $13,000,000,000 expense which we did not have in 1939 which should be taken into consideration in comparing the high cost of Government with 10 years ago. When the politically minded commentators deplore the great number of Government employeees, they fail to inform their listeners that over 500,000 Government employees are in the postal department which is at present under-manned. Another 202,000 employees are in the employ of the Veterans' Administration which administers to over 18,000,000 veterans of World Wars I and II.

The Democratic Party has been the sponsor of social-security legislation. Both parties promised in their 1946 and 1948 platforms that social security should be expanded. The Eightieth Congress failed to carry out its party platform in this regard and it is my earnest hope that the Eighty-first Congress will pass legislation calling for practical expansion of social security.

The record of the Democratic Party since March 4, 1933, has been replete with progressive legislation which has had for its purpose the improvement of our economy, which has adhered to the benefit of untold millions who formerly were classified as the forgotten men.

The Republican leaders have criticised this legislation in every campaign, but they dare not advocate its repeal.

It has been this record of performance on the part of the Democratic Party which has brought five successive Presidential election victories. Our party should not fear the future if we continue to carry out our platform promises and legislate for all segments of our economy fairly and equitably.

The Democratic policies since March 4, 1933, have literally lifted our Nation by its bootstraps from 14,000,000 unemployed to a Nation of over 61,000,000 employed in 1948. Lifted us from despondency to the greatest prosperity in our history. Republican leaders are still gazing into the future through smoked glasses, and in every Presidential election since 1936 have been predicting that these policies would lead us into financial ruin and economic bankruptcy. The American people have gone to the ballot boxes and served notice to the selfish interests of this country that they no longer fear threats or submit to scare psychology.

We find strong evidence that in the Eighty-first Congress these unseen forces are again working in Washington to retain the damage inflected upon the American rank-and-file by the Eightieth Congress; through legislative tricks and connivance and vast expenditures of money they are trying to curtail and impede President Truman's square deal and the Democratic platform of 1948.

In this effort I believe American public opinion will bring pressure upon the forces of reaction in this Eighty-first Congress and enable the President's recommendations to be enacted into law before adjournment.

Let us continue to carry the torch of liberty and progressive government to the homes of all the people in our land.

We are proud of our historic background of fighting for the people's rights under leaders like Jefferson, Jackson, Wilson, Roosevelt, and Truman.

Inland Waterway

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. BROOKS. Mr. Speaker, I have spent all of my life in the valleys of the great rivers of Louisiana. I was born behind the levees of the Mississippi River, and the first recollections of my childhood were those of high water, floods, and destruction. The cry of "run, crevasse" still echoes in my mind as I think back over the years. The term "Morganza floodway" brings back vivid recollections of a terrible flood which broke through the levees of the Mississippi at Morganza and followed largely the course of the floodway presently being constructed, until it found its way into the Gulf of Mexico.

Of course, years have gone by since then, and the great Mississippi River is being developed for flood control and for navigation. It is extremely important, this year especially, that the work of flood control and river development in the lower Mississippi Valley be carried on to its maximum degree. Seventy-five million dollars is really needed for this work.

From almost every source we now receive predictions that the river systems of this country may be tested sorely within the near future. The unprecedented snows which have piled up successively, the one upon the other, in the Midwest and Rocky Mountain States, hold out dark forebodings of record high-water stages and floods. It is therefore extremely important that the lower Mississippi, which includes parts of the Red River, have available for use in the coming fiscal year the full amount of money to complete the levees along the Red, the back-water areas, and generally to work along the Mississippi.

The Mississippi and its tributaries has now developed into a major carrier of water-borne traffic. This is true of other great streams which, under the careful planning and supervision of the United States Army engineers, have been developed for navigation. It is true that the lush pre-Civil War days of river transportation have gone. It is true that the glamorous days of the side-wheeler and the river packet have left—perhaps never to return. This does not mean the disappearance of navigation from the Father of Waters or from other navigable streams throughout the United States. On the contrary, the expansion of activities along our inland waterways continues to increase and to gain momentum with the passing of years. It has been a gradual expansion, and not a sudden upsurge. The increase in navigation is most gratifying to those of us who have devoted time and talents to a struggle to provide an additional means of transportation to cities and hamlets located throughout the country.

Beginning with the year 1927, the country has witnessed an expansion of the use of our inland waterways which is truly phenomenal. In this year, slightly less than 9,000,000,000 ton-miles of freight were hauled along our waterways, excluding, of course, the Great Lakes and the oceans. In 1937, this figure had risen to almost 16,000,000,000 ton-miles and, by 1947, it had reached the astronomical figure of 31,500,000,000 ton-miles.

To show the vital influence of inland waterways upon our national defense, we have but to look at the figure for the year 1941, the year in which war came to America, and we find in excess of 22,000,000,000 ton-miles of freight were carried in our inland waterways, excluding, of course, the Great Lakes. The war, concluded in 1945, showed that our inland waterways were carrying the huge burden of 29,700,000,000 ton-miles of traffic.

I am setting forth a chart showing the traffic haul along our inland waterways over a 20-year period, beginning in 1927. This chart indicates clearly the wisdom of our national policy of developing our waterways.

This chart is as follows:

Year:	*Ton-miles*
1927	8,961,000,000
1928	9,214,000,000
1929	8,659,000,000
1930	9,088,000,000
1931	7,826,000,000
1932	7,905,000,000
1933	10,232,000,000
1934	9,423,000,000
1935	13,406,000,000
1936	15,387,000,000
1937	16,883,000,000
1938	17,743,000,000
1939	19,937,000,000
1940	22,412,000,000
1941	26,815,000,000
1942	26,398,000,000
1943	26,306,000,000
1944	31,343,000,000
1945	29,709,000,000
1946	27,951,000,000
1947	31,500,000,000

These figures indicate that this country should proceed further with its policy of developing its waterways for navigation purposes. I have in mind the Red River as in need of development. Several years ago, Congress authorized the sum of $42,000,000 for the purpose of building a lateral canal along Red River from Shreveport, La., to the mouth of the river below the city of Alexandria, La. Perhaps it will be possible to start construction of this new waterway within the near future. Such a waterway will be of immense advantage to the Nation in the normal movement of its freight to the great Southwest.

Congressmen Define a Liberal

EXTENSION OF REMARKS
OF
HON. RAYMOND E. BALDWIN
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Herald Tribune containing comments by various Members of the Senate and other citizens regarding the meaning of the word "liberal."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESSMEN DEFINE A LIBERAL

COMMENTS FROM THE CAPITOL ON THE MUCH-USED WORD

(This newspaper recently asked its readers to define a liberal. We printed, so far as space permitted, the many replies received. Because we thought it of special interest to know what the controversial term might mean at Washington, we invited the following expressions from Members of Congress.)

To the New York Herald Tribune:

A liberal is a person who is commonly regarded as broadminded. He needs a conservative base to keep him anchored to the eternal verities and a genuine impulse for exploration and experimentation to give him the broadest viewpoint and perspective his anchorage will permit.

He needs imagination without being a daydreamer and vision without being a visionary. With him prejudice is at a minimum and tolerance at a maximum. He faces forward, but finds an occasional backward turn of his gaze to be generally profitable.

He does not reject the old merely because it is old, nor does he hesitate to accept the new because of its newness. When he tries out something of importance which has been untried, he wants to be reasonably sure that his effort will meet with success. Intellectually he is neither a daredevil nor a stuffed shirt.

Constantly seeking after truth, he is open to conviction on controversial questions until satisfied that he possesses sufficient evidence for decision. Having made a decision, he has the courage of his convictions.

Realizing that ours is a dynamic and explosive society, he recognizes that application of basic principles must vary with the changing conditions of that society. Instead of resisting social progress and opposing effort to improve the lot of mankind, he seeks to aid such progress and to contribute unselfishly to the betterment of his fellow man. His is a personal philosophy which contains a well-balanced mixture of idealism with realism.

Much as I would like to, I probably do not measure up personally to this definition of a liberal. However, it is my sincere aim to do so.

IRVING M. IVES.
WASHINGTON, D. C., *February 25, 1949.*

To the New York Herald Tribune:

To me a liberal is one who "believes in the value of human personality." That is the definition given in the Encyclopedia Brittanica and I think it is a good one.

I hold that this is the goal to which the Republican Party first dedicated itself when it was born in the heat of the slavery issue. This, I think, must be its goal if it is to have a real future of national service.

HENRY CABOT LODGE, Jr.
WASHINGTON, D. C., *February 23, 1949.*

To the New York Herald Tribune:

Liberalism is a popular word. Most men in public office label themselves with it, but like the pantaloons offered by the Yankee peddler in Lincoln's story, liberalism can be made "large enough for any man, small enough for any boy."

Am I a liberal if I defend the rights of the factory worker, but something else if I also defend the rights of the company president?

I am particularly concerned about American liberalism, which implies liberalism under our system. We cannot accept a foreign part in our machine. I believe a liberal is one who recognizes the peculiarity of his own age and thinks of tomorrow—one who knows the needs and the hopes of those who live around him and seeks to improve the average lot. An effective liberal goes even further—he has a practical, workable plan for improving that lot. A liberal is one who recognizes that undue emphasis must not be placed on any given issue—that special privilege must not exist.

There are so-called liberals who believe it wrong to conserve, and regard the speed with which they can spend or appropriate a dollar a measure of their liberalism. Any thinking man knows that that kind of liberalism can only lead to poverty. Liberalism must concern itself with creation as well as with distribution.

A true American liberal believes in preserving the system that can provide the most to divide. He thinks first of creating the wealth and strength. Then he proposes a just and proper division of it—a division that provides a wider opportunity to create more. A false liberal first divides what he finds and then hopes somebody will create some more.

A true American liberal recognizes the problems of all Americans in order of their importance. He does not deal with them in order of political expediency. In solving them he seeks to preserve the economic system capable of providing the greatest total wealth and strength so he will have the greatest possible total to apply to the public need. He is not concerned solely about security, for he knows that a quest for security alone shows weakness and fear. He seeks, rather, to create greater opportunity in order to provide the means for greater security. He is concerned with the health, the welfare, and the worries of all, but the true American liberal knows he cannot help any one of those by only providing a quicker or a more equal distribution of poverty.

He understands honest differences and recognizes there are problems other than his own—and is willing to deal with them.

Too often, today, unscrupulous enemies of our system steal that popular label of liberalism, put it on shoddy merchandise, and try to sell it as democracy.

Liberalism is necessarily based on "government of the people, by the people, for the people." American liberalism is necessarily based on a competitive-enterprise system for a practical reason. Any real liberal knows that this is the only system now—or in history—that has proved itself capable of providing the means with which to raise the social, educational, or health level, or the political freedom of its people.

Liberalism cannot be measured by which special privilege is attacked, but by whether special privilege is attacked. Liberalism cannot be measured by what security it buys, but by what security it creates. Liberalism cannot be measured by what opportunity it limits, but by what opportunity it offers. Liberalism cannot be measured by what equality it promises, but by what equality it makes possible. Liberalism is not a philosophy of division; it is a philosophy of addition.

RAYMOND E. BALDWIN.
WASHINGTON, D. C., *February 25, 1949.*

To the New York Herald Tribune:

In the current discussion on "What Is a Liberal," I believe it important to emphasize that we are talking about a liberal in political and social thought and action, and not about other fields. Such a liberal, in my view, believes first and foremost in democracy with constitutional guaranties for the liberty of the individual and for minorities—he is against the monolithic state and the enslavement by it of the mind and efforts of the individual. The liberal believes that our society in the United States is capable of affording well-being and security to all our people, and that our shortcomings are attributable to our own lack of organization or ability to utilize effectively our resources of men and materials. A liberal believes that government can go far to help in achieving this objective. A liberal believes that when the Government—as distinguished from the people—owns a preponderant number of the jobs, freedom is on its way out, but a liberal also believes that we are far from this situation now and that broad measures of improvement in health, social security, education, housing, youth assistance, child care and similar activities are not jeopardizing this principle.

A liberal in international affairs believes in the unity of interest of the world, and that peoples generally, as distinguished from aggressor governments, are interested in the same basic elements of freedom, prosperity, and security. Accordingly, a liberal, though realistic in terms of national security and its defense, is constantly striving for better world organization—whether through the United Nations and regional federations, or through world federation, or both, through regional recovery programs and similar efforts—to keep to the main idea of the interdependence of one world and all its peoples.

In all of these activities, a liberal also seeks a rule of law rather than a rule of men, and is against discrimination due to race, creed, color, national origin, or other arbitrary standards.

J. K. JAVITS.
WASHINGTON, D. C., *February 18, 1949.*

To the New York Herald Tribune:

It is of more than passing interest that "liberal" and "liberty" are only a few words removed from each other in the dictionary, for the two are actually kindred in application. As there can be no liberty without liberalism, so there can be no practical liberalism without considerable freedom for the individual.

All manner of self-professed liberals have endowed the word with interpretations of their own. Cloaking the most nonliberal purposes with the bright garment of human dignity, they have succeeded only in bringing one of the greatest words in our language into general disrepute.

The Latin "liberalis" means free, and thus the word in its basic source means freedom as opposed to slavery. Thus, by definition, a liberal must first of all be an advocate of freedom for the individual under a system of free government. It follows that the slave states, Communist and Fascist alike, can hardly square their status with the philosophy of life practiced by a true liberal.

When the pseudo-liberal advocates systems of government which would place chains upon the hands and minds of men, he does it out of deliberate malice or from the depths of unbelievable ignorance, either of which constitutes an offense against mankind.

The liberalism of the true despot and his dupes had its ultimate expression in the concentration camps and the cremation ovens of Adolf Hitler only a few years ago. Today millions of slaves in the Soviet Union bear grim witness to another great tragedy. The liberal apologists for this crime against humanity do nothing to restore its proper dignity and station to a magnificent word.

DONALD L. JACKSON.

WASHINGTON, D. C., *February 25, 1949.*

South's Man of the Year

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 4 (legislative day of Monday, February 21), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Hubert F. Lee, entitled "South's Man of the Year." The article, which relates to C. Hamilton Moses, of Little Rock, Ark., was published in the winter edition of Dixie Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH'S MAN OF THE YEAR

(By Hubert F. Lee)

C. Hamilton Moses, of Little Rock, Ark., has been selected by the editors of Dixie Business as the 1948 South's "man of the year."

In a group of outstanding leaders of the South, from Virginia to Texas, Mr. Moses received the most votes from editors, publishers, industrialists, business leaders, many of whom have worked with him in making his Arkansas plan, one of the greatest programs for State development ever formulated, a tremendous success.

In honoring Mr. Moses, the editors of Dixie Business honor the distinguished men of the South who are doing so much for its industrial revolution. Their forceful leadership may be confined to a single town or to a wider area—for the gage of measuring greatness depends upon the point of view—and just tribute is paid them by selecting one among them who has done the most.

It was his distinguished leadership that brought him an honorary membership in the Chamber of Commerce of the South, the honorary invitation organization founded in 1931 by the editor of Dixie Business to honor notable men who are interested in the South.

For developing a casual public utility into a widely recognized "corporation with a soul," he has set a precedent for the highly valuable electric industry. In formulating and directing for his State also a program designed to develop both the cultural and the economic balance to appropriate aggressiveness, he has given to the great South an economy for which it has long been searching.

His has been a leadership that was born of a sincere desire and determination to help his fellow man.

From the modest ranks of a mere country lawyer he has risen in stature to the man of the year in his native State of Arkansas, and now to the enviable position of the South's man of the year.

C. Hamilton Moses is better and more widely appreciated simply as "Ham" Moses. Through his conscientious concept of corporate responsibility—a concept that recognizes first duty as being to an entire State—he has elevated himself and his company into an enviable position in modern business economy.

Seldom in the history of any State has a native-born son chosen to remain within his own borders and, through personal sacrifice and personal effort, done so much for its development as has C. Hamilton Moses.

Truly an outstanding citizen—a cavalier of commerce, a captain of civic enterprises, and a champion of the common man's cumulative causes—his leadership looms above the accolade of endorsements given him by the many who presented his nomination for the 1948 South's man of the year.

Mr. Moses is president of the Arkansas Power & Light Co., the only domestic corporation in his State that has risen to the enviable position of being a $100,000,000 concern. But his role as chief executive of this community-minded corporation is almost dwarfed by his boundless activities in behalf of his fellow Arkansas and his fellow Dixie dwellers.

But it has been his services as founder and leader of the now widely publicized Arkansas Economic Council-Chamber of Commerce that have won for him the highest honors of a long leaderless people who now have their sleeves rolled up and are definitely on the march forward.

To understand fully just how extensive his endeavors as a citizen and a leader have been, it is necessary to go back to the beginning, and trace, step by step, his rise to his present place of eminence and esteem.

Coulter Hamilton Moses was born in Arkansas, on a farm near Hampton, in Calhoun County. His parents, Mr. and Mrs. A. G. Moses, wanted him to become a lawyer, and they planned his early education along these lines. He proved true to their expectations, rising to the pinnacle of prominence, not only in legal circles of his own State, but in his entire profession.

Trudging 3 miles to school daily, he completed his elementary and high-school education at Hampton, and then went on to win high honors at Ouachita College in Arkadelphia. Realizing that public speaking would be one of the essentials of a good lawyer, he mastered this art, and today is known far and wide for his ability to hold and sway audiences. He won all of the oratorical medals his college had to offer. On his graduation day he delivered both the baccalaureate address and the college oration, and so impressed Edwin Booth Craighead, then president of Tulane University, who was attending the exercises, that he was awarded a full scholarship to that institution. Here he received his master of arts degree, and won further fame for his elocutionary eloquence.

Returning to his native State of Arkansas, in 1909, he entered the University of Arkansas School of Law at Little Rock, working during his spare time for Guy B. Cook, commissioner of mines, manufactures, and agriculture, and George S. Cook, commissioner of education.

It was here that he received his initiation into the field of practical politics. In his job with the education department his principal duty was to go about the State making addresses to high-school groups. Through his sound logic, his polished phrases, and sincere tone, he lent encouragement to thousands of young men and women, and inspired them to higher things.

He completed his work in the School of Law in 1911, receiving his bachelor of law degree that year with high honors.

It was not long before George W. Donaghey became Governor of Arkansas for the second time. Having seen and heard about the sincere devotion of this young lawyer to his native State and its people, and impressed with his outstanding qualifications, Governor Donaghey selected him as one of his secretaries.

In 1913, the late Joseph T. Robinson defeated Governor Donaghey, and young Hamilton Moses moved to Monticello, to start his legal career as a partner of the late R. W. Wilson. Here he continued to impress the legal profession with his inborn ability as a trial lawyer as well as a student of fundamentals.

Soon after Governor Robinson took office, United States Senator Jeff Davis died, and Governor Robinson was named to succeed him. George W. Hayes of Camden entered the race for governor. Young Hamilton Moses left his law office in Monticello to help direct the successful campaign of Mr. Hayes over Stephen Brundidge of Searcy. Within a few weeks Mr. Moses was back in the Capitol again, this time as secretary to Governor Hayes, but not for long. He returned to Monticello to resume his law practice. But in 1915, after Wallace Davis, son of the late Senator Davis, was appointed attorney general, he immediately appointed Hamilton Moses as his assistant. He remained in this position until 1917, when he was appointed secretary to a third governor, Charles Hillman Brough.

During his tenures as secretary to three governors he came to know his State intimately, its people personally, and he recognized the countless problems faced by both. But more than this, he realized the vast opportunities that awaited development and exploitation, and he resolved to do what he could to advance them. His life since then has been devoted to this end.

After 2 years with Governor Brough he became an attorney for the State corporation commission.

It was while serving in this capacity that he received his first opportunity to begin selling Arkansas outside of the State. Businessmen of the State organized a special train of exhibits to be sent throughout the East to advertise the State's resources to capitalists. Unable to make the trip himself, Governor Brought sent Mr. Moses along as his representative. He became the official spokesman for the trip, and his ardent eloquence about Arkansas won the State countless admirers.

On that train was another super-salesman from Arkansas—the late Harvey Couch, then developing what has since become the Arkansas Power & Light Co. It may have been fate or mutual recognition of abilities that caused Hamilton Moses and Harvey Couch to become attached to each other. By the end of the trip Mr. Moses had decided to forsake politics for an association with Harvey Couch. And in the years that followed they developed the closest friendship and business association between these two great sons of Arkansas. Soon after the completion of the trip Mr. Moses resigned his position with the corporation commission to enter the practice of law in Little Rock, taking over the legal business of the Arkansas Power & Light Co. and of Mr. Couch.

This was in 1919, during the depression that followed World War I. Not only did the power company's new lawyer draw no salary for his work, but he paid his own expenses. Fortunately, however, he and Dwight Crawford were selected to make a digest of the State's laws, and for about 20 years the Crawford and Moses digest was the bible of Arkansas legal circles.

Those were trying days in Arkansas, and particularly for businesses that were seeking to expand and increase their services. With the vision and energies of Harvey Couch, and the keen analytical mind of Hamilton Moses to guide it the Arkansas Power & Light Co. weathered the storm.

Because financing in Arkansas was limited, it became necessary to seek outside capital. Through the combined efforts of Mr. Couch and Mr. Moses, the story of Arkansas and its resources and its potentialities was told throughout the Nation's money marts. Mr.

Couch often said that had it not been for the fine and fluent oratory of Mr. Moses, the great selling job that was done could not have been accomplished.

A few years after he joined with Mr. Couch, the strange antics of politics reentered the life of Mr. Moses. United States Senator Joseph T. Robinson, who had defeated Governor Donaghey and discharged his secretarial staff asked Hamilton Moses to become his law partner. Thus was formed the partnership of Robinson, House, and Moses.

In the early twenties, when Mr. Couch began to expand his operations in the electric field into the States of Louisiana and Mississippi he persuaded Mr. Moses to become general attorney for all of his interests. And later, when Mr. Couch entered the railroad field, merging the Kansas City Southern and the Louisiana & Arkansas Railroads, he persuaded Mr. Moses to serve on the legal staffs of these roads.

Alabama-born W. M. Deramus, is president of the railroad, having served it in various capacities since 1909.

It was only natural that one so familiar with the visions and ambitions of Harvey Couch should be chosen his successor following his death in 1941. Since September of that year Mr. Moses has served as president of the Arkansas Power & Light Co.

Although serving as friend, adviser, and associate of a man as busy as Harvey Couch required much of his time, Hamilton Moses always found time to participate in civic, fraternal, religious, and other industrial activities.

Few, indeed, are the new business undertakings in Arkansas during the last two decades that he has not been asked to aid in launching. Practically all of the new businesses of any consequence in the State during this period have been organized or set up with his legal advice and assistance. And he has been personally interested in many of them.

He has found time to serve long and faithfully as a Rotarian. He served the Little Rock Club as president and then assumed the responsibilities of district governor for a year.

He has long been interested in the advancement of all higher education in the State, having served as a member of the board of trustees of Ouachita College for many years. He has aided this institution in its planning, in its financial programs, and in many other ways. He is a thirty-second-degree Mason and a Shriner.

In his Baptist church at Little Rock he has devoted many years of unselfish service to one of the largest Bible classes for men in the South.

He has been awarded honorary degrees and various other forms of recognition from numerous institutions.

But it has been his concerted efforts in recent years in behalf of his native State that have brought him the greatest pleasure and have profited Arkansas the most.

About 1943, when it appeared that World War II would be over in a year or so, he determined that Arkansas would not pass through another depression like the one he had suffered through at the close of World War I.

"We must not have any apple sellers in Arkansas," he repeated over and over. "We must have a postwar plan ready when the war is over."

He was not satisfied to give mere lip service to the plan. He packed up his suitcase, reviewed some of his more appealing phrases of the past, and set about to organize Arkansas.

Making three and four talks a day, week after week, he visited every county in the State, talking to large groups and small groups of local leaders urging them to organize for business.

He set the machinery into operation and perfected the organization of the Arkansas Economic Council—something new in the State. He did what few other could have done; he brought business and government of the State together on a common ground. He sold them on the idea that each was dependent upon the other, that the success of one meant the success of the other, and the failure of one the failure of the other.

C. H. Moses was the logical choice for president of this new organization; he readily assumed the responsibilities of this office. He has devoted his time, effort, and talent to directing the work of the new organization since. Early in its existence, he guided the new organization into stronger fields by merging into it the long dormant Arkansas State Chamber of Commerce.

A brief summary of Arkansas accomplishments under the pushing, pulsating, and progressive program put in effect by Mr. Moses reveals an amazing accomplishment list.

A loss of about 262,000 people during the war has been completely regained.

There have been more than 1,500 new or greatly expanded industries for the State with new capital of $115,000,000, new pay rolls of $65,000,000 and employment for more than 40,000 people.

Agriculture income has zoomed, lumber production has gained greatly, and manufacturing output has increased over $100,000,000.

Per capita income that was $242 in 1940 has jumped to $750, one of the largest percentage increases in the Nation.

And greatest of all, a new Arkansas resource has been utilized—the spirit of the people.

Everywhere the Arkansas story—the amazing chronicle of a State on the march is attracting attention.

Latest in the series of successful undertakings launched by Mr. Moses has been the build-your-home-town program, now under way. Aimed at developing comprehensive long-range plans by which each city, town, or community can pull itself up by its bootstraps, this program is now in full sway. So convinced is Mr. Moses of the necessity of such planning that he has authorized the lending of two employees of his company to full-time participation in this program, which is being sponsored through the Arkansas Economic Council-State Chamber of Commerce and the State resources and development commission.

All of these activities on the part of Mr. Moses have been outside the scope of his own company's operations. As chief executive of the Arkansas Power & Light Co., he has set into motion the machinery by which his company can and is playing an important part in the State's economic development.

Through his efforts, his company is nearing completion of a rural-electrification program that places Arkansas near the top in the percentage of farms having electric service available.

He is spark-plugging a plant-to-prosper program in cooperation with the Arkansas Press Association, designed to bring about higher farm income and higher standards of life in the State's areas. He is directing cooperating moves with various agricultural agencies aimed at providing increased opportunities for farm youth through assistance to 4-H Clubs, Future Farmers of America, the Arkansas Farm Bureau Federation, the State extension service, and like organizations.

Probably his most demonstrative display of the sincere confidence he has in his State's future is the $88,000,000 expansion program he has developed for his own company. Deciding years ago that his company would be "The best utility in the Nation" he has worked long and hard toward this goal, and has won national recognition with his efforts.

His latest venture has come in taking the leadership in the Middle South Area Development Program. Under this plan he has aided in bringing together the chief executives of his company, the Louisiana Power & Light Co., the Mississippi Power & Light Co., and the New Orleans Public Service Co. A. B. Patterson is president of the New Orleans Public Service, Inc.; Rex I. Brown, president of the Mississippi Power & Light Co., and W. O. Turner, president of the Louisiana Power & Light Co. The combined efforts and energies of these four service companies are now merging in a Nation-wide promotion program that will result in Arkansas receiving millions of dollars worth of advertising throughout the rest of the Nation.

The results of the inauguration of this unprecedented program at Greensville, Miss., on April 2 indicate that tangible effects will be achieved that had been originally expected.

One of the more recent recognitions of his endeavors came last June, when the Arkansas State Junior Chamber of Commerce named him as the State's outstanding citizen and presented him with the coveted C. E. Palmer Trophy.

His selection for the broader honor of the entire South's man of the year comes as a fitting climax and reward for his achievements.

The Tax on Places Furnishing Entertainment in Connection With the Serving of Food May Mean More Loss Than Gain to Government

---

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. KEATING. Mr. Speaker, many bills have been introduced dealing with the Federal sales taxes which are now imposed under the title of excise taxes.

I have expressed the view in remarks accompanying the introduction of such legislation that primary consideration should be given to those taxes which are imposed on necessities of life, rather than luxuries. These are the ones which hit hardest those least able to meet the charge.

There is another class of these levies, however, the removal of which cannot be justified on this ground. Yet they equally deserve our study since they raise the serious question whether the revenues derived justifies the economic loss sustained by imposing the tax.

Chief among these is the tax of 20 percent imposed on places furnishing entertainment in connection with the serving of food.

The Central Trades and Labor Council of Rochester, N. Y., has advised me that this levy is causing widespread unemployment among musicians, waiters, and other workers.

This is a significant illustration of the meaning of the expression that the power to tax is the power to destroy.

This additional 20 cents on every dollar which a patron must pay to eat in a place where entertainment is furnished is apparently having the effect of driving people away from such hotels or restaurants.

This is a tendency which, of course, will snowball in time of depression, recession, or disinflation, at the very time when the impact of increased unemployment will be most serious.

I am informed that the estimated revenue derived from this tax is about $53,000,000 a year. In my mind, there is a very serious question whether the economic upheaval among a large group of faithful workers may not constitute a greater drain on the resources of Government than is offset by this income.

Today, I have introduced a bill to repeal this tax. It seems to me a thorough study should be made of this problem. It may develop that this levy represents a short-sighted policy. Perhaps the Treasury is the loser, rather than the gainer, by the imposition of this tax.

Dishing Out Insecurity

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. HÉBERT. Mr. Speaker, I recently inserted in the RECORD an editorial from the New Orleans Item, by Harmann B. Deutsch, associate editor, on the subject of government-by-gimme.

Perhaps this editorial, also from the New Orleans Item and also written by Mr. Deutsch, can be called a supplement or appendix to the editorial to which I have referred.

Direct, to the point, sound, logical, and irrefutable are the attributes of these observations.

It is indeed about time that we start taking stock of what security really means.

At the rate we are going we will wind up with the hollow Dead Sea fruit of insecurity instead of the pot of gold at the end of the rainbow security some people would have us believe we might get.

Remember, whatever we do get we will pay for.

DISHING OUT INSECURITY

President Truman's latest proposal to dish it out, boys, there's more where that came from, is simply another manifestation of his zealous allegiance to gimme-more belief that the country's tax resources are inexhaustible, and that the Government's tax take must be high. It is referred to as a social security program. That is a misnomer. Social insecurity would be a better term.

What it proposes is to take still more money out of circulation in order to confer benefits—and where have we heard that word before—on still more people. Instead of continuing a straight Federal insurance program, financed jointly by employers and employees through pay-roll and pay-envelope deductions, he proposes to up these taxes in order to—

Increase old-age insurance payments.

Reduce the age at which women begin to collect such insurance from age 65 to age 60.

Make direct-assistance payments for all needy persons whether or not they have paid anything into the fund from which this money is drawn.

Make direct temporary financial assistance payments to those disabled by accident or illness.

Include in the old-age insurance group farm laborers, domestic servants, doctors, small-business owners, attorneys, and other self-employed workers, and so on and so on, raising the number of beneficiaries from the present 30,000,000 to 50,000,000.

And—of course—increase the taxes now deducted from pay envelopes and levied against pay rolls to finance it all.

The basic infirmity of any theory which penalizes thrift in order to reward lack of thrift is obvious. The industrious worker is called on to give up still more of what remains in his pay envelope in order that the Great White Father in Washington can henceforth say to the man who has played grasshopper with his earnings: "Never mind, old boy, the Government will take care of you from now on."

Money that might go to the creation of new industries, new production, new pay rolls, and new earnings will be siphoned off to a still greater degree into a Government jackpot, to be distributed—by the Government, of course, the good, kind, generous "gimme" Government that says: "Dish it out, boys. Dish it out in big chunks. Dish out $50,000,000 to finance Latin-American aid so as to extend the Institute of Inter-American Affairs for another 5 years. Dish out some more money—billions, this time—for compulsory national health insurance. Dish it out for Marshall plan aid. Dish it out for China. Dish out $4,000,000,000 more for the general budget than you did last year, while you're at it. Dish it out, boys, there's plenty more where that came from."

Naturally that isn't even half the story. The housewife who will have to make deductions from the weekly pay she gives her cook, and send these to Washington through channels, the harried farmer who will have to do the same thing with his hired help, including such seasonal employees as harvest hands, the surgeon, the lawyer, the engineer, the salesman, the small-business man—all these will have to make deductions and fill out forms in triplicate and keep additional records. And, oh, yes. There will be a new army of clerks, tabulators, accountants, bureau chiefs, chart makers, stenographers, statisticians, and whatnot to keep track of all the returns. To be sure, there will have to be additional appropriations to take care of their salaries, stationery, filing cabinets, office space, blond mahogany tables for conference rooms, and the like.

For this is "government by gimme," which is no longer merely a small group of outstanding leaders and statesmen, chosen to enact laws and render essential public service in assuring peace, tranquillity, and the proper functioning of everything connected with public administration. This is "government by gimme" which, if it is not yet concerned with each sparrow's fall, is at least going to make sure how much Mrs. J. Doakes pays her cook or her laundress. This is "government by gimme" which is stanch in the faith that there's no bottom to the tax barrel, from which blessings and benefits can be dished out for ever and ever amen.

Quite a number of rather shadowy figures must be watching this latest development with something like amused wonder. The shade of old Ben Franklin, for example, looking up from the almanac page where Poor Richard had just inscribed the words: "A penny saved is a penny earned"; Thomas Macaulay, who once wrote: "Nothing is so galling * * * as a paternal, or, in other words, a meddling government which tells (the people) what to read and eat and say and drink and wear"; Ralph Waldo Emerson, who declared that "the less government we have, the better."

Laughing more loudly among the shadows, however, one can discern the figure of a camel—the one whose back was broken by a last straw; a horse, which in life had been so willing that its owner worked it to death; and a goose which laid golden eggs until its greedy master slew it because he was convinced he would not have to wait for riches until these were earned by giving the goose proper care and sustenance, but could come into it all at one time without further ado.

Wealth must be produced before it can be enjoyed, and Government produces none of it. Take away the natural human incentives for production—the opportunity to enjoy some of the fruits of one's individual labor—and the inexhaustible tax stream will dry up at its source. Carried on and on, the insatiable demand of a "gimme government" for more and more and more, so that more and more and more can be dished out, will drain the reservoir. That is why the President's latest proposal should be labeled the expanded insecurity program.

Erasing College Color Lines

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Milwaukee Journal of March 1, 1949. I particularly commend it to the attention of those who constantly infer that joint attendance of Negroes and whites in the same educational institution would result in race riots. Evidently, young Americans do not share the prejudices of some of their elders:

ERASING COLLEGE COLOR LINES

Racial tolerance is making gradual but certain gains on the college campuses of America. Nation-wide attention was attracted by recent cases where the United States Supreme Court decisions struck at segregation practices in two State universities. But there are other signs of breaks in the barriers that have kept Negroes from many college campuses.

A few days ago, the students at the University of Missouri voted, 4,156 to 1,847, in favor of abolishing the color line there. This was no isolated instance of increasing willingness of students to accept Negroes in colleges that have been for whites only.

The University of Arkansas has just been honored as the first State university in the South voluntarily to admit Negroes without segregation.

A year ago, some students at the University of Oklahoma burned a copy of the fourteenth amendment in protest to the ban against Negroes at that institution, a ban now partially lifted under United States Supreme Court mandate.

A student leader at the University of Texas has said that his fellow students are willing to see Negroes admitted there.

Nearly 65 percent of the graduate and professional students at the University of North Carolina voted last spring that they would have no objection to having Negroes in their classes.

The Graduate School of Arts and Sciences at Washington University, St. Louis, was opened to Negroes last spring. St. Louis University, a Catholic institution in the same city, has accepted Negro students since 1944 and now has 268 of them enrolled.

It is from the intelligent people of America, and especially those who have had the high privilege of college training, that we should expect an example of good sense in interracial relations. So instances of growing sentiment against racial discrimination on our campuses give great hope for accelerated progress against prejudices.

Arkansas Plan for Civil Rights

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. HAYS of Arkansas. Mr. Speaker, I am constantly being asked, "What is the reaction to your proposed compromise on civil-rights legislation?" For the information of the Members who are evidencing this interest in my effort to help define a reasonable and logical basis for reconciling the differences over civil rights, I include the following excerpts from letters and editorials endorsing my plan:

Gov. Sidney McMath, of Arkansas: "I think that you have submitted the best solution to this problem which has been thus far advanced. Our State press has almost without exception supported the plan. * * * I hope that you can win congressional support for your views. I certainly agree that this issue must be settled quickly with a reasonable, workable formula such as you have proposed."

William W. Leigh, Little Rock insurance man and Presidential elector on the Thurman-Wright ticket: "I wish to commend you for your efforts toward bringing about a compromise of the so-called civil-rights issue. I think that it should be perfectly obvious to everyone that there is very little hope of this issue being settled on any other basis and if your efforts meet with any degree of success you will have done your country and your State a distinct service."

A. D. Stewart, Amory, Miss., farm implement dealer: "Your proposal, in my opinion, could not be considered a matter of expediency, but a fair, just, and sensible solution of a problem that should have been solved many, many years ago. It is not fitting nor proper to expect the South or even the Nation as a whole to go along with all phases of Mr. Truman's civil-rights program. The FEPC as written would be abominable."

Frank H. Parke, president of a Little Rock printing company: "I have just read the report of your proposals on the race question and wish to compliment you on suggesting what I hope will be a practical way out of a very dangerous situation. Unfortunately, most southerners do not stop to think of the change that has taken place during the 80 years since the Civil War, nor do they realize that this change will continue to take place regardless of anything that they can do about it. No intelligent person can argue against all this in theory, but from a practical standpoint it simply cannot work if pushed faster than people's minds can adjust themselves to it. I certainly hope you have something."

Frank Cantrell, managing director, Arkansas Economic Council, State Chamber of Commerce: "This is a fine and broad-gauged effort on your part and you richly deserve the many expressions of praise which I am sure you have received."

Hon. CHASE GOING WOODHOUSE, Member of Congress: "I only hope that everyone on both sides of the issue will be as moderate and intelligently tolerant, and then we will bring out a program of which this Congress and the President can well be proud."

Wallace M. Milton, Ozark, Ark., manager of rural electric cooperative: "I think your compromise plan is an excellent one and it is refreshing to know that we at least have a few Representatives in Congress who are not narrow-minded bigots. Regardless of how we have been taught, the colored minority in our country deserves better treatment than we have accorded them in the past."

Joshua K. Shepherd, Little Rock, insurance executive and Masonic leader: "If the Congress will adopt this method, it will result in a great strengthening of the bonds of friendship between the white and colored races. I congratulate you on the persuasive reasoning and the thoroughness with which you are dealing with the problem and I hope that you and your associates will continue your earnest efforts to the end that we may both heal sore spots and promote further economic and social development of our Nation."

Elmer J. Rauschkolb, Little Rock businessman: "I venture to predict that it (the compromise) will go down in history as the finest and most Christian-like approach to one of the most vexing problems of this era."

Tom Johnson, University of Arkansas student: "I personally am in accord with your views on the civil-rights program and congratulate you on your efforts to compromise. I hope others will become aware of the wisdom of such a move."

Ed McCuistion, director, division of Negro education, Arkansas Department of Education: "(The address is) one of the outstanding statements coming out of Washington in the last 2 or 3 years."

Charles A. Stuck, Jonesboro, Ark., owner of a large lumber mill: "I find it difficult to express in words my appreciation for the fine spirit and wonderful message you brought to the House yesterday. When the sober, serious-minded, and intelligent people of our country come together to discuss any controversial question they can settle it sooner or later. I commend you again for your spirit and unusually fine presentation."

San Francisco Chronicle: "The Arkansas proposal is a piece of combined idealism and realism which we commend to Congress' attention as compared with legislative proposals which may or may not contain idealism but are not realistic enough to have a chance of enforcement even if passed."

Atlanta Constitution: "We recommend this plan to thoughful Southerners as reasonable and being possible of enforcement and productive of excellent results. At least it is a starter and it offers positive action. We will be offering something that we are 'for' and not appearing as merely 'against' something, a role which has brought the South much of its present trouble."

Arkansas Gazette: "It (the address) was a far cry from the ranting debates which have been touched off all too frequently by civil-rights legislation. Mr. HAYS presented a calm and closely reasoned defense of what he called the South's traditional attitudes. And, by offering a positive counterproposal aimed at admitted inequities, he took the offensive for the settlement of the continuing differences in Congress, a welcome change from the stand-pat attitude which has generally characterized the Southern reaction in the past."

George S. Mitchell, executive director, Southern Regional Council, Atlanta, Ga.: "On lynching, you have come out with what is to my mind the very best idea brought forward in recent decades. Putting the responsibility on the chief executive of each State is a fine thing to do. For my own taste I would ask a considerably stronger Federal power of intervention than what you are proposing, but I think we would all be a good way ahead if the principle you propose does get into State law."

Herbert L. Thomas, life-insurance executive, Little Rock, Ark.: "I know from my experience with the racial questions that have arisen in the university that our people can be sold on reasonable compromises that mean a progressive solution of some of these problems."

Arkansas Democrat: "Congressman BROOKS HAYS is thinking along sound lines in proposing a compromise on civil rights."

Dr. Robert A. Leflar, dean, School of Law, University of Arkansas: "The sort of compromise which you discussed must be recognized by everyone as a bona fide effort to take a forward step. I want to congratulate you."

Hon. Chauncey Sparks, former Governor of Alabama: "It is one of the best and fairest discussions of these vexing problems that I have seen or heard come out of the South."

Dr. John H. Buchanan, pastor of the Southside Baptist Church, Birmingham, Ala.: "I believe that you have offered the only solution to the difficult problem. While there can be no compromise on the principle of the right of the States to handle their own affairs, yet I think that the suggestions you make on each of the four issues are sound and feasible."

Dr. J. M. Dawson, executive secretary, public relations committee, Baptists of the United States, and former pastor of First Baptist Church, Waco, Tex.: "In regard to the antilynching plank, I am pleased to see you speak out so strongly. I have never been able to see any objection to an act of Congress in regard to lynching, for while past lynchings have been largely confined to the South, such a law would apply to the whole country, and as such should not be thought of as striking specifically at the South."

Tupelo Journal: "Mr. HAYS' approach to the civil-rights controversy is a display of statesmanship which offers the South its only hope of preserving freedom of action at the State level without Federal dictation. * * * And if our southern Congressmen are smart, they will see to it that the amendments to the President's civil-rights program are written by themselves along lines Congressman HAYS proposes rather than by northerners, who seek to make the Federal laws even stiffer."

Gould Lincoln, in Washington Evening Star, February 2, 1949: "Mr. HAYS has come forward with a well-reasoned compromise. It is certainly worthy of consideration."

Gladstone Williams, Atlanta Constitution, February 7, 1949: "It will probably offer the test of whether the extremists are interested in seeing a constructive program adopted or whether they merely prefer to keep the issue alive for its political effect."

Memphis Press-Scimitar, February 10, 1949: "But, meanwhile, an outstanding Congressman from the Democratic South, Representative BROOKS HAYS, of Arkansas, has proposed what appears to us to be a good, sensible compromise that would settle the issues and not sacrifice principle."

New York Herald Tribune, February 8, 1949: "The momentary value of Mr. HAYS' remarks in Congress is that an intelligent southerner admits the need for action and draws what he considers the impassable boundary. No program, or part of a program, will succeed without at least moderate quantity of southern acceptance. The rest of the Nation, at least, can listen."

Dr. Doak S. Campbell, president, the Florida State University: "It is sound to the core and we are very proud of it."

Some Facts About Social Security

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1949

Mr. KEATING. Mr. Speaker, since the Committee on Ways and Means is this week starting hearings on legislation suggesting drastic changes in the social-security law, this seems like an appropriate time to refer to a few facts. It is more than likely that they will not be stressed by the spokesmen for the administration.

In the 12 years since its inception there has been paid into the old-age and survivors insurance trust fund $12,200,000,000. This has been contributed equally by employees and employers.

How many working men and women in this country who have contributed this sum realize that there has been built up an accumulation amounting to $10,700,000,000, or how many employers are aware of this fact?

Also, how many of these contributors know that, although these are designated trust funds, the money is not there at all, except for the insignificant amount of $150,000,000? This money collected from the working people of this country and their bosses over a 12-year period has simply been spent for other purposes through the device of substituting Government bonds in the trust fund for the hard-earned dollars and pennies which people thought they were paying for future benefits.

Of course it can be said the Government bonds are in the fund which are as good as the Government itself. This is true, but the only way any benefits can be paid is by selling those bonds, making new appropriations, or tapping future pay rolls still more to raise available cash.

It is necessary, of course, that there be built up a substantial balance on the credit side of the ledger in this fund to meet future benefit payments. Nor should it be required that funds more than necessary to meet operating expenses and normally anticipated benefit payments be held in cash.

It is not the method of administering the fund but the failure fully to inform the public to which I object. Staggering sums have been collected from pay envelopes to run the Government on the pretext and the representation to the workers that this is an insurance fund from which they will get back many times their payments in later life.

Those who feel the pinch of inadequacy most severely are the employees who have already reached the 65-year-age limit for retirement or their widows. The provision for them under present law is pitifully small. They have every reason to feel, as I know from my mail many of them do, that social security partakes more of the character of lofty promise than of tangible fulfillment. In making legislative provision for a substantial increase in the benefits, let us give first consideration to those now retired or about to retire from employment. Let us face realistically and sympathetically the plight which they face in these days of high living costs. Let us do nothing further to jeopardize their investment in this fund. They have already paid into it 80-cent to 100-cent dollars and now face the prospect of drawing out 50-cent dollars.

Above all, let us discontinue the practice in the Government of collecting money for one purpose and using it for another, or, if we are going to follow that questionable practice, let us tell the people who put up the money frankly and openly what we are doing.

State Department's Left Wing

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Wednesday, March 2, 1949:

STATE DEPARTMENT'S LEFT WING

Roger Lapham, American economic cooperation chief for China, has told Congress $240,000,000 will be required to continue civilian relief for those areas of China still under Nationalist control.

This is little enough help for a loyal ally, in dire straits after 9 years of war. Refugees from the Communist advance have caused acute food shortages in China's coastal cities, and only outside aid can avert widespread starvation.

But if what remains of Nationalist China is to be saved from Communist occupation, money must be advanced to finance armed resistance.

Mr. Lapham, however, has gone as far as he can without a change of State Department policy; and there is no promise of that.

Congressmen who have discussed the Chinese situation with Secretary of State Acheson gained the impression that he has accepted, hook, line, and sinker, the appeasement policy of the leftist underlings in his Department's Far Eastern Division.

That policy reduced nationalist China to its present helplessness before the Red onslaught. Instead of changing it, Mr. Acheson apparently defends it. Instead of ousting the appeasers, he seems to be influenced by them, as his recent predecessors were.

Meanwhile, the Chinese Communists have ordered foreign correspondents and the United States Information Service in Peiping to cease activities. There has been no word from our Mukden consulate for 3 months. But these things apparently haven't impressed Mr. Acheson and his advisers.

Much that Mr. Acheson is reported to have told the Congressmen in defense of his position did not square with the record. Some of them took exception to his assertion that his wait-and-see policy had the support of our best-informed military men. If that is true, he was asked, why doesn't he release the long-suppressed Wedemeyer report?

Mr. Acheson answered, lamely, that this would not be in the public interest. It is known, however, that the Wedemeyer report did not support the State Department's policy, and this policy is at variance with General MacArthur's cabled message to the House Foreign Affairs Committee a year ago. It said:

"The Chinese problem is part of a global situation which should be considered in its entirety. * * * It would be utterly fallacious to underrate either China's needs or her importance. For if we embark upon a general policy to bulwark the frontiers of freedom against the assaults of political despotism, one major frontier is no less important than another, and a decisive breach of any will inevitably threaten to engulf all."

We have pursued this utterly fallacious policy for 3 years.

When President Truman proclaimed his general policy against Communist expansion, in announcing his Greek-Turkish program, the State Department's Far Eastern division was influential enough to make an exception of communism in China. As a result, on that one of the major frontiers of freedom, a decisive breach has been made.

And the whole Asiatic front will be exposed to Red attack unless the President and Mr. Acheson bring State Department policy toward China into harmony with the Truman doctrine.

Harry Truman, Come Down to Earth

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the following letter addressed to President Truman by Mr. Robert S. Burns, president of the Standard Steel Corp., of Los Angeles, Calif.:

Hon. HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR HARRY: This is just a voice from the wilderness, and maybe I shouldn't address you so familiarly, but if you can publicly address a fellow American as an S. O. B., I am sure you won't mind being called by your Christian name.

Anyway, Harry, the reason I am writing to you is that I listened to your Jackson Day address. I didn't pay $100 to hear you, but I listened to you on a prewar radio, and, Harry, I got the feeling you were losing your common touch. We have a saying that every once in a while a man should sit back and count himself just to see how many he is. I would like to help you count.

Do you know, Harry, you are one of the very few Presidents of these United States who was elected by less than a majority of the popular vote? With all this talk about a mandate from the people, it must be hard for you to remember that you got a quarter million votes less than 50 percent of the total votes cast for President at your election.

Do you know, Harry, that you are one of the few Presidents of these United States who, prior to election to public office, had a less-than-mediocre business career? I hope your attitude towards business is not engendered by bitterness, but it must be hard for you to treat business fairly when the haberdashery business treated you so poorly.

Do you know, Harry, that you are the only President of these United States who so forgot the dignity of his high office that he resorted to name calling when publicly refuting the opinion of a fellow American?

After all, Harry, the average American likes his Presidents to be men of the people, and even men of the streets, but never men of the gutters.

Do you know, Harry, you have an utter misconception of why you were elected? You were elected because you promised a neat trick of keeping the cost of food up and the cost of living down. You were elected by the apathy of the people to the matters placed in issue by the campaign. You were elected by the people who stayed away from the polls. You were elected by the poor tactics of your principal opponent. Let's face it, Harry, you were elected by a fluke—you were not given nor do you have a mandate.

Tell me, Harry, why do you so tenaciously hang to your campaign promise to repeal the Taft-Hartley Act, while brushing aside more vital promises? Do you think the voters took you more seriously regarding the Taft-Hartley Act than they did when you promised to cut the high cost of living? Do you think a man who is struggling to educate and feed his children is more anxious to have a closed shop and pay union dues than he is to have the price of food decline? Do you think the voters took you less seriously when you damned the do nothing Eightieth Congress for doing nothing about the high cost of living? And incidentally, Harry, did I hear you right when you now damn them for having done nothing to prevent the cost of food from going down?

Sum it all up, Harry, and start counting yourself.

Of course, you'll pay no attention to this letter because it comes from a special interest. I must be a special interest because I don't fit into your pattern any other way. I am not being subsidized like the farmer nor patronized like the labor leader. I am not on relief nor eligible for a pension. I am not on the Government pay roll nor lobbying against the Taft-Hartley Act. So who am I—I must be a special interest—a businessman, an employer, a taxpayer. That's right, Harry, but let me tell you something about that.

The business I run is small potatoes (oh! oh!) as businesses go. Our total assets are less than a million dollars, a meager sum from a Government viewpoint. We have good years and we have bad years, and we manage to survive, but on the over-all our stockholders net less after taxes than they would with an equal investment in tax exempt bonds. Over 30 percent of our gross income goes to pay rolls and less than 5 per cent for dividends and surplus. The rest is spent for raw materials, Federal taxes, State taxes, county taxes, and municipal taxes. There are income taxes, franchise taxes, State sales taxes, city sales taxes, pay roll taxes, personal property taxes, real property taxes, and numerous hidden and miscellaneous taxes—a burden on business you take far too lightly.

Prior to the Wagner Act we got along just fine with our labor relations. Our employees had their own independent union and were contented. Under the Wagner Act we went through a period of turmoil in our labor relations, resulting in an election favoring the CIO. Subsequently we had our first strike called by the national organization. We were struck because United States Steel was struck. Don't ask me why. We don't make steel—we buy it. We buy it and fabricate it into machinery. Why a buyer of steel must pattern his labor contract after the contract of a seller of steel is beyond me. Ask Philip Murray—he called the strike. Under the Wagner Act we were pushed around by so-called United States conciliators, whose directive to employers to bargain was tantamount to a directive to concede.

Under the Taft-Hartley Act we are getting along fine again and our contract negotiations last year were the most pleasant we ever had. Although we again gave a substantial increase to our men, the negotiations were conducted in a calm, businesslike way. Both sides recognized the other had rights. Both sides recognized the other was a responsible party and was taking those responsibilities seriously. Why do you now want to shake up the apple cart? Is it just for the purpose of harrying business? Or are you being kept under the impression that labor was the cause of your election and you must now pay for the votes? Two things are wrong with that delusion, Harry. First, you didn't get a majority of the labor vote, and second, the laboring man likes the Taft-Hartley Act. Don't let the labor leaders tell you otherwise. Ask the laboring man what he doesn't like about the Taft-Hartley bill and in what way he's injured by it. His answers will surprise you—that is, they will surprise you if you expect him to criticize the act.

In conclusion, Harry, I don't presume you'll get this letter. I presume the same people who are deluding you regarding a mandate from the people, and apparently keeping you out of touch with actual facts, will intercept it, so I am sure you will have no objections to having copies of it sent to Congress, who, after all, are the real representatives of the people. But in case you do read this letter, Harry, just remember you're a likable fellow and a good campaigner, but we want you to come back down to earth. Let us remember you as "Harry the campaigner," not as "Harry the harrier."

Very truly yours,

ROBERT S. BURNS,
President.

We Should Get Rid of Our Excise Taxes on Necessaries

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. KEATING. Mr. Speaker, the House Republican Policy Committee has made a wise decision in determining that an all-out drive should be made to reduce and, in some cases, eliminate Federal sales taxes which have been imposed upon our people under the fancy name of excise taxes.

Such is the objective of the Martin bill, H. R. 2100. Both its content and authorship commend it to our serious study. Certainly our efforts in this general direction should be concentrated on those items which are properly classified as necessities, rather than luxuries.

For additional consideration by the Committee on Ways and Means, along with the bill introduced by the distinguished minority leader and measures proposed by others, I am offering today legislation to terminate certain excise taxes.

The first of these has to do with the 20-percent tax on handbags, purses, pocketbooks, toilet cases, and luggage of all kinds. Admittedly, some of such items fall in the luxury class but certainly a handbag or piece of luggage which retails for $15 or less cannot be considered a luxury. A girl who is working, or a housewife shopping, must carry a handbag. Most everyone must have a modest piece of luggage, even if he or she infrequently takes a trip. Almost every man must carry a wallet or a billfold. By no distortion of language can such articles be classed as luxuries. I have therefore provided that if they sell for $15 or less they shall be exempt from tax.

The next provision has to do with the 20-percent tax levied on toilet preparations of all kinds. Cosmetics have become almost as much a part of a woman's budget as her clothes. Time was, perhaps, when these preparations fell in the luxury class and were the badge of fashion or the theater. Those days, for better or for worse, went out with the gas lights.

Toilet preparations are today a necessity for nearly every woman, no matter what her economic status may be.

It is a hardship and an imposition to ask her to contribute 20 cents to the cost of Government every time she spends $1 for the altogether praiseworthy purpose of adding to her attractiveness.

Another imposition, perhaps the most flagrant of all, is the 20-percent tax on electric-light bulbs. The amount is not great in any single instance but it seems to me a simply inexcusable levy. No one would even contend in this country today that an electric-light bulb is not a necessity.

Estimates of the loss of revenue to the Government from the elimination of the items I have discussed are placed at $175,000,000.

Now we come to the tax of 15 percent on local telephone service. This is perhaps open to greater possibility of argument, but it seems to me the case is conclusive for the proposition that normally a telephone can no longer be considered a luxury.

My bill does not deal with the 20-percent tax on long-distance telephone calls, telegrams, or cables. I am extremely sympathetic, however, to the argument advanced with considerable force that the great bulk of such messages are sent for business purposes, in the event of emergencies, and only infrequently for purposes accurately described as luxuries. Some reduction at least in this levy seems indicated.

Even stronger is the case for reducing the telephone bills of our people by relieving them of the 15 cents on every $1 which they pay for local service. To our grandparents a telephone may have been a luxury. Today it is part of a normal budget.

The revenue loss on this item is estimated at $216,000,000. If the size of this figure, coupled with such action as may be taken in adjusting the tax on telephone tolls and telegrams, does not justify complete elimination of the tax, certainly sharp downward revision is in order along the lines suggested in the Martin bill.

Finally, in the measure I have introduced effort has been made to meet the problem of the reduced recreation while a workingman and his family cannot now enjoy because of the expense involved. Now every time he passes 50

cents or $1 through the window for a ticket to the movies, or buys an admission ticket to any other form of entertainment, along with it must go 20 percent for the tax levied by the Federal Government.

There are forms of entertainment in the theater, on the concert stage, or in night clubs, where those attending suffer no particular hardship through this contribution to the cost of government. For many such diversions may be more routine than adventure.

For the great mass of our citizens, however, it is necessary to scrutinize very carefully the item in their budget for recreation. Too often this essential diminishes almost, if not quite, to the vanishing point. This problem has previously been before this Congress, but under quite different circumstances. I then opposed the elimination of the admissions tax on $10 tickets to the inaugural ball and parade. Fortunately, the Senate prevented this raid on the Treasury for the privileged few.

Certainly those who attempted to put over this deal to exempt $10 tickets have no legitimate ground for objecting to the proposal to free tickets costing $1 and less from this burden. The majority party controls both situations. It will be interesting to observe whether they are handled on the same basis.

My proposal is to exempt from an admissions tax all tickets costing $1 or less. The estimated loss of revenue resulting therefrom, I am informed is about $350,000,000. Here again fiscal considerations may require some modification in the plan I proposed. I strongly urge, however, that particular consideration be accorded those who pay a few cents, rather than several dollars, for admission tickets.

The estimated loss of revenue from all of the provisions in my bill is about $740,000,000. This is, of course, a large sum. Anyone familiar with official Washington, however, can refer to several spots where savings can readily be effected to offset this revenue reduction. This is the way it should be done, not by adding on taxes elsewhere as a substitute.

I hope arrangements will be made for early hearings on the Martin bill and the other measures, including my own, which have been offered to deal with this important problem affecting the daily lives of every citizen in our land.

Tribute to a Martyred Symbol of Democracy, Thomas Masaryk

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. KLEIN. Mr. Speaker, it gives me double pleasure to introduce into the RECORD the text of the proclamation of March 7, which is next Monday, as Masaryk Day in New York, as promulgated by the Honorable William O'Dwyer, mayor of New York.

I say a double of pleasure; but I should say a treble pleasure: First, because of my reverence for Thomas Garrigue Masaryk, the first president and one of the founding fathers of the Republic of Czechoslovakia; second, because of my warm friendship with Mayor O'Dwyer; and third, because the editor of what is probably the largest daily newspaper in the United States, perhaps in the world, printed in the Slovak language, Mr. Andrew J. Valucheck, was thoughtful enough to bring this to my attention.

Prior to the fall of democratic Czechoslovakia to the present regime, there was no country in the world closer to ours in form of government, industry, topography, and temperament of the people. I know that nothing can change the great majority of the people of the Republic from their firm love of freedom and human dignity, and nothing can sever the bond of sympathy which exists between the people of the two nations.

PROCLAMATION

Whereas Americans of Czechoslovak descent have traditionally celebrated the birthday of Thomas Garrigue Masaryk; and

Whereas Masaryk has more than ever become a symbol of freedom and democracy to all people of Czechoslovak descent now that the land of their ancestors has lost its freedom for the second time in a generation; and

Whereas the name of Masaryk has added meaning because of the recent course of history:

Now, therefore, I, William O'Dwyer, mayor of the city of New York, do hereby proclaim March 7 as Masaryk Day in New York City, this being the ninety-ninth anniversary of Masaryk's birth, and I urge all our citizens to participate in the various programs on this day, and to pray that another such liberator may come to Czechoslovakia.

In witness whereof I have hereunto set my hand and caused the seal of the city of New York to be affixed this 1st day of March 1949.

WILLIAM O'DWYER,
Mayor.

By WILLIAM J. DONOGHUE,
Executive Secretary to the Mayor.

Neither War Nor Peace

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thought-provoking article from the New Leader of February 19, 1949:

NEITHER WAR NOR PEACE

(By Boris Souvarine)

(Boris Souvarine is a veteran European political commentator. His articles on communism and Russia have appeared in scores of publications here and abroad. He is the author of a massive biography of Stalin.)

"It is obvious enough that some people—Mr. Churchill among them—believe that war will break out in Europe in August or September." So said the London Newsletter of July 13. This journal finds in Churchillian thought, moreover, portents of things to come. "There is a clear indication in both these speeches," says the Newsletter, "that Mr. Churchill's mind is thinking along these lines: First, that there will be a war; second, that he will be the man the country chooses to lead the coalition necessary to fight it; third, that he is already announcing the reasons for rejection of some and inclusion of others from the present cabinet in the wartime administration he will be compelled to set up."

The same copy of the paper contains other notes which point in the same direction. There are, for example, the voyage of Marshall Montgomery to Paris and Vienna and the stationing of units of the fleet in the Mediterranean. To these items should be added many of similar import reported from America. For several months the inner military circles of Washington have exhibited a growing sense of alarm. American rearmament having been decided upon, it was held by the experts that Moscow would have no further reason for postponing decisive moves. America's increasing preparation was considered a reason for Russian speed in beginning operations.

Anyone who had the desire could find plenty of support for this thesis. Mr. Truman urged his reelection on the plea that "one does not change horses in the middle of the stream." His calling of a special session of Congress in the midst of a vacation was thought to be only secondarily to take care of domestic affairs. Then there was the break in the Wall Street market. The sending of flying fortresses to England was an obvious recognition of a dangerous situation. The mysterious trip of General Clay to Washington obviously had parallel significance—despite the official optimism with which Washington endeavored to clothe it. It is evident, moreover, that in the highest political circles in America the opinion gains ground that the militant wing is gaining control of the Politburo and that, consequently, we are on the eve of another war.

This impressive accumulation of "official" opinions and disquieting signs give support to the theory that war with Russia is inevitable. Must Soviet tyranny inevitably seek expansion through immediate war or can it restrain itself within the confines of peaceful methods? Must Stalin follow through to the bitter end the pattern of Hitler?

The 30 years of Soviet history do not justify complete acceptance of the theory that war is imminent. Not that the Bolsheviks are burdened with any philosophy of pacifism. In their vocabulary this is one of the lowest and meanest of words. The important fact is that they are realists and that to them their power is the most precious thing in the world. They are dominated by concern for their political security. Since the stabilization of their regime after the march on Warsaw in 1920, they have consistently taken great care to undertake nothing which lies beyond their means. If possible, they will never run a risk.

They never gave more than token assistance to the Chinese Nationalists or the Spanish Republicans. Their attack on Finland—a movement of 100 against 1—could not be regarded as an uncertain adventure. The stab in the back of Poland, the invasion of the Baltic countries and of Bessarabia, all, though infamous, certainly could not be regarded as risks. The Hitler pact, misjudged though it turned out to be, was entered into as the lesser of two dangers.

There is no reason at all for supposing that the Politburo has adopted a new policy in regard to this matter. All initiative remains with Stalin. The other members are nothing more than hands ready to carry out his orders. The Politburo is a mere extension of Stalin's personality, built by him over a period

of 20 years through the sacrifices of his comrades. In this body there are no such things as tendencies or differences of opinion about matters of life and death. Any apparent disagreement is nothing more than a well-regulated scene staged for the deception of outsiders. All of the current speculation—about the age or physical ailments of Stalin, about his ambitions, about his nationalism or internationalism, about the intentions of his acolytes—all of these arguments pro and con rest upon no substantial basis.

Stalin's political structure is built of prudence, patience, good management, and the exploitation of human weaknesses. He will never risk everything by an open attack until he is sure of the result. The cases cited above prove this with regard to his behavior in the field of foreign affairs. But he sticks rigidly to the same pattern in dealing with his own people. Even in undertaking agricultural collectivization and the destruction of his political opposition—both movements carried out against groups which could not defend themselves—he did not move until he was sure of his ground. Never has Stalin openly and courageously taken on an opponent of his own size. Before he moves he must have an immense margin of advantage. He did not fight Germany until he was forced into action by Hitler's attack.

Harry Hopkins, special envoy sent to Stalin by Roosevelt in 1941, wrote an interesting account of his interview (American Magazine, December 1941). Despite the reserve imposed upon a man in the position of Mr. Hopkins and the secrecy necessitated by the war, this revelation has great significance.

"When Hitler invaded Russia," he reports, "he did so without a word to Stalin, not a hint. In Moscow, in the Kremlin, it aroused a hatred of Hitler that nothing but the death of the German Chancelor could lessen. As Stalin made clear to me, this was not a hatred of the German people nor of the German general staff. The invasion was regarded in Moscow as the treachery of a partner who had suddenly revealed himself as a rabid dog * * *.

"A trade and peace pact had been negotiated between the two countries, and whatever your personal feelings about the U. S. S. R. may be, it is to Russia's credit that she observed her commitments and treaties to the letter. Stalin told me that he had no intention of doing anything but be straightforward in his dealings with Germany. But now the pact had been destroyed—not by Germany, not by the German General Staff (perhaps in spite of it), and not by the Reich as a body politic. Hitler had torn it up without a word from or to anyone." If, then, Stalin was a part of the anti-German coalition, it is to Hitler that we owe this fact, not to Stalin or to the Politburo.

Precisely to avoid being dragged into a war against Germany, or to establish a pretense of his opposition to such a war, Stalin coolly planned and carried out the massacre of the companions of Lenin. He accused these non-Stalinist Bolsheviks of plotting an entente with Hitler of the very sort which he himself later carried through. This disgraceful performance is known as the Moscow trials. It is necessary to know the sinister history of yesterday in order to understand the tortuous politics of today and tomorrow.

Stalin operates with the means which he has at hand. He has no motive for changing his policy, at least none that one knows of, unless there is a change in the existing relations of force. His armies are on the Elbe, not by virtue of any military superiority, but in consequence of ill-considered agreements made at Tehran and Yalta. His annexations are not necessarily a source of strength, as a vain people have been persuaded to think. They are, far more, a source of weakness. Stalin needs at the present time not territory, but time. And the unalert men of the west are giving him precisely what he requires.

The time placed at his disposal he utilizes to carry on persistently the sort of war which he understands best, the cold war, the war of nerves, the war of intrigue and infiltration, the war of corruption and intimidation, the war of sapping and mining which may shatter European civilization. In this strategy troops and arms are assigned to a minor role. The main tasks are executed by politicians, bureaucrats, puppets, and the secret police. And we have during this long and painful period no declared war and no real peace.

Stalin is not wrong within certain limits in thinking that time works for him. His adversaries fail to see through his game and expend their principal energy fiddling about relatively minor matters. His mistake lies in supposing that things may be expected to go on forever the way they have been going recently—especially in the Far East. There it is impossible to proceed in the current manner for long without arousing American opposition. When this happens, success or failure will not depend exclusively on Russian initiative but on the possibility of counteracting efforts conceived and carried out by the Americans.

In the meantime we have in Europe and Asia what in Russia used to be described as times of trouble. It is useless to inquire who benefits from the trouble. Pretexts of war are not lacking, points of friction multiply from the Adriatic along the long line through the Dardanelles and the Gulf of Persia to the China Sea. But pretexts of war do not lead to actual conflict unless the principal protagonists have sufficient reason to believe that it will be advantageous for them to challenge the fates of war. There is no probability of our arriving at this state of affairs at any immediately foreseeable time.

In the historical process there is a margin of uncertainty without which the whole structure of events could be described in advance. We must, therefore, resign ourselves to the impossibility of rationalizing the irrational. As Valéry said: "Cold reason which, in the past, was able to speculate on the benefits of a bloody encounter should be willing to admit today that it is forced to waver between various possibilities which it may foresee. The one thing certain is that now there can be no localized conflicts, circumscribed duels, closed systems of military conflict. He who enters upon a war cannot foretell against whom or beside whom he will finally stand. He plunges into an incalculable adventure against undetermined forces and for an indefinite time."

But in order to face the uncertainty of future events one should grasp firmly a set of clear and constant ideas. Thus one cannot attribute to Stalin the intention of conquering Europe by force of arms without misinterpreting all that distinguishes him from Hitler. Anyone who foresees such a course underestimates his coolness and good sense. Intellectually Stalin has nothing in common with Valéry. But his innate astuteness, his political maturity, his experience as a civilian in control of a great war machine have enabled him in his way to arrive at the verities expressed by the French thinker of whom, I am sure, he has not read a single line.

But the disproportion, so much commented upon between the human and material resources of great Russia and disunited Europe—this is no novel circumstance. And the interdependence of continents and the internal deficiencies of the Stalinist empire—these, too, are things long understood by political observers. The pretended Slav bloc, less rich in Slavs than is believed and more poor in Slavism than is reported, may make a great impression on the outside world; but it deceives no one on the inside. Its future depends upon its ability to remain a viable complex; and that, in turn, depends upon the maintenance of world peace.

As to the supreme "nerve" which Stalin exhibits, it is evident that Roosevelt and his colleagues and successors dealt with him in such a way as to persuade him that he could permit himself practically any extravagance. The responsibility for allowing the Russian dictator to become so puffed up must be divided between the naive and the cynical, the deceivers and the deceived. It is as idle to speculate on who started the process as start the old argument about the chicken and the egg. After so many mistakes, so many false moves and countermoves, Moscow will not begin to retreat except in the face of an unconquerable obstacle. But Washington will never be taken seriously until it faces Stalin with acts, not words. If acts other than war are inconceivable to the men who believe themselves in charge of the planet, silence would, at least, be preferable to empty words which serve no purpose but to reveal too openly our disorganization and impotence.

China—Our Crumbling Ramparts

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the people of this country are not aware of the true situation existing in China and the real threat to our security in the Pacific. We have billions of dollars for the Marshall plan and it appears also for a military alliance all on the theory that communism must be stopped in western Europe. Yet Paul Hoffman of ECA, said that we will do business with the Communists in China if they succeed in establishing a government there. What kind of consistency is this?

Mr. Speaker, Mr. Alfred Kohlberg, writing in Plain Talk for January, very clearly points out the fallacy of our present policy in China and the Far East. I commend it to the attention of the Congress and the people of the United States:

OUR CRUMBLING RAMPARTS

(By Alfred Kohlberg)

The Washington grapevine has been buzzing with a rumor that Soviet Ambassador Panyushkin had served notice upon President Truman or, according to some, upon Secretary Marshall, that further aid to the Nationalist Government of China would be considered an unfriendly act.

We have no way of ascertaining how much truth there is in the report, but the Homeric American tragedy being enacted across the Pacific is a fitting illustration to the insiders' talk in Washington.

The redoubtable Panyushkin measures up to the role, for he is the only surviving Soviet ex-Ambassador to China, no mean achievement for a Kremlin diplomat. Without exception all his predecessors as envoys to China have fallen under Stalin's ax upon their recall home.

The promotion of the surviving Panyushkin to the supreme assignment of doing a little pushing around of the Tarzan-like Uncle Sam could not have been a mere acci-

dent on the part of the wily set in the Politburo.

Having shoved China into signing away Outer Mongolia, Ambassador Panyushkin practiced the art of pushing around in the maneuvers which led to the Communist conquest of Manchuria and the penetration of Chinese Turkestan, with our tacit blessings.

It seems hardly likely that even so offensive a Soviet grenadier as Panyushkin would present something like an ultimatum to the heads of the Government of the United States, especially after the ill-fated Soviet ultimatum to us in Berlin.

But then there are those in the know who have long suspected that certain pipe lines connected the Soviet Embassy in Washington with the far eastern policy makers in the State Department. Anyway, Ambassador Panyushkin could have no difficulty in discovering that there is no Lucius Clay among President Truman's advisers on our "bipartisan no-foreign policy" in the Far East, as Alf Landon so aptly described it.

On one point there can be no division of opinion: Our course in China is in the best tradition of Tehran, Yalta, and Potsdam, a course originally charted for us by Stalin and Molotov and the Panyushkins.

Remember Tito? We had for years tried to force Chiang Kai-shek into a Titoesque mold through the lofty stratagem of a coalition government. We succeeded in Yugoslavia, but Nationalist China resisted our pressure.

Remember Mikolajczyk? Falling in line with the dictates of the Kremlin, we had carried out a coalition policy in Poland which seemed to us to suit ideally the generalissimo of another valiant ally of ours. Unlike our Polish protegé, the head of the Republic of China continued to balk at our suasions and proddings.

Remember Czechoslovakia and Rumania and Bulgaria and Hungary? We backed the magic motto of coalition government, coined for us by the avowed and secret dupes of Moscow. The iron curtain has enfolded and garroted our friends—the friends of democracy and freedom—in all those countries. That has not prevented us from pursuing the same old will-of-the-wisp in China where our ramparts are a matter of life or death to American security in the Pacific.

These ramparts have been crumbling under the propaganda drills of those who have been telling us that "you can do business with the Chinese Communists." (It worked with Hitler, it is still working somewhat sluggishly with Stalin, why not with Mao Tse-tung?)

It is a familiar song: The Chinese Communists need us—for $5,000,000,000 we can secure their friendship. It was only yesterday that good old Joe's friendship was to be had for $10,000,000,000.

The theme of this song burst upon the front pages of our press when Paul G. Hoffman, head of the ECA, reversed himself after a 3-day visit in Shanghai and announced that the United States would continue aid to China if the Communists or a coalition government should overthrow Chiang Kai-shek.

Who can measure at this date, in billions of dollars or millions of lives, the full value to Stalin and his Panyushkins of this stab in the back delivered by our traveling envoy to our ally against Japan?

The American correspondents in China recorded the Hoffman venture into the realm of higher diplomacy as a devastating psychological blow to the government of the Republic of China, the same government which we had solemnly sworn to uphold at Cairo and Tehran and Yalta—in the treaties designed for public consumption only.

In the secret agreements, designed to be kept from the forgotten man, we had delivered anti-Communist China into the clutches of Communist imperialism, an undertaking which could not be consummated without getting Chiang Kai-shek's head into the noose of a coalition government. Secretary Marshall failed in his mission to mate the Nationalist tigers with the Red vipers. Paul Hoffman has carried on the fatal errand of his illustrious master with a sublime sense of irresponsibility.

Well may Panyushkin play the role of a bully in our diplomatic house of glass. How fragil are our rudders, how pompous our captains of the ship of state, and how blind.

Must all our ramparts in Asia crumble into dust before the eyes of America can be opened? Is it our destiny to fight for our life with our back only against Canada or Mexico as bulwarks in the race for the survival of civilization?

Anthracite Mine Safety Record

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Wilkes-Barre (Pa.) Times Leader Evening News:

ANTHRACITE MINE-SAFETY RECORD IS HAILED BY WALSH

The State mines department reported today 353 anthracite operators worked all of 1948 without a single fatality, a new safety mark for the hard-coal region.

Deputy Secretary Joseph J. Walsh described the record as exceptionally splendid. The operators turned in 28,754,612 man-hours during the year.

The 131 fatal accidents in the hard-coal fields in 1948 occurred at 39 other operations. But the over-all record of 0.87 fatalities safety mark for Pennsylvania, Walsh said, is apparently destined to be one of the finest records in the Nation.

"The perfect operators," he said, "have materially helped the industry to more nearly approach safety perfection."

Ten Great Truths About the Constitution

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Ten Great Truths About the Constitution," written by me and published in the Daughters of the American Revolution magazine for March 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEN GREAT TRUTHS ABOUT THE CONSTITUTION

By the Honorable ALEXANDER WILEY, United States Senator from Wisconsin)

The Constitution of the United States is the civic bible of every American. Next to the Holy Gospel itself, it merits our study, our respect, and our fulfillment more than any other piece of literature. Unfortunately, far too many of our citizens take it for granted and think that the only time in our lives that we should really be interested in it is during our school days, when we have to study it—its history, its development, and its meaning. But the Constitution, on the contrary, is living literature in the sense that it has meaning to us every single moment of our days. Every second that we enjoy freedom of speech, of press, of worship, of assembly, is a moment of liberty that we owe to the Constitution of the United States.

Love of the Constitution is the very embodiment of American patriotism just as disrespect and subversion of the Constitution is the very epitome of disloyalty to our way of life. The enemy of the Constitution is the enemy of America. Its upholder is the loyal servant of America.

A feeling of gratitude alone is not enough to bind our hearts to this miraculous document. Each of us knows that the Constitution gained vitality through the blood of American martyrs who paved the way for its creation by sacrifice of their very bodies in the War of Independence. So, too, the countless heroes who have served America's flag in our later wars have preserved the Constitution for us. We are the heirs of generations which shed their blood and tears on behalf of us and on behalf of this immortal document.

Not only, however, should we feel gratitude for those who battled for God, country, and Constitution in war, but for those who fought the bitter battles of peace in order that the Constitution might be created and might survive. We remember that it was only after the bitterest of struggles that it was written, let alone preserved.

The Constitution was, of course, not the first but the second written form of government of the United States. In 1777, just 1 year after the Declaration of Independence, the Articles of Confederation which had been drafted were adopted by the Convention chosen by the Continental Congress to frame them. It was not, however, until 1781 that the final State ratified these articles. Within 4 years the Articles of Confederation, however, proved so inadequate that plans were originated at Mount Vernon to remodel them. Washington and a group of statesmen suggested the calling of a convention in 1786 at Annapolis, but because of inadequate attendance that Convention adjourned to the next year at Philadelphia, when all the States but one sent delegates. This Convention, which had been called to remodel the Articles of Confederation cast them aside and drafted an entirely new instrument. The Constitution was adopted on July 2, 1788, and was placed in effect on March 4, 1789.

So many were the problems of the new Nation, so great was the doubt that the Constitution would last, that every American might thank Almighty God each day of his life that somehow this document did survive.

What, then, are some of the great truths about this Constitution in terms of its meaning to us?

Here are a few:

1. The United States Constitution is the most miraculous document in the history of mankind. This basic fact proven by our own and other nations' history commands our unyielding respect. It was no overstatement when William E. Gladstone, Prime Minister of Great Britain, remarked:

"The American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the brain and purpose of man."

Thomas Jefferson, in spite of his doubts arising out of the terrific struggle for the Constitution, wrote to David Humphreys, in March 1789:

"The Constitution * * * is unquestionably the wisest ever yet presented to men."

The very survival of the United States Constitution is proof of its value. It is a miracle in itself to think that any document almost 170 years old should have survived with a mere 21 amendments. In the course of this time the entire economic, political, and social pattern of American society has changed. From 13 weak colonies of less than 4,000,000 souls living in an almost wilderness civilization, we have emerged as the greatest power on earth, with the highest standard of living, leading all the 2,000,000,000 inhabitants of mankind in technology and in every other field and commanding the universal respect, if not the admiration of all men.

It is comparatively easy for us today to revere the strength of the Constitution, and yet when we turn back the pages of history to the time of its founding we note that the air was black with woeful predictions of the Constitution's collapse. It is said that Aaron Burr wrote:

"When the Constitution was first framed I predicted that it would last 50 years. I was mistaken. It will evidently last longer than that. But I was mistaken only in point of time. The crash will come, but not quite so quick as I thought."

T. B. Macaulay criticized the Constitution, as follows:

"Your Constitution is all sail and no anchor."

Even in modern times there are those who have attempted to disparage it either in attempted sarcasm or in malicious subversion. The cynical George Bernard Shaw, master of irony and sarcasm, said in an address on April 11, 1933:

"When you came to examine the American Constitution you found that it was not really a Constitution, but a charter of anarchism. It was not an instrument of government; it was a guaranty to the whole American Nation that it never should be governed at all. And that is exactly what the Americans wanted."

The miracle of American Government is the complete refutation of Mr. Shaw's words.

2. The United States Constitution is the perfect match for the American people. Never in all mankind has a governing instrument been so perfectly adapted to the pattern of the people governed as is the Constitution of the United States to the American people. We here on this continent are a new breed of men, blended from all peoples into a new people. Our Constitution has been emulated in other countries by virtual copying of its outline and of its clauses, but with varying success. Canada, Mexico, five Central American Republics, nine South American Republics, Australia, and South Africa all adopted constitutions patterned to greater or lesser degrees after our own. In addition, the Constitutions of France, Belgium, and Switzerland contain many provisions that are to be found in our Constitution. So, too, the so-called Weimar Constitution of Germany after World War I was patterned after our own.

Why, then, have we succeeded with our Constitution whereas some of the other nations in the list above have obviously not succeeded as well with theirs? Because the genius of America is such that it functions best in a constitutional Republic such as ours, whereas other peoples are by history and culture apparently less adapted to our form of government, although it is our prayer that they may someday enjoy the blessings and freedoms which we ourselves enjoy.

3. The strength of the Constitution is that it embodies eternal laws and principles. Wendell Phillips in 1861 well said:

"All that is valuable in the United States Constitution is 1,000 years old."

It is basic to our Constitution that man (although made in God's image) must not be given too much power or else he may tend unfairly to control other men. That is why the basic principle of the Constitution is a system of checks and balances whereby each of the separate coequal branches—executive, legislative, and judicial—cannot infringe upon the other. If ever this system of checks and balances is upset and if ever power unduly gravitates to one branch, then the liberties of all Americans will be threatened. The Constitution by its provisions separating power has thus far successfully forestalled the abuse of power.

4. The Constitution is the ultimate guaranty of American liberties. Since ours is a government of laws rather than of men, the supreme law of the land is the guaranty of our freedom rather than having the promise of any one man or group of men guarantee our freedom. In June 1933, in an address at Harvard University, Alfred E. Smith stated:

"Keep your eye on the Constitution. This is the guaranty that is the safeguard, that is the night watchman of democratic representative government—freedom of speech, freedom of the press, the right of public assembly, and the right to petition the government."

5. The Constitution preserving the heritage of the past is a guaranty of progress for the future. In these times there are folks at every hand who try to imply to us that, although the Constitution may have been well and good for the past, it is not dynamic enough for the complex challenges of the future. Nothing could be more insidious than this alien philosophy. The adequacy of the Constitution in the past is proof of its adequacy in the future. On February 6, 1850, Henry Clay, in a speech in the United States Senate, said:

"The Constitution of the United States was made not merely for the generation that then existed but for posterity—unlimited, undefined, endless, perpetual posterity."

Just 3 years previously, Daniel Webster, speaking in Springfield, Mass., gave the lie to those who imply that the Constitution is not adapted to America's future when he said:

"We may be tossed upon an ocean where we can see no land—nor, perhaps the sun or stars. But there is a chart and a compass for us to study, to consult and to obey. That chart is the Constitution."

6. One of the greatest menaces to the Constitution is usurpation. What are the other threats to the Constitution? Perhaps the principal threat can come from the ambition of any one branch of government, as previously indicated, to control the other branches of the Government in order to meet some emergency. Many times in American history the siren voice of some would-be fuehrer has pleaded for extraordinary powers outside the Constitution in order to meet crises. One of the finest answers to such appeals came from a Supreme Court Justice in 1866, when Mr. Justice David Davis stated:

"The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times and under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government."

We need look no further than to the Father of His Country for another opinion about the danger of usurpation:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation."

7. However miraculous the Constitution, it must be dynamically interpreted and implemented. The fact that it has proven so perfect for the American way of life does not, however, gainsay the fact that changing times require new interpretations of its clauses. Always throughout American history, in times of peace and in times of war, when the public welfare has been endangered, clauses of the Constitution have been interpreted in such a manner as to give the respective branches of Government the necessary power to meet real (not fictitious) emergencies in accordance with the Constitution.

The key concept to bear in mind is that always these interpretations and implementations must be in full keeping with the true spirit and insofar as possible with the letter of the Constitution. We have as much to fear from the man who would scrap it entirely as from the man who out of mistaken loyalty, proves completely a "stick in the mud," refusing to interpret the Constitution in accordance with the changing requirements of our system. Again it was Thomas Jefferson who provides us with the key to use along this line:

"Some men look at constitutions with sanctimonious reverence, and deem them like the ark of the covenant, too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment * * * We might as well require a man to wear the coat that fitted him as a boy, as civilized society to remain ever under the regime of their ancestors."

8. A basic test of loyalty therefore is respect for the Constitution. If you and I would recognize the enemies within our midst of which Lincoln warned, then we must be ever alert against those who would defame it and nullify its intent. The true American patriot, the good American citizen, the American-thinking American, fulfills the American's Creed as adopted by the House of Representatives on April 3, 1918, in the words of William Tyler Page:

"I * * * believe it is my duty to my country to love it, to support its Constitution, to observe its laws, to respect its flag, and to defend it against all enemies."

9. Still another great truth about the Constitution is its interrelationship with other great documents of American freedom. It should be read and understood together with the Declaration of Independence, the Gettysburg Address, and the other perpetual landmarks of American liberty. The spirit of these guideposts is one, the meaning is one, loyalty to them is one and indivisible.

The strength of the Constitution is, of course, found in the strength of the American people—in their loyalty to the heritage of the past, in their desire to pass on that heritage vital and unimpaired to the generations which follow us. It is up to each citizen, therefore, to know and understand these basic truths of the Constitution. It is up to each citizen to have readily at hand in his home, in his office, wherever possible, a copy and to refresh himself with it, to gain inspiration from its contents, to gain directions as to his role as a citizen.

We should take little journeys to the Constitution in the same way we take little journeys to the Bible, going to the source of wisdom and understanding and direction in order that we may be adequate for our role in these dynamic times.

President Cleveland stated:

"Millions yet unborn will inquire concerning our stewardship and the safety of their Constitution."

Address by Hon. Hubert H. Humphrey, of Minnesota, at Howard University

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, may I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Howard University on March 2, 1949?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I would like to have been in Washington 82 years ago. I would like to have met your academic forefathers who created from dust and from poverty—and, yes, from nobility of spirit—a school, humbly, called a university, for the elevation of freedmen. Howard University was not dedicated to the cold obscurities called truth and enlightenment. It was born of dire need, dedicated warmly to humanity.

Thousands of freedmen migrated to Washington after the Emancipation Proclamation. They squatted in abandoned barracks and in vacant houses. They needed moral and spiritual leadership to interpret their new freedom. They needed doctors to tend to the sick. They needed lawyers to advise them of their rights, and they needed teachers.

Your founders had a rare combination of practical insight and imagination and benevolence. They saw the immediate needs of the growing community. They saw the destiny of a liberated people, and the responsibilities that went with freedom. Four years after the Emancipation Proclamation your founders had the courage to initiate a new concept of brotherhood within the walls of their school. They opened their doors to all who came, and the privileged came to learn with the sons of slaves and the daughters of the trustees, and the poor came, and the men came with their wives.

The missionary founders envisaged an institution that would grow and develop and mature with its students. They had an indomitable faith in men. They knew them, as we know now, that freemen justify their freedom. Their faith has been vindicated by countless men whom Howard University built and molded and developed and sent out into the world to make invaluable contributions to humanity. Governor Hastie has vindicated their faith, and Dr. Drew, Dr. Just, and Dr. Frazier. Your president, Dr. Johnson ennobles that faith.

Freemen do indeed justify their freedom. The eyes of the entire world have been focussed on Howard University's Dr. Ralph Bunche. His efforts toward peace with justice in the Middle East, and the respect he has earned from people the world over, epitomize society's stake in the freedom of men. Freedom is a dynamic force. It gathers increased momentum with every liberation. It crosses oceans and deserts and it penetrates jungles and scales mountains.

When the Negroes in Mississippi can freely go to the polls to vote the iron curtain in Europe is ripped; and millions of Indonesians and Chinese take hope. Their newly found opportunities will undermine totalitarian propaganda just as surely as they will inspire the lives of the Chinese coolies. It is an international principle that is at stake. Those who would enslave men are destined to failure when the most powerful nation in the world rededicates its faith in freedom. Already the rumblings are being heard. There are vociferous cries of emancipation in Indonesia. The democrats of Asia have awakened to their responsibilities to assure freedom from tyranny in their vast area. The Chinese are agonizingly struggling for liberation from a feudal economic system. And even from behind the iron curtain we have heard Marshal Tito's voice raised against the bondage of Moscow.

There is a restless world-wide search for liberation. Whole nations of individuals are groping for the freedom to find themselves, and to recognize their capacities and fulfill their destinies.

We in the United States are in a unique position to chart the future. Too often do we here tend to limit our vision as we view the picture of our national life. There are shadows in the scene. The Ku Klux Klan does still ride. Fear of insecurity is still with us. Poverty and privilege still victimize us. But we ought not forget that these shadows have sharpened the light.

In our slow trial and error democratic manner we have steadily moved toward greater democracy and the enlargement of the area of human freedom.

The franchise has been extended. Our workers, both white and Negro, were liberated from slavery in 1863.

Sweatshops have been destroyed. Yellow-dog contracts have been outlawed; other freedoms have been recognized. In spite of temporary set-backs the trend has been toward liberation, liberation at a geometric speed.

As I stand here this moment there are men in the United States Senate planning a last desperate resistance against the age-old drive toward full civil rights for every citizen of our country regardless of his color or religion or nationality. Those men would ignore the Golden Rule so that they can keep a Senate rule. They tamper with the morality of a determined nation of people. The people of our country carried a great moral burden for too long a time. We cried out for democracy in other nations at the same time that we denied democracy at home. This hypocrisy developed a national moral guilt. Americans realized that discrimination clashed with our credo, that it was wrong—dead wrong. The new thoughts played upon the old during the years of our indecision. We were a nation plagued with guilty consciences.

We made an auspicious step toward absolving ourselves of this sense of guilt with the publication of the precedent-breaking report of the President's Committee on Civil Rights, organized labor, business, all religious groups—almost all sections of our public life were represented in this report which called—in ringing words—for an end to discrimination, the right of all citizens to live free of terror and oppression and to participate fully in the responsibility and benefits of their Government. This was a landmark in our march toward the realization of genuine democracy. The next step, and the step we now face, is the implementation of the committee's recommendations.

Last summer at the convention of the Democratic Party, the decision was abruptly made. When the delegates were challenged to get out of the shadows of States' rights and to walk forth in the bright sunshine of human rights, they voted to relieve themselves of their guilty consciences. They voted against discrimination and against bigotry. They justified the freedom of freemen.

Again on last November the second, our faith in the American citizen was tested and affirmed. There can be no doubt now about the American people's passion for liberation. They voted to liberate themselves from their guilt as well as to liberate minority groups from their displacement. The American voter showed to all the world that he had the courage of his convictions.

In spite of that great demonstration in November, a minority in the Senate of the United States withstands the national tide. They will fail, because history is against them, the people are against them, the times are against them, the President of the United States is against them. Our President risked his political career to bring the issue of civil rights to the people. He traveled many miles to proclaim his vigorous views on this issue. He has broken all precedent in the degree of his strength and leadership to the end that man's inviolate dignity shall be accorded to all men equally. President Truman has truly shown that he would rather be right than be President.

No, a minority of men in the Senate of the United States cannot frustrate a nation. A nation is awakening. Communities are coming alive. A groundswell is developing. Brotherhood is on the march. People are beginning again to feel democracy. In their communities they are talking and acting for democracy.

Here on the ground level, in the neighborhoods where Negroes and whites, Japanese and Indians, Christians and Jews live their lives and go about their daily business, here is the area in which understanding and justice and equality must take root. In the stores and the factories, in the schools, and the universities, the bus terminals and the railroad stations.

Many of you will go back to your homelands in the South within the next few years. Your education is awaited and needed there. And your initiative. The task of fulfilling your destiny lies in the communities of the South. You will need to share your education with your neighbors, and you will need to join with the groups that are already working to liberalize the South. Your efforts in home communities will come to fruition when you can send to the Congress of the United States men who will represent the new surge to freedom in your area. It is in the roots of your communities that you will solve the American dilemma. When a minority of men who represent a minority of the public can no longer hamper the Congress by their filibusters and by their derision of justice, then the American dilemma will be a thing of the past, a hardship conquered in the development of a great nation of freemen.

Resistance in Indonesia

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Resistance in Indonesia," by George T. McKahin, published in the Far Eastern Survey of February 23, 1949, and an article by Quentin Pope from the Chicago Tribune of February 18, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Far Eastern Survey of February 23, 1949]

RESISTANCE IN INDONESIA

(By George T. McKahin)

BATAVIA, January 22, 1949.—The Dutch attack launched on December 19, 1948, against the Republic of Indonesia was designed to impose a speedy settlement of the Dutch-Indonesian dispute along lines dictated by the Dutch. Enlisted men and officers of the Dutch Army were indoctrinated with the idea that once the principal Republican leaders and Republican cities (Jogjakarta in particular) were captured, resistance to the Dutch would collapse. They were told that their purpose was the release of the Sultan of Jogjakarta from 3 years of captivity within the Republic. Their marching order was "On to Jogja to free the Sultan."

All the principal cities of Java are now in Dutch hands. But Republican resistance has not collapsed—indeed, it has reached unprecedented proportions. The Sultan of Jogjakarta, who during the past 3 years has not only been free but has also been one of the most energetic and esteemed leaders of the Republican Government is now a voluntary prisoner in his own palace, refusing to have any contact with the Dutch.

The Dutch did succeed in capturing many of the top Republican leaders: Sukarno, Hatta, Sjahrir, and half the Cabinet. (The seven ministers captured are Hadji Agus Salim, foreign affairs; Mohammed Natsir, information; F. Laoh, public works; Djuanda, transportation; Dr. Leimena, health; Dr. Ali Sastroamidjojo, education; and Kusnan, social affairs.) Six Cabinet members, however, are now in Republican-controlled areas. Aside from Sjafrudin Prawiranegara, Minister of Economic Affairs, who was in Sumatra at the time of the attack and who was appointed head of the Emergency Republican Government by Sukarno and Hatta shortly before the latter was captured, these escaped leaders include Dr. Sukiman, Minister of the Interior and chairman of the Republic's largest political party (Masjumi), and Supeno, Minister of Youth and Reconstruction. (Kasimo, food; Susanto, justice; and Maskoer, religion, are in Republican-controlled territory, while Maramis, finance, is outside the country.) Many other outstanding political leaders likewise escaped, among them Tan Malaka of the anti-Muso Communists, and the heads of the Indonesian Nationalist Party, the Indonesian Socialist Party, the Proletariat Party, and the Indonesian Islamic Youth Movement.

The thousands of Dutch soldiers with more than 2 years' service in the Indies who were due to be sent home several months ago are particularly bitter. Told that they would be sent home once Jogjakarta was captured, they now find that the fighting has just begun, and their feelings toward the "brass" in Batavia are not kindly. (Conclusions as to the indoctrination and present outlook of Dutch soldiers were reached after personal interviews with many of them, and are reinforced by the experiences of other interviewers in the combat areas.) Java, Sumatra, and even southeast Borneo are surging with resistence. Although their armored columns continue to attack concentrations of Indonesian troops, the Dutch are in general on the defensive. They are losing control of towns to Indonesian forces; plantations are being abandoned, motor roads becoming impassable, and most railroad lines going out of commission. Sea and air are the only safe routes for travel between major cities. The cities of Malang, Bandjanegara, and Tjikampek are frequently reported to have been attacked heavily by Republican Army units. The Dutch posts around Jogjakarta and Surakarta are attacked almost nightly. The situation is so critical in the Madiun area that the Dutch are forced to supply that garrison by air. Republican troops are operating close to Cheribon and have made repeated attacks on towns within 10 miles of Surabaya, where the Dutch have been unable to garrison the city itself for lack of troops.

JOGJAKARTA: 3 WEEKS LATER

The situation in Jogjakarta 3 weeks after its capture by the Dutch can be reported on the basis of the writer's own observations. (After having left Jogjakarta on December 19 following its bombing and invasion by the Dutch, the writer revisited the city from January 6 to January 10 as a correspondent for Overseas News Agency. The Dutch originally authorized him to remain until January 13. He was apparently finding out more than they wished him to know, for on January 9 he was placed under house arrest in his hotel by the chief intelligence officer in Jogjakarta, and on the following day was forced to leave by plane for Batavia.) It has become for the most part a city of women, children, and old men. A majority of the young men had gone to the countryside to fight from there; many of the remainder were Chinese. Few people ventured outside their houses.

Jogjakarta is not under complete Dutch control. Its central area and its eastern and northern suburbs are Dutch-occupied, with a garrison whose strength is estimated to consist of 1,000 troops, 10 Stuart tanks, and a large number of armored cars and Bren carriers. But much of the periphery of the city is either no-man's land or actually occupied by Republican troops. The Dutch informed the writer that several areas of the city to which he wished to go were not safe. Both Dutch and Indonesian sources affirmed that, in a major attack on the night of December 29, Republican troops penetrated to within 4 blocks of the city's center. On January 9 the Kemal battalion of the Republican Army's Siliwangi Division launched a 4-hour attack (supported by mortar and heavy machine-gun fire) which penetrated to the very center of the city, where the battalion continued to fight for 2 hours before Dutch tanks and armored cars finally forced it to withdraw.

Despite the impressive amount of Republican troop activity, the writer was told while in Jogjakarta that the area around that city and Surakarta are not considered guerrilla areas. Two reasons have prompted Republican leaders to make this decision. First, they do not want the civilian population of these cities to suffer more than is necessary. Second, the Jogjakarta and Surakarta plains are deficit food areas, unable to support large numbers of Republican troops. Most of the troops formerly stationed in these areas have gone to the east and west, where they are now waging intensive guerrilla warfare against the Dutch. Indeed, the crack divisions of the Republican Army are now operating in areas which before December 19 were known as Dutch-occupied Java. (The Sungkono Division of 27,000 men has crossed into east Java, while the somewhat larger Siliwangi Division, except for its Kemal battallion, has crossed into west Java.)

Although the writer himself was not allowed to visit the environs of Jogjakarta, he talked with Indonesians who had been there. All of these Indonesians reported that a great many villages in the area have been burned by the Dutch, apparently because they have housed snipers who fired on Dutch patrols. On January 7, a day during which Indonesian units made no attack on the city, a Dutch officer informed the writer that nine Dutch soldiers were killed in the vicinity.

EXTENT OF CIVILIAN CASUALTIES

Civilian casualties have been extensive, particularly in the suburbs, according to the Indonesian Red Cross. The Red Cross, however, has no means of contact with these areas. Its one ambulance was destroyed by the Dutch in the December 19 attack; the Dutch have refused to grant them any replacement. The Central Hospital of Jogjakarta alone reports having treated 108 civilian casualties during the week of December 19–25, and 61 of these were treated after the Dutch had officially occupied the city. On December 27, 25 civilian casualties were treated at this one hospital, 12 of whom died of their wounds. On January 4, the last day for which the writer could secure such data, 6 civilian casualties were treated, and all of them died. (On January 9 the two principal hospitals in Surakarta reported that they were treating 197 civilian casualties, most of whom received their injuries well after the Dutch had officially occupied the city.)

FOOD AND COLLABORATION

Before the Dutch attack one was accustomed to seeing large numbers of ox carts driven by peasants from the surrounding countryside, bringing food to Jogjakarta. The writer saw not one of these carts during the period of his last visit. This single fact is the best index both to the peasants' fear of the Dutch and to the status of the city's food supply. According to Mr. B. J. Muller, head of the Dutch Economic Administration in the Jogjakarta district, the food situation is extremely critical. The Dutch, he said, give food only to those who work for them; noncollaborators get nothing. Twenty tons of rice are being imported daily by the Dutch, via convoy from Semarang. Mr. Muller stated that of Jogjakarta's half-million inhabitants, only 6,000 persons are working for the Dutch. He estimated that the amount of food coming into the city has dropped 50 percent since the Dutch attack.

Those few peasants who are willing to carry a little rice into town on their backs refuse to accept Dutch currency and will sell only for the Republican rupiah. The few city dwellers who venture through no-man's-land to the countryside in search of rice carry only Republican money. The shortage of rice in the city has forced up its price. This factor, plus the refusal of many Chinese merchants to accept Republican money during the first days of the Dutch occupation, greatly inflated the Republican currency. But the peasants' attitude and the general confidence in the Republic's survival, a result of the continuing guerrilla warfare, have reversed the inflationary tendency. Most Chinese shopkeepers must accept Republican money in order to buy rice. Whereas shortly after the Dutch attack on Jogjakarta the rate between the Dutch guilder and the Republican rupiah was 1 to 500, it now averages about 1 to 130. (Before the Dutch attack the rate was 1 guilder to 50 rupiahs.)

The Dutch had counted on securing the collaboration of a large number of Republican leaders once they had occupied Jogjakarta. Their expectations have totally miscarried. Not one of the Republican leaders there has consented to work for them. The Sultan has refused to deal with the Dutch, as has been noted above. On January 1 he resigned as head of the Jogjakarta district civil service. Out of about 10,000 civil servants formerly working in the district, Mr. Muller estimates that at most 150 have agreed to work for the Dutch.

Dutch treatment of the population has certainly done little to increase collaboration. On December 19 a Dutch major lined up nine civilians and shot and killed them with his own pistol. Among them was Dr. Santoso, secretary general of the department of education. (These facts were obtained from an eye-witness. Data as to the number of deaths and manner of shooting were corroborated by the Indonesian Red Cross.) Two weeks thereafter the Dutch offered Dr. Santoso's wife, formerly a minister of social

affairs in the Republican Government, a cabinet post in the new Dutch-sponsored government in West Java. She refused the offer.

It is unlikely that Abikusno, leader of the second largest Mohammedan political party in the Republic (the Indonesian Islamic Union Party), will feel inclined to cooperate with the Dutch. On December 25 three Dutch soldiers came to his house, demanded that his two sons hand over pistols which they did not possess, beat them, and carried them off to jail. The next morning the Red Cross informed Abikusno that the bodies of his sons had been found. (Interview with Abikusno, January 8, 1949.) The official Dutch explanation of this affair is that the two boys were shot because they were out of doors after curfew.

A number of other prominent Indonesians in Jogjakarta have been shot, including Masdoelhak Nasutian, adviser to Prime Minister Hatta; Dr. Hendromartono, a former cabinet minister; and Sumarsono, a high official of the ministry of the interior. The latter three were shot in their homes.

[From the Chicago Tribune of February 18]

TWENTY THOUSAND SLAIN BY DUTCH POLICE ACTION IN JAVA—INDONESIA IS SWEPT BY GUERRILLA WAR

(By Quentin Pope)

BATAVIA, JAVA, February 17.—A hit and run war is raging through the villages and plantations of stricken Indonesia as the UN nations which condemned the Dutch military action wait for the Netherlands to decide whether or not it will accept the United Nations Security Council's terms.

Official admissions disclose that the Dutch have killed 20,000 Indonesians since they initiated what are termed sercuity actions last December. Dutch army sources have told the UN Commission that they have killed 10,000 Indonesians.

These figures do not cover the many civilians killed or wounded during the Dutch attack, hundreds of whom were seen by this correspondent in Republican city hospitals as soon as the Dutch permitted newsmen to travel.

DUTCH HAVE CASUALTIES

Many of these were slain during the period in which the Dutch have claimed that the Indonesian Republican army has ceased to exist and that military operations have ended. That they have not died without fighting is shown in the latest casualty list, which gives one week's Dutch losses as 29 killed in action and eight missing. Perhaps significantly, the majority of these were from the Netherlands Indies army, comprising conscripted Eurasians and volunteer native troops.

Java, which was quiet before the Dutch began their attack, is being swept by murder and destruction. The Dutch news agency today reports a 70-man attack on a Lembang estate during which the administrator was killed by automatic fire, an estate guard routed, and the property looted. Another estate at Pegoendangan was razed and the planter killed.

In addition, the agency reports a series of hold-ups on the Malang-Batu Highway in which two automobiles were burned. The water main to Batu also has been destroyed.

A check with the major estate corporations today disclosed that some are considering closing their estates, and all rejected the idea of planning to spend any money on rehabilitation of their properties because they assert that the Dutch lack enough troops to maintain order even in territory seized before the latest army action.

JOIN TO GET GUNS

One British company said the strain on estate management now was so great that it was impossible to predict how long the managers could be kept in areas lacking any real defense. The spokesman said the situation has been worsened by the fact estate guards now were being suspected of being Republicans who have been taking these jobs merely to obtain arms and then rejoin the guerrillas. Another foreign company said only 5 of its 20 estates at present were in operation.

From east Java, official reports said another whole group of estates in the previously peaceful Loemadjang area has been closed except for two properties. The Republicans now have dynamited a bridge to these estates and they are isolated, the informant said.

Guerrilla warfare now is raging throughout Java. Estate companies named the east corner beyond Soerabaja, Mount Ungaran, south of Semarang, and the Tasikmalaja areas as among the worst hit.

Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an item which may be useful to teachers and students of journalism who desire to study techniques of slanting the news and headlines.

It is a clipping from the Denver Post, reporting action of that State's house of representatives on a resolution urging the creation of a Missouri Valley Authority.

The headline on this article reads: "Proposal urging MVA unit fails."

Most readers, who just scan the heads, would be under the impression that a majority in the Colorado Assembly are opposed to the Missouri Valley Authority.

Even those who glanced through the first paragraph would believe the same thing. It read:

A resolution urging Congress to create a three-member Missouri Valley Authority failed to pass the house of representatives Wednesday.

Only those readers who pursued the story to the next paragraph would learn what really happened. That paragraph tells the story, finally. It read:

The vote on the measure, House Joint Resolution 6, introduced by Representative Marshall Quiat, of Denver, received a majority vote of 30 to 25 but failed to obtain the 33 majority vote of the entire house membership required for legislation of this nature. Ten members were absent.

The thing I want to point out to the teachers and students of journalism is the careful, technical accuracy of the headline and the first paragraph, while leaving the reader with a very wrong impression. It was a very neat little job. I am sure the Post will defend its handling of the story as technically without flaw.

While preserving this little gem for those interested in journalism, I thought that it might also have a byproduct of value to us here in the Congress, namely, to read beyond the headlines, and even the first paragraph, of any stories about people in the Missouri Valley opposing a Missouri Valley Authority.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPOSAL URGING MVA UNIT FAILS

A resolution urging Congress to create a three-member Missouri River Valley Authority failed to pass the State house of representatives Wednesday.

The vote on the measure, House Joint Resolution No. 6, introduced by Representative Marshall Quiat, Democrat, of Denver, received a majority vote of 30 to 25 but failed to obtain the 33 majority vote of the entire house membership required for legislation of this nature. Ten members were absent.

Proponents of the measure contended the creation of a Missouri Valley Authority would aid Colorado in soil conservation and agricultural development, while opponents declared that the Nation is already too hamstrung with national boards and bureaus.

Other measures slated for debate in the house Wednesday afternoon included a bill which provides for a $25,000 loan from the State's general fund to a fund for the Colorado Racing Commission until the commission begins to realize revenue from the newly enacted State law authorizing horse and dog racing with parimutuel betting.

ON THE AGENDA

Other bills to be considered include:

A bill appropriating $500,000 as a deficiency appropriation for the State hospital at Pueblo. This is the third largest deficiency appropriation to come before the current legislature and officials of the hospital contend this amount is necessary to operate the institution until the beginning of the next biennium July 1.

A bill authorizing boards of county commissioners to make payments to families of honorably discharged hospitalized veterans under needy circumstances.

Another bill designed to strengthen mortgage laws pertaining to motor vehicles was introduced in the house Wednesday morning. Under the proposed bill, mortgages on such vehicles would be recorded on vehicle title, not required under present law.

Sponsors of the measure contend that this procedure, which is in force in a number of States, would make it virtually impossible for a motor-vehicle owner to obtain more than one mortgage.

The Watchdog Committee

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Watchdog Committee," published in the New York Times of March 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WATCHDOG COMMITTEE

There is one provision in the Taft-Hartley law which is conspicuously missing from the administration's proposed successor legislation, the Thomas bill, and whose retention is in some respects perhaps more important

than that of many of the sections that have been much more widely debated. This is to be found in sections 401–403, which create and set forth the functions of the Joint Committee on Labor-Management Relations (the so-called watchdog committee).

This committee, whose official life ended yesterday, consisted of seven members from the Senate Committee on Labor and Public Welfare and seven from the House Committee on Education and Labor. It was authorized under the 1947 legislation to conduct a thorough study and investigation of the entire field of labor-management relations, and was instructed to make what were the equivalent of two annual reports to the Senate and House of Representatives. The first of these was due not later than March 15, 1948; the second on or before March 1, 1949. These reports were to contain the results of the committee's study and investigation, together with such recommendations as to necessary legislation and such other recommendations as it may deem advisable. In short, the function of this committee, speaking broadly, was to study the Taft-Hartley Act in operation and, on the basis of its own observations and testimony submitted by others, to offer any suggestions which seemed to be in the general public interest for changes in the law.

In the course of its life of nearly 2 years the Joint Committee on Labor-Management Relations has assembled much valuable information. But if the proposed new legislation differs, as it well may, in numerous important respects from the Taft-Hartley law, wisdom suggests the desirability of reviving the committee in connection with the successor measure. Controversies over the proper approach to many important labor problems would in this way be transferred from the area of purely academic debate to one of more or less judicial observation and study.

There is one thing in particular that favors inclusion of this provision in any new labor legislation. Unlike such questions as the closed shop, the use of injunctions in national emergency work stoppages, or the independent conciliation service, it is not, or should not be, a partisan issue. It is a provision which not only the public but everyone who is genuinely interested in equitable legislation in this field should welcome. Neither management nor labor spokesmen, it seems to us, can oppose its inclusion, without raising serious questions as to their open-mindedness or their confidence in the American legislative system.

While the idea of providing for continuing or periodic review of the labor law may have been arrived at independently by the framers of the Taft-Hartley Act, the concept is by no means new. One well-known American statesman who realized that in the Wagner Act the pendulum had swung too far in the direction of labor, touched on the desirability of some such procedure as far back as 1938. Said he:

"The Wagner Act ought to have various amendments made to it, but we are a funny people over here. We at once go to the extremes both on the side of labor and on the side of the employer. Now in England when they put social legislation on the statute books they do it with the knowledge that every year or so they will amend it. * * * Now, how do they amend it? They have a Royal Commission that looks it over. The commission is nonpartisan. There are business people on it and there are labor people on it. They decide that the thing needs certain improvements. The Royal Commission makes a report to Parliament, and the thing goes through almost automatically, without fuss or feathers."

Those union leaders whose efforts have been confined largely to achieving a law with a minimum of restrictions on labor and to limiting the time for consideration of such legislation may be interested to know that the author of this quotation was none other than the late Franklin D. Roosevelt.

Nomination of Mon C. Wallgren

EXTENSION OF REMARKS
OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials, telegrams, and letters relating to the nomination of Mon C. Wallgren to be Chairman of the National Security Resources Board. The letter from Maude M. Biederman, an aged Civil War widow whom I have never met, is worth thinking about. She expresses a sincere grassroots opinion.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Longview (Wash.) Daily News of February 22, 1949]

NEWS AND VIEWS

(By J. M. M. Jr.)

CAIN'S PROTESTS

Senator CAIN is giving ex-Gov. Mon Wallgren a very bad time in the Senate even though he can hardly expect to bring about a refusal to confirm Wallgren's appointment as Chairman of the National Security Resources Board. He is bringing to light all the faults and weaknesses that were the cause of Wallgren's defeat when he tried for reelection as governor. CAIN hasn't missed a thing. He told how Wallgren operated a pool hall in Everett before going into his father's jewelry business. He even said the ex-Governor was expelled from high school in his sophomore year. But the most serious of CAIN's charges was this:

"Since 1932 Mr. Wallgren has prospered in and through politics. He owns, I am told, 12,250 shares of common stock in the Queen City Broadcasting Co. of Seattle (reported to be worth $17 a share.)

"* * * Wallgren is said to be a man of means, with property holdings in and out of Washington State."

CAIN was certainly right about Wallgren being a man of means, for yesterday the story broke in Palm Desert, a winter resort in southern California where he spent a lot of time during his term as Governor, about the luxurious home he is building. It is almost finished. The swimming pool is 20 by 50 feet. Mature palm trees have been brought in and replanted. The living room will have a plate-glass bar, whatever that is. One can only guess what such an establishment will cost, but what makes more interesting guessing is where this politician got the money to build it. His salary as governor was $6,000 per year.

Is it any wonder that Senator CAIN is protesting the appointment of such a man as this to so responsible a job?

MARYSVILLE, WASH., *February 28, 1949.*

Senator CAIN: I am so glad you have taken up the case against Wallgren. Surely people can see by the last election. We did not consider Wallgren as governor. How he ever got in, in the first place, I can't see. You see I came to Everett in '99 so I was living there before Wallgren was there. He is no good and it is not politics with me. I vote for the man or woman I consider best and I have several friends who vote as I do. Reading of your expenses in this case in the Times yesterday, I am enclosing $2 to help. Wish it was $200 but I am only a Civil War widow so the pocketbook is flat, but I am a tither and am very glad to send this and wish you every success.

MAUDE M. BIEDERMAN.

[From the Yakima (Wash.) Herald]

PLEASE, MR. TRUMAN

If Members of the United States Senate want more information than Senator HARRY P. CAIN has given them on Mon C. Wallgren's qualifications for the Chairmanship of the important National Security Resources Board, let them send a trusted colleague into this State for a week's investigation.

The Cain-Wallgren clash before the Senate Armed Services Committee, Thursday, had the earmarks of a political brawl, tending to divide members of the committee and perhaps Members of the Senate itself into party sides on the question of Mr. Wallgren's confirmation. That may have been inevitable, although we think Mr. CAIN's line of objections played into the hands of the adroit ex-governor, who is not inexpert in political free-for-alls.

Mr. Wallgren is defending himself and asserting his capability for the position on grounds of his experience as a Representative, Senator, and governor. During the period of his service in Congress, his contributions were in no way unusual. Indeed it was said by even his friends that his brains were in the person of his secretary and administrative assistant, HUGH B. MITCHELL, who succeeded him by appointment in the Senate and is now a Member of the lower House.

After a single 4-year term as governor, during which he was on his own and without the comforting coattails of Mr. Roosevelt for the first time, Mr. Wallgren was dumped from office in the midst of what amounted to a Democratic sweep of his own State. He became lame duck No. 1, only to have his old pal, President Truman, nominate him for one of the critical positions in governmental service.

Now there are jobs and there are jobs in the Federal structure—millions of jobs, in fact. Surely Mr. Truman could be persuaded to steer Mr. Wallgren into something else of comparable plush if not of equal importance to the welfare and security of the Nation.

We hope the necessity of this can be made clear in an atmosphere of calm reason and deliberation, and before "l'affair Wallgren" becomes another Pauley case which could make a martyr of our unlamented ex-governor.

[From the Astoria (Oreg.) Evening Budget of February 25, 1949]

OPPOSITION TO WALLGREN

Senator CAIN of Washington, is calling a lot of attention to the appointment of his fellow Washingtonian, ex-Gov. Mon Wallgren, as Chairman of the National Resources Board.

The Washington Senator has called Wallgren unfit and has even invoked the tradition of senatorial courtesy by declaring Wallgren personally obnoxious to him. Under senatorial courtesy Senators have refused to confirm an appointee from a Senator's own State whom he has designated personally obnoxious.

Senator CAIN seems likely to get nowhere with his objections, because Wallgren is an old friend of President Truman. The Sen-

ate is going to go along with the President rather than a Republican Senator in this matter.

President Truman definitely could have done a lot better than pick Wallgren, a lame duck repudiated by his own State in the face of general Democratic triumph at the polls last November, a man, too, without qualifying experience for his job.

The Wallgren appointment is a flagrant example of the bad political practice of naming a defeated condidate to public office, a practice in which both parties have indulged too often.

About the only qualification that Wallgren can present for his new job is that he is a Democrat.

[Excerpt from the letters-to-the-editor column of the Spokane (Wash.) Spokesman-Review]

SENATOR CAIN CONGRATULATED FOR WALLGREN ATTACK

To the EDITOR OF THE SPOKESMAN-REVIEW:

If there were more men such as Senator HARRY CAIN who would stand against such appointments as that of Mon C. Wallgren, who was recently made chairman of the National Securities Board, the United States would be in a much safer position.

Anyone who has followed Wallgren's career knows that he certainly isn't any brainstorm. As Governor of the State he left the finances in a precarious condition. During his 4 years communism has flourished. The population has grown, but with such a generous social-welfare set-up, why shouldn't it?

Senator CAIN is a Washingtonian, has followed Wallgren's career carefully, and isn't just making idle, erroneous statements.

The fact that Wallgren is a personal friend of President Truman spells nothing—so was Tom Pendergast.

Therefore before such a responsible post is filled, the President should search the land for a man who possesses great character, courage, capacity, and knowledge, as Senator CAIN stated.

IRIS B. GUTHRIE.

YAKIMA, WASH.

SEATTLE, WASH.

MY DEAR SENATOR: I am an ordained minister and look at everything from the Christian viewpoint. Have known Wallgren 20 years. The papers are carrying headlines that he is not big enough for the job Truman is giving him.

Not only is he not good enough, but he is not honest enough.

I consider Wallgren a liar and a cheat and one void of principle and destitute of honor. Of all the Christian forces in this State I doubt if one—just one—will approve this appointment.

I have met ELLENDER, EASTLAND, PEPPER, TAFT, and GEORGE. Please convey this message to them and teach Pendergast's boy wonder to appoint real men.

DALE J. BENJAMIN.

TACOMA, WASH., *March 4, 1949.*

Senator HARRY CAIN:

I hope you can make it plain to the Senate that the upheaval in this State against Mon Wallgren was a moral upheaval. It was not a petty political one.

P. M. SNIDER.

PUYALLUP, WASH., *March 4, 1949.*

United States Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.:

I admire greatly your fight against Wallgren's confirmation, this is not a political matter since right thinking people of both parties have repudiated him and are disgusted with his incompetence and low moral standards.

PAUL W. MILLER.

TACOMA, WASH., *March 4, 1949.*

Hon. HARRY P. CAIN,
United States Senate,
Washington, D. C.:

The moral forces of the State wish you success in your fight against confirmation of Wallgren.

HENRY G. SHAW,
President, Shaw Supply Co.

TACOMA, WASH., *February 27, 1949.*

Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR CAIN: We are watching with interest your fight against the confirmation of Mon C. Wallgren as chairman of the National Security Resources Board.

Informed people in the State of Washington are appalled that the President should seek to appoint a man so totally unfitted by education, experience, and general qualifications to a position affecting the future security of every American.

We, the undersigned, wholeheartedly support your fight to defeat this appointment.

Very truly yours,

Salem A. Nourse, Margaret B. Nourse, Tacoma; Dagny Norstrom, Seattle; Maude R. Skinner, Bertha M. Burge, Fred S. Henricksen, George O. Swasey, Clara S. Woodberry, Tacoma; C. J. Hertel, Ruth F. Hertel, Seattle; Frank M. Skinner, Tacoma.

TOPPENISH, WASH., *February 26, 1949.*

Hon. MILLARD E. TYDINGS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TYDINGS: I wish to add my protest to that of Senator HARRY CAIN re appointment of our former Gov. Mon C. Wallgren as chairman of the National Security Resources Board.

In my opinion he certainly demonstrated his unfitness and his lack of capacity to be Governor of this State, and he will be equally unsatisfactory in the post for which he has been appointed.

The test of his fitness for the job should not rest alone on his loyalty and friendship for the President, or on senatorial courtesy, but on his general ability and character. Many from this State will tell you he is sadly lacking in both.

Your committee wil best serve our country by refusing to endorse his nomination.

Sincerely,

B. R. STURM.

(Copy to Senator CAIN.)

FEBRUARY 28, 1949.

Senator HARRY P. CAIN.

DEAR SENATOR: In regard to your fight against the seating of Mon C. Wallgren for the important office which Harry Truman is appointing him, I, as a heavy taxpayer of the State of Washington, know what he has done to our State. We are paying $60,000 for the playhouse he is building in California and it is not of his salary either.

I know how every worker paid to his club so here is hoping you will have success in your fight.

I remain,

GEORGIA B. CLAY,

Tacoma, Wash.

LYNDEN, WASH., *March 1, 1949.*

DEAR SENATOR CAIN: Congratulations on your exposure of Mon Wallgren. You have done your country a service in showing him as he really is—and, even though he should be appointed—the spotlight of public opinion has been turned in his direction. That in itself makes the investigation worth while

Sincerely,

Mrs. GEORGE SUSSEX.

PORT ANGELES, WASH., *March 1, 1949.*

The Honorable HARRY P. CAIN,
The United States Senate,
Washington, D. C.

DEAR SENATOR CAIN: It so happens I am just another of the thousands of voters from this State who are with you in your fight against confirmation of Mon C. Wallgren to so high a Government position, and which we feel he is utterly unqualified to fill. If we are to put such men in the highest positions of trust and responsibility in our Government, we must concede we have been in error in the thought that great an i good men should be elevated to such high position, and must now admit that just anybody is good enough to run the Government of these United States. If you fail, we have failed, and may the Lord help us.

Very truly yours,

GEO. H. NORTHUP.

WAPATO, WASH., *Sunday.*

To Senator HARRY P. CAIN,
United States Capitol,
Washington, D. C.

DEAR SENATOR CAIN: I am watching your fight to keep former Governor Wallgren from being appointed as head of National Security Resources Board. I feel that everything you have brought up about him is true. Why should we have that type of man on the Government pay roll? He should be in the movies—good looking, well-groomed, polished in his manners, a good talker and pleasing to the ladies. Maybe Howard Hughes will give him a job as I noticed in some papers he attended some Hughes' parties during the war. This other job is entirely out of line, too big for him, as so many in the State of Washington realize. I do hope that you, Senator CAIN, are able to make the committee with Senator MILLARD TYDINGS, as chairman, realize it also.

I am enclosing some clippings cut from the editorial page of the Yakima Republic and the Seattle Times.

I am wondering if President Truman wouldn't be thankful to the committee if they voted "No." I think Mon is hanging on to his coattail. Why not send him to the Philippine Islands with very little money to spend.

In haste,

M. L. COLENSO.

Proposed Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article which appeared in the North Dakota Union Farmer published at Jamestown, N. Dak., February 21, 1949, dealing with the House concurrent resolution of the North Dakota State Legislature on MVA.

There being no objection the article was ordered to be printed in the RECORD, as follows:

LEGISLATORS BACK MVA

Governor Aandahl, the military brass hats, and the fat boys of the Power Trusts, have all but lost their fight to block a Missouri Valley Administration.

For nearly 5 years the governor has used his official position to put North Dakota in the anti-MVA column of Missouri Valley

States. For 5 years he has championed the Power Trusts and upheld the mud-plug construction program of the Army.

Last week nearly two-thirds of the senators and representatives of the thirty-first North Dakota Legislative Assembly told the governor how blatantly he has misrepresented the wishes of the people.

By a vote of 100 to 56 the two houses of the legislature completely repudiated the governor's stand on MVA.

A house concurrent resolution memorializing Congress and the President to establish a Missouri Valley Authority was passed by the house 77 to 31. Then the measure went to the senate.

There the governor turned the political screws on the unhappy ROC senators and managed to kill the resolution 25 to 23. The governor managed to save face—but he lost the battle because the people of North Dakota, through their chosen representatives, have made it clearly understood that they demand an MVA.

In a telegram to the President last week, NDFU president, Glenn J. Talbott, pointed out these facts which prove that North Dakota is overwhelmingly in support of the proposed MVA bill now before Congress.

Talbott also pointed out that both North Dakota Senators have recently reconfirmed their clear and unmistakable support for MVA—and that one of the two Congressmen concur with the Senators.

Following is a text of Talbott's wire to President Truman:

"Overwhelming majority in thirty-first legislative assembly, now in session, voted last week in favor of establishing a Missouri Valley Administration. Recorded vote in journals show that 100 senators and representatives favored MVA, and only 56 opposed it. In the house, over two-thirds supported the resolution—the vote was 77 to 31. The senate killed the resolution by a mere 2 votes only after the Governor used extreme pressure and had made public his telegram to you requesting your support of the Pick-Sloan plan. This decisive vote in our State assembly, in addition to the support already given to MVA by both our United States Senators and one Congressman, completely repudiates the position taken by our Governor, Mr. Aandahl, who has long used his official position against a Missouri Valley Administration. In my opinion, this proves conclusively that North Dakota is behind you if you ask Congress at this time to pass the proposed MVA bill.

"GLENN J. TALBOTT,
"President, NDFU."

Senator MILTON YOUNG, the Governor's appointee, has never been able to stomach the Aandahl plan of selling out the Missouri River Valley to the brass hats and power boys. Last week, in a letter to the Farmers Union, Senator YOUNG reiterated his support for an MVA.

Thus it appears in North Dakota that Aandahl has lost and the people have won.

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, March 5 (legislative day of Monday, February 21), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a brief statement on labor-management relations which I made on February 26 for publication in the Trainmen's News, official publication of the Brotherhood of Railroad Trainmen.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When the Labor-Management Relations Act of 1947 was enacted, I voted for its adoption, both on the original passage and to override the veto of the President. I felt then, as I feel now, that legislation was needed to strengthen the Wagner Labor Relations Act and to establish a proper balance between labor and management in seeking stable and peaceful industrial relations.

I did not then, and I do not now, favor all of the provisions of the so-called Taft-Hartley Act. I opposed certain rather extreme amendments offered on the floor of the Senate and which seemed to me to border on the drastic proposal once made by President Truman for drafting striking workers into the Army.

Many of my friends in labor disagreed with my support of the Taft-Hartley Act. I specifically stated to them at that time that "if experience shows that changes are needed, I am confident that there are enough reasonable and fair-minded Members of Congress who will make certain that such defects as time may reveal will be corrected." I am sympathetic to amending the act to bring about a better foundation of acceptance and understanding of the basic law.

It is my opinion that this is the situation in Congress today among temperate and reasonable Senators and Congressmen, notwithstanding the atmosphere of pressure and political expediency which appears to surround consideration of this vital legislation. I predict that a bill will be brought out of committee and adopted, possibly with some amendments on the floor, that will reflect the effort of Members of Congress, of both parties, to enact legislation that is fair to the workingman and to the employer and that is in keeping with the public interest.

In building the splendid industrial-relations record which we in Minnesota have enjoyed for the past 10 years, we learned that neither a law nor its administration, however good each may be, will alone create workable labor-management relations or assure industrial peace. A far more important factor is the attitude of members of these great groups of our economic life toward each other and toward their common responsibility to the public. In our complex society laws are essential. Good administration of just and reasonable laws is necessary. Yet it is the human factor which in the last analysis will determine the issue.

Unless we are ready to admit that our economic and social problems are beyond solution, and that we cannot solve our differences short of violence, we must strive to find the common ground upon which to stand. That is the task. It will not be met in one legislative enactment. It involves a continuous struggle for justice. It needs the wisdom born of experience.

However spirited and vigorous our differences of opinion may be, we in Congress face the supreme obligation of developing a pattern of laws conceived in that spirit.

One Hundredth Anniversary of Luther Burbank

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on March 7, 1949:

It is an extreme pleasure for me to participate in a program honoring the one hundredth birthday of Luther Burbank and to congratulate the citizens of Santa Rosa for their interest in paying respect to one of its most widely known and respected former citizens.

My duties in Washington make my physical presence in Santa Rosa impossible to join with you in this program. Thanks to the radio, however, I am privileged to lend my voice to express my sentiments to the memory of one I honored and respected.

I knew Luther Burbank. I knew his foreman, Robert Gaylord. I worked as a youngster after school and during vacation, pulling weeds at his experimental farm located at Sebastopol. I saw this kindly, friendly, patient gentleman walking through rows of flowers, pollenizing, inspecting, selecting the improved species. His art to cross-pollenize plants and trees has never been excelled. His contribution to civilization transcends any credit that has ever been given him. His work had many disappointments. I recall his working several seasons to develop a pumpkin. When the plant matured, the pumpkins were about the size of an apple, but the leaves were the most beautiful variegated specimen you could expect to see.

Luther Burbank was born March 7, 1849, and came to Sonoma County from his eastern place of birth because of the fine soil conditions and the mild seasonal climate, a place where he could use his skill and professional aptitude to work with the trees, vines, and flowers that could be raised under normal climatic conditions.

His early work was fraught with hardship, financial difficulties, and a reluctance to accept his achievements. Those were times when financial assistance was difficult to secure, when only things of proven worth were accepted. Luther Burbank rose above those obstacles and continued with a fervent desire and a will to accomplish which carried him through to success and renown. When once his worth was established, many came to his assistance, which permitted the product of his work to be universally accepted and made available to the peoples of the world.

The works of Luther Burbank will live in the minds of countless generations to come, for his contributions to our civilization, such as the development of the Burbank potato, the resistant grape root and the hundreds of varieties of fruit. The untold varieties of flowers have given to the world many of the beauties we enjoy.

Luther Burbank has been signally honored on many occasions. As a member of the California State Legislature, it was my privilege to pay honor to him in assisting in the enactment into law of Arbor Day in California, which is his natal day. The Federal Government of the United States also acted by issuing a special Luther Burbank postage stamp with his portrait a few years ago.

It is altogether fitting and appropriate that we today honor this great man. I am proud to have personally known Luther Burbank and am honored to add my humble remarks to those of many others at this time.

May this custom by his fellow townsmen continue to keep alive the memory of Luther Burbank—our distinguished Sonoma County citizen and the benefactor of all humanity.

LUTHER BURBANK, THE PLANT WIZARD

(By Aubrey Drury)

March 7, 1849, was Luther Burbank's birthday; and the date is worthy of remembrance, for March 7 in California is now Arbor Day, set aside for the planting of trees. It is likewise Conservation Day, the beginning of Conservation Week—March 7 to 14—and this year the observance of the centennial

of Luther Burbank's birth will add even greater public interest to the occasion.

Burbank came to California from his native New England in 1875 settling in Santa Rosa, and here his work in hybridization, propagation, and development of new flowers, fruits and vegetables attracted wider and wider attention.

For 50 years this creative gardener labored in his Santa Rosa nursery. It was a work-garden, not a show garden; but the great of the earth come hither to visit him. He and Thomas Edison and Henry Ford were cronies, and the three enjoyed a series of memorable meetings. Burbank was recognized not only as an experimental botanist of high genius but was looked on also as one of the leading citizens of his time. Many public movements received his support, such as the preservation of the representative groves of the giant California redwood, which he termed "the most perfect vegetable growth."

His countenance had a sweetness of expression, combined with a keen-eyed intelligence. "Cultivate kind, gentle, loving thoughts towards every person and animal," he had advised schoolchildren, "and even plants, stars, oceans, rivers, and hills. You will find yourself growing more happy each day, and with happiness comes health and everything you want." What wonder that Luther Burbank was a lasting inspiration for America.

He passed away in 1926, and at his request he was buried beneath a towering two-branched Cedar of Lebanon in his gardens. Burbank himself planted the seed, sent to him from the Holy Land.

Of Luther Burbank, one who knew him loved him well, wrote: "Nature seems to have chosen him to be her schoolmaster for the training of the lowly plant and leading it to a higher life. I cannot conceive of a more useful man nor of a better example of the highest type that has as yet been reached by the Aryan race of men." That was the tribute of Thomas A. Edison.

[From the Humboldt Times of Eureka, Calif.]

LUTHER BURBANK REDWOOD GROVE

Californians, each year, pay honor to the memory of Luther Burbank on March 7, which date is observed as Arbor Day in the State by act of the State legislature. It is significant, also, that Arbor Day in California each year marks the advent of the opening of Conservation Week, the observance through which Californians join in emphasizing the importance of conserving and protecting our great natural resources. And in many other ways, particularly in the northern sector of California, the State honors this great horticulturist whose genius contributed so much to the industries associated with the soil and its fruits.

Thus it is that residents of the redwood empire are expected to unanimously endorse a new movement which would further enshrine Luther Burbank's name and achievements for all time, through the establishment of a Luther Burbank Redwood Grove somewhere in the vast redwood forests of the north coast country.

As all California people know quite well, Burbank for a great many years made his home in Santa Rosa, where he carried on the innumerable experiments that have made his name a symbol for research and experimentation in the agricultural industry. His home still remains standing in the Sonoma County seat, proudly acknowledged by the people of that city as one of their civic shrines. In addition, Santa Rosa has created a public park bearing the name of the great scientist, one of the beauty spots of a beautiful community.

Throughout his lifetime and during his long career as a scientist, Burbank entertained a deep and enduring love for the redwoods, and a keen interest in the species and its preservation. Terming the redwood tree as "the most perfect vegetable growth," Burbank was among the first to urge saving of at least some of the finer groves for the enjoyment of future generations—long before sentiment on that score began to crystallize on a wide scale.

It is, therefore, most appropriate that his memory be kept alive, along with the redwoods he loved so dearly, through the medium of a memorial grove. The surprising thing is that this has not been done long before this time.

Throughout the State-park system in Humboldt, Mendocino, and Del Norte Counties there are, of course, a great many memorial groves of the type and character embodied in the present movement. By way of information, these memorial groves have been set aside, for the most part, through contributions from private persons or agencies, the funds being matched by the State of California. It is through this method that the park system has been able to acquire a great many of the fine tracts now set aside as parks, largely through the planning and effort of the Save-The-Redwoods League. In this particular instance, it may be properly pointed out that there must exist many fine groves, not yet designated as memorials, which could be utilized for this purpose even without the creation of a joint memorial fund for this specific purpose.

In any event, regardless of the financing plan employed, the proposal certainly strikes a responsive chord in the hearts of all northern California people, and one that is singularly significant in view of the close associations involved.

Cardinal Mindszenty and John Paul Jones

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. McCORMACK. Mr. Speaker, James Patrick McGovern, of the District of Columbia bar, a captain in the American Expeditionary Forces during the First World War, and the special Washington representative of the Arizona Daily Sun, has written a poem, released recently, which he has dedicated to every patriot who defends his altar and his hearth and the land that gave him birth. I include same and a statement made by him on Capt. John Paul Jones in my remarks:

CARDINAL MINDSZENTY AND JOHN PAUL JONES

The cardinal and captain, martyrs both,
Seem realms apart, and yet reveal the same
Grim fate as spokesmen who in freedom's name
Unveil the Russian guile their spirits loathe.
Jones, the fighter, won by Catherine's gin,
Went as admiral to fight the Turks,
While she and all her pack, as if with dirks,
Slandered him with lies of their own sin.
Stalin as well as Catherine must fear
The truths from men iron curtains cannot seal;
He most must shun Christ's servants who reveal
What their hearts prompt as to the life-blood dear.
And if such martyrs, crucified, look back,
Their bodies, not their souls, cry on the rack.

In making public his sonnet, Captain McGovern said:

For those Americans who know the history of John Paul Jones in Russia, the fate of Josef Cardinal Mindszenty and of other religious leaders in satellites of the Soviet Union should be wholly understandable as reflecting a ruthless despotism equally native to both czarist and communistic Russia. The lust for power and the relentless means to achieve it, including every method of guile and hypocrisy, remain the same. That we are often indifferent and sometimes blind in the face of basic parallels of history, obscured by external variations, is an ironic commentary upon the millions of students in our colleges and upon many of our leaders in industry, science, and politics who still live in the tradition of Henry Ford and his smug statement, "History is bunk."

Jones was lured to enter the service of Russia under every promise of an independent command and of support by the Empress Catherine and by her commander in chief, Potemkin. In no way were such promises kept. The truth of his naval services was perverted into lies by an iron curtain which resulted in the confiscation of his letters to and from Thomas Jefferson, our Minister to France, and by the propaganda of Potemkin and others which showed malice and unscrupulousness beyond conception. And to crown professional by private calumny, the enemies of Jones, with the connivance of the Empress, fabricated against him a fantastic tale of a moral lapse, which, in view of the utterly unmoral character of Catherine and her court, clearly had only slander for its purpose as one of the tricks in the bag employed by her—as she later confessed—to remove him from the Russian scene. Brought to trial, Jones was denied a lawyer; and the charges were made by disreputable witnesses and were garbled to suit the court. When the French Ambassador interceded for Jones, Catherine stopped the trial in her fear of international repercussions. In short, the private as well as professional life of John Paul Jones in Russia was a travesty of justice; but this aspect, often so ridiculous as to be comic, cast a tragic shadow upon his last years.

"The first duty of a man is to respect his own character," said Jones. Truth and honor, for which both Cardinal Mindszenty and John Paul Jones stood in their separate spheres of life, have suffered comparable hate at the hands of Russian enemies. An iron curtain prevented them from speaking to the outside world. On the other hand, intensive propaganda blazoned lies about them. Their court trials were a mockery. The fabrication against them has been such that even what they are supposed to have said and written cannot always be counted upon as authentic. The religious leader and the naval officer bear the same evidence, in the perspective of Russian history, of martyrdom to truth and freedom.

Settlement of Industrial Strikes

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. COLE of Kansas. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD the following

article by Mr. Harry A. Nightingale, of Topeka, Kans.:

In many of life's experiences valuable lessons may be learned if we keep our minds in a receptive mood to adequately appreciate their value.

Quite recently I had the experience of serving as a juror in the United States District Court for the District of Kansas, presided over by Judge Arthur J. Mellott. As I listened to the learned judge in his advice and instructions to the jury I was deeply impressed by his wisdom, sincere sense of justice, and generous amount of good common sense. The thought that occurred to me as I sat in the courtroom follows:

Surely there must be some way to avoid the costly strikes that are taking place in this country. They are nothing more nor less than cold wars with Americans on both sides fighting each other, and in a democracy such as ours this is inconsistent with the fundamental principles of our Government. It is as if brothers were fighting each other. Industry and labor bear almost the same relationship to each other as husband and wife. A happy harmonious atmosphere cannot exist when the principals involved are constantly harboring deep hatred and bitterness toward each other. A continuance of this emotional disorder eventually leads to disturbing and frequently tragic consequences. These conflicting differences can and should be adjusted by wise and conscientious umpires; men like Judge Mellott and Dr. Ralph J. Bunche, of whom we have goodly numbers in this country.

What I have in mind is the creation of arbitration boards throughout the land, consisting of men and women who bear the highest reputations for intellectual capacity, sound wisdom, unquestioned integrity, and moral characteristics that we expect to find in people who have proved themselves to be outstanding in the field of human relations.

It should be the law of the land that strikes are illegal, that all differences between labor and management must be settled by arbitration.

Unless we are willing to concede that human relations cannot be improved and that reason has no place in our lives, then we must be ready and willing to find a remedy for the disease (strikes) that has taken such a heavy toll in injuries, economic loss, human suffering, and the many other disturbing factors that accrue as a result of strikes. Let's use the intelligence with which America has been so richly endowed in the interests of those (labor and management) who are so important to the continued progress that has made us the leader among nations. As Abraham Lincoln so wisely said: "A house divided against itself cannot stand."

HARRY R. NIGHTINGALE.

Extension Service

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. TRIMBLE. Mr. Speaker, Dean Lippert Ellis, of the University of Arkansas, is doing a masterful piece of work for soil conservation and the Extension Service at the university. A few days ago I received a letter from him outlining the program and making suggestions. Under unanimous consent, I insert his letter and the analyses as a part of my remarks:

UNIVERSITY OF ARKANSAS,
COLLEGE OF AGRICULTURE,
Fayetteville, February 25, 1949.

Hon. JAMES W. TRIMBLE,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE TRIMBLE: At an early date you will no doubt be giving consideration to appropriations for the Department of Agriculture for the fiscal year 1950. Among others, the President's budget includes items for Federal grants-in-aid for research at the State agricultural experiment stations.

One item in the budget is of particular interest to us at this time. I refer to the item under title I, section 9 of the Research and Marketing Act in the amount of $5,000,000. This is an increase of $1,750,000 over the appropriation for the present fiscal year and represents the full amount authorized for the second year of the act. You will remember, however, that next year will actually be the third year in which appropriations have been made under the Research and Marketing Act.

It occurred to me that at the time you are considering this item in the budget you might be interested in having at hand some information with respect to the program of research carried on at the Arkansas Agricultural Experiment Station with research and marketing funds and also of the proposed new work which we would carry on if additional funds were appropriated under title I, section 9 of the Research and Marketing Act. During the current fiscal year (1949) the Arkansas Agricultural Experiment Station will receive $64,190.55 under that act. If the proposed increase of $1,750,000 is voted, the Arkansas station will receive an additional $34,564.15 or a total of $98,754.70 for the fiscal year 1950.

We believe that we have been able to make excellent use of these funds up to date and we also believe that we could make excellent use of any new funds which might be made available to us. For your information I am enclosing a table listing the projects supported under research and marketing funds during the fiscal years 1948 and 1949, as well as the projects which we propose to undertake if additional research and marketing funds are made available to us for use in the fiscal year 1950. This same information has been furnished to Mr. R. W. Trullinger, Chief, Office of Experiment Stations, who is assembling information for the House Subcommittee on Agricultural Appropriations. I trust that you are able to find the time to read this material.

I wish it were possible to review each of these projects with you personally, but since that is not possible, I want to call your attention to a few projects which are particularly significant. You will note that projects 273 and 276 have to do with two aspects of the broiler industry which is so important in northwestern Arkansas. The farm income from that source in 1947 was $14,112,000, and we believe the figure will be somewhat higher for 1948. Our research program needs to anticipate problems with which producers will be faced if we are to fulfill our obligation to farm people.

One might dwell at length upon the benefits which may accrue to the dairy industry of Arkansas as a result of the work on project 296. If we can succeed in improving methods of handling dairy-sire semen to insure its livability, the value to the dairy industry will run into millions of dollars.

Finally, may I call your attention to the proposed project on supplemental irrigation in Arkansas. As you know, farmers have already expressed a great deal of interest in this subject and many are trying it on their farms. Last season at the Rice branch experiment station at Stuttgart we produced 133 bushels of corn per acre with irrigation and fertilization while the production on the nonirrigated plots was 53.6 bushel per acre. Varieties adapted to irrigation, fertilization for maximum yields, and time and rate of application of water for efficient use are unknown and need to be given thorough study under Arkansas conditions.

If after going over this material you have any questions, I want to assure you that we would be glad to answer them and furnish any additional information which you would like to have.

Sincerely yours,

LIPPERT S. ELLIS,
Dean and Director.

Arkansas Agricultural Experiment Station research program under research and marketing funds (Secs. 9b1 and 9b2)

Project title and justification	1948 expenditure	1949 allotment	1950 estimated allotment
S-4, -275. Family food consumption in typical cotton communities of Arkansas. A record of the food consumed by 125 farm families for a week has been secured. These data will be used to determine food habits and nutritional value of diets in order to make recommendations for the improvement of diets.	$4,334.62	$1,550.00 5,100.00	$3,000.00
SM-1, -277. Marketing cotton from 1 variety and nonorganized communities in Arkansas. Cotton accounts for approximately one-half of the Arkansas cash farm income. The manner in which cotton is marketed, therefore, means much to Arkansas farmers. The marketing of cotton from organized and unorganized communities is being studied to determine improvements which may be made in the cotton-marketing system.	1,719.35	2,713.00 3,050.08	3,500.00
SM-6, -278. Egg-marketing problems with special emphasis on the handling of seasonal surpluses. Eggs represent a source of cash income for nearly all Arkansas farmers. This project seeks to describe and seek solutions to egg-marketing problems. Such problems, as brought out by the study to date, include complete disregard of variation in quality as measured by prices paid farmers, lack of proper equipment for handling eggs by local buyers, and the lack of proper storage facilities for eggs by both the farmer and first buyer.	3,402.71	3,888.00 4,225.00	4,000.00
SM-3, -279. Regional central market and consumer preferences for tomatoes, in relation to varieties, grades, preparation, pack, methods of transportation including refrigeration, and condition. Certain areas of Arkansas are well adapted to the production of tomatoes, but little is known with respect to consumer preferences or other marketing factors. A field study of the St. Louis market has been completed and the data are now being analyzed. It should indicate the type of recommendations that should be made to Arkansas producers.	511.36	2,486.50 2,486.50	500.00

Arkansas Agricultural Experiment Station research program under research and marketing funds (Secs. 9b1 and 9b2)—Continued

Project title and justification	1948 expenditure	1949 allotment	1950 estimated allotment
S-5, -281. The effects of wide variations in soils and weather conditions on the nutritive value of vegetables. The object of this project is to determine the influence of soil and weather conditions on the vitamin and mineral content of vegetables. Information secured in this study should enable experiment-station workers to recommend farm practices that will be likely to produce vegetables of the highest nutritional value.	$4,633.54	$5,100.00 6,400.00	$3,400.00
S-8, -282. Farm home improvement through practices and methods for obtaining adequate farm housing at low cost. The engineering phases of this project have not been activated because it has been impossible to hire personnel. However, a well-trained engineer has been hired and he will report for duty July 1, 1949. Work will be carried on by both agricultural engineers and home economists. Four experimental houses have been designed and are to be built at our branch experiment stations to determine the best and cheapest construction under Arkansas farm conditions. The home economists have studied or will study 250 farm homes in an effort to determine the best functional type of home for farm conditions.	199.56	10,088.00 10,088.00	10,305.62
271. Control of weevil injury to beans and cowpeas. To find practical control and preventive measures, insecticidal or cultural, for pea and bean weevils. Peas and beans harvested by market gardeners in Arkansas are rather generally infested when the crop goes into storage. This necessitates prompt and frequent fumigation. Ways and means of preventing the infestation in the field are needed.	1,600.00	800.00	800.00
272. Biology and control of the plum curculio. To find effective control measures for the plum curculio to enable peach growers to produce a high-grade marketable product. The yield and quality of peaches, a major crop in certain areas of Arkansas, have been greatly lowered by the plum curculio. A need exists for a satisfactory control of this insect to diminish losses of income.	3,639.26	2,800.00	3,000.00
273. Nutrition of chickens for efficient commercial broiler production. To increase the efficiency of commercial broiler production through more economical feeding practices. Newly developed rapid-growing strains of chickens have introduced a new problem in poultry nutrition. This problem is of prime importance in commercial broiler-producing areas, such as northwest Arkansas. Rations which adequately supply the growth requirements of egg-production strains are definitely deficient for newly developed meat-type strains.	9,168.49	3,200.00	4,200.00
274. Development of forage and grain types of sorghum. To develop for Arkansas conditions high yielding, heat resistant varieties of grain sorghum adapted to mechanical harvesting. The continued diversification of agriculture in the State, with emphasis on livestock enterprises, is dependent upon the production of increased quantities of forage and grain. At present, Arkansas is a big importer of livestock feeds and the development of sorghums adapted to the State would materially increase the feed supply.	6,700.00	6,700.00	6,700.00
276. The etiology and control of a new disease of young broilers. To determine a new disease which has appeared in young broilers and to develop methods of control. A multi-million-dollar broiler industry is threatened with extinction by an unknown disease which has infected young broilers. A control measure is needed to prevent large losses in farm income.	3,227.85	2,700.00	4,718.60
291. Marketing milled rice with emphasis on costs, margins, and trade and consumer preference. To analyze costs for the various methods of marketing milled rice from mill to consumer; to determine consumer preferences for rice in relation to grain type and type of milling; to determine trade and consumer preference in relation to income and trade services. Rice acreage and production increased in Arkansas upon anticipated outlets as a result of food requirements for World War II. Unless consumption can be increased through new outlets, the rice farmers and industry face an unfavorable future for profitable production.	2,348.48	3,855.00	3,500.00
292. Planning cooperative research under title I of the Research and Marketing Act. To permit travel where expenditures from usual sources would be inappropriate. Regional approach to the solution of agricultural problems affords the most efficient utilization of funds. Restriction on travel would hinder the development of the regional approach.	373.25	500.00 800.00	500.00
293. A study of the need for and development of plans for farmer and wholesale producer market facilities in Greater Little Rock, Ark. To appraise existing marketing facilities in Greater Little Rock and to determine the additional facilities needed. As a result of the above situation, civic and trade interest of Little Rock requested the services of various agencies, including the Arkansas Agricultural Experiment Station, in making a survey of existing conditions and to develop plans for a market.	935.30	350.00	None
296. Effects of processing, shipment, and storage on the livability of dairy-sire semen under Arkansas conditions. To study the factors affecting quality during collection, processing, and shipping of dairy-sire semen and develop new and improved methods to increase the efficiency of artificially inseminating dairy cows on Arkansas farms. It has been determined that the quality of semen is affected by transportation. Mechanical methods with temperature controls have been developed to duplicate shipping conditions as nearly as possible. The results show that the bulls producing semen of poor shipping ability as determined by the laboratory mechanical vibrations, also have low conception rates in dairy herds when the semen from which samples were taken was used by inseminators.	2,288.89	2,292.00	3,292.00
304. A histological and bacteriological study of the effects of various diets on pigs. To determine causes of death in pigs fed various diets. In experiments on swine nutrition at this station, pronounced morphological and physiological disturbances were observed. In some cases death resulted. These studies will contribute information upon which the producer can base his selection of the most economical feeds for maximum production, growth and finish.		1,900.00 2,400.00	4,400.00
306. Nutrition of swine. Objective is to determine the unknown nutritional requirements of pigs in the various stages of growth and in later life during reproduction. Almost 50 percent of the pigs farrowed never reach market. The greatest loss occurs during farrowing and suckling time and the financial loss to swine producers is millions of dollars each year. Malnutrition plays an important role in this great loss. During the early studies of this project, it has been found that certain sugars or sources of sugars when used in the rations of very young pigs cause death within 7 days. Continued studies may find other causes or contributing factors to the loss of millions of dollars in the swine herds in the United States.		5,700.00	5,700.00
Dairy breeding (project to be submitted). To develop 2 new highly efficient producing strains of Jersey cattle and 1 Holstein especially adapted to conditions in Southern States. This work will be part of the southern regional dairy cattle breeding project, which is to help take advantage of the favorable climatic conditions for dairying in the South so that dairy enterprise can be made part of the agriculture enterprises used in diversification to replace income formerly obtained from cotton.		None	8,000.00
Irrigation to supplement rainfall in humid areas (project to be submitted). To measure and evaluate the production of maximum yields through supplemental irrigation, applications of fertilizers, and soil-management practices in humid areas. Preliminary work gave large yield increases for irrigation under humid conditions during frequent drought periods. Maintenance of soil moisture with good soil fertility practices should permit maintenance of large yields of food, feed, and fiber crops needed for the national welfare, such as future population expansion, without impairment to the productivity of soils.		14,508.00	15,000.00
Broiler marketing—margins and costs in marketing broilers (project to be submitted). To analyze the components of the demand for broilers in order to eliminate wide fluctuations in price and insure stable agriculture enterprise. Increased production from 6,000,000 to 16,000,000 broilers in 10 years has created marketing difficulties. Since broilers are handled through specialized outlets, a need exists to determine the components so that fluctuations in price and demand can be eliminated.		None	2,000.00
Dairy marketing—seasonality of milk prices and supplies (project to be submitted). Object is to determine factors causing seasonal fluctuations in milk supplies and price and to determine methods of reducing wide fluctuations. Alternate periods of surplus and scarcity of milk supplies in the South contribute to unstable business relations between producers and plant operators. Idle assembling, processing, and distribution facilities result in lower prices to producers and unsatisfactory market relations.		1,000.00	5,000.00
Livestock marketing—outlets, practices, and comparative costs (project to be submitted). Object is to determine methods of improvement of marketing livestock in Arkansas. With increased emphasis placed on production of livestock in Arkansas, some means of eliminating the problems and improving the present market structure and practices are needed to provide a satisfactory market outlet for livestock producers.		None	2,238.48
Spoilage in the processing of frozen foods (project to be submitted). To determine the influence of biological activity during processing and in storage on quality of frozen foods. Low quality of home-processed frozen foods and inferior quality in some commercial packs may be associated with biological activity. Means of preventing off-quality resulting from this cause may stimulate conservation of food and provide new source of farm income.		None	2,000.00

Air Academy Should Be Located in Southern California

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. McDONOUGH. Mr. Speaker, I notice in the press that Defense Secretary Forrestal has recommended that the proposal for an Air Academy for the training of air officers be given serious consideration, the same as the training we give the boys in Annapolis for the Navy and in West Point for the Army.

In that connection, may I state that one of the first bills I introduced in this Congress, H. R. 80, was for an Air Academy, and I specified that it should be located in southern California. I said that for the reason that I believe it is the most desirable location, because of the year-round flying facilities, because of the advances made in aviation in southern California, because of the technical studies that are being conducted by the institutions in southern California, and because of the great production of aircraft in southern California during this last war.

I think we do need an Air Academy, especially now that we are advancing into greater air protection for the Nation. We cannot train these men properly in the two Academies, at West Point and Annapolis, because of the highly technical character of their training.

I hope that when the bill comes before the Committees on Armed Services of the House and Senate, they will give serious consideration to southern California as the location of this very necessary military institution as part of our armed forces and our national defense.

At the present time the Air Force has requested that a percentage of the graduating classes of both Annapolis and West Point be permitted to enter the Air Force to supply necessary officers for that service. However, with the demand for more officers in both the Army and the Navy, this plan could only serve as a temporary measure to obtain Air Force officers.

It is, therefore, evident that an Air Force Academy is necessary since the Air Force has been established as an independent branch of our armed services for the training of its officers. I have introduced H. R. 80 for this purpose, and my bill would create an academy to be operated on the same general lines as the other two service academies. The Air Force Academy would provide a 4-year course which would confer the degree of bachelor of science upon each graduate, and would give training to develop in the cadet the qualities and attributes essential to his progressive and continued development throughout a lifetime career as an officer of the Air Force including the special training to develop skills in the field of military aviation.

Modern warfare requires intensive training for the men who are to assume the responsibilities of officers in the United States Air Force, and we need an Air Force Academy which will furnish the necessary comprehensive training for aviation cadets.

In my bill I have indicated that the proposed Academy should be located in southern California where the ideal climate can supply more hours per year suitable for flight training on land and over sea than any other section of the Nation, and has many sites which would be suitable for the Air Force Academy.

The following are the provisions of my bill, H. R. 80:

A bill to establish a United States Air Force Academy

Be it enacted, etc., That there is hereby established in the Department of the Air Force the United States Air Force Academy (hereinafter referred to as the "Academy") for the purpose of training candidates for commissions as officers of the United States Air Force. The Academy shall be located in the southern district of the State of California.

SEC. 2. Applicants shall be selected for admission to the Academy in the same manner as applicants are selected for admission to the United States Military Academy.

SEC. 3. Cadets at the United States Air Academy shall receive the same pay, allowances, and perquisites as are now provided for cadets at the United States Military Academy.

SEC. 4. The instruction and training program for each cadet shall extend over a 4-year period and shall be designed to develop in him the qualities and attributes essential to his progressive and continued development throughout a lifetime career as an officer of the Air Force. Courses shall be of such scope and content as the Secretary of the Air Force shall determine, and shall be designed to provide a balanced and liberal education in the arts and sciences and a broad basic military education, and to develop special skills in the field of military aviation. Any cadet may be dismissed from the Air Force at any time he is found by the Superintendent of the Academy to be unsatisfactory in either studies or conduct, or not adapted for a career in the Air Force.

SEC. 5. The Superintendent of the Academy may, under such regulations as the Secretary of the Air Force may prescribe, confer the degree of bachelor of science upon each graduate of the Academy, from and after the date of the accrediting of the Academy by the Association of American Universities.

SEC. 6. The Academy shall be under the command of a Superintendent, to be selected by the Secretary of the Air Force from among the officers of the Air Force. The instructors at the Academy shall be officers of the Air Force detailed to such duty. Such other officers and enlisted men of the Air Force as may be necessary to accomplish the purposes of this act shall be detailed to duty at the Academy.

SEC. 7. There is hereby authorized to be appropriated such funds as may be necessary to establish and maintain such Academy.

Dollars and Cents

REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, groups are continually asking the Congress for more and more salary increases, even at a time when the people in general of the United States are taking a cut in their incomes and while other millions are losing their jobs. Let us keep in mind the facts as to the annual income of our people.

In the New York Times of Sunday, February 13, 1949, appeared an article by Mr. C. F. Hughes, which quotes the Census Bureau as follows:

The gist of the present business situation appears to be found in a routine report of the Census Bureau, and not in the many high-sounding explanations offered elsewhere. This report revealed last week that the average income of families in this country was $3,000 in 1947. The distribution of this income among some 37,000,000 families, however, was as follows:

Families:

4,000,000	Under $1,000
6,000,000	$1,000–$2,000
8,000,000	$2,000–$3,000
8,000,000	$3,000–$4,000
4,000,000	$4,000–$5,000
3,000,000	$5,000–$6,000
3,000,000	$6,000–$10,000
1,000,000	$10,000 and over.

These are figures covering families and not individuals.

The average for 68,000,000 individuals was $1,800 a year.

The male average was $2,200 as against $1,000 for women.

Further, let us analyze the following editorial by Albert S. Goss, master of the National Grange, that appeared in the February issue of the National Grange Monthly, and captioned "Complex farm problems":

COMPLEX FARM PROBLEMS

(By Albert S. Goss, master of the National Grange)

One of the complexities of the farm problem which is too little recognized lies in the wide diversity of farm units. The Agricultural Census of 1945 developed some figures which emphasize this point.

Annual income per farm	Economic classes of farmers			
	Number of farms	Farm population	Farm acreage	Gross value of farm products
	Per cent	*Per cent*	*Per cent*	*Per cent*
Over $20,000	1.7	3.7	25.8	21.9
$8,000 to $19,999	7.0	8.5	18.3	23.5
$3,000 to $7,999	20.0	21.3	24.1	30.0
$1,200 to $2,999	28.4	28.5	18.1	17.1
Subtotal	57.1	62.0	86.3	92.5
Less than $1,200	42.9	38.0	13.7	7.5
Total	100.0	100.0	100.0	100.0

It will be seen that a little over half of our people produced 92.5 percent of our farm products. The problem lies with the other half, where 42.9 percent of the people produced only 7.5 percent of the products. It is true that many of these are part-time farmers or nominal farmers, but a great many of them are dependent solely on farming for a livelihood, and in tough times probably most of them are thus dependent. Roughly, it can be said that in the case of half our farmers the problem is an economic problem which can be met by assuring a fair price for the products of the farm. Most of the other half produce so little that a reasonable farm price is still insufficient to give them a satisfactory standard of living, so their problem is a social problem which must be met in

some way quite different from that of the top half.

If we assume that a fair price will meet the problems of the top half, we have the problem only half solved. The more difficult part of the problem is how to meet the needs of the bottom half. This, generally, is a neglected field in the search for farm relief.

There are two general lines of approach to the problem in this low-income field. The first approach is to find ways of increasing the income from farm production, and the second approach is to find the means of securing income from other than farm production.

In the first class will be found those farmers who could increase their production on their present holdings if they pursued the best farm practices and had adequate stock and equipment. Education and credit accompanied by a certain amount of supervision are the best remedies in this field. Very frequently the need is for more land. Often this can be met by the extension of supervised credit, but where it cannot be so met, the case distinctly falls into class 2, requiring supplemental income.

Class 2 cases, defined as those requiring outside income, are by no means all distress cases. Many part-time farmers enjoy stable and substantial incomes and would much prefer their diversified occupation which permits both indoor and outdoor work. Unfortunately, adequate statistics are not available indicating the economic status of part-time farmers. There is, however, a group of substantial size who are essentially trying to make their living from farming on units so small that they have to seek outside work in order to obtain even low living standards. The establishment of small industries in rural areas not only frequently proves a blessing to such, but also often solves the labor problem of the industry so established.

In this field probably lies the greatest opportunity for relief from poverty in the general field of agriculture. Here lies the little used opportunity for betterment through some private or public agency that will assist in locating industries in areas which would be mutually profitable to the industry and to the part-time farmer, and which will undertake as a part of such a program the readjustment of farm acreage reducing the undersized farm to a yet smaller farm, but one adapted to part-time farming, and adding to other undersized farms to make of them practical-sized farm units.

Such readjustment requires not only skillful planning, but the skillful use of vocational education and supervision, credit and real salesmanship. We repeat this is an altogether different problem from the problem of price stabilization which concerns chiefly about half of our farmers who produce over 90 percent of the Nation's food products.

It should be apparent to any thinking person that with the above facts in mind, that, first of all, we should not be raising Federal salaries for those already in the higher income brackets, and, secondly, we should not be adding to the costs of the Government at a time when the net income of the people is being drastically reduced. Many of the people who feel that they should be skyrocketed into the higher income class never earned a comparable income in private life. Do you know of anyone who can convincingly maintain that many of the beneficiaries of the Federal pay increases can secure equal salaries outside of Government? This also applies to members of the President's Cabinet.

We should keep in mind that people with $600 incomes are not only asked to pay Federal taxes, but are also compelled to pay the same excise taxes as the high-income groups pay. When it is all said and done, the man who works and makes a contribution to society, is also the one who carries the tax burden.

BY WHOM ARE FEDERAL TAXES PAID?

According to a United States Treasury report the fiscal year 1948 showed:

Direct taxes on individuals:	
Income tax withheld	$11,436,000,000
Income tax not withheld	9,560,000,000
Estate and gift taxes	899,000,000
Total	21,896,000,000
Direct taxes on corporations:	
Income tax	9,852,000,000
Excess-profits tax	305,000,000
Declared value excess-profits tax	18,000,000
Total	10,174,000,000
Excise taxes	7,402,000,000
Employment taxes	2,396,000,000
Customs	422,000,000
Miscellaneous receipts	4,072,000,000
Total	14,292,000,000
Total receipts	46,362,000,000
Deduct appropriation to Federal Old-Age and Survivors Insurance Trust Fund	1,616,000,000
Net budget receipts	44,746,000,000

There are many interesting facts revealed by these figures. Among them is the fact that $21,896,000 represents the direct tax on individuals.

HOW ARE THE TAXES SPENT?

A large percentage of these billions is spent to pay for past, present, and future wars, that is, between 75 percent and 80 percent of the total amount collected is being used for this purpose. While some economies may be made, many of these expenditures are fixed by law. However, beyond a doubt, there is an opportunity to reduce Federal expenditures in the nondefense activities of the Government. These expenditures for nondefense purposes represent 20 to 25 percent of the total tax collected, and could beyond a doubt be reduced without any hardship to the public.

We, at least, should not be misled into increasing Federal salaries at this time, especially the high salaried group in the Government. We most assuredly should not do so while millions are being added to the unemployed rolls.

Our objective should be to keep our country strong by encouraging employment. We should do something to increase employment, and not spend more of the Federal funds for the benefit of the few in the higher brackets at the expense of the many.

So long as groups receiving $10,000 to $15,000, are now asking for $25,000 it should be borne in mind that they now belong to the group of the million families in the top bracket, and that the other 36,000,000 families in the lower brackets will be doing much of the paying.

The Eighty-first Congress has already doubled the President's take-home pay. Let us not follow up with still more legislation benefiting the few at the expense of the many.

Why, may I ask, should any congressional committee be spending its time on legislation to increase salaries from $15,000 to $25,000 per year when the increase asked is more than three times the income of the average family in the United States?

Why, may I ask, should any congressional committee be spending its time on legislation to increase the salaries of Government employees in the higher income bracket of $10,000 per year, and an amount which is eight times that received by 42 percent of the farmers of our Nation?

The Communist Party

REMARKS
OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. CHESNEY. Mr. Speaker, the die has been cast. The Communist Party in the United States has declared itself. It is now evident that every member of the Communist Party is pledged to the overthrow of the American Government. This outright declaration of intention must determine us to tighten our laws to curb subversive activities.

Are we to have continued cases of treachery such as that allegedly committed by an employee of our Government?

The American people will not stand for Soviet destruction of our laws of democracy.

Mr. Speaker, as a part of my remarks I include the following editorial, which appeared in the Evening Star on March 5, 1949, entitled "Communism Takes Its Stand."

COMMUNISM TAKES ITS STAND

The world has evidence again of the fifth-column nature of the world-wide Communist conspiracy which has its roots in Moscow. When Moscow pulls the strings, the puppets respond as the party line of the moment dictates. This time, for not too obscure reasons, the party line requires concerted warnings that in event of a war between Russia and the capitalist nations, the Communists will take their stand with Russia. The warnings have echoed around the globe within the past few days, with the American Communist Party joining in the refrain in obvious obedience to the orders sent out from Moscow.

There will be some fellow travelers and some other admirers of communism who will be embarrassed and even alarmed by this turn of events. Henry Wallace is reported to have indicated disapproval and surprise. But no one who has taken the trouble to inform themselves on Communistic doctrines and history should be surprised to learn that true Communists, whether they are in France, Italy, Canada, South America or the United States, owe an overriding allegiance to Russia, mother country of communism. The only really surprising aspect to the current parroting of the warning first voiced by Maurice Thorez in France is that the Communist Party of the United States should have made its long-standing attitude public. Perhaps it had no alternative but to obey. But the

blunt, though somewhat equivocal, admission of party leaders that American Communists would be on Russia's side if Wall Street should succeed in plunging the world into war is bound to stimulate demands for drastic anti-Communist legislation. The chances of passage of stronger antisubversive and spy laws are greater now than they would have been if the Communists had kept their plans to themselves. And if the timing of the threats was intended to disrupt efforts to negotiate the Atlantic pact, they seem destined to fail, if the reactions of Norway and Denmark are any criterion.

Communism at last is in the open. The American Communist Party no longer can expect anyone but the most naive to believe that this organization is just a domestic political party, devoted to the welfare of the little man. It has put itself on record for what it is, a foreign-dominated Marxist organization whose loyalty is not to the United States but to the Soviet Union.

The Peach Crop in South Carolina

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. BRYSON. Mr. Speaker, we are profoundly grateful that the chilling winds coming down to us from the North have been tempered to the degree that we still have the promise of an abundant peach crop in South Carolina.

From the current issue of the publication South Carolina Business I attach the following article:

SOUTH CAROLINA LEADS IN PEACHES

The National Peach Council meeting in St. Louis estimated that South Carolina has arrived as the Peach State, with a prediction that should all go well between now and the last frost date, this State should produce 6,500,000 bushels of peaches, as against Georgia's 5,000,000. Other States in the East fall behind South Carolina and Georgia, but in California, where they can dry, and otherwise dispose of their peaches, it is estimated the crop will be 33,000,000 bushels.

However, South Carolina is now finally and officially recognized as the Peach State by the supreme authority, the National Peach Council.

It is realized, however, by the peach council that the crop just now breaking into premature buds and bloom is in a precarious situation, with a lot of days ahead in which the weather can still be a determining factor in what happens.

Southern Sociologist Views Civil Rights

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. HAYS of Arkansas. Mr. Speaker, one of the Nation's outstanding sociologists is Dr. Howard W. Odum, of the University of North Carolina. He is an undisputed authority on the South, his book Southern Regions, being a monumental study of social problems.

Recently, Dr. Odum, writing in the Southern Packet, published at Asheville, N. C., addressed himself to the South's racial problems in what he calls this period of transition. While I do not agree entirely with all of Dr. Odum's views I recognize their great value in our current discussions. Under leave to extend my remarks, I wish to include the following excerpts from Dr. Odum's splendid article:

From all walks of life in the South—old and young, men and women, white and Negro, rural and urban—people are asking, as never before, soul-searching questions about what is best for the South to do in this time of crisis and conflict in the Nation. They are searching with equal earnestness for responsible answers to their inquiries as to what are the actual facts of this staggering dilemma and what is the relation of these facts to the inescapable issues to be faced. They not only want answers but they want to have a part in determining the right answers.

So, too, all over the country, in all the other regions, millions of other people are asking the same questions and insisting on having a part in answering them; for after all, the participants and the programs of actions are broadly regional and national rather than narrowly sectional and partisan.

Our regional approach, therefore, constitutes in reality an appeal for the creative South to work out its own positive, practical adjustment to today's crisis rather than to be driven, coerced and politically patronized into a negative defense to meet the letter of constitutional decisions. The appeal is for scientific and statesman-like ways of achieving a powerful and enduring reconversion program within the framework of a stable culture, a sound economy, a just morality, a changing folk psychology, a workable political democracy, and all set in the framework of an America of sanely balanced natural geographical regions.

This is an extraordinarily difficult task, worthy of any people and worthy of the challenge of world dilemma in which survival and welfare are at stake. Yet the challenge for the creative South to achieve such mastery is more specific. Here is not only the hope for positive and noble attainments, but for the emergence of an articulate South that will substitute for much of its fears and frustration a new faith in itself. It promises to make the South a more useful part of a great Nation.

And it is an appeal to the Nation for a larger measure of understanding, sympathy, and wisdom and a willingness to reconsider some premises of its crusade which have special sectional meaning.

Below we give one set of answers:

1. First, to abide by the decisions of the United States Supreme Court on these matters as on all others.

2. To adjust our culture and economy to national civil-rights legislation for which apparently a clear majority of the people of the United States have voted and to do it in such ways as to reduce outside interference to the minimum.

3. To stop, at all costs, prevailing lawlessness by violence and by evasion. This means in every community and in every State sharp warnings, strict law enforcement, severe penalties within the law.

4. To continue the sure and steady progress which the South has made toward increasingly great opportunity for all people to have access to resources and work in the South or to migrate to other regions where nearer equal opportunities may be guaranteed.

5. To accelerate the prevailing southern processes of improving race relations and of increasing and equalizing educational facilities for all the people.

6. To provide professional and higher graduate instruction for qualified individuals of both races in the same institutions.

7. To continue progress in agricultural, economic, and industrial development and in the conservation and use of resources.

8. To continue progress in public services, as in public education, public welfare, highways, conservation.

9. To help all southerners see the justice of today's normal wants of Negro people.

10. To help the whole Nation understand the problems—human, political, and economic—in changing a biracial civilization rooted in two centuries of growth.

11. More specifically, to convert from segregation to nonsegregation in many practicable areas such as transportation and other public services.

12. To guarantee opportunity for all citizens to vote without hindrance, and to eliminate the poll tax.

13. To work for effective legislation toward the sure elimination of lynching.

14. And to do all of these things calmly.

15. Again, to undertake a comprehensive and a scientific inventory of the South and the Nation so as to provide specifications for the future, in which the promise and costs of conversion from general segregation to attainable programs of nonsegregation may be examined, revised, and adopted.

16. And this calls for a greater degree of cultural and political maturity than the South now has, and by the same token a striving for that maturity which is the goal of the good society.

17. Still more, willingness to reexamine the basis of the southern credo as a substitute for protest, bitterness, and secession-mindedness.

18. In the face of bitter attack and vested frustration by many irresponsibles, isolated from the reality of living democracy, to protect the great mass of Negroes from outsiders who would weaken or destroy their extraordinary systems of schools, churches, industry, and self-developed programs which have amazed the world by their mastery and by the effectiveness of their training grounds for progress and leadership.

19. In this transitional era to stop, through wholesome methods, the almost universal trend toward frustration of Negro youth growing from ideologies of despair, bitterness, hate, and aggression; and through interracial cooperation to substitute hope based on both promise and actuality.

20. To stop being afraid of democracy. Thousands and hundreds of thousands of southerners are saying in substance, "Let's try some of these things out; maybe they will work, but if not we will keep on trying."

21. And finally, somehow to stop this intersectional bitterness and to do the job before us in spite of all the complexities and cultural immaturity of many groups; to take the controls away from partisan extremists; to guard against those ideas and acts which seek to inflame and divide the people through irresponsible agitation and violence.

Dairy Industry in Texas

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. HILL. Mr. Speaker, recently our Committee on Agriculture had the op-

portunity of hearing the testimony of a Fort Collins, Colorado A. and M. College, graduate, now dean of agriculture at the Texas A. and M. College, Charles N. Shepardson.

Mr. Shepardson gave a very interesting and instructive discussion on the dairy industry in Texas and the importance of this agricultural program as a stabilizer and balance wheel in our economy. Under unanimous consent, I include in the Appendix of the RECORD his testimony:

STATEMENT OF CHARLES N. SHEPARDSON, DEAN OF AGRICULTURE, TEXAS A. AND M. COLLEGE, COLLEGE STATION, TEX., BEFORE THE HOUSE COMMITTEE ON AGRICULTURE, MARCH 3, 1949

My name is Charles N. Shepardson. I am dean of agriculture at the Texas A. and M. College, College Station, Tex. I am appearing before your committee under the sponsorship of the National Cooperative Milk Producers' Federation. The facts I present are of record, and the views I express are my own.

Dairying is of major importance in the agricultural economy of Texas from two angles. First, it represents an important part of our agricultural income. Out of approximately 385,000 farms in the State, over 80 percent receive some income from dairying and on 30 percent dairying is one of the major farm enterprises. In 1947 it contributed a cash income of $119,000,000 compared with $562,000,000 for cotton, and $512,000,000 for meat animals. If we add to the cash income from dairy products, the value of milk products used on the farm and the value of dairy beef, we have a total of approximately $215,000,000—and this in a year when the price relationship between cotton, cattle, and dairy products was most unfavorable to dairying. For example, in 1938 the gross income from dairying, including dairy beef, was approximately $100,000,000 which equaled the income from beef and was two-thirds of the cotton income for that year.

Notwithstanding the importance of the dollar value of an industry of this size in the total agricultural income of Texas, the second point to consider is that dairying plays a still more important part as a stabilizer and balance wheel in our economy.

Thirty years ago, the people of Texas were becoming increasingly aware of the evil effects of a long-continued one-crop agriculture. Soils were eroding and wearing out, yields were dropping, buildings were falling into disrepair, and Texas, together with the cotton South was rapidly becoming what was frequently referred to during the 1930's as the problem child of the country.

After nearly a century of one-crop cotton farming, this condition had become so bad that bankers and businessmen, as well as farmers, began to realize the cost of soil depletion, seasonal unemployment, and high credit costs. They recognized the need of a diversified program that would permit crop rotation, soil conservation, and restoration of soil fertility. They also recognized the need of an enterprise that would provide more regular employment and a regular cash income.

Dairying fills these needs, and since Texas had never produced her needs for dairy products a dairy development program was started. Creameries, cheese factories, and milk condenseries were built, and communities that were on the brink of disaster became thriving dairy centers. Creamery butter production increased from an average of 27,000,000 pounds in 1928–32 to 37,000,000 pounds in 1939–43. Cheese production increased from practically zero in 1928 to over 20,000,000 pounds in 1938.

During the worst of the depression the milk and cream checks kept many of our farmers solvent. According to the Federal land-bank office in Houston, at a time when farm mortgages were being foreclosed all over the State there was a noticeable absence of foreclosures on farms that had a regular milk or cream check income.

Counties in the Panhandle and in East Texas that had seemed to be in hopeless condition began to come back. These two areas became prosperous dairy areas. Land improved in fertility, erosion was controlled through pasture development, roads were hard surfaced, county and city indebtedness was reduced, and schools were improved.

Cow population increased from 1,202,000 in 1930 to 1,458,000 in 1939 and to 1,514,000 in 1946. Since that time the trend has been reversed and on January 1 this year our cow population was estimated at 1,351,000. This is in spite of the fact that we have a tremendous shortage not only of manufactured dairy products but also of fluid milk. During the past winter thousands of gallons of milk were shipped into Texas daily from northern production areas. At the same time, our cheese production dropped to less than 10,000,000 pounds, butter to less than 20,000,000 pounds, and two-thirds of our condenseries and powdered milk plants closed their doors.

This means that more and more of our remaining cows have been and are being concentrated in commercial grade A dairies in our city milk sheds, which is all right for those areas. But it also means that the loss of a favorable outlet for cream in the more remote areas has brought about the dispersal of their dairy herds and the loss of the stabilizing and land-improving values mentioned earlier. This is especially noticeable in the Panhandle area where dairy production has given way to field crops and a return to the same type of cultivation that brought on the dust-bowl conditions of the early thirties.

One other factor should be mentioned. With the development of mechanized cotton production which is absolutely essential if cotton is to remain a competitor in the textile and fabric field, it is becoming more and more of a large-scale, industrialized operation. This means that the small farmer must look to other farm enterprises that will provide a satisfactory farm-labor income. Dairying is essentially that, providing a much higher labor income per dollar invested than either beef production or mechanized cotton production.

And so it is to dairying and more particularly cream and manufactured milk production that the farmers in two-thirds of our Texas counties outside the city milk sheds must look for their future, since these farmers are too scattered and remote for a milk market. Anything that depresses the outlet for butter has a direct bearing on our ability to develop and continue a type of farming that is inherently soil-conserving and soil-building and that provides the regularity of farm employment and farm income so essential to a stable, prosperous agriculture. And certainly there is no need to remind this committee of the importance of a prosperous agriculture in the total economy of the country.

In my opinion the conditions in Texas are not materially different from those in other States throughout the cotton South.

For these reasons it is my personal conviction that the interests of Texas and all southern agriculture and of our people as a whole will be served best by legislation that will prevent the manufacture and sale of colored oleomargarine in the semblance or imitation of butter.

The Farmers' Viewpoint

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Farmers Own Ditch Co., of Ashton, Idaho. This letter is a good sample of the thinking of the people who are looking to their headgates and wondering if the Federal Government is going to take over their water rights:

FARMERS OWN DITCH CO.,
Ashton, Idaho, February 25, 1949.

HON. JOHN SANBORN,
House of Representatives,
Washington, D. C.

DEAR SIR: We are fearful that bills may be introduced in the Congress, perhaps under different names, and claiming to be different while still containing most, if not all, of the objectionable features of past CVA bills. Furthermore, a modified bill, if passed by the Congress now, could at a later date easily be amended and became most objectionable.

Do not commit yourself to any CVA or similar legislation.

The board of directors and our association consider the matter of vital importance. We are against CVA in any form.

Sincerely yours,

WILLARD BONNERU,
President.

ROSE M. HANSEN,
Secretary.

Restoration of Red Hill

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. BROWN of Ohio. Mr. Speaker, under authority to extend my remarks in the RECORD, I include an article by my friend, Walter Johnson, of Heathsville, Va., who writes regularly as the Country Lawyer in the Northumberland Echo and other live Virginia papers.

Mr. Johnson ably discusses the proposed restoration of Red Hill, which was the home of Patrick Henry. Though from Ohio, my State was a part of Virginia in 1775 when the voice of Patrick Henry hurled defiance at tyranny in St. John's Church in Richmond.

The effort to restore Red Hill through private subscriptions instead of coming crying to Government for aid is most commendable and discloses the sturdiness and independence of Virginians.

The article follows:

COUNTRY LAWYER

(By Walter Johnson)

A well-organized meritorious movement is afoot to restore Red Hill, home of Patrick

Henry, which is located on the Staunton River in Charlotte County some 25 miles from Lynchburg, Va.

The land has been acquired and funds are now sought to restore the house and grounds. This is a splendid movement and it merits the support not only of Virginians but also of persons all over the world who adhere to the ideals of the noble founding fathers.

In the days before the advent of the political machine in Virginia with its stultifying effect on the minds of men the State produced men of truly magnificent stature; men whose names and ideals are held in reverence wherever mankind dares to think in terms of freedom and dignity of the individual.

Among those great Virginians were George Washington, the executive and leader of men; Thomas Jefferson, the philosopher on government and founder of the two-party system; Patrick Henry, the orator, lawyer, and legislator; and John Marshall, the incomparable jurist.

Today we can go to the Washington home at Mount Vernon and to his birthplace in Westmoreland County, and we can go to the Jefferson home at Charlottesville. There, where these great men walked and talked, every person may acquire renewed reverence for these patriots and the things they stood for. That is good for all and particularly youth.

The decisions of the Supreme Court of the United States serve as a monument to John Marshall. Therein one may read the very words he wrote in the important decisions which put to practical use the Constitution of the United States.

But there has been no place set aside as a shrine to Patrick Henry and his great principles and restoration of Red Hill will supply that need.

Born at Studley in Hanover County on May 29, 1736, Patrick Henry entered the practice of law there in 1760. It was his gift of oratory supported by sound and compelling logic and the forcefulness of his personality that made him so outstanding.

He participated in the writing of the first Constitution of Virginia in June 1776, which later served as a pattern for the Constitution of the United States. He served as the first governor of Virginia when it became a sovereign State.

On March 20, 1775, at St. Johns Church in Richmond he, with magnificent courage, hurled these words at the proposition of tyranny.

"Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it Almighty God. I know not what course others may take, but as for me, give me liberty or give me death."

Those words, so fine in 1775, are just as fine today. The principle Patrick Henry so eloquently uttered in 1775 is as important today as then. Whereas Henry and his associates wisely separated the powers of government in 1775 to the end that men could enjoy freedom and self-government, today our legislators, both Federal and State, are merging those powers together again into what we call bureaucracy which is fraught with tyranny.

Restoration of Red Hill is needed as is a full reexamination of the concepts of Patrick Henry, Thomas Jefferson, George Washington, and John Marshall. Though physical things change as science improves our methods, transportation and communication there is no change in the fundamentals of government. Exactly the same things constitute tyranny today as in 1775. Exactly the same protection is required if we would remain free.

States' Rights Superseded by Federal Government

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the board of directors of the New Dry Creek Ditch Co., Ltd., of Eagle, Idaho.

This unsolicited letter calls attention to one of the most dangerous provisions of an authority bill. Proposals for river authorities are attempts to create Federal agencies having the powers of State governments in regard to water matters. A situation wherein there exists dual administration of water resources not only unworkable but also utterly foreign to our system of government. It should be obvious to all that it is no solution of the problem to create an instrumentality of government having in water matters the powers and responsibilities of State governments, in addition to the Federal powers properly exercised under the Constitution, and at the same time to preserve the recognized quasi-sovereignty of the States.

The letter follows:

EAGLE, IDAHO, *February 25, 1949.*
Hon. JOHN SANBORN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: We, the board of directors of the New Dry Creek Ditch Co., Ltd., hereby petition you to use your influence in an effort to defeat the CVA bill when it is introduced. We object especially to the following features:

1. Turning control of all resources in the Columbia Valley over to a Board of three men appointed by the President and responsible only to the President.

2. Taking jurisdiction away from Idaho courts and giving it to the Federal Courts.

3. The unlimited power to condemn property rights with no right of appeal for the property owner.

We believe our water rights should remain under State control and that the development of our water resources should be continued by the Bureau of Reclamation and the Army engineers.

We, therefore, respectfully urge you not to vote for any CVA bill or similar legislation at least until the people of Idaho have had an opportunity to study such proposed legislation thoroughly.

Sincerely yours,
NEW DRY DITCH CO., LTD.
By O. L. GREER,
President.

Col. James Perry Alvey

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. RANKIN. Mr. Speaker, in the death of James Perry Alvey the Federal Government in general, and the Department of the Interior in particular, has lost a most valuable public servant.

He was one of the most valuable public servants I have ever known. He was a man of unimpeachable character, his integrity was unassailable, his ideals were of the highest quality, and his devotion to duty was beyond question.

Perry Alvey, as he was known to all of his friends, was born in Galveston, Tex., on December 1, 1885, and died in Boston, Mass., March 2, 1949. He was graduated, as an engineer, from the University of Texas in 1906, and from the Massachusetts Institute of Technology as a hydroelectric engineer in 1907. His entire adult life has been devoted to his chosen profession.

During the First World War, he served as captain in the Corps of Engineers, in the United States Army Expeditionary Forces in Europe, and was staff officer on the staff of Gen. Edgar Jadwin.

Because of his deep interest in the conservation and development of our natural resources, he devoted a great part of his life to this general subject, especially to the development of our hydroelectric resources. He realized the tremendous contributions of low-cost electric power, not only to our economic welfare, but also to our national security.

With his vast knowledge and experience, he was a tower of strength to those of us who were interested in the development of the hydro resources of the Nation—and especially of the Columbia River, which resulted in the passage of the Bonneville Project Act of 1937. Since then he has been actively engaged in the administration of that act as the Washington representative of the Bonneville Power Administration.

He gave unselfishly of his time and effort to the cause he had espoused, to the very end of his days. It can be truly said that he died in the service of his country.

Every person who turns an electric switch anywhere in the West, if not in the whole country, owes him a lasting debt of gratitude.

He was my personal friend, as well as the most effective and useful aid I have ever had in my fight for justice for the power consumers of the Nation.

My heart goes out to his bereaved widow. She has lost a noble and loving husband; and our country has lost one of her most useful and valuable citizens.

There Can Be Only One Kind of Americans

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following edi-

torial which appeared in the San Francisco Chronicle on Tuesday, February 15, 1949:

THERE CAN BE ONLY ONE KIND OF AMERICANS

The menace of the veterans' pension proposal advanced by the American Legion and introduced into the House by Representative RANKIN, of Mississippi, is that it sounds like something fine for the boys, and nobody wants the Nation to seem ungrateful to those who defended our democracy.

We don't want to seem ungrateful either—as a matter of fact, a great many of us of the Chronicle went out and did what we could to defend that democracy, and would stand to reap any benefits under the bill to start paying veterans $60 a month at age 60. But we're still, as civilians, deeply concerned with preserving the democracy that was defended in 1917–18 and again in 1941–45, and that concern compels us to oppose this and every proposal that would make one class of people of veterans and another of the rest of the Americans.

In treating recently of a bonus proposal advanced by another veterans' group we undertook to make clear the distinction between bonuses and blanket pension plans, on the one hand, and existing veterans' benefit programs on the other.

We agreed that every effort should be made to relieve hardships suffered by servicemen as result of that service; we approved of physical and financial care for the disabled, educational benefits for those whose education was interrupted by the war; Government aid to secure housing for ex-servicemen; vocational guidance and placement for veterans. For the Nation to have done less would have been ungrateful and unfair.

But the multibillion-dollar bonus proposals and now the multibillion-dollar pension proposal are not aimed at the relief of hardship, because evidence of hardship is not a prerequisite for enjoyment of their benefits. Almost 20,000,000 veterans could look forward to special benefits under the Legion's pension program—to be supported, at a cost sloping upward from an initial $2,000,000,000 a year, by the rest of the Americans. That would mean that an able-bodied, 60-year-old veteran with $50,000 a year would be entitled to this special bounty whereas a 60-year-old nonveteran without so much as the price of tomorrow's breakfast would not. It would also mean that the Federal benefits for the blind, ill and helpless would have to be curtailed to make these blanket benefits available to veterans. Indeed, it could very well mean that the defenses of the Nation would have to be hamstrung so all veterans, rich, poor and middling, could enjoy the $60 per month at 60 and $90 per month at 65.

The proposal, it seems to us, crumples under the hard light of common sense alone.

But there is one other aspect of the proposal that deserves the careful attention of the members of the American Legion.

The Legion has resolutely opposed statism in many forms—Nazi, Communist, or whatever. Notwithstanding, this pension proposal is exactly up the alley of statism. It sets apart one group of Americans as deserving of arbitrarily assigned special privilege; it would make this group politically beholden to the Government for the maintenance of its special financial status, and it would saddle the Nation at large with an inflationary burden ponderous enough to jeopardize the economy. All of those roads lead toward totalitarianism. The rank and file of veterans can serve themselves and their country by recognizing these facts and avoiding the trap that always lies under the bait of a something-for-nothing proposition.

H. R. 1582

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SCRIVNER. Mr. Speaker, early in the session I introduced H. R. 1582 to provide a simple, direct method of making funds available to the several States for education, with absolutely no Government control of the State's educational program, present or future.

In substance, H. R. 1582 provides that the collector of internal revenue shall, each quarter, remit to the treasurer of his respective State, a sum equal to 1 percent of the corporate and individual income tax collected that quarter, such money to be used by the States for educational purposes only.

The text of the bill and my comments thereon appeared in the Appendix of the RECORD, pages A204 and A205.

On the basis of corporation and individual income taxes collected during the fiscal year 1948, the gross sum made available to the States under H. R. 1582 would not differ greatly from the $300,000,000 proposed under S. 246 to initiate the administration-sponsored plan of Federal aid to education. The distribution to each State would, however, be considerably different. Under H. R. 1582 each State would receive for its use every cent paid in by the taxpayers of that State to be applied to the educational program. Since there is always some fluctuation in tax collections, benefits under H. R. 1582 would vary with such fluctuation.

For more detailed information for the Members, the following comparative tables will show the estimated annual cost in taxes to each State under each proposal, and the estimated amount each State would receive annually in funds which it could apply to improving its educational program:

	Under H. R. 1582: Amount each State will pay and receive, each year, based on tax collections, fiscal 1948	Under S. 246	
		Estimated annual tax cost to each State, on basis initial authorization of $300,000,000	Estimated amount each State will receive each year, basis of initial authorization
Alabama	$2,318,000	$3,734,000	$19,390,000
Arizona	714,000	1,111,000	1,750,000
Arkansas	974,000	2,211,000	12,390,000

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. BUCHANAN. Mr. Speaker, I wish to bring to the attention of my colleagues a very important development in connection with the St. Lawrence seaway project. As a result of growing realization that our iron-ore resources are being rapidly used up and new sources must be found, both labor and management in the steel industry have now come out strongly for the construction of this project. They realize that industry in the Middle West may gradually be strangled unless ample new sources of iron ore are made accessible.

I wish to place in the CONGRESSIONAL RECORD at this point a statement from Mr. Otis Brubaker, director, Research Department of the United Steel Workers of America, which describes the position of the national CIO and of the steel workers in support of the St. Lawrence project. I also wish to place in the RECORD an excerpt from the annual report of the M. A. Hanna Co., of Cleveland, explaining their activities in the development of iron ore in Labrador and Quebec and the reasons for their shift of position from opponents to supporters of the St. Lawrence seaway project.

The matters follow:

UNITED STEEL WORKERS OF AMEPICA,
Pittsburgh, Pa., February 9, 1949.

Mr. N. R. DANIELIAN,
Washington, D. C.

DEAR MR. DANIELIAN: As I have previously indicated to you, both the United Steel Workers of America and the National CIO have publicly announced their suppor of the St. Lawrence project. The last St l Workers convention was held on May 11–15, 1948, at Boston. There the union adopted an economic program which, among other things, encouraged the Congress to establish a St. Lawrence seaway and other needed river valley authorities similar to the TVA. The convention also passed a resolution in support for water power and waterways projects. Although the St. Lawrence is not specifically referred to here, it plainly is included as indicated by the direct reference in the economic program. Following is the text of this resolution:

"We believe that a closer integration between navigation upon our great inland waterway system and other beneficial water uses such as flood control, stream purification, soil conservation, and hydroelectric generation is essential to our national economy.

"No nation can attain full economic stability except by the full conservation and proper utilization of its natural resources.

"America has been generously blessed with natural resources, and especially rivers and harbors.

"These natural gifts have been a predominant factor toward its growth and prosperity: Therefore be it

"*Resolved:*

"1. The United Steel Workers shall with the utmost vigor seek Federal authorization necessary for the canalization and improvement of our natural waterways such as the proposed Ohio River-Lake Erie waterway.

"2. Continue to lend full support to the further implementation of the Tennessee Valley Authority and Missouri Valley Authority and all water-utilization and flood-control projects that may give the people of America a more equitable share in their heritage of America's boundless resources.

"The committee recommends approval of this resolution.

"The recommendation of the committee was adopted."

In November of the same year the national CIO held its convention in Portland. Here, too, the St. Lawrence seaway and power project received endorsement. Following is a quotation from President Philip Murray's report to the CIO:

"The CIO also supported the St. Lawrence seaway and power project, a resolution which would have approved a 1941 executive agreement between the United States and Canada providing for completion of power works and navigation features along 119 miles of the St. Lawrence River."

I might point out that the legislative program, outlined in the same report, includes support for river valley developments.

On November 25, 1948, the question came up on the convention floor. A resolution urging regional development was passed unanimously. This included the following sentence:

"We likewise reaffirm our support of the St. Lawrence seaway and power project."

Sincerely yours,

OTIS BRUBAKER.

EXCERPTS FROM 1948 ANNUAL REPORT, THE M. A. HANNA CO., CLEVELAND, OHIO

FINANCIAL RESULTS

Our consolidated net profit for 1948, after all expenses and taxes, was $9,087,574. This compares with $7,282,506 in 1947 and $5,611,654 in 1946, and is a new high record.

Dividend distributions during the year aggregated $5,551,839, also a new high record. Preferred stockholders received the regular dividends of $4.25 a share ($399,519) while a total of $5 a share ($5,152,320) was paid on common stock, comparing with $3.20 a share ($3,297,485) in 1947. The excess of earnings over dividends, amounting to $3,535,735, was added to surplus.

At the year-end our current assets were $23,117,716 and current liabilities were $7,490,268, so that working capital was $15,627,448 compared with $9,293,037 the year before.

Our quoted securities had an indicated market value of $111,681,044 at December 31, 1948, compared with $109,920,547 at the end of 1947. Their book values on our balance sheet were $51,240,483 at the close of 1948 compared with $50,301,808 the year before.

OPERATIONS

Our operations in 1948 included the following:

Iron ore shipments	tons	11,828,000
Lake coal shipments	do	11,234,000
Anthracite coal production	do	2,691,000

The Hanna fleet of 13 vessels operated at capacity throughout the shipping season.

LABRADOR-QUEBEC IRON ORE

The iron-ore tonnage shown by exploration and drilling so far is about one-third in the Labrador concession and about two-thirds in the concession in Quebec. However, the Labrador concession covers a total of about 18,000 square miles while the Quebec concession covers about 3,800 square miles, and there is much more territory in Labrador than in Quebec which is entirely unexplored. Explorations to date have proved with reasonable accuracy the existence of about 300,000,000 tons of very good grade direct shipping open pit ore and manganiferous iron ore. It is located about 300 miles from the Gulf of St. Lawrence and requires the construction of 360 miles of railroad with transshipping docks at Seven Islands, Quebec, on the St. Lawrence River.

It is a big undertaking and may involve the expenditure of as much as $200,000,000 for mining and railroad equipment, power development, railroad and dock construction, townsites for the large number of people involved, etc. This will take a number of years and progress is slow, but we believe that the discovery is of sufficient importance and the ore possibilities of such magnitude that eventually this will become an important source of iron ore supply for some of the blast furnaces and steel plants of Canada and the United States. Additional exploratory work will be continued, and as the properties develop plans for the future will be made.

One important item of consideration is the development of the St. Lawrence seaway. The distance by water from Seven Islands to Erie, Pa., on the southern shore of Lake Erie, is almost the same as the distance from Duluth, as our Lake Superior ores now move. The entire distance from the Gulf of St. Lawrence to any lake port is now available for transportation in our regular standard lake vessels except for about 90 miles of intermittent rapids. If these rapids can be made navigable by the prompt completion of the St. Lawrence waterway project, the ore can be moved economically and competitively to the central industrial districts of Canada and the United States.

Through our various connections, we are interested in the ownership of large reserve tonnages of Lake Superior iron ore. We are not unmindful of the importance of such reserves nor do we contemplate the early exhaustion of shipments from that district, but continuation of the declining trend of shipments of high-grade direct shipping ore from Lake Superior is inevitable. Expensive underground mining must be increased and even more expensive beneficiation processes must be developed to make a useful product from lower-grade Lake Superior reserves. They will be required as a source of iron ore supply for the future, but they can best be supplemented by shipments of high-grade open-pit direct-shipping ore from Labrador and Quebec to fill the needs of the great iron and steel businesses of Canada and the United States now located in the Great Lakes Basin area.

This district is the heart of the greatest industrial area on this continent and it is to the interest of every business and every citizen of both countries that it may continue to have an ample supply of iron ore cheaply transported to it by water to supply the many industries dependent upon iron and steel. The Great Lakes waterway will continue to serve this important district, but now that this new source of direct shipping high-grade iron ore supply has been definitely established the St. Lawrence waterway should be undertaken promptly to make it equally available. It is essential for business in times of peace and it would be indispensable for both countries in the unfortunate event of another war.

G. M. HUMPHREY,
President.

Federal Tax on State Securities

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SPENCE. Mr. Speaker, I concur in the statement issued by Senators ELLENDER, WAGNER, MAYBANK, SPARKMAN, MYERS, HILL, PEPPER, and LONG, which favors striking the provision from the national housing bill which would withdraw the tax exemption now accorded the obligations of States and their political subdivisions.

The greatest security against concentration of power is our dual form of Government, State and Federal, and our three coordinate branches of Government. Each must be preserved in its full integrity. To permit the Federal Government to impose taxes on securities issued by the State or its subdivisions would concentrate power in the Federal Government and weaken that of the States, for the power to tax is the power to destroy.

The provision—section 505—will be stricken from H. R. 933 when the Banking and Currency Committee takes up the legislation.

Statement of the Washington Chapter, Americans for Democratic Action, at the Hearing of the District Commissioners on the Extension of Rent Controls

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I wish to insert the following statement of the Washington Chapter, Americans for Democratic Action, which was given before the District Commissioners at the hearing on the extension of rent controls for the District of Columbia, Friday, February 11, 1949:

The Washington Chapter of ADA welcomes this opportunity to present its views on H. R. 1757, a bill known as the Harris bill which amends and extends the District of Columbia Emergency Rent Act. There still exists in the District of Columbia an extremely critical housing shortage, particularly for persons of middle and low incomes. The recent report of the National Captial Housing Authority indicated that there are 18,000 low-income families now on the waiting list for low-rent housing. Many District families are living doubled up. The rate of new construction of rental housing is insufficient to meet the current demands and the rents of most of this housing are above that which middle and low-income groups, ineligible for public housing, can afford. Since rentals constitute a major drain upon the budgets of families of fixed or limited incomes, we have a deep interest in the continued control of rents in such a manner as to safeguard adequately the economic position of the vast majority of Washington residents, until such a time as the current demand for rental housing has been met.

SUMMARY OF ADA POSITION

We strongly recommend the extension of rent control for at least a 2-year period since there is no indication that the rental-housing shortage will have been relieved before that time. The Harris bill would serve to extend the present District rent-control system and strengthen it in certain respects but we do not believe that it would correct most of its principal weaknesses. Those weaknesses are, however, substantially corrected in H. R. 2291, known as the Douglas bill. This bill would include the District of Columbia in a national system of rent control. We, therefore, respectfully urge the District Commissioners to oppose the enactment of the Harris bill (H. R. 1757) and to recommend to the Congress, the passage of the Douglas bill (H. R. 2291).

REASONS FOR ADA POSITION

We believe that existing rent controls for the District are inadequate. At present, there are no controls over rents charged for additional housing units created by conversion of existing buildings. There is also no protection for tenants threatened by eviction from apartments which are put up for sale as cooperative housing. The Harris bill corrects these weaknesses to a large measure. But there are several additional defects in the present District rent control act which are not corrected by this bill and which we believe are serious enough to require legislative action. These defects are the following:

1. The lack of controls on newly constructed rental housing.

2. The lack of controls on nonhousekeeping furnished rooms in private homes.

3. Inadequate safeguards to tenants with respect to evictions.

4. The lack of a local advisory rent board, representative of affected interests of the District, which would make recommendations to the administrator of rent control concerning such matters as the adequacy of the general rent level in the area.

5. The lack of adequate sanctions against persons who violate rent-control legislation and regulations. (The present law does not provide criminal sanctions against such violations and the amount of damages a tenant may collect is negligible. Moreover, no action may be taken against such a violator if the tenant affected does not institute action himself.)

The Douglas bill corrects the weaknesses outlined above, as well as those covered in the Harris bill. The Douglas bill provides controls on newly constructed housing, housing created by conversions and nonhousekeeping furnished rooms in private homes. It provides for local representative advisory boards and also a national advisory board. This bill contains criminal penalties for violations of rent control legislation and regulations; increases the amount of damages a tenant can recover in case of excessive illegal rent charges; and permits the administrator to institute action when the tenant fails to do so. These latter measures will not only ease enforcement of rent controls but will also act as deterrents against violations of such controls.

The Administrator of the Office of Rent Control under the Douglas bill is given broad discretionary powers to regulate evictions. We believe that this provision is desirable since it will permit the administrator to establish any regulations necessary to protect tenants in accordance with the purpose of the act, including prompt action against evasions of the purpose of rent control such as those evidenced by the mass evictions in Tulsa, Okla., and the numerous conversions of old apartments to cooperative housing in the District of Columbia.

For the reasons outlined above, we urge the Commissioners of the District of Columbia to recommend to the Congress the passage of the Douglas bill rather than the amendment and extension of the present District Rent Control Act by the Harris bill. In addition to strengthening the present rent control system of the District, the Douglas bill would provide the District with the same type of rent control as that for the rest of the country. It has been asserted that the present separate system should be maintained because of the cost of changing over to the national system. We do not believe that such a cost is sufficient reason for the continuance of a dual-control system and that the important consideration is that of providing the District of Columbia with adequate rent controls, on an equal footing with the rest of the country.

Soviet Intentions

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of March 4, 1949:

SOVIET INTENTIONS

(By Joseph Alsop)

WASHINGTON.—The scene was a rather bleak government office in Belgrade. The speaker was a high Yugoslav official, who had worked intimately with Molotov. His subject was the unpleasant situation of any small country in the no-man's land of the world struggle between the Soviet empire and the west. He spoke almost wistfully, as many Europeans will, of the desirability of a settlement between Moscow and Washington.

Fear of western aggression, he said, was the whole mainspring of Russian policy. From personal experience, he emphatically described Molotov as genuinely afraid that the United States would attack Russia.

To reduce the conversation to practical terms, he was asked one or two questions. In order to achieve the mood described, must not Molotov have ignored all the visible facts of the first two postwar years, when Washington went so far to appease Moscow? In truth, must not the Soviet Foreign Minister simply formulate his theories by combining rigid Marxist theology with his own knowledge of what the Politburo would do with American resources at its disposal? The Yugoslav laughed and nodded.

QUESTIONED ON SOVIET FEARS

Then he was asked, What will calm these Soviet fears? Would not this appeasement entail giving away so many vital strategic positions that the Soviet Union could safely begin the career of aggression now imputed to the United States? And if the Politburo were thus enabled, by a delusive settlement, to expand the Soviet sphere by easy conquest, what would be the result? This time the Yugoslav nodded glumly and stopped talking about settlements.

The story is worth telling, because its pattern was repeated in every other capital of Europe visited by this correspondent. A good many responsible European leaders even spoke wistfully about settlements. But the slightest inquiry about practical details is enough to reveal what they know in their hearts, that any settlement likely to be accepted by Moscow would spell the end of Europe.

The question now, in fact, is not how to make a settlement but how the Kremlin is going to deal with the stalemate that is emerging in Europe. No one can speak positively about such an enigma as Soviet policy. But the following analysis is the consensus of the many informed officials and expert observers with whom this correspondent talked in France and Italy, Yugoslavia, Britain and Germany. All agree that the Kremlin does not want war now and will not take the risk of war, even for great ends, for some time to come. Even the talk of an attack on Finland and other violent reactions to Norway's joining the Atlantic Pact, with which Soviet diplomats have been making Swedish flesh creep, have failed to carry conviction except in Stockholm. All agree also that the Kremlin's plans for Europe have been at least temporarily frustrated, and that this frustration has forced the Kremlin to elaborate a new program. Finally it is the consensus that this new program has three aims.

The first aim is to establish total, ruthless, unchallengeable control over the Soviet Union's new wartime conquests. (Hence the Czechoslovak coup d'état and the attempt to liquidate the island of western freedom in Berlin. Hence also the constant purges in all the satellite countries, which are always going on, and are hardly noticed except when they involve such dramatic episodes as the Mindszenty trial.)

The second aim is to take immediate advantage of the American concentration on Europe, and of the feeble or nonexistent defenses of the vast regions of the Middle and Far East. (Hence the drive into China, the even more significant drive into southeast Asia, and the signs of renewed Soviet interest in the Middle East. If Asia is allowed to fall into the Soviet sphere by default, the attack in the Middle East will surely be launched at once. And it may even begin much sooner.)

The third aim is to prepare the Soviet Empire for war with all speed. (Hence the militarization of the Soviet economy now almost as complete as the militarization of the German economy by Hitler. Hence, also, many other phenomena, from the creation of an embryonic German Army to the terrible fate of the tens of thousands of men groaning in the uranium mines of the Erzegebirge.)

A PRACTICAL PROGRAM

There are two things to note about this program. It is a practical program. There are no obvious miscalculations, such as the misreading of the United States that caused

the Kremlin's first grandiose plans to miscarry. In fact, such events as President Truman's reduction of American rearmament have already given the Kremlin every reason to believe that America is relapsing into a mood of business-as-usual. As the stalemate in Europe continues, the American opposition is undoubtedly expected to decrease.

On the other hand, this is not a program which can be countered by a mere Atlantic pact in which no member nation is genuinely strong. The Kremlin's conscious aims may be defensive, even for the long run. The Soviet program may take 5 or 10 or 15, or even 20 years to fulfill. But if this program is ever fulfilled, their new might will deeply influence the men of the Kremlin. They will be almost irresistibly tempted to use force to assist the spread of the "truth" of their new religion. And just because this time of great danger is still distant, the United States cannot afford relapse into drugged enjoyment of a false peace.

State Department's Left Wing

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of David Taggart Clark and editorial from World-Telegram of March 2, 1949:

FEBRUARY 25, 1949.

Hon. ROBERT HALE,
House of Representatives,
House Office Building,
Washington, D. C.:

May I express most fervent approbation of your most cryingly needed endeavor to obtain before fatally too late, a pro-American policy for China?

The near danger seems to me not pseudo-coalition but actual Communist government of all China. This would create such formidable peril to American security and future world peace that American Government ought forthwith to make unequivocal declaration, whether public or otherwise conveyed, that acceptance of such situation would be impossible. Although tolerating provisionally Mao's control north of Yangtze, it should immediately assure all necessary aid to whichever Nationalist leader, Chiang, Hsueh-Yueh, or other might seem best bet to contain Communists at or near Yangtze.

It should then again try to terminate civil war, perhaps offering Mao something for definite promise to install genuine parliamentary democracy in his area. We should then watch vigilantly the trial. It was a major blunder failing to follow English recommendation to divide country provisionally between the two forces.

Sole relevant question for American policy is this: In possible future clash, or threat of clash, with our Russian friends, in their own good time for attacking us, would Communist dictatorship in China side with them, with us, or stay neutral?

It is difficult to imagine Chairman Mao rallying to our side to save free capitalist democracy from Stalin's crusade. Had we caught him young enough, I incline to think, we might have made him one of the best Americans. Now, I fear, is much too late.

Although peasant revolution to emancipate a proletariat might appear topsy-turvy Marxism, Mao remains a social revolutionary convinced, sincerely as ever Lenin, of the holiness of his cause. We should have to take him on against us, beside whoever then were lord of Moscow. Very best we could hope, initial neutrality, would fail completely our real desideratum, preventing the war.

General Chennault's argument is incontrovertible. So long as we, with a friendly China, remain able to threaten Moscovites with a two-front war, they will never start it. But if Stalin should achieve his wish to replace the recent capitalist encirclement of communism by a counter encirclement of ourselves, capitalist stronghold of freedom, we may look for trouble should ever miscalculating Russians entertain motive to start it, to save their cause and their place in history.

Thus debacle in China, already major disaster for American people, holds potentiality of unparalleled catastrophe for them for freedom, and for all humanity. It increases whatever chances there may be of a third war and gravely diminishes our chances of winning it.

Earnestly I hope you and your group in Congress can successfully warn of our danger, and reverse recent dumbbell policy, or worse, in Asia of selling United States down the river.

Yours with greatest respect,
DAVID TAGGART CLARK,
Associate Professor of Economics,
Retired, Williams College.
GOSHEN, CONN.

[From the New York World-Telegram of March 2, 1949]

STATE DEPARTMENT'S LEFT WING

Roger Lapham, American economic cooperation chief for China, has told Congress $240,000,000 will be required to continue civilian relief for those areas of China still under Nationalist control.

This is little enough help for a loyal ally, in dire straits after 9 years of war. Refugees from the Communist advance have caused acute food shortages in China's coastal cities, and only outside aid can avert widespread starvation.

But if what remains of Nationalist China is to be saved from Communist occupation, money must be advanced to finance armed resistance.

Mr. Lapham, however, has gone as far as he can without a change of State Department policy; and there is no promise of that.

Congressmen who have discussed the Chinese situation with Secretary of State Dean Acheson gained the impression that he has accepted, hook, line, and sinker, the appeasement policy of the leftist underlings in his Department's Far Eastern Division.

That policy reduced Nationalist China to its present helplessness before the Red onslaught. Instead of changing it, Mr. Acheson apparently defends it. Instead of ousting the appeasers, he seems to be influenced by them, as his recent predecessors were.

Much that Mr. Acheson is reported to have told the Congressmen in defense of his position did not square with the record. Some of them took exception to his assertion that his wait-and-see policy had the support of our best-informed military men. If that is true, he was asked, why doesn't he release the long-suppressed Wedemeyer report?

Mr. Acheson answered lamely that this would not be in the public interest. It is known, however, that the Wedemeyer report did not support the State Department's policy, and this policy is at variance with Gen. Douglas MacArthur's cabled message to the House Foreign Affairs Committee a year ago. It said:

"The Chinese problem is part of a global situation which should be considered in its entirety. * * * It would be utterly fallacious to underrate either China's needs or her importance. For if we embark upon a general policy to bulwark the frontiers of freedom against the assaults of political despotism, one major frontier is no less important than another, and a decisive breach of any will inevitably threaten to engulf all."

When President Truman proclaimed his general policy against Communist expansion in announcing his Greek-Turkish program the State Department's Far Eastern Division was influential enough to make an exception of communism in China. As a result, on that one of the major "frontiers of freedom" a "decisive breach" has been made.

And the whole Asiatic front will be exposed to Red attack unless the President and Mr. Acheson bring State Department policy toward China into harmony with the Truman doctrine.

North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein, by request, an article by Mr. Blair Bolles on the North Atlantic Pact.

Mr. Bolles is director of the Washington bureau of the Foreign Policy Association and is a writer on international questions and has conducted various studies in the field of foreign relations.

The article follows:

WILL THE PACT SAVE PEACE?—BEHIND THE PLAN FOR A NORTH ATLANTIC ENTENTE LIES A LONG STORY OF TRAGIC FAILURE TO HALT WAR THIS WAY

(By Blair Bolles)

(The North Atlantic Pact, which involves one of the most fateful decisions in American history, is being discussed in a series of articles in the New Republic. Last week Capt. B. H. Liddell Hart, noted British military expert, analyzed the defensibility of western Europe, and in an editorial we gave our reasons for believing that the North Atlantic Pact deserves support. The article below, by Blair Bolles, offering an argument against the plan, is published for its intrinsic interest. The author is director of the Washington Bureau of the Foreign Policy Association and a well-known specialist in the field of international relations.)

The twentieth-century diplomatic boneyard is littered with dead defense treaties that failed in their purpose. They did not prevent the outbreak of war and, once war came, they did not always insure victory. The Triple Alliance, the Locarno Pact, and Hitler's mutual-assistance treaties were all slaughtered by gunfire along with the Entente of Britain, France, and Russia of pre-World War I and the guaranty of military support that Britain gave Poland on the eve of World War II.

Ignoring that disappointing record, President Truman is now recommending American participation in a North Atlantic defense pact, on the grounds that its existence might prevent an armed attack endangering our national security from ever taking place.

Such a treaty has great superficial attractions. Its supporters, like the drafters of previous defense pacts, assume that the show of intercountry solidarity will smother the aggressive tendencies of Soviet Russia. But the inevitable consequence of this kind of treaty making is to provoke the other side to make treaties of its own. The Triple Alliance was the direct cause of France and Russia making their military convention in 1894. And the psychology of nations today

is as it was 50 years ago. Nobody keeps the peace by an alliance race. Alliances simply inflate suspicion.

While past alliances have not staved off war, they sometimes have been useful in war when the pacts creating them called on the signers to give armed help at once to a partner when attacked. France supported Russia in 1914, and Britain declared war when Hitler attacked Poland in 1939. On the other hand, Italy not only ignored the Triple Alliance when World War I broke out, but joined the enemies of the Triple Alliance in 1915. Some pacts simply fade away like the treaties France signed with the Little Entente powers during the 1920's; either they represent no enduring common interest or they do not create the stability in international relationships that their sponsors seek.

The negotiation for the North Atlantic defense pact is the most questionable piece of unfinished business that Secretary of State Dean Acheson inherited from George Marshall. Although Marshall has gone, the administration is committed to it. President Truman espoused it both in his budget message and his inaugural address, where he announced his intention to "provide unmistakable proof of the joint determination of the free countries to resist armed attack from any quarter." Determination to resist attack is the basis on which the defense pacts of history have usually rested.

An apparently irreconcilable conflict between the powers of Congress and the wishes of Europeans blighted the conversations aimed at the creation of the new alliance which opened at the State Department on December 10 among Robert A. Lovett, then Under Secretary of State, and representatives of Canada and the signers of the Brussels Treaty of last March 17—Britain, France, Belgium, the Netherlands, and Luxemburg. These negotiations are still far from their end. The Europeans want an absolute guaranty that America will go to war the moment any of them is attacked. But since the Constitution authorizes Congress alone to declare war, leading Senators have advised the State Department that they will not stand for an automatic guaranty. We can give Europe assurances of interest but no promise to fight.

A series of deeper questions overshadows that practical difficulty. Considering the inability of America to go to war automatically, does the prospective treaty's capacity for exciting the Soviet Union to countermeasures exceed its ability to strengthen the west to resist the Soviet Union? Can it bind us to support of reactionary colonialism which strengthens the Soviet's appeal? Since the Dutch would surely be our colleague in the treaty, one may ask whether we would be urged to go to war to save the Dutch from the consequences of some imperialistic stupidity like their attack on the Indonesian Republic. One may ask also whether the draft articles would be fatal for the United Nations, although they are rich in references to that institution. Above all, would the treaty make the cold war a permanent feature of world politics, by creating an insuperable barrier to the eventual establishment of east-west tolerance?

The outline treaty which Lovett handed on to Acheson has a novel feature missing from the useless defense treaties of the past. Following the wartime pattern set by Britain and America in the Combined Chiefs of Staff Committee and adopted by the Brussels treaty powers in their Chiefs of Staff Committee, the treaty would set up a small bureaucracy of international committees, through which the Allies could make political and military plans against every conceivable eventuality and adjust themselves jointly to day-to-day developments in international relations. Thus the treaty not only calls upon the signers to support one another in emergencies but to cooperate intimately with one another in peace and war. It implies economic as well as military cooperation, for no chiefs of staff can plan a war without planning the use of the resources available to them.

The treaty is modeled also after the Inter-American Defense Pact signed at Rio de Janeiro in September 1947. That treaty has a look of strength and the quality of weakness. It provides that an armed attack by any state against an American state shall be considered an attack against all the American states—a thesis taken over wholesale for the North Atlantic alliance. Yet no signatory of the Rio Pact is required to use armed force without the consent of its national legislature, although the treaty states that decisions reached by two-thirds of the members concerning any breach of the peace are binding. The Rio Pact requires its signers to consult, and no more.

Like both the Rio and the Brussels treaties, the text of the pending pact states that the alliance depends on the United Nations for its existence. As a regional treaty, its framers invoke articles 51 and 52 of the UN Charter which authorize member nations to make regional arrangements and set up regional agencies and to defend themselves collectively if attacked. Article 51 exists in the Charter because the United States delegation to the San Francisco Conference in 1945 put it there. Their thoughts dwelt then on the American Republics.

But last June in a speech to the Senate, ARTHUR H. VANDENBERG, recommending a regional pact, complained that we had been too often stranded on the veto rocks of the United Nations. If the alliance is intended to circumvent the veto power in the Security Council, its sponsors cannot be taking seriously the requirement of the Charter that members of regional alliances clear their actions and decisions with the Security Council. Actually the Charter makes the old-fashioned defense alliance futile, since, to quote the State Department as of 1945, "no enforcement action may be taken under regional arrangements without specific authorization of the Security Council." The alliance can operate only by defining the powers of the UN to suit itself.

The treaty differs from its predecessors also in that it encourages standardization of the weapons of the alliance members and provides for the distribution of arms to the members at American expense. Thus it embodies features of lend-lease and the Marshall plan. A number of western European countries have asked America for weapons during the past year on the ground that inadequate military strength prevents the development of the sense of national confidence which encourages investors to put money into capital enterprise and thus get on with the Marshall plan. Some of these requests, as that of the Norwegians, are certainly sincere.

Yet this military effort to make the Marshall plan work might harm the plan unless the administration can control the American economy more strictly than it does now. America lacks material to equip her own armed forces at authorized strength. Despite its hullabaloo over the need for an air force of 70 groups, the Air Department is able to arm adequately only 34 of the 55 groups that now comprise it. The need for steel in peacetime industries is so much greater than present production that President Truman, in his message on the state of the Union, threatened the industry with his plan to have the Federal Government set up steel mills. Congressional approval of the St. Lawrence seaway agreement and construction of the power plant at International Falls would enable Canada to manufacture some arms for Europe. But the plant would not go into operation for 5 years.

The scarcity of arms gives the European governments with whom the United States has been negotiating the character of heirs to a moderately wealthy man. Each heir hopes the beneficiaries of the legacy will be limited in number. If there is not going to be a mountain of weapons, the Brussels-Pact powers want what is available for themselves alone. This again produces conflict. The United States is said to want the membership of the alliance to be wide, to embrace, now at least, the Scandinavian powers (including Iceland, and probably excluding Finland) and Portugal, and perhaps in time to extend over the whole of non-Soviet Europe, taking in Yugoslavia, Italy, Greece, Turkey, Spain (if this can be wangled over the sensibilities of France and the British Labor Party), and western Germany, besides the countries which have signed the Brussels pact.

To dissuade Norway, Denmark, and Sweden from organizing their own regional alliance separate from the North Atlantic Pact, the State Department has announced that nonmembers of the Atlantic alliance will not receive arms. But Washington has been giving planes, tanks, machine guns, and artillery for 2 years to Greece and Turkey without benefit of alliance, and the conclusion of the North Atlantic Pact, if it ever is concluded, would not mean cutting off Greeks and Turks without another bullet. Those who get the weapons may be asked to give up bases in return, but at the moment we have rights in Portuguese bases, while we have not given Portugal arms for the privilege. If America assumed an obligation to furnish every member of the alliance with arms by signing the pact, she could not live up to it. At that point we would have given the Soviet Union justification for the complaint that it was being encircled, without having strengthened ourselves to cope with the policies the U. S. S. R. might adopt in reprisal.

The belief that the United States should ally itself in a military treaty with western European powers is a hang-over from the war scare last winter and spring which led to the demand for a permanent universal military-service program, a draft act, and big appropriations for the Defense Department. President Truman's new budget, limiting the military agencies to $15,000,000,000, has signaled the end of the hysterical period during which Washington seemed to believe that national military power provided the main assurance of national survival. Having rejected that notion at home, we seem to be proffering it abroad.

The administration began to think seriously of the pact after the Communist coup d'état in Czechoslovakia at the end of last February. Bernard Baruch and John Foster Dulles had proposed such a treaty during the early days of the congressional hearings on the Marshall plan, and the State Department publicly expressed interest when Ernest Bevin told the House of Commons that the British Government intended to negotiate a defense alliance with the Benelux powers and France. That negotiation for a 50-year compact led to the signing of the Brussels Treaty on March 17, the same day President Truman addressed Congress and asked for a peacetime draft in order to give America what Secretary Marshall called a "military posture." Noting the action in Brussels, the President said:

"This development deserves our full support. I am confident that the United States will, by appropriate means, extend to the free nations the support which the situation requires. I am sure that the determination of the free countries of Europe to protect themselves will be matched by an equal determination on our part to help them do so."

The pact thereupon became a dead subject for President Truman until his budget message of last January 10. All others directly concerned with the treaty idea have maintained an attitude of secrecy, with the result that the American public is uninformed and confused about one of the most momentous undertakings in foreign policy

which a President and a State Department have ever seriously entertained.

Inspired stories about the pact appeared in a few large papers between March 1948 and January 1949. They served only to befog the issue. Those who read the stories grew bored with the subject before it came to a boil, and those who did not read them have not been stirred to excited interest by the State Department's one comprehensive statement on the subject, issued less than a week before the inaugural address.

A good deal of activity has taken place behind that screen of secrecy, for which the American Government is not primarily responsible. Secretary Marshall in the middle of last spring recommended to Senator VANDENBERG and his colleagues on the Senate Foreign Relations Committee that they push through the Senate a resolution encouraging the administration to negotiate a regional-defense treaty. From the suggestion was born the Vandenberg resolution, which the Senate passed on June 11 by 64 to 4. The administration took that vote as America's repudiation of her traditional opposition to balance-of-power arrangements, but the statements during the debate on the resolution by even the most ardent advocates of regionalism and anti-Sovietism, including Senator VANDENBERG, hardly bear such interpretation.

VANDENBERG told the Senate that a pact negotiated under the prod of his resolution would not step outside the final authority of Congress to declare war. And Senator HENRY CABOT LODGE, Republican, of Massachusetts, said that "the purpose of the resolution is to show that we are in sympathy with the broad trend of strengthening the freedom-loving countries, but it does not commit us to do anything definite."

Despite that vagueness, the State Department after June 11 arranged for conversations with Canada and the Brussels powers about ways and means of creating an Atlantic alliance. The Defense Department assigned an observer to the military committee of the Brussels powers, and early in the summer the observer, Maj. Gen. Lyman L. Lemnitzer, became an active participant in the committee's discussions. After those preliminaries, the serious negotiations began on December 10. On January 14 the State Department admitted the public to the secret with a long argument about the desirability of the pact.

Assuming that the need for armaments in western Europe is real, the United States could choose between two courses each of which would more effectively keep the peace than a treaty of regional defense especially a treaty which cannot guarantee American action at the moment a treaty member is imperiled. The heart of the security problem is to find a policy which will enhance security and at the same time provoke the least possible counterpressure which endangers security. The conclusion of a North Atlantic pact would at once invite the Soviet Union to establish a competing system, probably including China if a Communist Government becomes supreme there.

The first alternate course is to distribute weapons from America to individual countries after making agreements for the standardization of arms and after broadening the existing Anglo-American Combined Chiefs of Staff Committee to include representatives of all the arms recipients. That would strengthen our friends militarily and enable the friendly western powers to consult continuously about military problems without formally creating an impervious bloc that would barricade future progress toward the resumption of world-wide cooperation. It substantially safeguards the purpose of the pact without burdening the West with the weaknesses of the pact.

The second alternate course is to negotiate a pact which provides for universal membership, following the recommendation of Hamilton Fish Armstrong, editor of Foreign Affairs. A pact of limited membership would be in effect only an extension of the Truman doctrine. But a wider instrument would lose the character of a political weapon aimed at some portion of the world. It would stand instead as the foundation for the system of world-wide peace enforcement which the authors of the United Nations Charter intended to create but which they have never been able to achieve.

Flood Control

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. WILLIS. Mr. Speaker, the Civil Functions Subcommittee of the House Committee on Appropriations is holding hearings on a measure to provide funds for flood-control matters. Flood control, soil conservation, and erosion are, or at least should be, considered essentially related. These are important national problems. They are so vital to my State and district that I take this opportunity to quote from the following statement which I made before the subcommittee:

Mr. Chairman and gentlemen of the committee, there is no State in the Union which has the problem of waterway improvement in such varied aspects as does the State of Louisiana. We are on the one hand wonderfully blessed with a great asset and on the other hand we live in almost constant dread of the fury which flood can heap upon us. Water is, at times, our servant, and, at other times, our master. To the extent that our waters are abundant with fish, shrimp, oysters, and other resources, and our rivers, bayous, and other streams are invaluable channels and provide natural traffic for commerce, such waters are a blessed servant; but when, because of inadequate planning, the waters get out of control they become our master, heaping upon us untold misery and damage.

Again, perhaps, in no place within the State of Louisiana, is our water problem more varied than within the Third Congressional District, which I have the pleasure to represent in Congress. If, in the Third District of Louisiana, we had simply the problem of flood control, its solution could probably be fairly easily coped with; but when we add to our flood problem the needs of navigation, the necessity for exclusion of salt water, the great need for irrigation, and our problems of public health, then our situation becomes extremely complex and the solution is not an easy one to work out, either from an engineering or from an economic standpoint.

Mr. Chairman, Louisiana is the dumping ground for the floodwaters of 31 States of the Union. A vast area of the Third District of Louisiana borders on the Gulf of Mexico. It may fairly be stated, therefore, that the problems of the lower Mississippi Valley, especially in Louisiana, are many times greater than those of any other single one of the 31 States whose floodwaters pour through Louisiana, thence to the Gulf of Mexico; and, because of its proximity to the Gulf, the problems in my district are more acute than those in the other districts of Louisiana.

Mr. Chairman, your duty is to recommend to the Congress the appropriation of adequate funds for flood control and related matters to meet the needs of the lower Mississippi River and its tributaries. I know that you are sympathetic with our problems, and the question is what amount should be appropriated. Your task in finding a solution is really very simple. The Corps of Army Engineers has recommend the sum of $104,000,000, while the Bureau of the Budget has placed a limitation of $70,000,000 for construction and maintenance on the lower Mississippi River and its tributaries. The Corps of Army Engineers has had vast experience in this field, and based upon its splendid performance for over a century it seems to me unthinkable that you would not follow its advice instead of the advice of the Bureau of the Budget.

In the Flood Control Act of 1944 and in the River and Harbor Act of 1945, the Army engineers were directed to make preliminary examinations and surveys of all streams in Louisiana south of the latitude of Boyce, for all beneficial uses of water. These called for investigations of all such streams and bayous for flood control, rice irrigation, navigation and drainage, and for the prevention of stream pollution, and salt-water intrusion. Under their general authority, and in particular under the provisions of these acts of Congress, the Army engineers have held public hearings and have made preliminary examinations and recommendations for numerous needed projects in my district, and other projects are contemplated. Unless this committee adopts the recommendations of the Corps of Engineers and sets in motion the appropriation of $104,000,000 many projects through the lower Mississippi area, and in particular in my own district of Louisiana, which the people have been led to believe will be undertaken and completed, will be seriously jeopardized.

I, therefore, associate myself with the proponents of this measure and urge you with all there is in me to favorably report it to Congress.

I thank you for the privilege of allowing me to give my testimony on this most important piece of legislation.

I trust, Mr. Speaker, when this measure reaches the floor, that it will command the careful consideration of the House and receive its unanimous approval.

Fearmongering With the Nation's Health

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial from the Capital Times, of Madison, Wis.

On March 1 the well-known liberal editor of that paper, William T. Evjue, very ably exposed the tactics of the American Medical Association in the current discussion on national health insurance. His editorial follows:

FEARMONGERING WITH THE NATION'S HEALTH

The politicians of the American Medical Association are making the same mistake that the entrenched financial interests have always made in this country whenever a political reform is discussed. They are trying to scare the American people away from compulsory health insurance by yelling "Socialism and regimentation."

Their chief propagandist, Dr. Morris Fishbein, editor of the AMA Journal, is going up and down the country telling bogy stories of what will happen under President Tru-

man's health program. Not satisfied with Dr. Fishbein's production of hair raisers, the AMA has hired a San Francisco public-relations firm to help curdle the public's blood. It is expected that this advertising campaign will cost upward of $3,000,000, one of the biggest selling jobs ever staged.

The AMA is having trouble convincing many of its members that they should invest in Fear, Inc. The $25 assessment voted against the membership is meeting with considerable resistance and would meet with a lot more if more of the doctors had the courage to defy the organization and stand by their personal convictions. The other day the Brooklyn Medical Association, the largest local chapter in the Nation, voted against the assessment.

The AMA has also endorsed the work of the National Physicians Committee, a propaganda organization that floods the country with horrible tales of how national health insurance will mean that precinct committeemen will replace the doctors in the operating rooms of the hospitals. NPC's idea of discussing the issues involved is to call the proponents of health insurance stupid and then rush into a shrieking declaration that health insurance means communism.

It would seem that the AMA would have learned by now that the American people don't scare easily. Millions of dollars were spent to convince us that the Social Security Act would mean regimentation and a loss of individual freedom and expression. Americans still remember the dire warnings that social security would deprive them of their names and substitute a number on a dog tag to be worn around the neck. Similar fearmongering marked the attempts to defeat measures against child labor, to insure the right of collective bargaining, to establish the REA, and other reforms.

The scare technique may work for a time, but ultimately the people see through it. The majority of the American people know that our present methods of providing medical care are inadequate. And they don't need to be told by any Government official or anybody else. They know from their own experience.

Compulsory health insurance will not, as the AMA fear mongers say, mean the regimentation of doctors or political medicine. No doctor need belong to the plan if he doesn't want to, no more than he need accept a patient under a voluntary health-insurance program. And a doctor who is under the plan can still carry on private practice.

Health insurance merely provides a different method of paying for medical, hospital, and dental care—a method based on the sound insurance principle of pooling the funds of all of us to protect the individual who suffers a loss. It is the same principle we use in establishing fire protection by taxes collected from everybody.

Compulsory health insurance is a vital and revolutionary step in our social development. It is one that requires sober consideration and lengthy discussion. Hysterical name calling on either side will benefit no one.

State Rights and State Responsibilities

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of an address given by me before the Nebraska Legislature at Lincoln, Nebr., on Friday, February 18, 1949. The address is as follows:

Mr. President, there is a passage of Scripture which says that the wicked shall continue in their ways. Mark Twain, once called upon to explain that passage, replied it probably meant that they would study law and eventually go to some legislative body.

I am not here to jest about legislative bodies, but rather to praise them. I do not agree with Mark Twain. The high quality of the Nebraska Legislature is something that has been most impressive to me. The vast majority of the men and women who have served in this chamber have been a credit to our great State. It has been a group of individuals of integrity, character, and intelligence. The number of times that this legislature has said "No" to proposals that are not for the common good is far, far greater than many citizens realize.

We always need to remind ourselves of the importance of the sovereign States in our Federal Union. Local self-government is essential to the maintenance of liberty. If a function to be performed is necessarily a governmental function, it should be handled on the State level rather than on the national level, if that is reasonably possible. Likewise, the State should not assume the responsibility for a matter that can be handled by our local communities. This means better administration, less waste, and lower cost, fewer rules and regulations. It means matters must be handled with due regard for the peculiar situation of the people who pay the bill and who must live under that government.

A government that is close to the people means not only economy but honest and understandable administration. National legislation in any field often means not only greater cost but cumbersome and sometimes oppressive administration because of the very diversity and complexity of this Republic of 48 States. Laws and regulations suited to fit the needs of New York City or Los Angeles may not be suited to Auburn, Beatrice, Hastings, McCook, or Lincoln.

The founding fathers, in designing our Federal system, very wisely provided for the continuance of sovereign States with residuary powers and a national government of delegated and limited powers. We must never lose sight of the fact that while Federal jurisdiction means Federal responsibility, likewise State rights mean State responsibilities.

If, for instance, it is determined that the education of our children is to be controlled by the parents, the local communities, and the States, the responsibility follows. Our schools should be improved. The salaries of our teachers should be sufficient to enable them to maintain a dignified leadership in our communities. The close tie between home and school should not be loosened by the hand of the Federal Government. This can be achieved best through local control under which we have made such remarkable progress during the last 150 years.

Failure of the National Government to assume a fixed responsibility shifts added burdens to the States, and vice versa. To illustrate, the first responsibility of the National Government is to provide for the common defense. But if that were not assumed by the Government in Washington, protection against invaders and turmoil within would be a large item in the budget of all the States, more especially would it be an item for those States on our borders and seacoasts. It is not conceivable that such an extreme situation would prevail; of course, I use it merely as an example.

We recognize that the jurisdiction of the National Government extends beyond those activities that are specifically mentioned in the Federal Constitution. Our interstate rivers, for instance, know no State boundaries. Flood-protection works in one State may bring protection to the citizens of many other States. Land in one State may have to be sacrificed for the exclusive benefit of other States. Hence, the Federal Government must enter the picture and usually pay all or part of the cost of these projects. However, it should not follow that because the National Government must assert jurisdiction over those aspects of such developments that are definitely interstate, that the hand of the National Government should extend to all of the activities, local in character, emanating from such development or that the States should abandon their jurisdiction over such matters. The fact that the National Government has had to assume a wider and greater jurisdiction throughout the years is no reason why we should abolish the States or enlarge the jurisdiction of the National Government unless it is absolutely necessary.

The influence of the National Government is felt within the walls of this State capitol in the administration of joint Federal and State programs. Without a doubt, many of the Federal regulations imposed in such programs require a greater expenditure by the State than would be necessary if the State were given a freer hand. This problem has its repercussions in activities handled solely by the States also. As a member of the Congress I always appreciate the detailed suggestions of State officials on these problems. Inasmuch as national legislation must meet the conditions prevailing in all the States, those suggestions cannot always be translated into results, but they always merit the fullest exploration.

The burdens resting on the National Government in our time are most heavy. Huge outlays, running into billions of dollars, are necessary to provide for the defense, to care for him who has borne the battle, to implement our foreign policy, to carry on in the many fields where the National Government has already entered, to systematically pay the national debt, and to pay the interest thereon. The President of the United States has asked the Congress for $42,000,000,000. We hear a lot these days about legislating for the welfare of the citizens and to provide for their security. I believe in that, and I further believe that the solvency of the United States Government is the most important factor in such a program. Bankruptcy and repudiation on the part of our National Government would bring about the greatest degree of insecurity for every individual that the human mind can conceive.

No greater service can be rendered to our beloved Republic by those connected with the State government than the championing the cause of State rights and State responsibilities. By the same token, the Congress of the United States, in view of these heavy burdens, should certainly go slow in extending the jurisdiction of the National Government for the sake of social reform, even though the objectives of those reforms are most laudable.

I propose a closer liaison between State and National legislators. Efforts should be directed toward—

1. The simplification of the administration of already established joint Federal and State programs in order to promote economy and efficiency and lessen the burdens on our citizens.

2. The determination in as much detail as possible of just where the responsibilities of the State government shall end and where the National Government's responsibilities shall begin in any given field.

I believe that these efforts would promote much worth-while public discussion and bring about better government under this, our Federal system.

John Nicholas Brown Leaving

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the resignation of John Nicholas Brown, the Assistant Secretary of the Navy for Air. All Americans interested in national defense feel that we have lost one of the finest executives this country has ever known. Great of stature, great of mind and heart, his cool, calm judgment will be sorely missed in our councils of defense.

The following is an excerpt from an article written by Mr. Arthur Krock in the New York Times of Sunday, March 6, 1949:

BROWN GOING QUIETLY

The third of the Pentagon trio is leaving quietly, of his own volition, with no critics in evidence. Yet, John Nicholas Brown, the Assistant Secretary of the Navy for Air, entered on his duties when the struggle over unification was at its height. Because naval aviation was the core of that struggle, his calm temperament and objectivity led to many of the compromises that were adopted. He effectively supported the Navy's building program of jet aircraft for carrier use, encouraged all-weather flying, enthusiastically developed the Naval Air Reserve and, as chairman of the Board for the Correction of Naval Records, employed his deep humanitarianism against injustice.

Admission to United States of Parents of American Citizens

EXTENSION OF REMARKS
OF
HON. ROBERT L. COFFEY, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. COFFEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Senator MYERS, of Pennsylvania, on his bill (S. 1163) to amend the Immigration Act to facilitate the entrance into this country of parents of American citizens if the parents are otherwise eligible for admission, which reads as follows:

This bill merely extends to fathers and mothers of American citizens the same opportunities for reasonably expeditious immigration into the United States which are now accorded to minor children and to wives of American citizens and, in certain cases, to husbands.

The present statutes permit the immigration outside of quotas of minor children and wives and, in marriages occurring before January 1, 1948, of husbands, providing these relatives are otherwise eligible for admission to this country. The present statutes also provide a preference status for parents to come to this country, but the preference, of course, is under the quota regulations.

According to testimony of high officials of the State Department's Visa Division before a staff committee on immigration and naturalization last July, the parents of citizens residing in a number of foreign countries which have low quota allowances, even with their preferential status, are required to wait 7 or 8 years before they can be reached.

This situation has been made even more acute by virtue of the fact that during the war, immigration virtually ceased and even the few quota numbers provided under present laws were not used and subsequently expired—thus extending for additional years the period of delay so agonizing to those who yearn to join their families in this land of freedom.

From the testimony taken at that committee staff hearing on July 15, 1948, I am inclined to believe that the State Department would be willing to support legislation of this sort.

I have been urged, as I know many other Members of Congress have been urged, to introduce legislation to increase the quota of a particular nation. The desire is based primarily on the difficulties of American citizens in bringing to this country various categories of close relatives, but particularly fathers and mothers.

Due to the pattern of our immigration experience over the past few decades I believe this bill would accommodate a reasonable number of worthy cases so as to serve a meritorious cause without causing any strain on the housing or employment opportunities for American citizens.

Most of those who would be eligible to be admitted under this bill would undoubtedly live with their sons or daughters in this country, and it is a safe assumption, I believe, that many would be at that stage of life where they would not be competing for employment with Americans. It is taken for granted, of course, that there would be full provision made for their care by the families involved.

I am in hearty accord with the provisions of this proposed legislation, and I have just introduced a similar bill in the House, upon which I do hope early and favorable action will be taken.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks, I include, by request, the following address by Prof. Frank Nowak over the Justice for Poland radio program sponsored by the western Massachusetts branch of the Polish-American Congress, Station WSPR, Springfield, Mass.:

Fellow Americans, twice in a single generation the people of America have been called upon to wage a world war for the cause of humanity. Their generous response and great sacrifice on each occasion brought overwhelming victory, yet in each case we lost the peace and failed to gain the objective sought.

We, who were inspired to wage a just war for the peace and security of all mankind as solemnly outlined in the Atlantic Charter, were in the course of the war troubled and perplexed by our leaders who on the eve of victory dared to betray our war aims and to play fast and loose with the conscience and honor of the Nation.

In the First World War we lost the peace when our leaders failed to use the League of Nations for the purpose intended.

In the Second World War the record was even worse. Hardly had the principles of the Atlantic Charter been proclaimed in 1941 and accepted by 22 nations including the Soviet Union, when they were flagrantly violated by Stalin, Churchill, and Roosevelt in the very first test case of Poland. The people of this gallant country, who were the first to fight Adolf Hitler and who suffered heavier losses in men and material than any other country in proportion to population, were secretly and then openly betrayed by their allies.

The fate of Poland became the touchstone of the validity of the principles of the Atlantic Charter and at the same time demonstrated to the world that Stalin, like his former colleague in arms, Adolf Hitler, signed treaties for the purpose of deceiving friend and foe alike. By insisting that he wanted a strong and independent Poland, Stalin convinced his gullible allies at Tehran and Yalta that the best way of maintaining a strong and independent Poland was to cut the country in two along the Ribbentrop-Molotov lines of 1939. What is more, he induced Prime Minister Churchill and President Roosevelt to subscribe to this shameful deal with Hitler in defiance of our professed war aims.

No doubt the democratic leaders imagined that for a price they had converted Stalin to their point of view. Even at Yalta they did not realize that they were being taken into the Russian camp. Wishful thinking had brought us to another Munich. The greatest military and naval power in the world betrayed an ally to appease Stalin. Poland at Yalta, like Czechoslovakia at Munich, became a tragic symbol of the failure of American diplomacy to achieve peace in our time. But the rape of Poland was but the beginning. Other countries, including China, were soon to suffer the same fate. Yalta was, indeed, a colossal blunder that lost for us the peace.

The attempt to whitewash our leaders by adducing military necessity as the cause of our blundering policy is plausible but not convincing. The labored argument is weak and apologetic. It will not convince any man of sense and it will not conceal from the American people the total failure of our diplomacy to achieve a lasting peace.

Robert Sherwood, in his book Roosevelt and Hopkins, An Intimate History, reveals the close collaboration of these two men in directing American policy. There is abundant evidence to show that Harry Hopkins was largely responsible for President Roosevelt's complete misapprehension of the character of Joseph Stalin and the trend of Russian policy.

The President never tired of repeating that "Harry got along with Stalin like a house-afire" and he trusted Harry's judgment. The stature of Harry Hopkins as a statesman is revealed by his own estimate of the achievements attained at Yalta. Said he:

"We really believed in our hearts that this was the dawn of a new day we had all been praying for and talking about for so many years. We were absolutely certain that we had won the first great victory of peace. * * * The Russians proved that they could be reasonable and farseeing, and there wasn't any doubt in the minds of the President or any of us that we could live with them and get along with them peacefully for as far into the future as any of us could imagine. * * * We felt sure that we could count on him (Stalin) to be reasonable and sensible and understanding."

When a well-informed American Ambassador to Moscow, William Bullitt, in 1941,

tried to warn President Roosevelt regarding the true character of Joseph Stalin and insisted on written agreements regarding lend-lease to Russia, the President replied.

"Bill, I don't dispute your facts. They are accurate. I don't dispute the logic of your reasoning. I just have a hunch that Stalin is not that kind of man. Harry says he's not and that he does not want anything but security for his country, and I think that if I give him everything I possibly can and ask for nothing in return, noblesse oblige, he won't try to annex anything and will work for a world of democracy and peace."

The gullibility of Harry Hopkins and a hunch of President Roosevelt that Stalin could be honest and decent if overwhelmed with favors brought us on the road to Tehran, Yalta, and ruin. When it seemed reasonable that Stalin should take half of Poland and all of Manchuria, Soviet aggression and expansion had been given the green light and was not to stop until it encompassed one fifth of the earth's surface, extending from Berlin, Germany, to the Yangtse River in China. Nor is the end yet in sight.

The supreme irony of our position today is that while we scrupulously continue to respect the terms of the agreements reached at Tehran, Yalta, and Potsdam, Stalin has broken every one of the agreements. Surely the time has come to put the record straight and return to first principles. These agreements are but a snare and a delusion. They are a dishonorable betrayal of democratic tradition and have lost for us the confidence of the freedom-loving nations of the world.

If the denunciation of these agreements, already broken by Stalin, is termed Utopianism and Idealism, what, may we ask, is the meaning of the word Realism? If we can not convert Stalin who believes might is right and that power confers authority without responsibility, is it realism to deny our democratic birthright and accept the philosophy and frame of reference of a totalitarian dictator? That was the tragic mistake made at Munich, Tehran, and Yalta. That is the road to further appeasement, dishonor, and disaster. Such a policy is not realistic and it can never insure peace.

By returning to the principles of the Atlantic Charter and insisting upon a policy of firmness, we may yet convince Stalin of the futility of aggression and war. If he is still unconvinced, the challenge will be met. It is a calculated risk based on realism of a high order. By repudiating the errors made at Tehran and Yalta, America can once more regain her position of moral leadership among the nations of the world. In time of crisis, there will be no hypocrisy in our appeal for friends and allies. Our appeal will have a sound moral basis and will take into account those indefinable imponderables which inspire men inside and outside the iron curtain to continue the fight for a permanent peace based on the rights of man and respect for law.

Who will deny that at the present time the influence and power of the United Nations organization is also primarily based on moral leadership? It will deserve the homage of mankind only so long as it stands firm on questions of principle outlined in the preamble of the statute of organization. The United Nations is the hope and symbol of world organization based on respect for law; a public forum where all states, great and small, can obtain a hearing. But here also, Stalin has sought to impose his view that power confers authority without responsibility. His 29 votes in the Security Council have prevented effective action by the United Nations organization, although the Soviet Government has failed in its attempt to choke off honest criticism and expression of opinion. Debate in the public forum, however acrimonious, has clarified the issues in the ideological and political struggle between the east and west. World opinion is being crystallized, even when the United Nations lacks the power to enforce its decisions.

The world is becoming convinced that Soviet aggression can be stopped only by a show of superior power. Most men agree that if America is strong, the risk of war will be lessened, the United Nations will be immeasurably strengthened, and the nations behind the iron curtain can hope for survival. Once more the greatest military and naval power in the world, the United States is in a position to correct the mistakes made at Tehran and Yalta by uniting the liberty-loving nations of the world in a concerted effort to achieve a permanent and a just peace.

Farmers Union Resolutions

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. HULL. Mr. Speaker, the annual convention of the Wisconsin Farmers Union was held at the city of Eau Claire from February 18 to February 21. It was one of the best conventions held by the farmers union since its organization. The farmers union has been steadily growing in both local unions and other membership and now has an enrollment of over 20,000. The convention was addressed by many prominent speakers, and various topics of interest to Wisconsin agriculture were ably discussed by the delegates present as well as by the guest speakers.

Through the courtesy of K. W. Hones, who has long been the president of the Wisconsin Farmers Union, I have received a copy of the resolutions adopted at the Eau Claire convention, covering many of the topics of discussion. They are well worth the attention of the Members of the House of Representatives and others interested in the welfare of agriculture and of the great dairy industry of the Northwest.

The resolutions adopted are as follows:

Resolution on support price on butterfat

Whereas the only present governmental support price on dairy products is on butter; and

Whereas fluid milk is sold on the basis of butterfat content and butterfat is used or contained in many other products such as cheese, powdered milk, condensed milk, ice-cream mix, etc., and the support price on butter alone does not react to the benefit of many dairy farmers and communities in which butterfat is used for such other products, and the support price should, therefore, be upon butterfat instead of butter for the support of dairy industry in general; and

Whereas the dairy farmer is facing increasing costs of production, including taxes, insurance, cost of machinery, repairs on machinery and buildings, tractor and automotive fuels, building material, fertilizers, hired labor, and feeds, such costs having increased from one-third to one-half during the past 3 years; and

Whereas in addition to previously enumerated conditions that have affected all dairy farmers, many have faced great losses due to dairy plant financial difficulties and closings caused by decreasing market trends or shifts in comparative prices as between various dairy products competing for butterfat market; and

Whereas many dairy farmers have had a great loss in dairy herds due to various diseases such as Banks, mastitis, shipping fever, etc.; and

Whereas for the past 2 years there have been serious drought conditions in northern Wisconsin which have caused great losses of new seeding, crops, and feeds necessitating many dairy farmers to cut down on herds by reason of exorbitant costs of shipping in out-of-State hay and feeds; and

Whereas by reason of all of the foregoing conditions, the Wisconsin dairy farmer is in desperate need of adequate support price for his products; and

Whereas by reason of the foregoing conditions, the present support price on butter is too low and does not solve the problem of the general dairy farmers as well as would a reasonable support price on butterfat: Therefore be it

Resolved, That the delegates attending the nineteenth annual convention of the Wisconsin Farmers Union, meeting in Eau Claire, Wis., February 18–21, 1949, do go on record in favor of the National Farmers Union program for full parity; and be it further

Resolved, That milk and dairy products be made a basic commodity in the Government's price-support program; and be it further

Resolved, That copies of this resolution be sent to the National Farmers Union officers, the United States Secretary of Agriculture, and to Wisconsin United States Senators and Congressmen.

Resolution on Federal oleo tax

Whereas according to press stories the Eighty-first Congressional session will consider bills to repeal the Federal tax on oleomargarine; and

Whereas the enactment of such repeal legislation will jeopardize the economic welfare of dairy farmers in Wisconsin and other States; and

Whereas dairy farmers are being hard pressed now because of increased costs and lower prices for their products; and

Whereas the dairy farmers of the Nation have a tremendous investment of capital in their farms which will be jeopardized through unfair competition from the oleomargarine industry; and

Whereas the oleomargarine industry has been attempting for years to seduce the consuming public to buy their products by imitating dairy butter in color and through artificially fortifying their products with vitamins; and

Whereas dairy farming is one of the soundest methods of promoting soil conservation: Therefore be it

Resolved, That we the delegates attending the nineteenth annual convention of the Wisconsin Farmers Union, held at Eau Claire, Wis., February 18–21, 1949, do petition our congressional representatives to vote against the repeal of the Federal oleomargarine tax; and be it further

Resolved, That we hereby request our congressional representatives to introduce legislation which will prohibit the use of yellow or allied yellow colors in the use and sale of margarine, and butter substitutes.

Resolution on tariff on imported butter

Whereas announcement has been made that the United States State Department is recommending that the present tariff of 14 cents per pound on butter be cut in half to permit increased importation of Danish butter; and

Whereas at present the tariff on the first 50,000,000 pounds of butter imported from Denmark during the months of October through March is only 7 cents a pound; and

Whereas this proposal by the State Department, if adopted, would seriously harm the American dairy industry: Therefore be it

Resolved, That the delegates attending the nineteenth annual convention of the Wisconsin Farmers Union, held in Eau Claire, Wis., February 18–21, 1949, do go on record as opposed to the recommendation of the State Department to cut tariffs on imported butter; and be it further

Resolved, That a copy of this resolution be sent to Secretary of State Dean Acheson and our congressional representatives.

Resolution on protection against losses from weather

Whereas present Nation-wide weather elements have created conditions that will wipe out many farmers, especially younger farmers, including many GI's; and

Whereas droughts, floods, unprecedented frost, and snow, particularly in 1948, have seriously endangered agriculture in the areas affected: Therefore be it

Resolved, That we, the delegates attending the Nineteenth Annual Convention of the Wisconsin Farmers' Union, held in Eau Claire, Wis., February 18–21, 1949, do petition the first session of the Eighty-first United States Congress to create a special bureau under the Agricultural Department to do the following: To insure areas for all losses incurred by farmers other than those which are man-made. The farmers in the affected areas should be subsidized until they are self-sufficient. And be it further

Resolved, That Congress take immediate steps to help out the affected areas by providing a Federal agency to float long-term low-interest loans to save stricken farmers from coast to coast.

Resolution on excess-profits tax

Whereas profits of big business and monopolies are reaching an all-time high; and

Whereas high profits will, if left to continue to rise, endanger the buying power of the average consumer; and

Whereas our public debt continues to rise from year to year: Therefore be it

Resolved, That we the delegates assembled in annual convention at Eau Claire, Wis., February 18–21, 1949, go on record in favor of reenactment of the excess-profits tax; therefore be it further

Resolved, That a copy of this resolution be sent to our United States Senators from Wisconsin and to our Congressman.

Resolution to abolish electoral college

Be it resolved, That the Wisconsin Farmers Union, at its annual convention at Eau Claire, Wis., February 18–21, 1949, go on record as being in favor that the President and Vice President of the United States of America be elected by popular vote rather than by the electoral college system.

Resolution on Federal housing program

Whereas the housing shortage is still critical and many people are housed in homes that are considered unfit for human habitation; and

Whereas we need a more adequate housing program to furnish homes for people in low-income brackets and for slum clearance: Therefore be it

Resolved, That the delegates attending the nineteenth annual convention of the Wisconsin Farmers Union at Eau Claire, Wis., February 18–21, 1949, do go on record in favor of a more adequate Federal housing program: Therefore be it further

Resolved, That a copy of this resolution be sent to our United States Senators from Wisconsin and to our Congressman.

Resolution on full parity

Whereas the Eightieth Congress passed the Hope-Aiken bill supporting farm prices on a sliding scale of 60 to 90 percent of parity; and

Whereas this program will tend to bankrupt family-type farmers; and

Whereas the National Farmers Union has taken a definite stand for 100 percent of parity: Therefore be it

Resolved, That we, the delegates to the nineteenth annual convention of the Wisconsin Farmers Union, meeting in Eau Claire, Wis., February 18–21, 1949, do petition our Congressmen and United States Senators to support a change in the present law to provide for 100-percent price supports; and be it further

Resolved, That we favor a new parity formula to give farmers their fair share of the national income; and be it further

Resolved, That a copy of this resolution be sent to all Wisconsin Congressmen and United States Senators.

Resolution on compulsory military training

Whereas the Wisconsin Farmers Union believes that the United States should have an adequate program of defense based on voluntary enlistments for its manpower needed; and

Whereas we are opposed to the establishment of any system of compulsory military training on the grounds that every country which has had military conscription has lost its wars through its lack of production of foods and manufactured goods: Therefore be it

Resolved, That the delegates to the nineteenth annual convention meeting in Eau Claire, Wis., February 18–21, 1949, go on record as being opposed to compulsory military draft and training; and be it further

Resolved, That when it becomes necessary to draft men that wealth and industry also be drafted.

Resolution on Federal aid to education

Whereas thousands of rural communities in the United States are unable to finance a sound system of public education; and

Whereas education is the keystone of democracy: Therefore be it

Resolved, That the delgates to the nineteenth annual Wisconsin Farmers Union Convention, meeting in Eau Claire, Wis., February 18–21, 1949, do go on record in favor of increasing Federal aid for education; and be it further

Resolved, That a copy of this resolution be sent to Wisconsin congressional Representatives.

Who Pays the Taxes and What Effect Do Burdensome Taxes Have on the Prosperity of the American People?

EXTENSION OF REMARKS

OF

HON. JAMES S. GOLDEN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. GOLDEN. Mr. Speaker, the Democratic Party has had control of the executive and legislative branches of this Government for the past 16 years with the exception of the 2 years, during the Eightieth Congress. They fooled and deluded the people by their slogan of soaking the rich with taxes. The real true facts which the American people ought to know and understand are that the 2 years the Republican Party controlled the tax-fixing body, the House of Representatives of the United States, is the only time that the poor or small man received any reduction in taxes during this entire period.

Seven million little fellows were taken off of the income-tax list altogether. During all this time the Democrats were claiming to soak the rich with taxes, and we have heretofore let them get away with it. The facts are the people, the small wage earners of America, paid most of these enormous Federal taxes during the periods of time that the Democratic Party was in control.

Even now, after the Republican Party relieved millions of small taxpayers of Federal income taxes, approximately 43 percent of all the Federal taxes comes from the individuals and not from big business or not from the rich. Nineteen percent more come from customs, excise taxes, and other taxes that might be justly called sales taxes and most all of these sales taxes come out of the pockets of the plain ordinary people when they buy the things which they need and have to have. A reduction of these taxes, and the Republican Party is now sponsoring such a program, would give further direct relief to millions of people that are in the low-income brackets.

The thing the American people ought to understand in making up their minds which party has the soundest tax philosophy is that only 28 percent of our present Federal taxes come from corporations. That leaves 72 percent of the great fund of Federal taxes coming off of the people themselves. If President Truman carries out his many promises he will need several billions of dollars more in taxes besides the billions which the Federal Government now exacts from the people. If he gets this additional tax money, about 70 percent will come out of the pockets of the people that work in one way or another. That is the farmers, the laborers, and wage earners, the small-business man, and the professional men will have to pay. The Republican Party wants to protect these people. The Republican Party was criticized for the Eightieth Congress, yet there was enough confidence engendered among the people of America during this period of time until America went ahead and invested its money and expanded its business. We produced more, made more, and had more prosperity during the Eightieth Congress than ever before in the history of this Nation in peacetime.

What is happening now? Under the wild promises of the Democratic administration, with the black threat of more taxes, unemployment is beginning to stalk the streets. Over 3,000,000 men and women are now out of jobs and more people are being added to this discouraged group of American citizens every week. Business has largely stopped expanding. If this process of discouragement to American business and to the American people is not stopped, if we do not get back to the sound principles of taxation as advocated by the Republican Party, America will soon be mired up in a Truman depression.

The Republican Party, in my opinion, is the only hope of the American people for continued prosperity and stopping

Government waste. Our experience has taught us, and it is a simple proposition to understand, besides 70 percent of Federal taxes coming from the people, if we, in addition to loading more taxes upon them, exact more taxes from business, then business cannot expand, it cannot furnish employment to millions of needy workers, unemployment will spread, the people generally will have little to spend, the farmer cannot sell his products at reasonable prices, the manufacturer cannot sell his goods, the national income will greatly decrease, and even though the Democratic Party may succeed in placing more taxes on the overburdened people of America, yet the end result and the net take of Federal taxes under this unsound policy will bring into the Federal Treasury a smaller sum than if the philosophy of the Republican Party is adopted and we allow America to go forward with working and producing and creating income and wealth from which to derive our Federal revenues.

The burdensome and excessive and unreasonable excise taxes upon many articles that are used every day in the homes of the American people has caused many American businesses to be removed from the class that makes money and can pay taxes. In addition to this, it has added many thousands of workers to the unemployment roll. While it is true that some articles are luxuries and should be taxed, there are many other articles needed by the common people of America that are now taxed and this adds to the cost of living besides creating unemployment and drying up the prosperity and the taxpaying ability of the American people.

There is a situation where taxes can be legitimately and sensibly applied for the purpose of producing the tax revenues that our Government needs. There is another theory where you can carry the taxing power to such an extent as to destroy. We must find where this line of demarcation exists. The experience of the American people when we read the history of this Nation will, I think, convince the thinking people of this great Nation that the Republican Party is sound in the position that it is taking on the question of Federal taxes.

One thought which the American people ought to keep in mind is that the farmers, the working men and women, and the people who are in business have a common interest in this question.

The sound approach is, there ought not to be any disagreement among any of our classes of people. The truth is, what is good for America is good for all of them. A tax program can and should be worked out that would add to the prosperity and the income of all the American people. This would make the American people, by their producing power and increased earning power, better able to pay Federal taxes. This would be accomplished, not by a higher rate as the Democratic Party proposes, but by having a greater income under a prosperous Republican administration more Federal revenue could be derived out of a larger income, received by everybody, and with a less percent of everybody's income taken for Federal taxes.

The question may arise, Can this be accomplished?

The answer is, "Yes." The Eightieth Congress enacted legislation carrying out the thoughts expressed above and accomplished this wonderful good for all the people. For the first time in many years everybody's taxes were reduced. Everybody's income increased and millions of taxpayers were taken off the tax roll. Best of all, the Nation was prosperous and business hummed. Jobs were plentiful and the Republican Party balanced the budget.

They spent less of the Federal income than was collected through Federal taxes. They reduced the taxes on the people approximately $4,000,000,000. They had money left to pay on the national debt. They allowed a man and his wife to pool their income, file a joint income tax return, and divide it by two, thus greatly relieving the families of America from burdensome taxes. They encouraged business and they encouraged the people. The threat of increased taxes as proposed by the Democratic Party has cast a gloom over American business and over the working people who know that business has to be prosperous if they are to have jobs, and over the American farmer who knows that all the people must be prosperous if he sells his products for a good price. This question is vital to the American people, and the Republican Party has proved itself able to best manage the country's affairs.

A Growing American Tradition

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. MULTER. Mr. Speaker, indicative of the tremendous strides we are making in this country for better interfaith relations is the following article which appeared in the February 1949 issue of the bulletin of the Hebrew Union College.

A GROWING AMERICAN TRADITION

President George Washington proclaimed the first Nation-wide Thanksgiving Day in 1789, and on Thursday, November 26, of that year the first sermon marking the occasion in New York State was delivered by the Rev. Gershom Mendez Seixas at the Jewish Synagogue in New York City.

EXCHANGE SERVICES

Since early in the last century, rabbis and Protestant ministers have been conducting exchange services in synagogues and churches. Joint services have become increasingly common during the holiday season from Thanksgiving through New Year's Day. This custom was practiced often by Rabbi Gustav Gottheil during his long association with Temple Emanu-El in New York City in the last half of the nineteenth century. The tradition was strengthened further by congregations in midwestern States during the 1870's.

In recent years exchange services have been growing in popularity with a broadening of the concept of brotherhood and democracy. There have been increasing evidences, too, of a genuine tendency in every section of the United States to implement this greater understanding with more instances of actual cooperation to translate the American creed into concrete terms.

In San Francisco such services have been held alternately at Temple Emanu-El and the First Unitarian Church since the 1860's. On November 25 last Unitarians and the congregation of Rabbi Alvin I. Fine gathered in Temple Emanu-El to render thanksgiving to God.

The good-neighbor policy of K. A. M. Temple in Chicago goes back to Thanksgiving Day in 1871, when the Universalist Society asked and received the use of the synagogue for its services because the society's own building had been destroyed in the Chicago fire.

During the past year several Jewish and Christian congregations, temporarily homeless, found shelter in houses of worship dedicated to different traditions but serving the same God.

An eloquent letter, accompanied by a gift of $1,500, was sent during the holiday season by Mr. and Mrs. L. A. Nordan, members of the Central Christian Church of San Antonio, Tex., to Rabbi David Jacobson, of Temple Beth-El, as an expression of gratitude for the hospitality of the Jewish congregation while the church has been without a building of its own.

In Roslyn, N. Y., young Alvan Rubin, Huc-Jir student rabbi, has been conducting Jewish community center services in the Roslyn Presbyterian Church, its Sunday school classes in a Catholic day school, its Hebrew classes in the town firehouse, and general meetings in the Odd Fellows hall.

HOSTS TO OTHER FAITHS

Temple Israel in St. Louis has been host during the past year to the congregation of the First Church of Christ, Scientist. On January 7 last, the Village Presbyterian Church in New York offered its facilities to the newly formed Village Temple. And in Cortlandt, N. Y., Rabbi Victor Eppstein soon will be conducting services for his congregation in the Boscobel Baptist Church.

In the heart of the country, in Chicago, Jewish and Christian residents of the Hyde Park area participated in a community service in the Rockefeller Chapel of the University of Chicago, as they have been doing for a number of years during the holiday season. The sermon was preached by Rabbi Louis L. Mann of Sinai Congregation before an assembly of all faiths.

Under the auspices of the Rabbinical Association of St. Louis, Mo., Methodist Bishop Ivan Lee Holt delivered a sermon at the United Hebrew Temple of Rabbi Samuel Thurman, who was ordained at HUC.

Rabbi Abraham J. Feldman, of Temple Israel, Hartford, conducted annual joint services for his congregation and that of Emanuel Methodist Church at the church. And the members of Beth El Congregation in Corpus Christi, Tex., met in the Church of the Good Shepherd to hear Rabbi Sidney Wolf preach the sermon at the fourteenth annual joint observance during the holiday season in that city.

DEEPER UNDERSTANDING

There were many other demonstrations of good will by men and women of different traditions, stressing qualities of heart which eventually will lead all mankind to brotherhood.

Beginning with the time when men of a common heritage express gratitude to God for His bounty of food and freedom, and continuing through Hanukah and Christmas, when the Jew through his tradition, and the Christian through his, kindle tapers that light up the world, we see the development of greater faith and deeper understanding among men.

Socialism—Now Is the Time To Fight It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks the following article by James H. McGraw, Jr., president, McGraw-Hill Publishing Co., Inc., on a subject which should have the attention of every citizen in this country:

Do we want to follow Britain down the economic skids?

We Americans face that question today. For we are being advised by administration economists in Washington to take the course which destroyed Britain industrially. It is the temporarily easy course of cutting down expenditures for tools in order to have more things to consume right away.

The President's Council of Economic Advisers tells us we are spending too large a part of our national income on new tools and equipment. A larger share, they say, should go for goods and services used directly by consumers.

Before we take that advice, let us look at Britain. When the British once allowed their industrial plants and equipment to run down—they started down a dreary road to industrial stagnation and decay.

British industry once ruled the world. Low production costs enabled it to undersell all competitors. Efficiency gave British workers the highest living standards anywhere.

Now all that Britain has between it and economic disaster is pluck and American aid through the Marshall plan.

The British people are living poorly—still on rations and in austerity. With practically everyone working, and working longer hours than we do in the United States, they cannot produce enough to pay for the raw materials and food they must import.

How did Britain get in this fix?

The story is complicated British sacrifices in two wars play a tragic part in it. But another fact also stands out:

Britain began to go downhill even before World War I—when British industries allowed their plants and equipment to grow obsolete.

Once that process started, it grew steadily worse. By 1929 the share of Britain's national income being plowed back into capital investment had shrunk to less than two-thirds of what it had been 20 years earlier. We were putting twice as big a share of our national income into capital goods at this same time.

Skimping on capital equipment—on new plants and new tools—put the skids under industrial Britain.

World War II only speeded up a process already well under way.

British industry today shows the results of its failure to keep up to date. Here are three examples found by Dr. Laci Rostas, Britain's leading authority on measuring workers' productivity:

An American produces four times as much pig iron as his British counterpart.

He produces more than four times as many tires.

In all industry, on the average, an American produces almost three times as much.

The real reason is the American's better tools. The British are struggling with equipment that is, on the average, 40 years old.

Britain once had a big head start in industrial equipment. But she let it slip away. And as it went, Britain's industrial and political leadership slipped with it.

How could British leaders have slept while all this happened?

This, too, is a complicated story. But parts of it stand out clearly:

1. British businessmen put in more time perfecting cartels to avoid competition than they did in improving their plants and equipment to meet it.

2. British labor leaders concentrated on sharing the work and sharing the wealth—rather than doing the job necessary to have enough wealth to make the sharing worth while.

3. British governments taxed away the means to buy new equipment. By steadily increasing personal taxes, they undercut the ability of individuals to invest in new equipment. Finally, they took away the incentive to get new equipment by progressively taxing away any returns on it.

4. Far-seeing Socialists smiled all the while, knowing that as private industry more and more lacked the tools to do a progressive job, they would have their chance to run the country.

Now, with Britain's fate in their hands, the Socialists are trying desperately to stem the nation's economic decline by rebuilding its industrial plants and equipment.

They are making a little headway, but not enough. There are several reasons. One is that Britain must export most of the new equipment she can make. Another major reason—increasingly important for her future—is that money needed to renovate Britain's run-down industry is taxed away to support welfare programs. The (London) Economist grimly puts it this way:

"The importance of the function of saving has only been discovered now that the means of saving have largely been destroyed."

Our own Federal and State Governments, too, have dangerously whittled away incentives. They have more than tripled tax rates on personal and corporation incomes in the last 20 years. Now, the President proposes to do more whittling.

If the United States is not to go Britain's way, we must preserve our incentives to save and to invest in industry.

If the United States is to progress, we must continue to build up our industries.

The President's economic advisers say we can slow down. But the McGraw-Hill survey of "Business' Needs for New Plants and Equipment," reported in the previous editorial in this series, produced facts to the contrary. It showed that industry now plans—if it can get the money—to spend $55,000,000,000 in the next 5 years for new plants and new tools. Moreover, it showed industry's needs for new facilities are large.

By cutting down the incentives to save, by giving soothing advice that we do not need to save so much, Washington is pushing us toward Britain's way—the route via industrial stagnation to socialization.

Before we skid too far, we should pull up short and ask ourselves: Do we want to go Britain's socialistic way?

There still is time to say "No."

Communism in This Country

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. MULTER. Mr. Speaker, following are two editorials which appeared in the Brooklyn Eagle of March 4, 1949, both of which deal with the subject of communism in this country:

THREATS OF FOSTER AND DENNIS BARE THEIR TRAITOROUS AIMS

William Z. Foster, national chairman, and Eugene Dennis, general secretary of the Communist Party in America, have reiterated treasonable purposes expressed earlier in the week by Maurice Thorez, of France, and Palmiro Togliatti, of Italy These latter two Communist leaders have proclaimed to the world that they will commit treason against their own nations if war should come with Russia. In somewhat more cautiously couched terms, Foster and Dennis have cast their fortunes and those of their party in America with the Kremlin.

There is the familiar specious justification for such a treasonable course. A war between Russia and the United States would necessarily be an imperialist war, initiated by Wall Street, and as such it would be unjust and destructive of the deepest interest of the American people and all humanity. This sophistry will fool no one.

On the contrary, these recent rash revelations of Communist leaders are producing and will continue to produce an effect which could hardly have been included in their calculations when they initiated their bold policy of telling all. They have brought their cause into the open, where it can be dealt with most effectively. They have themselves provided authoritative confirmation of suspicions and fears.

It is no longer possible for a Communist to say that he is a loyal Frenchman, Italian, or American. He has established his status as a citizen of the Kremlin who is in America or some other country for two purposes—enjoyment of the privileges of democratic government while conspiring for its destruction. The constitution of the Third International permits of no divided loyalties.

"Every branch and member of the Universal Communist Party," it says, "is pledged to indulge in national treason in case of war with the Soviets, no matter who, in such a war, should be the aggressor." They are prepared to follow this line to the letter, which is a good thing to know. Knowledge of the plans of the enemy is a major advantage in any conflict. It must be utilized fully.

Communists, through the authoritative word of their leaders, have divested themselves of all pretense of being merely a political party. They are a fifth column, traitors and potential saboteurs. Through their orgy of self-revelation in Europe and the United States, they have given the governments under which they live, including our own, reason to watch them at every hour of the day and night and to strike at them quickly and mercilessly when there is the slightest sign that treason is brewing.

Unfortunately their presence in the country must be tolerated. But there must be no tolerance of sabotage and betrayal.

DE WOLFE OUSTER OF MELISH DOES A SERVICE TO RELIGION

No one who has followed the strange case of Dr. John Howard Melish and his son in Brooklyn can fail to recognize in the ouster decision of Bishop James P. De Wolfe the judgment and determination of a mind seriously intent upon protecting the best interests of his church and the faithful.

The official act of Bishop De Wolfe in relieving the elder Dr. Melish of his pastorate was in no way a hasty, precipitate, or arbitrary action. Every legal and canonical step was taken to insure the proper and full measure of justice for the two clergymen whose activities and attitudes were under question. But even before the juridical procedures of the church were brought completely into play the bishop, with sincere paternal solici-

tude, had made every effort to dissuade the erring father and son from the dubious paths they trod and to sway them to retrace their steps and follow in the traditional ways of the ministry.

The bishop expressed the crux of the issue when he wrote: "Questions have arisen regarding the effect upon the church as a whole and upon the parish in particular of the activity on the part of one of the church's priests, in good standing, exercised among reputed atheists, Communists, agitators of world revolution, totalitarianism, and almost every article which denies the Christian doctrine of man. * * * The question well may be raised, 'Why does the church allow one of her own priests to engage in such activities without protest or condemnation?'"

Dr. Melish's spiritual superior had answered that question, by anticipation, in a previous paragraph of his official statement when he wrote: "I believe the Rev. William Howard Melish, assistant minister, to have been, and that he continues to be, most mistaken in what he supposes to be the pastoral application of his ministry. He has allowed himself, I believe most unfortunately, to become involved with 'outside activities' of such a nature and to such an extent as to incite doubt and confusion in the church as to whether he is indeed living up to his ordination vows as a priest in the church."

The issue in this local case is the same as in every similar case everywhere. Communism and Christianity are opposites. The one is the negation of the other.

The Founder of Christianity mingled with sinners, atheists, and what not. But it was done with the thought and hope of winning them away from their evil ways. The Communist sympathizer consorts with atheists, agitators, and the like, as Bishop De Wolfe specified, but as a collaborator and a promoter of their activities.

An enlightened clergyman should know and understand that Communist fronts are meant to be just that—external displays of innocence which hide evil purposes. If he does not realize this, and still refuses to follow the advice and counsel of those who do, especially when the counselor is his own ecclesiastical superior, there is no alternative but the action which has been taken in this case.

Bishop De Wolfe has done a great service to his church, the community, and the cause of religion both in the decision he has made and in the manner in which it was made.

Social-Security Bills

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial, entitled "Huge Package," which appeared in the Niagara Falls Gazette, Niagara Falls, N. Y., on February 28, 1949:

HUGE PACKAGE

Administration social-security bills, on which hearings are now starting, are overwhelming in their scope. If adopted, they will raise many practical problems that will not be easy to solve, and they will entail increased pay-roll taxes. The total effect is, therefore, difficult to evaluate.

The bills provide for extension of present and proposed social-security benefits to an additional 20,000,000 persons, including the self-employed, farm and domestic workers, employees of the Federal Government, and of nonprofit corporations, and State and local employees in States that contract for this coverage. This would boost the number of persons included to 50,000,000 and their dependents.

Benefits would be raised to nearly twice the amounts provided in the present law. For women, they would start at age 60 instead of 65. Beneficiaries would be permitted to earn up to $50 a month (the figure now is $15) before losing any benefits.

New benefits not now available would be paid. There would be disability insurance for limited periods, ranging from $8 to $45 a week, according to income and number of dependents. Federal payments to the needy are another new proposal.

Costs would mount. After the program had been in effect 6 months, they would reach double the present social-security pay-roll deductions for persons making less than $3,000 a year, and more than triple present deductions for persons making more than $4,800. Employees' matching contributions, which have some inhibiting effect on wages, would keep step.

Within 5 to 10 years, the bills anticipate, the number of beneficiaries reaching 65 would become so great that further increases (either in pay-roll deductions or in general taxes) would be necessary.

Hearst Newspaper Prints Front-Page Apology to Congressman for Red Smear Editorial

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. HAVENNER. Mr. Speaker, perhaps the Members of the House and, indeed, all of the readers of the CONGRESSIONAL RECORD may be interested in the following anthology of a political smear attack.

On October 27 last, just prior to the 1948 national elections, the San Francisco Examiner, a Hearst newspaper, published a front-page editorial entitled "A Vote for HAVENNER Is a Vote for Bridges."

This editorial contained the following statements:

HAVENNER again is a candidate of the Communists and of all factions the Communists and Bridges represent. * * * A vote for HAVENNER is a vote for Bridges and the Kremlin.

On that day my campaign manager, Mr. Elmer P. Delany, a prominent San Francisco attorney, served notice upon the attorneys for the San Francisco Examiner that it was his intention to file a suit for libel in my behalf against that newspaper. In accordance with a provision of the California libel law, Mr. Delany demanded an immediate retraction of the libelous editorial. On the same day the attorneys for the San Fransciso Examiner notified Mr. Delany verbally that the newspaper refused to publish a retraction.

Accordingly Mr. Delany proceeded to file a suit for libel in my behalf against the San Francisco Examiner.

Despite the libelous attacks of the San Francisco Examiner, I was reelected to Congress at the national election on November 2, 1948.

On November 17, 1948, the following announcement was printed on the first page of the San Francisco Examiner:

A RETRACTION OF HAVENNER EDITORIAL

On October 27, 1948, this paper published an editorial entitled "A Vote for HAVENNER Is a Vote for Bridges."

Insofar as this editorial could be interpreted as questioning Mr. HAVENNER'S loyalty to the United States, or labeling him as a Communist, or a Communist sympathizer, or Communist supporter, it is hereby retracted.

I had received no advance notice that the above retraction was to be published and had no knowledge of it until I saw it in print. Of course, the purpose of the libelous editorial was to defeat me for reelection by persuading the voters of San Francisco that I was the candidate of the Communists and a supporter of the Kremlin. The retraction of this false and libelous editorial was not made until 2 weeks after the election was held—obviously too late to repair the damage intended to be done to me on election day.

On Sunday, February 27, 1949, the following letter, signed by the publisher of the San Francisco Examiner, was printed on the first page of all editions of that newspaper:

SAN FRANCISCO EXAMINER,
February 24, 1949.

Hon. FRANCK R. HAVENNER,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN HAVENNER: As part of the amicable settlement of the libel suit brought by you against us, we are pleased to address this letter to you publicly.

Your suit was instituted as a result of editorial and articles appearing in the San Francisco Examiner.

We are convinced that you are not a Communist nor in sympathy with communism.

We are convinced that you are a true American in the American tradition. We are sorry that we attempted to cast a doubt on your Americanism during your various campaigns for public office.

It is not necessary to reserve the right to differ with you in the future on specific issues, but we do not wish this apology to carry the implication that any promise has been made to support you. As a real American, we know you wish us to assert an independent judgment on all issues.

Very truly yours,
CLARENCE R. LINDNER.

Public Welfare

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. FORAND. Mr. Speaker, under permission to extend my remarks I invite the attention of the House to a resolution recently adopted by the committee on welfare policy of the American Public Welfare Association, stressing the urgency of liberalizing and extending the

old-age and survivors insurance program as a means of preventing dependency and reducing the assistance loads. With the hearings now being held by the Ways and Means Committee on needed social-security legislation, I think it is particularly interesting to observe that those officials in this country who administer assistance are taking the lead in urging upon Congress that constructive action to reduce the number of people coming to their agencies for aid be taken at once. A similar resolution was passed in December at the meeting of the State Council of Public Assistance and Welfare Administrators.

The resolution follows:

Whereas the cost of public assistance financed from general tax revenues of all levels of government is unnecessarily high because millions of persons are not included under the old-age and survivors insurance program; and

Whereas the exclusion from coverage under the old-age and survivors insurance program of the self-employed, agricultural workers, domestic workers, employees of nonprofit organizations, and public workers is not only discriminatory toward persons in these occupations but places a disproportionate financial burden in terms of assistance costs on certain States; and

Whereas the present old-age and survivors insurance program benefit payments are too low to provide economic security to many persons with the result that supplementary public assistance grants are necessary in these instances; and

Whereas insurance benefits based on a work record and available to the individual for his basic economic security without a needs test are preferable to public-assistance payments from general tax funds; and

Whereas it is in the public interest to reduce the need for assistance by preventing dependency through contributory social insurance: Therefore be it

Resolved, That the welfare policy committee of the APWA recommends that the old-age and survivors insurance program be immediately extended to all gainfully employed persons now excluded; and be it further

Resolved, That the old-age and survivors insurance benefit payments, which are now computed on a formula adopted by the Congress in 1939, be increased in accordance with the rise in the cost of living.

Jack Kapp Symbolizes the American Answer to Communism

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. KLEIN. Mr. Speaker, one of the clichés which I am never ashamed to repeat is that the right way for America to avoid the dangers of communism—or of fascism—is to make our own democracy work.

Jack Kapp, the president of Decca Records, is a living symbol of what I mean.

Jack Kapp is the boy Horatio Alger wrote about. He is the hero of the unending American saga of rags to riches. He is the man who symbolizes competitive free enterprise.

I do not want to be overly eulogistic. I am not trying to suggest that Jack Kapp is without fault. What I am trying to say is that his rise from a poverty-stricken beginning to his present position—in which I can find a parallel to my own youth—is another illustration of the opportunity that lies around us in America.

It is no wonder that Life, in its March 7 issue, chose to write an editorial around his career and his philosophy, which I am pleased to insert in the RECORD:

NO FRONTIERS?—MAYBE THE CLOSED ECONOMIC FIELD OFFERS A REALLY SOFT TOUCH

Jack Kapp, president of the Decca Records Co., has been having an interesting time talking to college students. On every campus, says Mr. Kapp, the questions are the same: "What chance have I got in this system?" The students are plaintive; they couple their skeptical questions with such wistful remarks as, "Everything is in the hands of a few people."

Well, college students have always been skeptical before diving into the somewhat disconcerting whirlpool of that first job hunt. It was more or less the same in 1925 as it is now. But not quite the same. For the disbelief of a generation ago was the purely psychological reaction that occurs when anyone stands face to face with the unknown. Today the disbelief is deeply philosophical; it is part of a world weariness that afflicts even those who have good jobs and secure niches in adult society. Undergraduates can hardly be blamed for reflecting a philosophical attitude that is cultivated not merely by the young but by practically everybody, even some of the professors.

There is a peculiar irony, however, when disbelieving questions are addressed to Jack Kapp, of all people. For Mr. Kapp is living proof that no man in America is destined by circumstances to spend his life behind a large and immovable eight ball. Mr. Kapp was born in Chicago in 1901, the son of a house-to-house canvasser for the old Columbia Phonograph Co. He worked his way through high school by taking errand-boy jobs. In 1926 he was in charge of the Brunswick Co.'s race-record division, meaning that his business was to go around the country making recordings by Negro talent.

All of this was background for what was to come later. In 1934 Mr. Kapp decided the time had come to use his background in his own behalf. What chance did he have? The record business was near the all-time low. Radio had forced the bankruptcy of hundreds of record companies; only two remained. Everything was in the hands of a few people.

What Mr. Kapp proceeded to do was to prove that a closed field is the softest of touches. As Mr. Kapp himself puts it, any company which casts itself in the role of "custodian of the status quo" is destined to die. With the record business on the rocks because of status quo custodians, Mr. Kapp hived up in the public library for a week to study old record catalogs. He discovered that the business was oriented toward Europe; there were 1,200 recordings of Chopin to few of Irving Berlin. You could get plenty of foreign voices, but United States singers, such as Bing Crosby, were considered infra dig.

All of this gave Mr. Kapp an idea that soon burgeoned into a relevant philosophy of business. Pursuing his idea, he made Bing Crosby a rich man. Bucking the rest of the industry, which considered it foolish to put entire musical comedy scores into album form, Mr. Kapp made thousands of dollars by selling Gershwin scores complete.

Mr. Kapp likes to repeat the words from Emerson's The American Scholar: "We will walk on our own feet; we will work with our own hands; we will speak with our own minds." Emerson isn't much favored these days, and the modern American scholar might insist that Mr. Kapp is a monopolist in four-leaf clovers. But the Dartmouth student who has spent the winter week ends riding up a few of America's 1,000 ski tows might stop and reflect on the fact that in 1932 there wasn't a single ski tow in the whole United States. Maybe it is impossible to start a new automobile company today, but General Motors is going to need a new president in a few years, and it is certainly going to need new production men. According to a recent survey this country needs to train 15,000 new doctors; indeed, if present trends continue we will, so says Dr. Thomas Parran, be faced with a doctor shortage of 30,000 to 50,000 by 1960.

"What chance have I got?" In the light of the world's hunger for services and moving ideas, the chances would seem to be as manifold as the inside of the human skull can make them. When someone asks Mr. Kapp a wistful question the next time, he might counter it with another question. We suggest that he put it this way: "What's stopping you?"

Sally Pitcher Letter to Congress

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on effects of excessive excise taxes inserted by Sidney Fields in the New York Daily Mirror of Monday, February 21, 1949:

DEAR MR. CONGRESS: Right now I am doing a slow burn because I've discovered (in my pocket where it hurts) that taxes are a daily brain breaker and not just something I chew my nails over around midnight every March 14. I honestly don't know all the answers and I'm writing you to find out.

It all started when I dropped into a store the other day to buy a handbag and the price tag plainly read $12.50, but the saleslady said that will be $15 please. I got a little annoyed, though she was a very nice saleslady. Her first cousin through marriage went to the same junior college I did. Anyway that extra $2.50 got me mad.

The saleslady said that was an excise tax. I said an excise tax? And she said you know the luxury tax. Well, I didn't know because you don't call a handbag a luxury. She said she didn't call it a luxury either, but the Government did. Now, you're the Government and I'd like to know what's a luxury about a handbag? It's my pocket. And if you tax my pocket why didn't you tax every man's pocket, including your own?

WHY PICK ON WOMEN?

Now, for the past 4 years I've been working as a secretary-assistant to an account executive in an advertising agency, and after I got through talking to that nice saleslady about these luxury taxes I talked to my boss about them. He rattled off some pretty staggering figures: For instance, you collected $525,000,000 in luxury taxes on furs and leather and toilet goods and jewelry just for 1947, and over $90,000,000 of that was collected right here in the city. Women pay all or most of that money. Why do you discriminate against us?

I earn an average salary, average, that is, until you get through with it. Like any other girl I have to budget half my salary for clothes, $6 a week for lunches and carfare, about $1 for personal cosmetics, and about $7 for amusements and gifts and trifles come Christmas and birthdays and such. That leaves me a big $6.75 for big things like a fur coat or a vacation. I'm still paying back the money I borrowed for the last 2-week vacation I had. Did you borrow for your vacation?

And don't you dare tell me my fur coat is a luxury. I can't afford a fancy cloth coat every year. Besides, it isn't as warm as fur. And I can wear fur day or evening. I paid $375 for my kidskin coat and got hit with a $75 tax. Hear that? $75!

Within the past year I bought a wallet for $7.50 and an overnight bag for $20 and some earrings and a bracelet for $10 and paid $7.50 in luxury taxes. And if you ask your wife she'll tell you that earrings and a bracelet aren't luxuries. You're not dressed without them.

Now, let's take up this business of personal care. Your own Labor Department got out a little pamphlet called Government Girl Budget a couple of years ago and said that it's reasonable to put aside $56 a year for personal care, if your take-home pay is $1,610. Now, I do my own hair and nails (does your wife?) and I pay that 20 percent every time I buy lipstick, powder, talc, shampoo, hand lotion, powder base, nail polish, or deodorant.

A DISTAFF REVOLUTION

You may not know about these things, but just ask your wife or the nine ladies in Congress. You can bet me right now that they won't call them luxuries. They're absolute necessities for health, cleanliness, and appearance.

Can you imagine if I walked into work any morning without my nails done, my hair groomed, my eyebrows neat, and no lipstick and powder? My boss would very probably shriek with fright and tell me to go right home and get dressed—if he didn't fire me first.

Please remember that besides your 20-percent tax the city gets an additional 2 percent. I didn't mind paying your old luxury taxes during the war when everybody had to try. But the war is over now. Or haven't you heard?

Your 20-percent tax is against us women; it's unfair and just plain nasty, and there are 16,000,000 women in business who I'm sure feel just the way I do about it. That's a lot of votes, Mr. Congress. A lot of votes.

I know one way we could get rid of this nasty 20 percent: Until it's lifted let every woman do without any cosmetics. Know what that would do? Just imagine your wife at breakfast without any powder or lipstick on. Such a movement would create a deluge of divorce and bankruptcy. Why, it's as great a menace as the atom bomb.

Respectfully yours,

SALLY PITCHER.

Remember Colombia?—It Could Happen Here

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the RECORD, I submit a copy of an editorial from the New York Times of date March 6, 1949, entitled "Communism Drops the Mask" as follows:

COMMUNISM DROPS THE MASK

The American Communist leaders, William Z. Foster and Eugene Dennis, have given us an opportunity to clear our minds as to just what the Communist movement in this country means. Not that there is much that is new in the statement issued by Messrs. Foster and Dennis on March 1. Its real significance is that it follows similar and less cautious statements made in Paris on February 22 by Maurice Thorez and in Rome on February 26 by Palmiro Togliatti. American communism now explicitly reveals itself as an international movement tied to the interests of Russia. The assumption made in all three of these recent statements is that Russia cannot do wrong. This being the doctrine, Communists in any country attacked by Russia must side against their own country and with the Russians.

Any discussion of this question is unpleasant because it involves the discussion of a war that might destroy civilization. If Mr. Foster or Mr. Dennis can find one Wall Street broker who wants such a war, he will surprise Wall Street as well as the rest of us. But since the talk has proceeded in terms of war and has raised a question of how certain citizens would behave if war came, it is necessary to ask just how far such citizens could go without being traitors. Messrs. Foster and Dennis cite Lincoln's opposition to the Mexican War. Lincoln did oppose that war. While in Congress he voted for a Whig resolution that declared it to have been "unnecessarily and unconstitutionally commenced by the President." But Lincoln also said, "When the war had begun and had become the cause of the country, the giving of our money and our blood * * * was support of the war." The Communist spokesmen might have mentioned the case of the elder Senator La Follette, who voted against our entrance into the First World War, but Senator La Follette had this to add: "There is, and, of course, can be, no real difference of opinion concerning the duty of a citizen to discharge to the last limit whatever obligation the war lays upon him." When the pinch came, it was easy to tell the difference between those who exercised their legitimate right of opposition and criticism and those who attempted treason. Lincoln in 1849, La Follette in 1917 were not kinsmen of Benedict Arnold.

For those who look back over the history of American protest movements, the moral corruption which is represented today by the Communist Party of America is appalling. We have had our protest movements since colonial days. A strain of humanitarianism, of idealism, of aspiration for greater liberty has run through most of them. Workers fought and sacrificed for the right to organize. Farmers rose against what they considered the tyranny of the cities. Common men and women struck out against injustices that they attributed to monopolies or to political corruption. But not until this generation was there ever heard in this country the harsh and perverse sort of doctrine that we now hear preached by the self-styled exponents of a better world. Cynicism and despair direct the course of these so-called radicals.

We may thank our own Communist spokesmen for making this issue plain. We no longer are called upon to think of Communists as domestic reformers. They have shaken off such disguises. They speak from now on purely and simply in the interest of a foreign power, purely and simply against the interests of their own country, when there is a conflict, military, or otherwise, with that foreign power.

We have two dangers to avoid. One is the danger from these enemies in our midst. Now that they have proclaimed themselves as such, that danger is diminished. The other danger is that in our revulsion against this betrayal we turn away from the basic freedoms. We must cling to those freedoms all the more, as we cling to democracy itself. The only freedom that we must refuse is the freedom of the conspirator, in peace or in war, to strike at the country that has nurtured him. And, having discussed this question in terms of war, let us not develop any form of war hysteria. We believe that the Communist spokesmen in France, Italy, and the United States have spoken out of weakness, not out of strength. It is because democracy is strong and growing stronger that they have given way to this madness.

Mr. Speaker, I also include a copy of a news release from the Washington Post dated March 5, 1949, quoting Prime Minister Louis St. Laurent, of Canada, stating that "One would have to be lacking most elementary realism to consider war an impossibility."

ST. LAURENT ASKS REALISM

MONTREAL, March 5.—Prime Minister Louis St. Laurent said today a person would have to lack the most elementary realism to consider another war an impossibility.

"There is no doubt that war is avoidable—I am sure that if we follow our present firm policy we can avoid war," he said. "But one would have to be lacking most elementary realism to consider war an impossibility."

St. Laurent made the statements in a speech at a Richelieu Club luncheon.

In the speech, largely devoted to an outline of Canada's reasons for supporting the North Atlantic alliance, the Prime Minister blamed Russia for the current international unrest.

Christian nations have not lost hope that the United Nations will work, but pending that time they are conscious of the necessity for them to assure their own security through regional pacts, such as the North Atlantic pact, he said.

Mr. Speaker, in my opinion, without any desire to alarm our people, I feel it is my duty to suggest that the Communist threat is serious in these United States.

Does the State Department and any other Department of our Government know how many Communist agents, fellow travelers, and others in this country, at this time, such as William Z. Foster, Eugene Dennis, and others in this country.

Mr. Speaker, your former distinguished colleague from Texas, Martin Dies, when chairman of the House Un-American Activities Committee, exposed these traitors many years ago. Our Government did not heed his warning. They are still here. Thousands more, in my opinion, have infiltrated into this country since that time and are ready to sabotage our Government and country.

Mr. Speaker, we must not forget the plan—General Marshall was lucky, in Colombia, to save his life.

The Late S. Wallace Dempsey

EXTENSION OF REMARKS

OF

HON. WILLIAM L. PFEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my

remarks, I include the following editorial from the Lockport Union Sun and Journal, Lockport, N. Y., concerning the late Stephen Wallace Dempsey, former Representative in the House of Representatives for the Fortieth District of New York:

DISTINGUISHED LEGISLATOR

The congressional career of the late Stephen Wallace Dempsey shed a glow of considerable prestige over Lockport in the 16 years that the distinguished attorney represented the Fortieth District in the House of Representatives.

As chairman of the Rivers and Harbors Committee, Mr. Dempsey combatted with all energy and skill proposals to construct a St. Lawrence ship canal. His contention, in favor of an all-American canal to traverse New York State, never materialized but neither did the St. Lawrence canal. The controversy still is timely for residents of western New York.

Mr. Dempsey was admirably fitted for congressional duties. He was universally recognized as a lawyer of extraordinary ability and he brought to the office a dignity of person which matched his legal talents. Admitted to the bar without benefit of formal legal education, he made himself prominent by the astuteness with which he conducted for the Federal Government its case against concerns charged with violations of freight-rate regulations.

Such a long and distinguished career, based upon ability and enterprise, should serve as an inspiration to the rising generation.

Britain's Health Service

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MULTER. Mr. Speaker, there is much discussion abroad today with reference to our national health program. Many people are comparing it with the national health program now in force in Great Britain. For the benefit of those who are interested in how the plan works in Britain, I am submitting an article which appeared in the February 28, 1949, issue of the New Republic. The author, Stephen Taylor, is a practicing physician in London and a Labor Party member of Parliament.

BRITAIN'S HEALTH SERVICE

(By Stephen Taylor)

THE ENEMIES OF PLANNED MEDICINE HAVE BEEN CONFOUNDED IN ENGLAND, WHERE THE NEW SYSTEM IS WORKING SMOOTHLY

Those who had been campaigning for a National Health Service in Britain confidently expected that it would begin with a period of administrative chaos. They had not hoped for anything like full cooperation from the British medical profession and they anticipated a swamping of whatever facilities might be available.

In fact, nothing of the kind has occurred. Journalists in search of failure stories to damn the Labor Government have returned empty-handed, except to write that opticians are dispensing unparalleled numbers of spectacles to those who for years have been unable to read the newspapers.

There were two reasons for the smooth transition from private to socialized medicine: the extensive preliminary planning; and the full cooperation received from private medicine. Planning began long before the health bill was finally enacted. During the war, the medical profession itself did much exploration into possible forms for a national health service. The British Medical Association, through its medical planning commission, produced a series of proposals, many of which are now incorporated into law. The younger doctors organized their own inquiry under the title, "Medical Planning Research." The Ministry of Health produced a plan of its own, as well as a valuable group of surveys of British hospital resources. Therefore, when Aneurin Bevan entered the Ministry of Health he found a complete set of blueprints outlining every possible alternative. He found, too, that public opinion was well aware of the pros and cons of each proposal.

His own planning was carried through with a magnificent disregard for Labor Party preconceptions. In place of a municipal hospital service, he set up a regional service based on natural hospital areas and financed entirely by the treasury. Private hospitals were allowed to admit paying patients. He turned down the idea of a salaried-general-practitioner service, but he stood by the 100-percent coverage of the population, the abolition of sale and purchase of medical practices, and the closing of overdoctored areas to new entrants. Above all, he insisted on making the service noncontributory, so that every resident of Britain has the right to use it.

Thus, many of the views of the medical profession were incorporated in the bill as presented to Parliament. Other of their proposals—for example, the continuance of the sale and purchase of practices—found no support from any of the political parties. Consequently, when Bevin proved reasonable about minor concessions, the profession finally swung from opposition to support. The knowledge that only those who had entered the plan by July 5, the date it went into effect, would receive their share of the $265,000,000 compensation to cover the loss in capital value of their practices made it certain that doctors would rush to join. More than 19,000 general practitioners opened their waiting rooms to all who cared to come.

The regional hospital boards were in operation nearly a year before the appointed day. Their members had inspected the hospitals they were soon to run; the hospitals themselves had been grouped so that small units were linked with larger ones for specialist services and management purposes; and the individual hospital management committees had held their first meetings well in advance.

Local executive councils, responsible for the general-practitioner side, had been in operation for a similar time; and, strangely enough, British Medical Association members of these councils were cooperating fully at a time when the BMA itself was denouncing the whole scheme.

Although the service has now been in operation for only a short time, the administrative machinery has taken the strain well. Complaints from doctors and patients have been minor.

The number of patients going to a doctor's office has definitely increased, especially mothers and children with minor ailments. Such patients formerly made use of the voluntary-hospital clinics when they could not afford doctor's fees. Almost all have genuine reasons for consulting the doctor, although a few are going to him to get their favorite laxative or aspirin without charge.

Home visiting has increased much less than was expected. Especially in the working-class areas, patients are being extraordinarily good about it. They apologize when they have to call the doctor to their homes, and it is far more usual for people to come to the doctor's office when they should be in bed than vice versa.

Druggists report an increase of between 30 and 60 percent in the number of prescriptions they are filling. This is due partly to the abandonment under the scheme of dispensing by city doctors. But there has been some real increase which will bear watching. Any attempt to make the British abandon overnight their love of a bottle of medicine would certainly end in failure. Health education still has a big job to do in this field.

More than 92 percent of the public registered early with doctors, and as the winter brings its usual crop of coughs, colds, and influenza, we are seeing further encroachments on the 4,000,000 people who still remain outside the scheme. The health program started at the same time as the national insurance plan, which provides cash benefits to cover sickness, unemployment, and old age. In consequence many people regard the National Health Service, which is free, as the most obvious tangible return for their $1-a-week contribution to the insurance plan. The spectacles or false teeth they receive without charge are regarded as having been paid for by the weekly payment, and are considered good value.

The backlog of people needing spectacles is enormous. Surveys have shown that, among people over 65, 90 percent are wearing spectacles. Of these, one-sixth have never had their eyes tested, having borrowed or inherited the eyeglasses, or bought them off a shop counter. A further third has had no eye test for 5 years or more. As a result the opticians have been working overtime. Ten varieties of frames are free, and some others may be had for a small extra charge—up to about $1.40.

The dental position is more difficult. For many years, Britain has been short of dentists, and even if they all entered the new service, demand would far exceed supply. Dentists are paid for according to the work done on the patient. A quarrel about details of remuneration has led the British Dental Association to refuse to cooperate. Nevertheless some 7,000 out of 10,000 eligible dentists have joined the service and the number is growing.

Indeed, the scales of pay are so good that many dentists are giving up salaried work in the school dental service to join the new plan. Consequently, something of a crisis over school dentistry has arisen, and new salary scales are under consideration. Britain's dental health is bad. More than 90 percent of recruits during the war needed dental attention; something like 12 percent should have upper and lower dentures.

The hospital service is functioning smoothly enough, but outstanding problems include the need for nurses, more beds for patients with tuberculosis and chronic illnesses, and new buildings. Because of the necessity to divert labor and material to houses and factories, work for the moment is largely confined to renovations and small extensions. Thanks to plenty of paint in a wide variety of colors, many former public-assistance institutions are already putting on a bright new look.

Specialists have been granted interim contracts until next month. In the meantime, salary scales have been negotiated on the generous basis provided by the report of an independent tribunal set up by the Government, the Spens committee. It looks as though the specialist who decides on full-time service can hope for $10,000 to $12,000 a year at the age of 45, with higher figures for the exceptionally able.

Nine years ago the writer of this article contributed a plan for British hospitals to the Lancet. Had he then been told that his plan would be in full operation 9 years later, he would have been frankly incredulous. Now he finds himself a member of the Parliament responsible for this great reform. The job which remains to be done of translating blueprints into actuality is a job for

a lifetime. However, for the future, the only barriers to progress are manpower and materials. No financial or administrative obstacles stand in the way of Britain's ambition to produce a health service that will guarantee every citizen the best that medicine can offer.

Dangers of Too Much Secrecy

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. KLEIN. Mr. Speaker, I have just voted for H. R. 2663 without vocal protest but with great inward misgivings and trepidation, not because of the intent and authorization of the measure, but because of the bad precedent which it sets in secret legislative consideration.

My affirmative vote was cast only because of my confidence in members of the Committees on Armed Services and on Rules whom I know well. Their assurance that the secrecy which surrounded committee consideration was only to safeguard our national security persuaded me, and at the last moment, not to oppose the bill on grounds of inadequate consideration and dangerous secrecy.

I do want to go on record that I regard this kind of legislative proceeding in the United States as dangerous and subversive to our form and philosophy of government.

We have a wonderful tradition in the United States of open debate on all legislation.

I am fearful that the secrecy of consideration of this measure, the so-called "spy" bill, sets an example which we will regret. This country must, as a matter of reality, have its own espionage network, whether we like the word spying or not; but even after my vote, I dislike this kind of dark-room process, and hope it will not again be necessary.

Reciprocal Trade Agreement Discriminates Against American Worker and American Industry

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter from a Wisconsin firm on the subject of reciprocal-trade agreements. This is just another bit of evidence from which we can conclude that ultimately the Reciprocal Trade Agreements Act will put legitimate industry out of business and American labor on the unemployment rolls.

MARCH 5, 1949.

Hon. LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

HONORABLE SIR: We have followed with a great deal of interest the discussions in Congress relating to extension of the reciprocal-trade agreements law. Our company is engaged in the manufacture and distribution of patent leather, which is a staple in the domestic market, and which we have also exported to various countries. This product is a glaring example of the inequity to which American industry has been subject under the Reciprocal Trade Agreements Act, and we want to call it to your attention as an instance of discrimination and injustice.

Through progressive tariff reductions in prior years, the United States duty on patent leather has been lowered until it is only 7½ percent. The result of these cuts in duty has been to stimulate shipments of patent leather into the United States from Canada. We might grit our teeth and bear this if it were not for the extraordinary injustice represented by the fact that Canada maintains a duty of 17½ percent on imports of patent leather from the United States.

This is our situation then, absurd and incredible as it may seem. Tanners in Canada can ship patent leather to our customers in the United States at a duty of only 7½ percent, whereas we are prohibited from seeking exports in Canada through a tariff barrier of more than 17½ percent.

There are further ramifications which have added to our miseries. Most of our markets abroad have been restricted because dollars are supposedly not available for the import of patent leather. However, Canada can ship abroad to the sterling area, to the United Kingdom which used to be one of our principal customers, so that we are hurt in two ways. First, leather comes into the United States from Canada to cut down our sales domestically and second, we are not permitted either by prohibitive duties or by trade restrictions from shipping leather abroad.

If the reciprocal-trade law is to operate logically and fairly, one of two things must be done immediately. Either our duties should be raised up to the level of the Canadian duty on the same product, or else the Canadian duty cut down to ours. Why don't we deserve the same benefits and treatment that foreign producers get?

Our trade association, the Tanners' Council of America, has discussed this matter with the Tariff Commission. In substance the reply they get is that there may be some inequity in the comparative United States and Canadian duty on patent leather, but this is only a small matter in relation to the general objectives in our treaty with Canada. However, it is not a small matter to the patent leather tanners of this country, and in my opinion no law is successful that condones small inequities for the sake of vague, general objectives.

We shall appreciate your assistance in the matter and trust that you will urge the Tariff Commission to take the necessary remedial steps or that the Senate, in acting on the proposed extension of the Reciprocal Trade Agreements Act will seek to incorporate provisions that will protect us against discrimination.

Very truly yours,

GUSTAVE SOKOL,
Vice President, Colonial Tanning Co., Inc., Milwaukee, Wis.

A Baby Is a Luxury—If You Ask Congress

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on effects of excessive excise taxes by Sidney Fields in the New York Mirror of Wednesday, February 23, 1949:

A baby is a luxury—if you ask Congress. And like any average New York family the Websters want to know why. They're writhing under the congressional conspiracy against their hard-earned buck, which slaps them with a 20-percent tax every time they buy a bottle of baby oil or a can of powder for their infant son Jimmy and their daughter Judy.

The other day Mrs. Webster spent $6 in a drug store for things she considers necessities: baby talc, oil, and cream, some hand lotion, shampoo; and for the thousandth time she was ready to explode when the drugstore man, in embarrassment, asked her an additional $1.32 in taxes.

"And that's just the beginning," she says. "How about my cosmetics, my handbag, fur coat, my husband's wallet, or the little pleasure we get out of a movie or a show? It's more than a 20-percent death. It's 20-percent murder!"

"It's a tax assault against my family," adds Bill Webster. "It discourages the idea of raising a family."

Now, the Websters aren't rich people. Patricia Webster worked as a lab technician before they were married. Bill is an engineer and earns just a modest salary. He says if he didn't do a little outside work at night for some badly needed extra money he couldn't call his family his own.

THE VETERAN IS THE TARGET

During the war Bill entered the Coast Guard as a second-class seaman and emerged as a lieutenant, junior grade. He spent 3 years on destroyer escort duty in the north Atlantic which wasn't exactly a holiday. He has the usual veteran's headaches.

"A one-room apartment with two kids. Great. I can't choose my home and the taxmen choose the way I spend my pay. It's a good thing my wife can knit and sew."

"You're allowed a dog when you look for an apartment," Mrs. Webster boils, "but you're supposed to drown your kids. If we want to go out, we're lucky if we can get a baby sitter. Good Lord, we can't even go out on our anniversary because the tax stops us. So we just sit home."

On their last anniversary Mr. Webster bought his wife some perfume for $10 and a handbag for $15 and paid $5.50 in taxes. Mrs. Webster got her husband a wallet, belt, and briefcase for another hard-saved $25, and shelled out another $5.50 in taxes.

"That $11 could have bought a lot of groceries or shoes for the kids," she says. "I budget myself carefully and figure and figure, but I find myself buying less and less each year.

"I could save by using one basic dress and changing the accessories. But there's that 20-percent death against accessories too. So I'm trapped."

Mrs. Webster would like to go to Washington and present the housewife's case to Congress this way:

"Your excuse for the 'luxury tax' is gone. The war is over.

"Your definition of luxury is about as stupid as your idea of what a dollar can buy.

"Your 20-percent tax is directed against women and children. It prevents everybody from buying, which kills business, causes unemployment, and ferments Government hostility.

"Just why aren't we allowed to deduct these luxury taxes from our income taxes? I thought you said we'll never pay a tax on a tax. We do and it's ridiculous and immoral."

EVERYTHING TAXED EXCEPT THE AIR

Mr. Webster would like to take the trip to Washington, too, and his arguments would be just as biting:

"You rationed and taxed such materials as drugs and leather during the war. But the war is over. You promised to repeal those taxes when it ended. You haven't. That's not right.

"Both you and I would think our wives strange animals if they gave up using their cosmetics. I'd beef, and I'm sure you would. Yet, you call them luxuries.

"On one hand you smack us with those luxury taxes and on the other you allow any person leaving America for more than 12 days to bring back $400 worth of perfumes, furs, jewelry, or cosmetics without any taxes on them. He can do that once every 6 months. If he's in Canada for 48 hours he can bring back $100 worth of stuff tax free. That makes little sense.

"I figure out that I pay more than $200 a year just in these luxury taxes, and that doesn't include important things like a fur coat for my wife. It seems you're taxing us just to live. How soon will you put a tax on the corner we pick to die in?"

Veterans' Hospitalization in Michigan

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
AND
HON. CHARLES E. POTTER
AND
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Messrs. ENGEL, POTTER, and FORD. Mr. Speaker, on February 17 we jointly sent a letter to the Federal Board of Hospitalization, heretofore the top group in location of veterans' hospitals, protesting the astonishing degree to which Michigan's 788,000 war veterans have been discriminated against, in comparison with other States, particularly those in the South, in the matter of veterans' hospitalization. The letter was based on a study by us, from figures furnished by Veterans' Administration, showing the number of beds per veteran in each of the 23 States having the greatest number of Veterans' Administration hospital facilities. In that list Michigan was No. 23, in last place.

A copy of the February 17 letter was sent by Representative ENGEL to Carl R. Gray, Jr., Veterans' Administration administrator, with a request for his comment and suggestions.

Subsequently we were informed by the Bureau of the Budget that the Federal Board of Hospitalization has recently been disbanded by the President, its fiscal functions having been transferred to the Budget Bureau. The letter stated Veterans' Administration is now solely responsible for veterans' hospital locations.

On February 28 we received a reply from Administrator Gray enclosing veterans-per-bed figures for each of the 48 States, but otherwise making no comment on the Michigan situation, other than a closing statement to the effect that, in view of the President's curtailment order in January, eliminating 16,000 beds from the Nation-wide proposed construction program, nothing could be done to restore two cancelled projects in Michigan—one at Grand Rapids, another at Detroit.

This response is, of course, unsatisfactory to us, especially in view of the shocking fact that, by Veterans' Administration's own comparative figures for all 48 States, Michigan—ranking seventh in veterans' population—with 788,000 veterans, is thirty-ninth among the 48 States in VA hospital facilities.

Since Veterans' Administration is now exclusively in charge of veterans' hospital locations, we insist on knowing its exact attitude toward this astonishing situation in which, by its own figures, Michigan ends up in thirty-ninth place among the 48 States in veterans' hospital facilities. Hence we are attaching a second joint letter which went forward to Administrator Gray yesterday. We hope by this letter to learn specifically what that agency, since it now does have sole responsibility, will do to correct the Michigan situation, now and in the future. The March 4 letter:

CARL R. GRAY, JR.,
Administrator, Veterans' Administration, Washington, D. C.

DEAR ADMINISTRATOR GRAY: We have the February 28 letter signed by O. W. Clark on your behalf, in reply to Congressman ENGEL'S February 17 letter to you in regard to the veterans' hospitalization situation in Michigan.

Since the original statement, submitted to the Federal Board of Hospitalization, was prepared jointly by us, we are in turn presenting this joint reply to you.

Mr. ENGEL'S February 17 letter enclosed a report prepared by us showing Michigan to be in twenty-third position among the 23 States having the greatest number of VA hospital facilities. We used the study to show first that proper veterans' hospitalization is neglected in Michigan in comparison with other States of similar size, and, secondly, to seek reauthorization of two hospitals, one at Detroit, the other at Grand Rapids, that were deleted by you under the President's curtailment order in January of this year.

We are not trying to trump up a justification for reinstatement of the two Michigan hospitals, irrespective of need. For it is clear to us that, by your figures or ours, such a need does exist; that Michigan is seriously out of line in veterans' hospitalization. If your agency feels otherwise, we believe a hearing should be arranged so that the case of the 788,000 veterans in Michigan can be presented.

The February 28 reply signed by Mr. Clark enclosed Veterans' Administration's own statistical analysis of the hospitalization situation in each of the 48 States. By referral to it you will find that, according to your own analysis, Michigan ranks thirty-ninth among the 48 States in beds per veteran, the 9 States below Michigan being Connecticut, Idaho, Montana, New Hampshire, New Jersey, Oklahoma, Rhode Island, South Carolina, and Vermont, all States with far fewer veterans than Michigan.

In short, by your study as well as ours, Michigan, ranking seventh in veterans' population, with 788,000 veterans, is thirty-ninth among the 48 States in VA facilities.

We think you will agree there is something radically wrong in that condition.

Your February 28 letter offers no comment whatever on that situation nor does it suggest any prospect of improvement.

It is understandable that Veterans' Administration cannot offset the President's curtailment order. But Veterans' Administration must have views of its own on the Michigan situation, along with suggestions as to what may be done in the future to bring Michigan in line with comparable States.

These views and suggestions we want to have, so we may answer the many inquiries from veterans in our State. We would like your specific views and recommendations on the Michigan situation as it compares with that of the other States. Further, we would like to be informed whether Veterans' Administration has, or will in the reasonable future have, any hospitalization review board, or other hearings before which we may appear on behalf of the 788,000 veterans of our State.

Since Veterans' Administration, with discontinuance of the Federal Board of Hospitalization, is now sole authority on location of veterans' hospitals, we want to know specifically what your agency can and will do now and in the future to correct the unfair Michigan situation. May we please have your reply as promptly as possible?

Most sincerely,

ALBERT J. ENGEL.
CHARLES E. POTTER.
GERALD R. FORD, JR.

The Wages and Hours Act

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Monroe (La.) Morning World of February 27, 1949:

A THREAT TO THE SOUTH'S ECONOMY

Chief discussion of controversial administration measures in Congress has centered around repeal of the Taft-Hartley Act, civil rights, socialized medicine, the filibuster, etc. We have heard occasional rumblings from certain sources on protest against H. R. 2033, the so-called Wage-Hour Act, but if there's been any real, effective, concerted action on the part of the South in this direction, we are unaware of it. And it's high time the South woke up to the fact that passage of this bill will be a stiff blow to this section's economy.

Despite the fact that industry has become an important factor in the welfare of the South during the past few years, the area below the Mason and Dixon's line is still largely dependent upon agriculture. And cotton is still our biggest money crop.

It has been argued by some persons who have not read the bill closely that the minimum wage of 75 cents as proposed will not apply to farm labor. That is not correct. The act is practically all-inclusive.

In general, the farm wage rates in the United States have increased about 300 percent since 1910–14 while rural living costs have increased only about 150 percent. The

average hourly wage rate of farm workers ranged from a low of 11.1 cents an hour in 1933 to a high of 52.5 cents an hour in 1948. The hourly rates of farm laborers have been very flexible and are closely related to changes in economic conditions. That will not be the case if H. R. 2033 is passed.

In this connection, an interesting observation was made by a large Ouachita Parish planter—a man who operates his holding in a most efficient manner and who has made a success of farming for many years. He said, in commenting upon the 52.5 cents an hour present wage and the proposed boost to 75 cents: "The minute my labor cost goes over 56 cents an hour, I go bankrupt."

In brief, the proposed bill would—

1. Raise the minimum wage from its present 40 cents to 75 cents an hour, provide for industry committees to set higher minima, industry by industry, up to $1 an hour.

2. Give the responsibility for administering the Wages and Hours Act to the Secretary of Labor and reduce the Wage-Hour Bureau to a mere bureau under his control.

3. Extend the scope of the act to virtually every business in the country by (a) extending coverage to activities affecting commerce or competing with any activity in commerce and (b) by drastically narrowing the present retail and service trades exemptions. It would include any retail or service establishment that operates more than four such established (chain stores) or that has a total annual volume of sales or servicing of more than $500,000.

4. Give the Secretary of Labor power to make binding regulations, and permit him to sue for employee back wages due in case of violation of the act.

5. It would increase the 2-year statute of limitations of the Portal Act to 4 years.

Good wages make for a prosperous community, but there's a limit to what the traffic can bear, and we believe that figure is best determined by employee and employer together and not by a blanket pattern set by the Government. If the administration insists on pushing through its proposed measure, then it should amend the bill so that the Nation would be zoned according to economic conditions and the ability to pay.

This important act should be given serious consideration, and then your views should be communicated to your Congressman and Senators. Time is running out; your wishes should be made known at once.

Luxuries or Necessities?

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on effects of excessive excise taxes by Sidney Fields in the New York Sunday Mirror of February 20, 1949:

DEAR CONGRESS: LUXURIES OR NECESSITIES?

Once, back there in history, when the henchmen of a tyrant suggested a mess of new taxes to be piled on a mess of old ones, the tyrant shrewdly replied: "Boys, let's just shear the lamb, not kill it." This concerns 140,000,000 lambs known as Americans, who are being shorn right down to the skin by a mess of silly taxes, and the silliest of them is the 20-percent sock against fur coats, leather goods, toilet articles, jewelry, and amusements.

Congress calls it a tax on "luxuries." In effect, it's a tax against necessities. The bumbling legislators didn't intend the tax to discriminate against women and children, but it does. And since 1944 it's become a slowly tightening noose contributing to unemployment and a frightening number of bankruptcies in the industries involved, especially in New York.

TAXING BABIES

Nobody has yet figured out by what process of reasoning Congress slaps a 20-percent luxury tax on a bottle of baby oil and a jar of baby powder, and omits the same tax on a $1.50 cake of perfumed soap. A lady's handbag is a lady's pocket. There's no tax against a man's pocket. There is a 20-percent tax against any handbag.

Congress would have quite a time convincing a boss and his secretary that her lipstick, powder, shampoo, nail polish, and so on are luxuries. She pays the 20-percent death tax on all of them. But anyone buying a $500 ready-made bar or a fancy billiard table pays no luxury tax.

That same secretary, or her father, or her brother, needs an alarm clock. There's a luxury tax on alarm clocks. But some joyful gent on a hunting trip buys $1,000 worth of hunting equipment and pays no 20-percent tax on it.

About 80 percent of all fur coats sold in the United States retail at $300 or under. Tell five females their fur coats are luxuries and four of them will glare at the first man's coat they see and snap at you that a fur coat is a practical necessity: It's warm, durable, and can be worn day or evening. She pays 60 hard-earned bucks in "luxury" taxes for her $300 fur coat. But a $500 evening gown or a $1,000 cloth coat trimmed in ermine is tax-free.

BILLION-DOLLAR BITE

Of course, there's an added bite: The 2-percent sales tax in New York, on any of these luxuries.

The 140,000,000 lambs known as Americans were sheared for almost a billion dollars for the fiscal year 1947 in excise taxes on furs, leather goods, jewelry, toilet articles, amusement, and movie and theater admissions. New Yorkers were squeezed for $153,000,000: about $20 for every man, woman, and child in the city.

Since 1944, when the tax was boosted from 10 to 20 percent, there have been 4 bankruptcies in the luggage business, 9 in toilet goods, 108 in jewelry, and 334 in furs. All the bankruptcies listed more than $32,000,000 in liabilities.

Of the 334 fur failures 218 were in New York City. Usually the industry employs 40,000; over 13,000 of them are now jobless. New York is the world's first fur market fed with skins from all over the world: Alaska, China, Afghanistan, plus 2,500,000 American trappers and 7,000 American fur animal farms.

These farmers are in a screwy nutcracker: Congress appropriates money to help them, then taxes the life out of them.

Of the 500 handbag manufacturers in the country 400 have their factories or offices in the city. Since 1947 some 35 firms went out of business, and another 60 are on a part-time basis, throwing about 5,000 people out of work.

Movies are the poor man's entertainment and he finds it in the neighborhood theater. Ordinarily a family of four spends about $25 a year just on admission taxes. Right now pop is trying to save half that sum, which means admissions are down 50 percent. Film rentals have decreased at least 10 percent under last year. Any little theater owner tells you he's getting along with less ushers, cleaners, box-office help, and is even cutting down his manager's salary.

POWER TO DESTROY

In its itchy desire to tax and tax, Congress would call a hallway with a jukebox in it a night club, and slap the 20-percent plague on it. The city's 1,200 cabarets ordinarily do a business of $70,000,000 a year. They do less than half that now. In the last 6 months at least 10 major spots have shut down. Over 1,000 people were thrown out of work.

"We're only hiring full staffs for week ends now," one night-club operator wailed. "This once was a 7-night-a-week business. It's just a week-end affair now."

Then he added with a shudder: "I see one-time owners now working as headwaiters, and I know one of them who is a dishwasher in a restaurant."

One man who had his little fur shop knocked out by the luxury tax summed up the plight of all the shorn lambs this way: "Congress needs a lesson in simple arithmetic. They can collect a lot more in income and corporation taxes from flourishing factories and their workers than from ghost factories and the unemployed. This 20-percent death proves that the power to tax is the power to destroy."

PROMISE RENEGED

When it was first passed in 1941, the so-called luxury tax was 10 percent. No one complained when it was boosted to 20 percent in 1943 as a wartime measure. Congress then said it would be lifted 6 months after the emergency. The war ended in 1945. The President officially declared hostilities at an end on December 31, 1946. That same month Congress reenacted the 20-percent death and omitted any mention of a termination date.

Airports and Facilities in Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the Legislature of Oregon:

Senate Joint Memorial 6

To the honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Senate and the House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas the west coast during World War II was vital to the defense of the entire United States; and

Whereas this defense required the construction of large airports and extensive facilities for the operation of long-range aircraft and for the training of large numbers of air-force personnel at strategic locations in Oregon; and

Whereas these strategic airport and training facilities must be maintained so that our western defense front is held in a state of readiness; and

Whereas the maintenance of these strategic airports is beyond the capacity of the present finances of the municipalities affected; and

Whereas the Oregon cities owning these strategic airports are faced with increasing population: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the house of representatives jointly

concurring therein), That the Eighty-first Congress of the United States be and it hereby is memoralized, and this forty-fifth legislative assembly of the State of Oregon hereby does petition the Congress to make available funds for the purpose of maintaining, on a defense standard, the airports and facilities which have been either constructed or taken over by the armed forces and which are of primary strategic value to said forces; be it further

Resolved, That the secretary of state of the State of Oregon be and he hereby is directed to transmit copies of this memorial to the President of the Senate, to the Speaker of the House of Representatives of the United States, and to each Senator and Representative therein, representing the people of the State of Oregon.

Adopted by senate February 9, 1949.

WM. E. WALSH,
President of Senate.

Concurred in by house February 25, 1949.

FRANK J. VAN DYKE,
Speaker of House.

Where's the Promise?

EXTENSION OF REMARKS
OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article on effects of excessive excise taxes by Sidney Fields in the New York Daily Mirror of Tuesday, February 22, 1949:

Just a few years ago Arthur L. Krassny was a handbag manufacturer with a thriving business that employed about 60 people and grossed half a million a year. He helped build that business himself. Today he's pounding the streets as a salesman. And it isn't because he didn't know how to make or sell handbags.

It's because of a death penalty called a luxury tax which gets the customer sore at the storekeeper and the storekeeper sore at the handbag maker.

Krassny's is no ordinary tragedy, though it is a common one. If you don't share it with him, you feel it. You meet the luxury tax every day, and pay it. Since the luxury tax was boosted from 10 to 20 percent in 1944 there have been 455 bankruptcies in the fur, leather, toilet goods, and jewelry industries. Since 1947 some 35 handbag makers shut down completely, and another 60 went on a part-time basis, throwing over 5,000 people out of work. Congress may still figure on collecting luxury taxes, but it's losing a lot on income and business taxes.

With Krassny the idea wasn't a hunger for power or great wealth. He's the little guy who worked out a promise. A promise that we all search for. His is shattered now. Twelve years ago he was selling handbags, on the street, like any salesman. He did pretty well; so well that he bought into the firm he worked for. Three years ago his business started skidding.

YOU DON'T SELL, YOU DON'T EAT

"Before, I or any one of the six salesmen could easily sell 150 bags a day. Then we all learned we couldn't sell a dozen a day. It was mostly the consumer resistance set up by the luxury tax."

It got so bad 3 years ago he couldn't cover his overhead. So he paid off all his employees and all his creditors and just folded up, and went back to work as a salesman * * *.

"Oh, I make a living now, if you want to call it that. I'm earning about a third of what I did when I was on my own. Maybe my relatives will stay away if you put that in print. But do you know what it is to be a businessman, on your own, and then."

His eyes weren't happy when he said it.

Every day now he lugs his sample cases and calls on about 30 retailers. Sometimes he takes a trip through New England, to Philadelphia, Baltimore, Washington. He has to pay his own expenses for the trips, and he works on a straight commission. If he doesn't sell, he doesn't eat.

And his whole industry isn't getting any better: It's not uncommon for him to see an indignant lady customer froth at the $2.50 tax on a $12.50 bag, demand that the storekeeper pay the tax himself, and storm out when he refuses to do it.

"The retailers say that the customers aren't buying and 85 percent of it is due to the tax. When a woman has to pay $6 for a $5 bag she screams that the war is over, what's the tax for. And she's right. Working people buy $5 bags. She has a right to scream after the butcher and baker and grocer get through with her dollar."

RETREAT OF THE KRASSNYS

In the past few months Krassny has encountered at least 12 specialty shops who just threw out their handbag line completely. There's so much customer resentment against the 20-percent tax the specialty shop owners feel it hurts the sales of other things they carry. And that's true all over the country.

"The craziest experience I've had was watching a woman buy a $75 hat, and she wanted a bag to match. The $75 hat had no 20-percent tax on it, but rather than pay $5 tax on the bag, she bought the hat and left the bag. Does it make sense?"

Back in the bright days the Krassnys, Mr. and Mrs. and their 14-year-old daughter, would eat out a couple of times a week, and go to the theater and movies maybe twice a week. They stay home now. Miss Krassny won't go to camp this summer. Mrs. Krassny has to do all the housework herself now.

"None of us is weeping. But our sense of security is jolted. My savings are almost gone. I'm changing. I find myself cussing out people. And at my age. Lugging grips around the streets, and waiting in offices and foyers. Oh, the damn waiting. This luxury tax can get very personal can't it?

"My father was in business for himself and I always dreamed of being on my own. In business. That's the promise. This whole idea we have here, this America, what is it except promise? I was born here and always felt I could work out the promise. That's my birthright. Why is it that your own government won't let you work out your own promise?"

Bock Beer Time Is Here Again as Brewing Industry Celebrates Seven Hundredth Anniversary of Famous Brew

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. KLEIN. Mr. Speaker, it has come to my attention that the brewers of the United States this year are celebrating the seven hundredth anniversary of bock beer, that rich dark brew which traditionally heralds the approach of spring.

Since the year 1249, when the first kegs of bock were tapped in the manorial village of Einbeck in Germany, this beverage has traveled far and wide to delight appreciative generations of beer drinkers all over the world. In the United States, which today is the No. 1 producer of beer, the art and science of brewing bock have reached fruition. We produce the most and we produce the finest.

On this occasion, it seems both proper and fitting that we pause for a moment to salute the industry which not only tickles the palate but which also contributes a good part of the money required to run the Federal Government. Last year the United States Treasury collected almost $700,000,000 in taxes from the more than 85,000,000 barrels of brew produced. Approximately 80,000 men are employed directly in the production of beer, and many times that number make their living from the distribution and sale of this beverage of moderation.

Now, as the brewers of my home city prepare to celebrate this occasion with a gigantic bock-beer festival for the benefit of the American Red Cross, I hope you will join me in extending congratulations to them and to the brewers of America.

Under leave, I am including as a part of my remarks an article which appeared in the New York Times magazine for February 27, 1949:

BACK COMES BOCK

THE FAMOUS BREW WILL SOON RETURN AS A CONGENIAL HARBINGER OF SPRING

(By Morris Gilbert)

After 7 years' scarcity, bock beer will again inundate taprooms in the metropolitan area beginning on March 10, bringing satisfaction to many gourmets and reviving a brewing practice 700 years old this year. It will take 5,000 truck drivers to distribute the 4,500,000 gallons specially laid down for the bock season, according to the New York Brewers Board of Trade and the New Jersey Brewers Association, "fomenters" and "fermenters" of this occasion.

The brew

Bock beer is a rich, dark brew, traditionally produced from the finest grains and hops of the autumn harvest. Its malt is kilned—roasted—longer than usual, which gives it an exceptionally vivid flavor and deep mahogany color. Brewmasters lay down the seasonal supply around December 1. The ensuing period of winter is the brewer's slack season, so more space for storing this brew is available than at other seasons when consumption of beers is brisker. Therefore the bock and lager—age—a full 3 months, an exceptional period of growth and development. That allows it to be launched in all its stored maturity just ahead of the vernal equinox. Consequently bock, in beer-drinking lands, has become as symbolic of springtime as the robin, the daffodil, or the umpire's shout, "Play ball!"

The origins

To a small village near Hamburg, according to legend, belongs the distinction of having originated bock beer. The village was Einbeck; the year, 1249. The autumn before its brewers, already celebrated in the vicinity for the quality of their product, had compacted together to make an unusually superior beer against the arrival of spring. They chose their cereals for the malt with greatest care, selected the best available hops, brewed the mixture with devoted skill, and laid it down in their caves.

In March, when birds were twittering, ewes and rams and goats were frisking, and a festival honoring the return of the sun was at hand, they tapped the brew. A new wonder had, it seemed at that moment, come into the world.

The name

The christening of the brew is also attributed to Einbeck. It was so good, and its local fame spread so fast, that discriminating drinkers of the region were soon calling for "ein Einbeck bier." Soon their command was for "ein Einbeck," then for "ein Beck." And, presently, what with the little kids butting their impetuous way among merrymakers at the open-air spring frolics—goats being already identified with the revels of Gambrinus, the inventor of beer, a sort of Teuton Pan or Bacchus—the order became "ein bock"—a goat.

The spread

The tides of commerce floated bock beer to many lands, along with other important commodities, beginning in the Middle Ages. Einbeck became a member of the Hanseatic League in the thirteenth century. This collection of German trading cities sent its exports to Scandinavia, to Russia, to Britain. Bock beer is reported to have fetched up in places as distant as Jerusalem. The goat became the label of the brew.

A learned chronicler, Letzner by name, wrote in the sixteenth century of this delicious, palatable, subtle, extremely sound, and wholesome beer, which because of its refreshing properties and wholesome taste is exported to far-away countries. * * *

Modern bock

Einbeck was almost wiped out by fires 400 years ago, and the Thirty Years' War ruined its industry. But the practice of brewing bock beer survived in Germany. German brewers, making their way to this country a century and more ago, brought with them the habit of producing the exceptionally masterful springtime beer each year. In German communities here—and then quite generally—signs in barrooms displaying prancing goats became the accepted and welcome announcement that bock was on tap again.

The production of bock beer has not been unimpeded over the years here. First prohibition, then World War II, interfered with conscientious production. Small quantities of bock have been produced in the years since. But now the venerable practice is being renewed in a big way. More than a score of local breweries have combined to make this year's bock revival a notable event for the disciples of Gambrinus.

A Forty-ninth State in '49

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a copy of an editorial from the New York Times of March 6, 1949, entitled "A Forty-ninth State in '49."

Mr. Speaker, I think this editorial is eminently apropos at this time, and since the House has already indicated its approval that the Senate will in the national interest likewise discharge a moral and legal obligation, and join in making Hawaii a forty-ninth State in '49.

The editorial follows:

A FORTY-NINTH STATE IN '49

The first step in the legislative process that should make Hawaii the forty-ninth state this year has been taken with unanimous approval by a subcommittee of the House Public Lands Committee of H. R. 49, the appropriately numbered bill of Delegate JOSEPH FARRINGTON. The question has been investigated so many times that the subcommittee spent little time on its hearing. Similar quick and unanimous action was taken on an Alaskan statehood bill.

There seems to be little question that the House again will approve statehood for Hawaii, as it did in the Eightieth Congress in 1947. It is to be hoped that the Senate also will find time this year to consider and approve. There is no valid reason why it should not. All the old arguments against statehood for the lovely islands that lie 2,400 miles off our west coast and over which the United States flag has flown for over 50 years have long since been worn threadbare. The new one of communism is no more valid against Hawaii that it is against any present State. There may be some Communists in Hawaii. Senator CORDON's investigation last year failed to show that the movement had any importance in Hawaiian affairs.

By every known standard Hawaii and its 520,000 inhabitants are well qualified to become the forty-ninth State of our Union and to have in Congress spokesmen for their interests. Further delay would be an injustice to them that cannot be defended. The question as to Alaska is not so clear, but it also merits consideration.

Address of Hon. Tom C. Clark, Attorney General of the United States

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of Hon. Tom C. Clark, Attorney General of the United States, prepared for delivery before the Jewish Labor Committee Convention, President Hotel, Atlantic City, N. J., Friday, February 25, 1949:

It is a pleasure to participate in this second postwar national convention of the Jewish Labor Committee, which is devoting its energies to the happiness of mankind.

Since the dawn of history man has been constantly struggling upward toward the peak of individual liberty.

In the Book of Genesis we read that "the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life, and man became a living soul."

This unbreakable link with the Divine has inspired freedom-searching peoples of all creeds and all races throughout the centuries in their ceaseless quest for freedom. Out of the longings, the sufferings, the hopes of the ages, a nation, dedicated to the principle of individual freedom was born and established 170 years ago on this continent.

When this glorious country, this haven of liberty was being formed, the founding fathers sought to secure once and for all a firm and enduring basis for human liberty. They wanted and demanded guaranties for the sacredness of human personality against the hand of dictatorship and tyranny—they wanted most of all and demanded guaranties of religious liberty, the right to worship God, and to worship Him as they pleased.

First the founding fathers looked to England for their model of individual freedom. In that nation, rights were rooted in Parliament. They rejected the English concept because if a Parliament could grant liberties and rights, then likewise, a Parliament could take them away at will. The guaranty was worthless.

Next they looked to France, where the rights of man rested on the will of the majority. They rejected the French theory of government because, if rights are the gift of the majority, then that majority can take away the rights of the minority—and this guaranty, too, was worthless.

After surveying the different systems of government our founding fathers realized that the rights of man stem only from Almighty God, not from any human power.

And thus with their recognition of this great truth, the sacredness of human personality—the inherent, inalienable rights to life, liberty, and the pursuit of human happiness became a fundamental part of the basic law of the land.

Originating in the divine, it shall never be taken away by any human power—here at home or abroad.

Since our beginnings as a nation Americans have worked, prayed, fought, and died to attain and maintain her ideals. We Americans today stand steadfast in our determination not to swerve 1 inch from this noble course.

It is difficult to realize that within only one generation we have fought two world wars that we might pass on to our children and our children's children the freedom we have enjoyed. And also to hold high the torch of liberty to light the way for peoples in darkened areas of the earth.

Natives of all the world have landed here in their search for liberty.

One such citizen, through whose efforts the dignity and worth of labor has received more fully the recognition it deserved, came from Great Britain. The spirit of that dauntless champion of the rights of man in the world of labor is here with us tonight—it is the spirit of Samuel Gompers.

It is comforting to all of us to know that William Green, Philip Murray, David Dubinsky, Matthew Woll, and a host of other labor leaders, backed by millions of workers, are holding high the banner for those who toil—and are fighting and defeating evil forces than would destroy the very things upon which the worth and dignity of labor depend and prosper.

It is especially encouraging and heartwarming to meet with organizations such as the Jewish Labor Committee. Your organization gives aid to Jewish and non-Jewish labor institutions overseas. It assists the democratic labor movement in Europe, provides relief for victims of oppression and persecution, and combats racial and religious intolerance here and abroad. Dedicated to these worthy purposes, you recognize the interdependence of peoples, and the need to keep liberty's flame burning all over the globe. All of us have learned that if the flame is snuffed out in one place, the lights can go out in other places.

We live, move, and have our being under the Eternal God whose fatherhood doth encompass us all. We share joy and sorrow, prosperity and poverty. Together we rejoice in the blessings of liberty, or suffer the burdens of slavery. We in this world are all brothers under God.

Labor's educational program, both here and in Europe, to alert its members against every totalitarian ideology, together with your efforts to promote racial understanding and good will, furnish a patriotic example for all of us to follow—here at home as well as in

foreign lands. Yes, the totalitarian would destroy everything dear to us. In essence, this vicious ideology would, if it could, smash our precious American heritage.

Our democratic form of government, functioning in the spirit of the Declaration of Independence, and of the Constitution with its Bill of Rights, has made it possible for our Republic to achieve the highest standard of living known to civilized man, and to become the wealthiest and most powerful nation on the face of the earth. In saying this, we do not point it out in a spirit of exaltation—or braggadocio, or in an attempt to overlord other peoples and other nations.

Yet, day and night, subversives are circulating over the earth's surface, attacking the liberty of the people.

It is appropriate, therefore, since we are celebrating Brotherhood Week and National Security Week, as well as the birthday of the Father of our Country—that we stress the need for a strong citizenship that will make us safe on all fronts.

In his day, Washington recommended such defenses.

Today, with the same thought, President Truman, our great human-rights President, says:

"We can fulfill our obligation of service in the cause of peace only by maintaining our strength. The will for peace without the strength for peace is of no avail."

The time of this great meeting also comes close upon the birthdays of Thomas Jefferson and Andrew Jackson, those two famous exponents of democracy and brotherhood. The efforts which you are making to promote racial understanding and good will would, I believe, have brought heart-warming satisfaction to our first President as well as to his successors, Jefferson and Jackson.

By written and spoken word, the father of our country missed no opportunity to contribute to the preservation of the civil and religious liberties of the American people.

To the Hebrew congregation at Newport, R. I., he sent a message which, ever since that time, has seemed like a benediction and a protection. Included in the ever-living words were these: "The Government of the United States gives to bigotry no sanction, to persecution no assistance."

This bears emphasizing today, especially when we consider our displaced-persons program. Some advancement has been made in this humanitarian cause, but much better results must be and will be achieved. It is regretted that up to now only a few thousand displaced men, women, and children have landed in the United States. But it is a start. That is a far cry from the 200,000 that are permitted to enter under the law and a much farther cry from the 400,000 that we hope will find a haven on our soil.

Labor is to be commended for the aggressive fight it has made in behalf of those needy persons who were innocent victims of dictators' tyranny. And Mr. Dubinsky and the garment industry deserve high praise for furnishing employment to over 100 skilled workers who were among the first arrivals. I understand the industry seriously needs more of such skilled workers and about 1,000 others are now being processed for this employment.

Labor organizations make the best answer to the distorted anti-American propaganda abroad to belittle the notable achievements of great American trade-unions. The Communist falsehoods cannot take hold among the peoples of Europe because your magnificent deeds expose and refute their claims.

American labor's support of the Marshall plan was proof to the worker in western Europe that Communist propaganda was all wrong. Your establishment of an orphanage in Palermo and 12 projects in France, the loaning of generous funds to the Dutch transport workers so that they could re-equip themselves, your contribution to the labor league for human rights, all have combined to bring hope to a forlorn world. Your help has been spiritual as well as material, and your good-neighbor influence has been felt all over Europe. Your answer to communism is immeasurably better than bombs and bullets.

As we seek to help the displaced persons we must also be unceasing in our efforts to safeguard the civil rights of individuals in our own country. Thus far, we have had to rely upon only a thin thread of statutory authority, consisting of the scattered remnants of civil-rights legislation of the post-Civil War period. This law is so vaguely worded that the courts have frequently been reluctant to see it applied to specific situations. Notwithstanding the legal and constitutional difficulties which have confronted the Department, to say nothing of the force of local prejudice when prosecutions have been undertaken, the department has on many occasions sought to obtain for these statutes, through the courts, both in matters pertaining to individual rights and the rights of labor as a group, a broad interpretation of their application.

The report of the President's Committee on Civil Rights, based upon an exhaustive case-by-case review of the work of the civil-rights section, has emphasized the weak statutory tools with which, in this field, the Department has had to work. It recommended, as you know, clarifying and enlarging enactments in respect to the coverage of the civil-rights statutes and the machinery for their enforcement, the more important of which have been urged upon Congress by President Truman in his state of the Union messages to the Eightieth and Eighty-first Congresses.

Some of you present at this convention have fought recently on the battlefields of freedom. There you learned that no artificial barriers separated men on the fighting front.

You fought to advance the cause of universal brotherhood and to extend the spirit of the good neighbor to all mankind.

You proclaimed America to the world as an example of what a free society can do for the individual and for a nation.

Never in the history of our country has it been so important that we live up to that example, and point the way to a better world—one filled with understanding and friendship among men.

In peacetime or wartime, the godless termites of democracy must find no hiding place in the hearts of our citizens. Our citizens want to send forth into the world rays of good will and happiness for all.

When the liberty and dignity of the individual are everywhere respected and protected, then we will have approached universal brotherhood.

In ancient days, gallant souls in noble succession were unjustly accused, and suffered for their faith. Today, in 1949, not in the distant past, freedom weeps as falsely accused individuals stand before courts—courts supposed to be tribunals of justice—from which they receive no justice—only brutal injustice.

May God grant us the courage and the wisdom to combat these menacing godless trends and to lead the stricken peoples of the world to justice and lasting peace.

The members of our armed services, who went forth to battle tyranny during the recent world conflict, came from all walks of life.

They were freemen fighting for freedom.

We thought they won that fight.

But no, the battle is not ended. All of us must be determined to remain free. Religious faiths, without armaments, will never be supplanted by tyrannical forces bearing arms.

We must never allow communism, or any other subversive activity which makes criminal mockery of individual rights, to get authority over our liberties. Should we do so, freedom would vanish from the earth. And that will never happen as long as freemen guard freedom's ramparts.

Yes, we are living in the most tense time in world history.

But we also are living in the most dynamic period of human experience.

History's pages are filled with accounts of nations crumbling in the dust. They took the lower road—the route that detoured them from God.

We must take the upper road—the high road that leads to a more abundant life for all mankind—that road leads to God.

In following the right way, we will reach an era of personal security and abundance such as mankind has never witnessed. We will also have international peace and world happiness.

The technology of this modern age—this wonderful challenging age—must advance and serve humanity, not wreck it. Your officials in Washington are determined that atomic energy shall be used for humanity's sake, and hope and pray that it shall never have to be used otherwise.

Builders, not destroyers, Americans will not fail a world yearning for harmony and peace.

With God's help, we will make the land in which we live better and more beautiful because we have been in it. We will make a growing America, full of golden opportunities, become a country in which those opportunities are realized.

I, too, pray and urge: "Let us keep America the refuge of the oppressed, the hope of the despairing, and the land of justice and opportunity for all."

Reduction in World Trade Volume

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Total World Trade Volume at Scant Prewar Level," written by Robert H. Patchin, vice president, W. R. Grace & Co. and published in the Grace Log for January-February 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOTAL WORLD TRADE VOLUME AT SCANT PREWAR LEVEL

(By Robert H. Patchin, vice president, W. R. Grace & Co.)

The fact that when the figures are completed, the total volume of world trade, as distinct from its value, for 1948, may turn out to have been smaller than in 1938, suggests that the effort to restore nondiscriminatory, multilateral world-trade relations needs a more powerful impetus than it is getting.

A dazzling total world trade value of forty-four or forty-five billion dollars is likely to blind us to the truth that the combined barrels, boxes, bundles, and bulk of goods internationally bought and sold would be worth substantially less than half of that amount at average 1938 prices. That's the way the comparative trade volume is determined. So much for inflation. But men everywhere live by things not money. And things are not moving very freely in world trade today.

This renders important and urgent the proposal of Representative JOHN D. DINGELL, Democrat, of Michigan, to move early in the new Congress for prompt extension of the Reciprocal Trade Agreements Act in its original strength.

The Eightieth Congress, by extending the act for only a year with a confusing, if not crippling, amendment, raised doubts as to the future and vigor of the policy inaugurated by Cordell Hull in 1934. The policy has produced a network of 42 trade agreements between the United States and other countries. As all are based on the nondiscriminatory multilateral principle, it is a far-reaching factor in the world economy, even though, for the time being, bilateral trade agreements are widely prevalent.

Early extension of the Trade Agreements Act for an adequate period and vigorous administration, not only in adjusting tariffs, but in positively combatting discriminations, should be a powerful encouragement to multilateral expansion of the volume as well as the value of world trade, and should arrest any further decline. Moreover, the broad and tolerant philosophy of this policy should be mustered full strength in support of the President of the United States in the bipartisan purpose of surmounting the world political and economic crisis.

Nondiscriminatory and multilateral are mouth-filling words. They fall heavily upon the ear. But in world trade they mean simply liberal trade relations, fair to all, in which cruel and unusual barriers are out, and monetary exchange is convertible. Convertible, in turn, means that if you sell something somewhere for pounds, francs, or whatever else, you can buy any other currency with the proceeds.

This seemingly simple state of affairs used to be the rule in international commerce. However, it was widely broken down by trade and exchange controls established during World War I. Some were carried over and even intensified in the period between the two world wars. Most of them were reestablished in practically all the belligerent countries, except the United States, in World War II, and they prevail widely today.

In fact, probably half of world trade today is trussed up, hand and foot, with import restrictions, quotas, exchange controls, and the like, with a heavy infiltration of state trade and managed economy. Controls can be more stifling than the highest tariffs.

Practically every government in the world subscribes to the principle of nondiscriminatory multilateral trade. But—and this word "but" is heard everywhere—many feel obliged for one or another emergency reasons to practice the various controls which the peace-loving nations wanted to bring to an end, after a transition period by the creation of the International Monetary Fund.

This period has 2 or 3 years to run. The control countries are technically within their rights as they contend that this way they trade more than they could if controls were lifted and currency allowed to find its own level. However a fundamental question arises: Is the world getting anywhere? Or, is it getting there fast enough for the welfare of the greatly increased world population which is demanding the better standards of life which these same peace-loving nations collectively promised in all the joint agreements of war, with the United Nations, and so forth?

The year 1938 was a none too prosperous prewar period. The seeds of want and war were germinating rapidly. There has been wide acceptance of the conviction that should total world trade revert to the prewar level there would simply not be enough trade to go around, and nobody would be very happy. The ground would be fertile for things we do not like. But we are back there right now. For while total world trade (the sum of everybody's exports to everybody else) reached a value of $46,000,000,000 in 1947, the volume of goods thus traded in that year was only about 5 percent more than in 1938.

But in 1948 the exports of the United States, which had been about one-third of the world total compared with one-seventh before the war, appeared to have declined about 20 percent in value. The combined exports of all other countries were rising but the net result appears to have been a dip in the total volume to a point slightly under that of 1938. Some may consider this pretty good for a war-scarred world but if the various forms of relief and outright aid, such as in the Marshall plan, are deducted, the volume of private self-sustained trade would appear to have been substantially smaller. The Marshall plan, projected for 4 years, cannot continue indefinitely.

Moving into 1949, it remains to be seen whether the $5,000,000,000 voted by the American people in the Foreign Assistance Act to make the European recovery program (Marshall plan) work for the first of 4 years will stimulate sufficiently the latent forces of recovery in world trade on a growing multilateral basis, as well as the recovery of the individual production and trade of the nations aided.

In the September-October issue of The Grace Log I pointed out that the Marshall plan was conditioned upon resolute and effective measures of self-help to be taken by the nations of western Europe. This recognized that economic recovery could not be assured solely by aid from without, but must be generated from within. Senator ARTHUR VANDENBERG has given notice repeatedly that at the end of the first year of operation of the act the results will be realistically appraised.

This appraisal will not be complete unless it extends to the total effect of the restrictive trade and currency controls which enmesh so much of world trade. Sympathy is not lacking for the nations which have resorted to and are clinging to such methods in their search for economic security. However, the question confronts the world: Does the overall restrictive effect of such controls on the recovery and expansion of world trade outweigh the benefits of the security sought by various nations? The trouble with trade and exchange controls is that they frequently bolster highly artificial situations; they become embedded and defy termination.

To quote Cordell Hull when he launched the reciprocal trade agreements against the world tide of rising tariffs and trade and exchange controls: "Let us not deceive ourselves. We must awaken to the fact that we are at a parting of the ways. In one direction lies the road of fair and practical cooperation among the nations in the field of their commercial relations, the road of expanding international trade. It leads to increasing employment, rising standards of living, international political and economic stability, and durable peace.

"In the other direction lies the road of economic warfare inherent in the policy of national self-containment, the road of contracting and vanishing trade. It leads to a progressive economic impoverishment everywhere, political instability, and constant fear of armed conflict among nations.

"Which way shall we go?"

The International Monetary Fund and the International Bank for Reconstruction and Development, financed more largely by the United States than by any other power, are dedicated to this task also. Their responsibility is world wide, by no means limited to Europe. While it may well be argued that dollars cannot save the world it is likewise apparent that the world cannot be saved without dollars, particularly if the dollars are so employed as to energize the latent forces of economic recovery wherever found. The world needs a new set of spark plugs but they should be of the well-tested and sound variety.

Since everything nowadays has to be "sold," how about the following for a slogan to speed the return of nondiscriminatory, multilateral trade relations: "Multifair, the economic spark plug."

Obviously there is no uniform pattern of trade and exchange control. They vary from country to country. Sometimes they relate to the maintenance of currency areas. On occasion, as recently in South Africa, sudden administrative changes abruptly halt orders in process between factory and overseas buyers. Desirable investment of United States capital in Latin America is frequently impeded by doubt as to obtaining regular remittances, in dollars, of the earnings thereon.

Of course, a pretty good case can be made for exchange controls under conditions where a flight of capital into the supposed refuge of stronger foreign currencies might otherwise result. Countries in the smaller economic category are not likely to adopt a bold fiscal course when key nations of Europe, long looked up to, cling to drastic controls and a wide variety of managed economy.

This is one reason why the United States, in addition to a vigorous revival of the trade-agreements policy, should assert the inherent merit of uncontrolled currency of which the United States dollar is the chief example. Anyone selling anything to the United States can convert it into foreign currency at will but the reverse is not true in many other countries. The result is a clogging of the channels of world trade which it is the responsibility of the European recovery program, developed pursuant to the Marshall plan, and directed by the ECA, eventually to clear away.

Intergovernmental Relations

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Time for Good, Hard Look," published in the Cleveland Plain Dealer of February 15, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME FOR GOOD, HARD LOOK

A bill of laudable purposes—the purposes of examining the results of the steady centralization of power in the Federal Government, of ascertaining how much of this centralization has resulted from necessity and how much from political design—has been introduced in the United States Senate by Senator JOHN W. BRICKER, Republican, of Ohio.

The bill by the former governor and the present junior Senator calls for the creation of a national commission on intergovernmental relations. The commission, which would be somewhat comparable in scope of authority to the Hoover Commission on the Reorganization of the Executive Branch of the Federal Government, would be composed of representatives of the national administration, Congress, State government, municipal government, and the taxpaying public that foots the bill for the oppressive snarl of Federal-State-local taxation and the wasteful, confusing jumble of jurisdictions of the three levels of government.

As Senator BRICKER accurately points out, not since the adoption of the Constitution, the framers of which believed they had stipulated a "proper division of powers and functions between the Federal and State Governments," has a thoroughgoing inquiry into

intergovernmental relationships been conducted. Senator BRICKER is deeply concerned, and rightly so, with the way in which the three levels of government, Federal, State, and local, have crisscrossed the jurisdictional lines—and with the enormous concentration of governmental power in Washington.

In presenting his bill to set up a commission to determine the best allocation of functions between the Federal and State Governments, and mark out appropriate fields of taxation in harmony with its proposed allocation, Senator BRICKER made some remarks that should be soberly pondered by the American people generally, and by the Republican Party leadership particularly, if that party is to be the party which the senior Senator from Ohio, ROBERT A. TAFT, believes it should become—the party militantly protecting human liberty against the steady encroachment of government.

"I believe the Congress should find out, if it can," said Senator BRICKER, "what factors have contributed to the centralization of Government in Washington, and the degree of contribution of each."

"I believe the Congress must carefully examine the ultimate result of the trend toward centralization. Are we faced with an irresistible rush toward centralization—then state socialism—then dictatorship? I do not believe we are. I do not believe that this trend, which to my mind will certainly lead to the eventual destruction of the Federal form of government, is irreversible. Again it is high time the Congress stop and take stock—high time to find out where we are going.

"It may be," Senator BRICKER said later in explanation of his bill, "that State and local governments are expensive, archaic manifestations of a bygone day and should be dissolved. Heaven forbid such a finding—but if they are, let's find it out and stop paying lip service to the Federal system."

Senator BRICKER is quite right; it is time to take a good, hard look and see what time, a vastly changed economy, and the dreamers of a welfare state have done to the handiwork of the creators of the Federal Government who delegated what they thought were carefully enumerated powers to that Government.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Pact or Union?" published in the February 7, 1949, issue of the Providence Evening Bulletin, and an editorial entitled "Partners or Allies," published in a recent issue of the Washinton Post. The editorials deal with North Atlantic security.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Evening Bulletin of February 7, 1949]

ATLANTIC PACT OR UNION?

Two of America's oldest and most cherished political maxims are: "In union there is strength" and "No entangling alliances." In modern times there may seem to be an inconsistency between them, yet both still have validity. Our own history has taught us the inestimable benefits of the bond among our States and the disastrous results of any effort to break it. European history has shown us the dangers of committing this country to fight in wars which may be undertaken by other nations for interests quite foreign to our own.

In the context of today's news, the riddle posed by these two truths might be stated this way: How can America gain the strength promised by the proposed Atlantic security pact without incurring the risk of being drawn into war by the action of allies beyond our control? A practical answer to that riddle, it seems to us, may be found in the proposal of Senator ESTES KEFAUVER, Democrat, Tennessee, that the Atlantic defense pact take the form of a genuine union of the free democracies.

A federal union of free peoples even on the limited basis Senator KEFAUVER suggests would, we believe, have other important advantages, notably economy in defense expenditures and the ability to provide mutual defense against internal as well as external aggression. But its great and basic merit from an American viewpoint is the promise it holds of solving our ancient riddle of how to gain the strength of unity without encouraging economic, diplomatic, or military irresponsibility. We strongly support Senator KEFAUVER'S call for a convention of free nations to study this approach to the forthcoming Atlantic security pact.

If the negotiations now under way among the United States, Canada, and several nations of Western Europe produce only another alliance along these lines, the same flaws may reappear. But if the effort is turned toward the creation of a real union, in which the member nations sacrifice a degree of sovereignty to a central parliament representing the free peoples in proportion to population, we might achieve the world's first international organization based on law.

[From the Washington (D. C.) Post]

PARTNERS OR ALLIES

However, the occasion might be taken to reexamine the nature of the particular kind of Atlantic association under discussion. Why limit the association to a military alliance providing for the acquisition of bases, for arms consignments, and for a pledge to wage war together? If we feel a sense of association with western Europe, why not offer an association for peace as well as for war? Metternich said after the Napoleonic wars that a unifying idea was the foundation of postwar reconstruction and pacification. The unifying idea of his day was legitimacy of government. Today it is freedom and union—as the free peoples all recognize in their dreams, though their governments are not guided by it. Specifically, before this country sets its hand to a military alliance, and embarks on a course that all history teaches will infallibly lead to war, let us issue a call for a constitutional assembly for the consideration of a grand Federal union.

Such a call from the United States—the music maker for the free world—would lift the present discussions onto a new plane. It would reach peoples as well as governments, and inspire them to lift up their voices in an irresistible demonstration. In their hearts they want to relate themselves to other peoples. They know that distance has been annihilated, that what affects one affects everybody; yet they see their governments building up vested and nationalistic interests in such things as fighting currencies, state trading systems, and other forms of anarchy. It must seem to them defeatist as well as senseless. They cannot be encouraged either by the spectacle that this reversion to pathological nationalism is being financed under ERP, though to be sure, the ERP ideal is eventually to create interdependence out of a sturdier independence.

Is it not remarkable that the first thing to be forgotten in time of peace is our war aims? Cannot we see that in all the postwar schemes of pacification and reconstruction, we have undershot the mark? Partnership is the effective alliance, and the only one. Before the reaction to a mere military alliance gets altogether crystallized, an effort to realize the aspirations of the men who have had to fight a couple of world wars in the last 35 years ought to be explored, and the idea of a great community taken out of the hearts of mankind and given some form and substance.

Representative Hays' Compromise Proposal on Civil Rights

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial concerning Representative BROOKS HAYS' proposal for a compromise respecting civil-rights legislation, published in the March 1, 1949, issue of the Arkansas Gazette.

There beng no objection, the editorial was ordered to be printed in the RECORD as follows:

MR. HAYS' COMPROMISE

The area of compromise on civil-rights legislation defined by Representative BROOKS HAYS in a recent address before Congress has attracted attention across the Nation, and has won praise from moderates on both sides of the central argument. For instance, it impresses Roscoe Drummond of the Christian Science Monitor, one of the ablest of the Washington correspondents, as "a significant compromise in good faith." Mr. Drummond wrote:

"These are significant proposals to come from an influential southern Congressman. They make a valid distinction between 'civil rights' which should not be compromised and 'social aspirations' which cannot be waved into being by a law."

But if the compromise has made a favorable impression in many quarters, it apparently hasn't registered with the administration. Mr. Truman has publicly ordered full steam ahead on the effort to divest the Southern Senate bloc of the filibuster. No member of the administration has openly taken any notice of the compromise proposal offered by Mr. HAYS and that, as Mr. Drummond sees it, leaves it dangling in the air where it can't remain for long.

If the compromise is thus rejected without serious examination, the administration will allow the civil-rights argument to revert to the extremists in both camps who have waged it with increasing bitterness in recent years. It may be possible for the administration to muster sufficient strength to push through major civil-rights bills—although that is doubtful. But at the same time the administration will have created an atmosphere of bitterness which will make enforcement impossible.

Mr. HAYS offered a possible solution that goes beyond a mere settlement of political differences, and holds some hope of restor-

ing the atmosphere of tranquility and cooperation in which enduring solutions to the race problem may be—as they must be—mutually achieved. If Mr. Truman finally and flatly rejects in favor of the all-or-nothing demands from the left wing of the Democratic Party he will only strengthen the opposition to his whole program that is already forming in Congress.

Editor Chides the Farmers

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, Jack Sinclair, the wide-awake young editor of the venerable Hartford Day Spring, published at Hartford, Van Buren County, Mich., recently took occasion to remind his subscribers and others that you can't have your cake and eat it too.

He recently wrote and printed an editorial which calls attention to a fact well known by most public-office holders, that is, that folks sometimes vote for candidates who promise the most, even though they are fully aware that the promises, if fulfilled, may in the end give them something that they do not want.

Farmers in Michigan listened to Harry S. Truman's promises and to his threats that, if Republicans were elected, they would, figuratively speaking, starve to death. Being so interested in Harry's story about what the Democrats had been doing for the farmers, they forgot to listen to his promises of what he had done and would do for the workers.

Now, realizing that the administration is proposing a 40-hour week and a minimum 75-cents-an-hour wage for farm workers, they are beginning to wonder where that leaves them; they are beginning to wonder who is going to milk the cows Saturdays and Sundays, or whether Harry has some storage plant he can hook on to the cow which will help her hold the milk until Monday morning or evening.

They are also doing a little thinking about the 75-cents-an-hour proposition and wondering why it is that, if they must pay the hired man 75 cents an hour, they must also furnish him and his family, if he has one, with a home to live in, pay the electric light bill, and give him off the farm a half or a whole steer, a hog or two hogs, depending on the size of the family, together with butter, eggs, and milk, and whatever vegetables he may wish to grow, using the farmer's machinery, gasoline, and getting pay for his time while planting, cultivating, and harvesting the garden crop.

The editor puts it this way:

UNHEEDED WARNING BEARS FRUIT

One of the partial explanations for President Truman's surprise reelection last fall was that he received a large farm vote, that receipt of Federal subsidy checks over the years was a major consideration that led many farmers to cast their votes for him.

Truth of that conclusion was reflected in the voting in this area as well as in many other places throughout the country. In Hartford Township, which in recent years hasn't been able to muster enough Democrats to hold a township caucus, there were 286 votes cast for Truman. In Keeler township there were 207 votes for Truman out of 528 total votes cast.

Now comes the irony. These same farmers, who at election time could not see past their subsidy checks to read the warnings that reelection of the New Deal would mean more of the same, now are screaming against a proposed 40-hour week and 75-cents-an-hour minimum wage for farm workers.

Maybe some of those normally Republican farmers who switched their votes to the gravy train will be convinced now that they can't sell their crops and store them, too.

Have been getting quite a few letters from farmers who wish to know whether 75-cents-an-hour minimum wage must be paid in addition to the other things, like rent, food, and sometimes fuel, which I have just mentioned.

Sometimes we learn that legislation is not just as simple and workable as it appears at first glance.

Unlimited Debate a Weapon for Minorities

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Unlimited Debate Is Fine Weapon for Minorities," written by Gould Lincoln and published in the Washington Sunday Star of March 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNLIMITED DEBATE IS FINE WEAPON FOR MINORITIES—POLITICAL WRITER HOLDS ENDLESS TALKING IN CONGRESS HAS NEVER INJURED UNITED STATES OR CAUSED DISASTER IN CRISIS

(By Gould Lincoln)

The drive to make the United States Senate just another legislative body is not new. Such a drive has arisen frequently in the past, when under the stress of passion some particular piece of legislation has been demanded. Today there would be no pressing demand for a change in the Senate rules, clamping a closer cloture provision on the individual Senators, were it not for the outcry to have the Federal Government compel individual States—those in the South particularly—to accept the so-called civil-rights program.

And today the chances for success in this drive to strip the Senate of its unique qualifications—as a great reviser and compromiser of legislation and as a final and effective check on intemperate demands of the executive branch of the Government, or demands of minority groups—appear better than they have at any time in the past. At the insistence of President Truman and the Democrats outside the solid South, and the insistence of the Republicans, the civil-rights program has been given the right-of-way in the Senate over all other measures. And to make the drive for the enactment of this antiracial discrimination legislation run more smoothly, it is now proposed to amend the cloture rule of the Senate—to fill the loopholes and make it possible for a two-thirds vote in the Senate to limit—and so close—debate in the Senate at all times and on all matters.

DELAYS IRRITATING

The present demand to make two-thirds cloture ironclad is frankly only a step toward majority cloture.

President Truman has declared himself for closing debate by a simple majority of the Senate. Under the President's proposal, 25 Senators—a majority of a quorum of 49—could put an end to discussion of any subject before the Senate, if only a bare quorum of the Senators were attending a session.

A number of Senators, during the recent hearings on the amendment to the cloture rule and during the present debate in the Senate, have stated they desire majority cloture. Senator MYERS, of Pennsylvania, Democratic whip, is proposing to offer an amendment to the pending resolution, providing for majority cloture instead of two-thirds, and so is Senator MORSE, Republican, of Oregon.

To partisans the tortoise-like slowness of the Senate, the constant and continuing delays arising because of the rule of unlimited debate, have been tremendously irritating. Invective leveled at the Senate has been harsh in the extreme. Others have attempted to ridicule the upper house of Congress and its individual Members. The boast of the Senate—and it is a proud one—has been that it alone provides a forum of completely free debate and free speech.

The rule of unlimited debate has prevailed in the Senate since 1806—143 years. The only checks upon it have been a temporary rule, adopted during the Civil War, restricting debate on war measures considered in secret sessions of the Senate, and the present two-thirds cloture rule, adopted in 1917 when this country was on the verge of another war. Prior to 1806 the previous question could be moved in the Senate—a motion designed to end debate and bring a vote on a pending question—but even then the previous question was subject to debate. The Senate rules themselves provide exceptions to the general rule of unlimited debate—for example, a motion to adjourn is not debatable, nor is a motion to lay on the table any question or measure before the Senate.

ADVANTAGE AGAINST WEAKNESS

The test of the value—or lack of value—of unlimited debate lies, of course, in its practice. The advantage of the rule of unlimited debate must be weighed in the balance against its weakness. Has the rule of unlimited Senate debate ever proved injurious to the country? Has it ever caused disaster in an emergency? The answer is, "No." It has, to be sure, caused delay, compromise, and defeat of measures which a majority has desired—measures that have had merit. But such delays, compromises, and defeats must be weighed against the tremendous value of free and unlimited discussion of measures upon which the people of the country have needed to be informed, far more fully than a limited discussion permits.

So strong has been the feeling against limiting free debate in the Senate that efforts to invoke the present two-thirds cloture rule of the Senate, since its adoption, have been very, very rare. Take a look at the record. In all that time, the Senate has actually voted on cloture only 19 times. And cloture has been invoked only 4 out of those 19 times on which it came to a vote.

TWO LOOPHOLES FOUND

The two-thirds cloture rule was adopted by the Senate as a result of a filibuster in the Senate which prevented the passage of the

so-called armed merchant ship bill at the close of a short session of Congress in 1917. President Woodrow Wilson had asked for legislation permitting him to arm American merchant vessels, as an answer to Germany's submarine attacks upon American vessels sailing for belligerent ports. President Wilson denounced the filibusterers—calling them a little band of willful men. The House had already passed the bill by a huge majority. Because the session of Congress ended arbitrarily on March 4—a small group of Senators was able to talk the bill to death. President Wilson afterward found authority and armed the merchant ships notwithstanding. Since that time, the twentieth amendment to the Constitution has been adopted, doing away with the short sessions.

The immediate fight over the Senate rules is to make two-thirds cloture operative at all times. Two loopholes have been discovered in the rule that states specifically that the cloture rule may be invoked on any pending measure. In 1922 it was ruled by the Presiding Officer of the Senate that the cloture rule was not applicable to debates upon amendments to the Senate Journal—the official record of the previous legislative day of the Senate. Still later it was ruled that the cloture rule was not applicable to debate upon a measure to take up a measure for consideration by the Senate. This latter ruling was made by Senator VANDENBERG.

Both these rulings were made when efforts were under way to bring to a close debate on so-called civil-rights bills. In 1922 the Senators from Southern States so rang the changes upon debate of the Senate Journal that the bill had to be laid aside in order to take up other pressing legislation.

POSSIBLE PROCEDURE

While the Vandenberg ruling was challenged when it was made last August 2, the consensus at the time—and since that day—was that he had ruled correctly on the language of the cloture rule itself.

Under the amendment to the rules now pending before the Senate, the cloture rule would be applicable to any matter under debate, whether it were the Journal or a motion to take up a measure for consideration.

If this amendment to the rules is finally adopted it will be far easier to move to invoke the cloture rule. But even should it be adopted, there still remains the necessity of obtaining a two-thirds vote of all Senators present and voting to limit debate.

Ordinarily a two-thirds vote of the Senate would require a combination of Senators representing both the major political parties—and such a combination will undoubtedly be exerted to bring the limitation of debate and a vote on civil-rights bills as they come before the Senate in the future. It is entirely possible, however, that the political make-up of the Senate may in the future—as it has in the past—show two-thirds or more of 96 Senators belonging to the same political party.

GUARDIAN OF STATES

The issue before the Senate today ultimately is whether the Federal Government shall force its will upon individual States of the Union, notwithstanding the opposition of the people of those States. Today the States involved in this drive for Federal control lie in one section of the country—the South. Federal encroachment, however, is driving in every direction and the probabilities are it will not confine itself to any particular section of the country in the future.

The benefits derived from the rule of unlimited debate in the Senate have been frequent. For example, in 1937, when the late President Franklin D. Roosevelt stood at the very summit of his power politically, Mr. Roosevelt proposed a plan to pack the Supreme Court of the United States with justices who would carry out the bidding of the administration. Had it been possible to force an early vote in the Senate on this proposal, the legislation giving the President that authority would, in all probability, have passed. A full and free debate—lengthy also—brought so much opposition to the measure that it was dropped.

On another occasion, in 1946, when President Truman came to the Congress and demanded legislation empowering him to draft railroad workers into the armed services—as a measure to prevent a Nation-wide railroad strike, the House, with rules that permit quick and immediate action, passed the bill within a few minutes after it had been proposed. In the Senate, however, where the rules do not permit such immediate cloture, the bill was forced over—and never was passed.

Economy! Just Talk?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, is the administration really desirous of economy, or is it just talking—just trying to fool the folks?

If the Veterans' Administration, which apparently has found it advisable to close certain hospitals in the interest of economy—and no one has any fault to find with the program if it will give economy without impairing a needed service to the veterans—is really interested in economy, unless it has some satisfactory answer to the following letter, can really bring about a worth-while saving in this one little item.

The letter to which I refer reads as follows:

STURGIS POSTURE CHAIR CO.,
Sturgis, Mich., February 22, 1949.

The Honorable CLARE E. HOFFMAN,
Representative in Congress,
Washington, D. C.

DEAR CONGRESSMAN: Your desire to effect savings in the cost of Government, eliminate unfair practices, and assure unhampered competition is well known. Therefore, I do not hesitate to bring to your attention certain restrictive and discriminatory bid invitations now being issued.

The Veterans' Administration has issued a bid invitation No. F-67, dated February 11, 1949, to be opened February 28, 1949, at the Veterans' Administration Building in Washington, for over 4,000 chairs to meet Federal Specification 340. Chairs to meet this specification must be aluminum and, to the best of my knowledge, are made by only one manufacturer, namely, the General Fireproofing Co., of Youngstown, Ohio.

Recently the Army Quartermaster Purchasing Office in Chicago issued an invitation for bids on chairs to meet this specification 340, with the result that steel chair bids were automatically disqualified and the award made to General Fireproofing Co. at prices about double the amounts bid on our chairs. The actual quotations were as follows:

Bidder	Chair	Type 2	Type 3	Type 4	Type 5
Chas. G. Stott & Co. Inc.	Sturgis..	$31.48	$17.17	$45.45	$28.80
General Fireproofing Co.	G. F....	57.94	46.30	73.88	46.81

One each of the above General Fireproofing chairs totals $224.93. One each of the Sturgis chairs totals $122.90, or about one-half that of the aluminum chair bid. You can readily see the amount of savings which could be made in large quantities of these chairs.

For some time various agencies of Government have been purchasing aluminum chairs at a much higher price than steel chairs. The fact that a slight weight factor may be involved should certainly not be controlling in the consideration of a suitable office chair. While it is true that aluminum will not rust, the parallel to this would be a steel chair bonderized to inhibit oxidation. Since the volume of aluminum necessary to obtain the same strength as steel must be 1⅝ times the volume of steel, you can easily see the weight difference would not be as much as is inferred by the proponents of aluminum. I very much doubt if you or any of your colleagues ever worried much about whether your swivel chair weighed 36 pounds or 42 pounds as the weight is immaterial in any case.

It so happens that the three largest producers of steel office chairs are located in Michigan; namely, the Sturgis Posture Chair Co. of Sturgis, Metal Office Furniture Co. of Grand Rapids, and the Harter Corp. of Sturgis. Because of the discrimination against steel, none of the above Michigan manufacturers have any chance to get any of this Government business. This, even though they offer metal chairs of equal value at approximately one-half the cost to the Government. If manufacturers of steel chairs of equal value were given an even opportunity in the bidding, the cost to the Government would be drastically reduced and Michigan industry would be able to get its rightful share.

Your early attention to this situation is respectfully requested.

Very truly yours,

T. H. VAN BUREN,
President.

To my knowledge, the Sturgis Posture Chair Co. is a reliable manufacturing company. It produces a worth-while product at a reasonable cost.

Is the Veterans' Administration permitting someone to draw specifications to favor a particular firm? If it is, it would not be the first time in the history of this Government—and that in recent years—when some fellow who was on the inside channeled orders into a source where he had a friendly or financial interest.

I have asked the Veterans' Administration to give me the low-down; for the folks back home, who pay the taxes to pay the salary of the boy who draws the specifications, want to know what he is up to.

Health Insurance or Socialized Medicine

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Porter on Health Insurance," written by Philip W.

Porter, and published in the Cleveland Plain Dealer of January 8, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTER ON HEALTH INSURANCE—IT'S A FINE THING AND WILL REMAIN SO UNTIL GOVERNMENT GETS HOLD OF IT

(By Philip W. Porter)

In President Truman's recommendations to Congress, one of them stuck out like a sore thumb—Government health insurance. Nothing sounds better or would turn out worse than this. Before you swallow this sugar-coated pill you had better examine it carefully.

There is nothing wrong with health insurance as such. In fact, it's a fine thing when privately and efficiently operated. We have in Cleveland one of the finest cooperative hospital care plans in the country. We also have a medical-mutual plan which ties in with the hospital plan. The Cleveland Hospital Service Association has been in existence here for a dozen years or so, and the medical-mutual plan for a couple. They are so widely used by Clevelanders that there is not enough hospital space to care for all those eligible to use them.

But get this—no one is required to pay the small monthly fee unless he wishes to. He is not taxed, and his employer is not taxed. The managers and clerks of the association are not subject to political hiring by the Government nor injected with the deadening influence of civil service. The association makes no profit and operates efficiently in the public service—or else. You squawk directly to its office, not to your Congressman or some buck-passing bureaucrat.

GOOD INSURANCE

The thing is a huge success and performs a marvelous service. If you remain well, the small fee is good insurance. If you fall ill or have an accident, the 30 days' free hospital care and 60 days' half fare is a godsend.

The Cleveland hospital plan is not the only one. The Blue Cross plan operates in central Ohio and elsewhere, and all over the country there are numerous such organizations.

What would happen to them if the Government took over? Just what you think. These plans would either be gradually absorbed by the Government scheme or would be forced out of business, because most people would not subscribe to them and pay the Government insurance tax too. Since they'd be forced to pay the Government, they would drop the private plan. I don't care what assurances the Government gives that the present plans would continue, sooner or later they would disappear into the clutches of the bureaucracy. And when that day came, then you'd get just what you get in every attempt by Government to manage a public service—inefficiency multiplied, surly employees, political appointees, poor planning, and all-around snafu.

IT'S A FRAUD

This proposed health insurance, like so much of the rest of politically inspired welfare, is a lot of pap, designed primarily to promote jobs for and produce votes for the self-perpetuating New Dealers. It sounds great, but it works awful. It is based upon the prevalent philosophy of something for nothing. The promoters of this fraud will contend that it is necessary to impose it upon us because thousands are not covered by health insurance and they suffer medically and financially thereby.

Well, chums, health insurance has been sold by insurance companies for heaven knows how long, and what is to prevent any community in the country from organizing its own hospital service plan, just as Cleveland and other cities have? All they have to do is begin—they'll get the customers. It's definitely not a function of government, any more than running a grocery store or putting diapers on babies.

There isn't space today to discuss socialized medicine—which would come later if the political-job producers should have their way—but if the time ever comes when that one is slipped over, God help us. You don't have to listen to the perfectly legitimate objections of doctors and dentists on this score; all you have to do is to see the way it is working out in Great Britain.

HOW SOCIALIZATION WORKS

I lived over there and saw it function. Thank the Lord, I didn't have to depend on it, for I could go to competent army doctors. But I had plenty of friends who were forced to depend on it, for they had deductions for it taken out of their slim pay and couldn't afford to hire Harley Street specialists.

If what they got under socialized medicine was medical care and competent treatment of illness and disease, then I'm a Tanganyikan rhinoceros. The panel doctor's office was an assembly line of 50 patients crowded into the time and space it should have taken him to handle 10. He gave each of them scarcely more than a look and a promise—and often they got the wrong medicine in the rat race. Some of the offices were even unclean and some of the doctors were smelling high of drink, but what did they care? Their fees were guaranteed by the government at so much a head.

And the poor patient, if dissatisfied, couldn't change doctors once he had signed up, without the permission of the doctor he didn't like or without 3 months for a government board to make up its mind. Meanwhile, he could make a choice between paying a competent specialist a stiff fee or dying slowly. One thing for sure, the socialized doctor would never cure him.

Military Justice

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. REED of New York. Mr. Speaker, I am taking this opportunity to present the views of Maj. Paul S. Davis, JAGD Reserve, who has contributed a very interesting article which appeared in a recent edition of the Evening Star.

I am inserting this article in the RECORD under leave to extend heretofore granted:

MILITARY JUSTICE

To the EDITOR OF THE STAR:

As a Reserve officer in the Army with several years' wartime experience in the Judge Advocate General's Department, I should like to comment on the proposed uniform code of military justice recently introduced in Congress (S. 857 and H. R. 2498). Your recent editorial (February 12) suggests that it combines the best features of existing laws in each branch of the service, and some other current comments give the impression that it would improve court-martial procedures throughout all the armed services and benefit accused personnel. In fact, however, this bill, if enacted, substantially would curtail the rights now given by law to accused personnel of the Army and Air Force. It would discard many of the constructive changes made in the Army court-martial system since 1916 and particularly in 1948.

Specifically, the following changes would restrict the rights now given to the accused in the Army and Air Force:

1. Under the present law a general court-martial must have a trained lawyer as law member who rules on all legal questions. Under the proposed code the law member would no longer sit as a member of the court but would be limited to ruling on evidence and other matters during the trial and advising the court on legal questions. Thus the accused would lose the important safeguard of having an informed lawyer present at all times during the deliberations and voting of the court in closed session.

2. The power of immediate commanding officers to impose so-called company punishments would be vastly increased. In the Army and Air Force a commander now can impose only minor punishments such as extra fatigue, reprimand, or restriction or hard labor without confinement for not more than 7 days. Soldiers and airmen need not accept such punishment. If they do not believe themselves guilty, they may demand trial by a court-martial. The proposed code would authorize commanders to impose on enlisted men forfeiture of one-half month's pay, confinement for 7 days, confinement on bread and water for 5 days, or reduction in grade. Furthermore, unless specifically authorized by departmental regulation, a soldier would no longer be able to refuse punishment and demand trial.

3. The right of a soldier to have enlisted men sit on the court trying him, conferred by the 1948 amendments, would be made subject to decision of the commanding officer as to "physical conditions" or "military exigencies."

4. A summary court-martial (consisting of one officer) would have complete power to try any noncommissioned officer, even one of long service with the highest rating, and could reduce him to the lowest grade. As the law now stands the higher grades of noncommissioned officers can request trial by special court-martial and thereby insure that the case be heard by at least three officers and an adequate record made.

5. Reserve personnel during inactive duty training periods might be subjected to courts-martial for absence, tardiness or other alleged offenses during training periods and could be placed on active duty without their consent in order to stand trial and suffer punishment.

6. Under the present Army and Air Force law, soldiers may be confined in a penitentiary only for very serious offenses, such as wartime desertion, mutiny, or crimes of a civil nature for which penitentiary confinement is authorized by other Federal laws. The proposed code would authorize penitentiary confinement for any offense, no matter how minor, thus potentially branding a soldier with a penitentiary record even for an insignificant military offense.

Apparently the proposed bill adopts many provisions of the Naval Code of Justice, which has not been substantially revised since 1862, and attempts to impose them on the Army and Air Force. The 1948 amendments to the Army system were made after 3 years of careful consideration by Congress during which hearings were held and all points of view considered. The new Manual for Courts Martial has just gone into effect, and the Army and Air Force should have a chance to give the new law a fair trial. If more changes are desirable, they can then be made in the light of experience.

I am not sufficiently familiar with naval problems to know whether the Army system could or should be fully applied in the Navy or to express an opinion as to what changes, if any, should be made in the present Navy Code. But whether or not uniformity of procedure between the services is an ultimately desirable goal, it certainly should not

be achieved at the cost of destroying wholesome safeguards now existing in the Army and the Air Force system of military justice.

PAUL S. DAVIS,
Major, JAGD Reserve.

Union Man Wants Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the following is a letter received from a member of a union who after paying union dues for 38 years, sees the need for a continuation of the Taft-Hartley Act. Let the letter tell you why:

FEBRUARY 22, 1949.

Senator TAFT of Ohio,
Senate House, Washington, D. C.

MY DEAR SENATOR: The eyes of our Nation are placed upon you in regard to the Taft-Hartley bill. This bill is the only salvation of saving the laboring class of people of our Nation and the manufacturers. It may be that there should be just a few changes in this bill—if we are to save our Nation we must have some bill, if not this one, to do so.

The writer is only speaking after paying dues for 38 years to the ORT, which is an A. F. of L. part of the Order of Railroad Telegraphers, but turned out to be a company union. It gives no protection to anyone, even though the Government has set up the Labor Board to hear its cases. One cannot go to these Boards alone or through a lawyer. It has to be through the union, which will not do anything for its members.

For instance: Let's take the big packers' strike in South St. Paul, Minn., where the laboring people would not have gone on strike if it were up to them to take a vote on it, and not up to the heads of unions. They all would have accepted the companies' offers and all would have kept working, but the union officials told them they would get 15 cents or more raise per hour, and that it would only be a week or two until the strike would be settled. They struck and were out 13 weeks and had fights at the picket lines and all over. The strikers thought the union would back them, so they went and damaged some of the machinery. However, after they were arrested and sent to Stillwater to the Minnesota State prison the strikers discovered that they had no one backing them. They all suffered in every respect and will always have this record. They can never have any Government job whatsoever on account of their record, even though they are not criminals in one sense of the word.

Many of the strikers' families suffered so that their children never had a Christmas present and many went hungry due to this strike. Nevertheless, the union official, or rather their field man, Mr. Segal, did not lose any money. He got paid for all his time, and although he was convicted, he never served any time like the poor laborers did. Why?

Lets take another machine shop here where their field man came around and told them they would have to have 15 cents raise per hour, or strike, and their foreman told them to take it up with the manufacturer and see what they would offer. They went to the manufacturer and told him their demands and they wanted him to figure out just what the manufacturer could pay. The manufacturer came and told them they could pay 7½ cents raise per hour at present, but could not pay them the 15 cents, which they asked for until they could make other arrangements to increase the price of their products. The field man of the union was provoked at the foreman for accepting the 7½-cent raise, and he told him that he was not accepting it and that the men all will take a vote on this. He wanted a 25-cent raise for himself and the manufacturer was also kicking the foreman for not accepting it. They took a vote the next evening and only one of them voted to strike among the whole group, and everybody was happy. They all had a merry Christmas and presents for their kiddies, too.

Another instance was the Minneapolis Honeywell Regulator Co., which also was threatened with strike, but when the company's election was held, the majority voted to stay and take the raise which was offered by the company. This in turn goes to show just what can be done if the men have a right to speak for themselves.

The voting of any union should be an American's privilege. However, many times they have been cut out by the officials of the unions. We should have a law to give them this privilege.

The writer is sure that there is not any man in the Senate or Congress who disagrees with this, and would make laws to give them this privilege. We have also got to have the open shop. This would win our Nation, if we did not. All Americans would vote the same way, or if not, it will keep a lot of laboring men from good jobs.

My attention has been called to the fact that the United States Chamber of Commerce is also asking that they be an open shop to protect our Nation.

As previously stated, the writer is only speaking after paying dues for 38 years and learning that I was only throwing my money away. Had I been paying life insurance, I would have been drawing $200 per month, instead of being let out to starve by the union, as far as the officers of the union are concerned.

Very truly yours.

Prayers-for-Peace Movement

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks of Hervé J. L'Heureux before the Last Man's Club, William H. Jutras Post, No. 43, American Legion, Manchester, N. H., October 28, 1948:

I am glad indeed to be here tonight particularly since, owing to my having been stationed outside of the United States 20 out of the past 22 years, this is the first of our annual banquets I have been able to attend.

Earlier this evening, I related to you some of my experiences in the American Foreign Service, 10 years of which were acquired in several countries of Europe and North Africa in the years immediately preceding, during, and following the Second World War. Those were some of my more pleasant experiences, of amusing incidents. But now I wish to speak to you in a more serious vein. I want to give you my impression of how other people regard us and the efforts we are making to assist them, and to suggest a means of correcting erroneous impressions and of restoring the faith of all the peoples of the world in the spiritual values rather than in the apparently prevailing materialistic values.

In spite of the great sacrifices we have made, in two world wars, to preserve the liberties of the people throughout the world, and notwithstanding the tremendous financial and economic assistance we have rendered to them during and following the last war, the true character, ideals, and purposes of the American people are, unfortunately, little understood by the peoples of Europe. Many of them have gained a very bad impression of us as a result of wide and exaggerated publicity given to the exploits of our gangsters, for instance, and to the growing rate of divorces in this country. We are regarded by them essentially as capitalists, addicted to luxurious living. This unfavorable impression of us is strengthened by the insidious propaganda, now being disseminated, that we are imperialistic and warmongers, that the financial and economic aid we are giving the free peoples of Europe is inspired by ulterior motives. It is difficult for the peoples of Europe to grasp the fact that the American people are essentially Christian, God-loving, God-fearing and peace-minded. As a result, an American abroad who follows his religion and who is not afraid to mention publicly the name of God makes a deep impression.

In this connection I recall an incident when several hundred persons had gathered at the grave of a group of patriots who had been tortured and put to death by the Germans for work they had done in the resistance. Speakers praised the patriotic services of the dead and promised to erect an elaborate monument in memory of their heroic deeds. And yet, not a single prayer was offered, not a moment of silence was observed. When my turn to speak came, I recalled how these men had paid the supreme sacrifice in order that those of us assembled might live freely and continue to carry on the work of God here on earth; that, reciprocally, there is nothing we can do more effectively than pray for the repose of their immortal souls. I then requested all of those gathered to pause in silence and pray for these acknowledged heroes. Many commended me for this gesture and expressed astonishment that I dared invoke the name of God without fear of consequences from my Government. I also recall the great surprise and deep impression which was made on an outstanding French industrialist when he witnessed the opening, by a prayer, of a daily session of our Senate in Washington. I told him the House of Representatives follows the same custom. He talked incessantly about this during the remainder of his stay in the United States, and he has related this commendatory custom many times since his return to France. Some of his incredulous listeners have written to me to confirm it.

We in this country have a rich inheritance. Before God and men we have the responsibility of sharing it with others, of enriching others from the treasures we possess—financial, economic, intellectual, and spiritual. Seldom has the world been so spiritually beggered as it is today, seldom has it been so destitute and in such dire need of the riches we can offer. I can say without fear of challenge that the Christian way of life has never been menaced by greater danger than that which threatens it today. For never before have the forces of evil been marshaled against it with such strength and such sinister strategy.

When I speak of this new crisis I am not raising false alarms nor appealing to baseless fears. For generations our spiritual leaders have seen this conflict growing. Their warning voices went unheeded by the statesmen of the west. But at last these statesmen are convinced, awakened by the harsh realities of the international scene. They may speak

of the conflict as a struggle between western democracy and eastern despotism—a struggle for the freedom of the individual or his enslavement. But this is merely a superficial view, for in reality the struggle is between the Christian way of life and the apostasy of communism. It is a conflict between belief in God and the dignity of men as the sons of God, as against atheism and the concept of man as a mere material force, without power to survive the grave's corruption, without a supernatural destiny. This denial of the supernatural is the basic doctrine of those who, in the name of the Communist philosophy of government, have subjected millions to their ruthless and cynical domination.

Let us pause for a moment and think of the millions who enjoyed, for a brief space after the cessation of hostilities, the illusion of liberty but who now, instead of building their lives in security and peace, look to the future with dread, of how discouraged and confused they must be as they witness so many of their fellow citizens being converted away from the basic principals of natural law which they had inherited. In addition to financial and economic aid it is my humble opinion that the thing the bewildered peoples of Europe need more than anything else is moral encouragement. The conviction that the people of the United States are not wavering, that they are holding fast to the principles expressed in their Bill of Rights, that they ardently desire peace but are unwilling to compromise with justice would, I believe, bolster the morale of the European peoples tremendously.

In my commencement day address at Rivier College on June 6 I pointed out what a wonderful thing it would be, at least until peace shall have been secured, if a custom sprang up in every town and city in the United States whereby at 12 o'clock noon each day, for instance, all traffic and industry should come to a halt for 1 minute and simultaneously every man, woman, and child in the United States should lift his mind and heart toward God in a silent prayer for peace—if everyone should ask God to bless our statesmen in order that their negotiations for a righteous peace might succeed.

Aside from the well-recognized efficacy of such prayers in themselves, think of the tremendous moral force such a voluntary, spontaneous, and unanimous manifestation would have upon the peoples of the earth, particularly upon those of the incredulous nations and those of the Christian nations who are presently abandoning Christianity and the fundamental rules of the natural law as their life guide. It would go a long way toward dispelling the propaganda that we, Americans, are war-like and imperialistic. At this time, when we are giving the world encouragement by rendering astronomical financial, and material assistance, why should not our Nation also become a moral leader in the world? It would cost us little effort and it would pay liberal dividends.

The preamble to the constitution of the American Legion calls attention to our association for God and country for the purpose, among others, of promoting peace and good will on earth. As members of the American Legion and war veterans, I believe it is most befitting for this group to be the first to resolve to implement the contemplated 1-minute daily peace prayer custom in the United States. With this end in view, and as a member of the Last Man's Club, I offer the following resolution:

Having complete confidence in the ability of our fellow men, with the aid of Almighty God to establish a just and enduring peace in the world.

We, the members of the Last Man's Club, William H. Jutras Post No. 43, American Legion, do hereby unanimously resolve to pause for 1 minute in the midst of our daily task, at 12 o'clock noon each day, and, raising our heart and mind toward God, ask Him to help us adjust our international differences to enable the nations of the world to secure an equitable and abiding peace; further,

We urge that this movement be endorsed by all the spiritual, civic, and business leaders in the United States, and that a similar resolution be adopted and implemented by every organization in our country to the end that this custom may become universal in effect.

Committee for Kentucky To Draw a Blueprint for a Better State

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Paul Hughes which appeared in the Louisville Courier-Journal on Sunday, February 6, 1949:

COMMITTEE FOR KENTUCKY TO DRAW A BLUEPRINT FOR A BETTER STATE

(By Paul Hughes)

The drafting of a long-range blueprint for a greater Kentucky has been launched by a group of 45 top-flight experts and leaders representing a broad cross-section of the State's activities, interests and institutions.

The general committee, made up of 13 groups, includes a tremendous wealth of experience, prestige, and versatility. Probably no such galaxy has ever before been drawn into a single effort of so great a magnitude and significance in Kentucky. It met in Louisville Friday night at the instance of the Committee for Kentucky to shape preliminary plans that will, it hopes, result in an epoch-making, eye-opening guidebook to steer the State into a high level of health, welfare, education, and prosperity.

President Harry W. Schacter, looking to the blueprint as the committee's final and crowning achievement, asked the subcommittees to spend the major part of this year in research and planning for the goal—the raising of Kentucky's social services to the national average. The response was heartening, in that every one of the committees agreed to the program.

LONG STUDY MADE

"Our achievements need be limited only by the scope of our imaginations," Schacter said, adding that "if we think in piddling terms we will get piddling results, but if our plans are bold and courageous, the results will be the tremendous success the people of Kentucky deserve."

The committees are agriculture, farm housing, education, health, welfare, urban housing, manufacturing, labor, natural resources, taxation, transportation, community life and government. They were chosen by committee directors after weeks of study of the available brains in the various fields, and as each chairman and the various members stated their views at the organization dinner it was made clear that, in their opinion, the people of Kentucky could raise their standards of living if they willed to do so. The new committees' jobs were to show how.

Al Whitehouse, Covington, member of the labor committee, summed up the problem and its solution this way: "We ourselves, sitting here tonight, are getting an education in democracy. If we can get this message to the people, I know they will accept this challenge. What it will cost, and nobody yet knows, will be a dividend-paying investment, because our plan will consider only the increased ability to pay and the resultant raising of the entire level of our State's economy—the people's economy."

PROJECT OUTLINED

The thinking behind the project stemmed from a determination to get at the very core of Kentucky's basic problems and was based, fundamentally, on these salient points:

1. Kentucky is not providing adequate social services for its people, a fact that has helped to make it a backward State.

2. It is important that the people know what it would take in capital expenditures and in annual budgets to provide such services on a par with the progressive States of the Union.

3. It is important that the people, once they know the total needs, be given a plan for raising the capital and developing the annual budget to meet the needs.

4. Since the inadequacy of the social services is for the greater part due to lack of sufficient tax money, it is important that the people know the various possibilities for increasing the revenues of the State.

Determination of what it would cost in capital improvements and anual budget outlays to provide social services to meet the national averages would probably be the responsibility of the experts who have developed the original reports on such services. These estimates, arrived at with the aid of research staffs, should give the people of Kentucky a reasonably accurate dollar-mark picture of the total needs.

Once that important and significant figure is arrived at, taxation and revenue experts could go to work on the task of finding out where the funds should come from. These may suggest and discuss various methods, a long-term bond issue, a tax revision procedure, a program of improved administrative efficiency as a means to economy, reassessment of property for an equitable distribution of the burden or (perhaps and/or) even as hot a potato as consolidation of counties.

But whatever the ultimate recommendation, the study would be expected to go a step further and develop a plan by which the legislature could, over a 10- or 15-year period, progressively build up the State's annual budget to care for increased social services in tune with a gradually increased ability to pay.

KENTUCKY RFC

What may emerge as the keystone of the entire plan, in the light of later planning, is the suggestion for a corporation tentatively referred to as the Kentucky Development Co. with paid-in capital of $10,000,000 subscribed by private individuals and business concerns and administered by a board comprising "the ablest businessmen in the State." It would, in effect, function as a Kentucky Reconstruction Finance Corp. and not unlike the Louisville Industrial Foundation.

There would be four divisions of effort—finance, research and engineering, industrial development, and sales promotion and distribution.

The first task of the company would be to determine the location of the most important of Kentucky's natural resources and what industries might best be established near these resources. For instance, in the Paducah region are found some of the best clay deposits in the country. At present, these clays are shipped to other States for processing. It could be that the proposed company's research might show that it would best serve Kentucky's interests to set up a pottery plant near the clay deposits. Also, there is a market in Kentucky for glass products to meet the needs of bottlers, dairies, and food packers, as well as the building industry. Yet there is no glass industry

in the State, although Kentucky has sands suitable for such a project.

HOW IT WOULD WORK

Once the research has been done, the division of industrial development would take over, calling, for example, a meeting of Paducah area citizens to suggest to them the establishment of a pottery and presenting them a carefully prepared plan for the building, equipment, personnel, and operation. Next step would be for the finance division to present its cost estimates and plans for raising the necessary capital. The sales and distribution people would, in turn, work out the sales potential of the products contemplated and, with all phases of the problem thus packaged, the company would invite the citizens to subscribe to the necessary capital stock. If the subscriptions fell short of requirements, the Kentucky Development Co. could step in and subscribe to the balance.

In explaining the proposal, Schacter stressed that activities would be carried forward in close cooperation with existing agencies, both public and private. Not only would the cooperation and facilities of the new Kentucky Chamber of Commerce, a nonofficial group, and of the State's own agricultural and industrial development board be solicited and utilized, but local chambers and civic organizations would be invited to assist.

Beginning tomorrow, each of the 13 committees will set to work preparing its portion of the comprehensive report.

By next July 1, each committee chairman is expected to submit to Schacter the draft of his report and Schacter then will begin to prepare a rough summation of all 13 reports. About October 1, Schacter plans to meet with each chairman to read to them his portion of the report and then hold a thorough critical discussion. Shortly thereafter, he plans a meeting of Committee for Kentucky directors and all the experts for a final reading and discussion of the entire findings, which will contain the 13 reports and the Schacter composite. Later a meeting of all members of all committees will be held for reading and a vote of approval.

The accepted final draft then will be printed as speedily as possible for presentation to the members of the 1950 legislature.

The fullest possible publicity will be given the blueprint, meanwhile, by local and district meetings attended not only by the public but by their own elected legislative representatives. And it will be distributed in pamphlet form to thousands of high-school and college students, to parent-teacher groups, to civic and luncheon clubs and to as many individuals as can be reached. Radio stations are expected to present dramatizations of the reports and newspapers will be offered serializations.

Schacter, anticipating that the Committee for Kentucky will wind up its work in 1950, said that it is fitting that the committee, the essence of whose spirit is cooperation, should have as its last report the result of the cooperative effort of some 45 persons, plus their staffs and associates.

Grouped around the Committee for Kentucky's conference table, with President Harry W. Schacter presiding (he's also a Louisville department-store president), are the other Kentuckians who accepted assignments to help draft a master plan for the State's future. Courier-Journal Artist George Joseph has provided places at the table for the chairman of the 13 subcommittees, and ranged about them the other experts in fields into which the explorations reach.

The drawing includes these, listed by committee assignments:

Agriculture: Dean Thomas P. Cooper, University of Kentucky College of Agriculture and Home Economics; J. E. Stanford, executive secretary, Kentucky Farm Bureau Federation; and J. W. Jones, North Middletown, president, Burley Tobacco Growers Cooperative Association.

Farm housing: J. Allan Smith, publications editor, College of Agriculture; J. B. Kelley, agricultural engineering section, College of Agriculture; and Miss Myrtle Weldon, State leader of home demonstration agents, College of Agriculture.

Education: John W. Brooker, executive secretary, Kentucky Education Association; President Rufus B. Atwood, Kentucky State College, Frankfort; and Dean Maurice F. Seay, University of Kentucky.

Health: Dr. Bruce Underwood, State health commissioner; Dr. Emmet F. Horine, Louisville heart specialist and author; and Dr. Charles A. Vance, Lexington, president, Kentucky Medical Association.

Taxation: Wilson W. Wyatt, former Louisville mayor; Clyde Reeves, State commissioner of revenue; Paul G. Blazer, board chairman, Ashland Oil & Refining Co.; and James W. Martin, director, bureau of business research, University of Kentucky.

Housing: Nicholas H. Dosker, administrator, Louisville Municipal Housing Commission; Robert I. Kutak, head of University of Louisville department of sociology; and Clarence C. Hieatt, Louisville, former president, National Association of Real Estate Boards.

Manufacturing: H. Fred Willkie, executive vice president, Joseph E. Seagram & Sons, Louisville; and W. Scott Hall, department of economics, Transylvania University, Lexington.

Labor: Ernest Greene Trimble, University of Kentucky professor of political science; Edward H. Weyler, Louisville, secretary-treasurer, Kentucky Federation of Labor (A. F. of L.); and Al Whitehouse, Covington, president Kentucky State CIO Council.

Natural resources: Tom Wallace, editor emeritus, Louisville Times; Arthur C. McFarlan, head, University of Kentucky department of geology; and Henry Ward, State conservation commissioner.

Welfare: Howard W. Beers, head, department of rural socialogy, University of Kentucky; Miss Oscie Sanders, president, Sue Bennett Junior College, London; and Miss Louise Diecks, Louisville welfare director.

Transportation: Guy A. Huguelet, Lexington, president of Southeastern Greyhound Lines; Rodman Sullivan, University of Kentucky College of Commerce; P. G. Vondersmith, Covington, president, Cincinnati, Newport & Covington Street Railway Co.; E. J. Buhner, Louisville, Silver Fleet Truck Lines; Al Near, director, Louisville & Jefferson County Airports; John E. Tilford, executive vice president, Louisville & Nashville Railroad; Patrick J. Calhoun, Jr., Louisville, president, American Barge Lines; and J. Lyter Donaldson, Corrollton, former State highway commissioner.

Community life: Irwin T. Sanders, head, University of Kentucky sociology department; Ralph H. Woods, president, Murray State College; and Merton D. Oyler, Berea Collece sociology department.

Government: Philip Ardery, Frankfort, attorney; J. E. Reeves, University of Kentucky political science department; and Eli H. Brown III, Louisville, former United States district attorney.

Address by Hervé J. L'Heureux, Chief, Visa Division, Department of State

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. CELLER. Mr. Speaker, I herewith submit for insertion in the RECORD a speech made by the Honorable Hervé J. L'Heureux, Chief of the Visa Division of the Department of State, before the Jewish Labor Committee, Atlantic City, N. J., on Saturday, February 26, 1949.

I have always been impressed by the fine work done by Mr. L'Heureux, and anything that he has to say is of interest to me. However, in this particular instance, my offering his speech does not imply that I approve or subscribe to all that is contained in his remarks. Nonetheless, I commend those remarks to all who are interested in the program of the displaced persons now in camps in Europe and elsewhere:

It is indeed a pleasure for me to appear before a group of people associated for the accomplishment of such lofty purposes as those for which the Jewish Labor Committee is organized. Your committee has consistently been favorably regarded by us in the Visa Division of the Department of State who appreciate your continual assistance, your patient understanding of our problems and those of our consuls abroad, your excellent cooperation at all times, and the noble efforts you have made to alleviate the suffering and to better the living conditions of the thousands of displaced persons abroad. To my knowledge your organization has never made an unreasonable request of us nor been motivated by any selfish purpose. Your patriotism and Americanism is unchallenged.

Although the Displaced Persons Commission is primarily responsible for processing cases of displaced persons under the act of 1948, other agencies of the Government are required to exercise independent judgment and responsibilities under the law. It is the consul's responsibility, for instance, to issue or to refuse a visa, depending upon the displaced person's ability, after he has been selected, screened, and classified by the Displaced Persons Commission, to establish that he is not admissible under any excluding provision of the immigration laws. This requirement is specifically provided in section 5 of the act of 1948 which reads: "No eligible displaced person shall be issued an immigration visa if he is known or believed by the consular officer to be subject to exclusion from the United States under any provision of the immigration laws" with two exceptions—the contract-labor clause and that relating to persons whose passage is paid by means other than the visa applicant's, which are contained in section 3, act of February 5, 1917.

The Department of State has taken appropriate steps to work in close collaboration with the Displaced Persons Commission, to eliminate, so far as possible, consistent with the law, any procedure or documentary requirement which would not be conducive to expediting the issuance of visas, without jeopardizing our security or our national interest, and to staff our consular offices with the maximum available personnel so as to reduce to a minimum the time required to issue or refuse a visa after the Commission has completed the processing of a case.

Last fall the Department detailed to the Visa Division a foreign-service officer as program coordinator to keep in close and constant liaison with the Displaced Persons Commission, and to coordinate to the fullest extent possible policy and procedure between the Division and the Commission with respect to the issuance of displaced-persons visas abroad. This officer had been stationed at one of our larger consular posts in Germany for over 2 years and has had first-hand experience during that entire period with regard to the issuance of visas to displaced persons under the President's directive of December 22, 1945.

The Department has thus far assigned 42 consular officers and 53 American clerical employees to the current displaced-persons program in Austria and Germany, including

foreign-service personnel who were transferred from other posts and new personnel specially hired for the purpose. Additional personnel are being either transferred or hired for the program as the situation requires. Furthermore, a large number of alien clerks are employed to assist the American personnel abroad.

In order to prevent undue delay in the processing and issuance of visas to displaced persons, the Department has waived the foreign passport requirement for such visa applicants who do not have and are unable, without too much difficulty, to obtain such a passport. Furthermore, the Department has instructed its consuls that certificates of identity or personal affidavits in lieu of passports are not to be required of qualified applicants. The Department has also instructed its consuls not to insist upon displaced-persons visa applicants submitting formal birth certificates or police certificates or military records if, as is so often the case in Europe today where so many records have been lost or destroyed, they are shown not to be reasonably procurable and where undue hardship would ensue were applicants required to spend considerable time in a fruitless search for unavailable documents. Even if such documents could be obtained, they would be of doubtful value in many instances.

So far as the presentation of evidence to satisfy the public-charge requirements in section 3, act of February 5, 1917, is concerned, a very effective short cut was achieved by the issuance of an instruction to consuls advising them that they may properly accept the assurances of specific employment and safe and sanitary housing, submitted to and approved by the Commission, as sufficient evidence of that nature, unless the applicant is found upon medical examination to have a physical defect which may affect his ability to earn a living.

The Department has, at all times, taken steps to insure that a steady flow of quota numbers to its Immigration Coordinating Office at Frankfort is maintained for issuance to eligible displaced persons.

The delay in commencing the actual issuance of immigration visas and the apparently limited number thus far issued—approximately 11,000—was caused by legally required technicalities and a chain of circumstances beyond the control of any one agency of the Government concerned with the program. You may be assured that there have been wholehearted cooperation and a great deal of efficiency shown by all the agencies concerned. With the early obstacles resolved and the means for carrying out the program well established, it is expected that immigration visas will shortly be issued to displaced persons at the rate of 12,000 per month.

Under the German-ethnic-origin provision in the Displaced Persons Act the Congress has set aside one-half of the German and Austrian quotas for this year and the next for the exclusive use of persons in that category who were born in Poland, Czechoslovakia, Hungary, Rumania, or Yugoslavia. This provision of the act was introduced in the closing days of a session of Congress, and there was no hearing, debate, or other recorded legislative history of it to show clearly what the Congress intended. After considerable research and consultations with the Members and committees in Congress I believe a solution of this problem should be reached shortly which may enable us to proceed with this program in the near future.

Section 13 in the Displaced Persons Act of 1948 has been interpreted as applying only to persons who derive some benefit under the act, such as eligible displaced persons and persons of German ethnic origin referred to in section 12. It is considered that section 13 has no relation to aliens applying for visas, in the normal way, without any relationship to the Displaced Persons Act, but under the provisions of the Immigration Act of 1924 and the general immigration laws.

With the resumption of general visa services in Germany and Austria July 1, 1948, and the beginning of the actual processing of nonpriority, nonpreference quota cases by our consular officers in those countries on January 26, 1949, some interest has been aroused by persons in this country regarding the admissibility into the United States of former members of the German Army and of the Nazi and Fascist Parties.

It must first be understood that such persons, as such, are not barred from admission into the United States under any of the excluding provisions of our immigration laws. Under the wartime visa regulations, which are still in effect, and the Public Safety Act of June 20, 1941, which is a permanent peacetime law, former members of the German Army or of the Nazi or Fascist Parties may be denied visas only if their admission into this country would be prejudicial to the interests of the United States or endanger the public safety. During the period of hostilities, mere membership was considered sufficient to bar such an alien from admission into the United States.

Shortly after the cessation of hostilities the following criteria were applied in dealing with such cases:

"Membership in the Nazi or Fascist Party, or service in the German or Italian Army, was considered prima facie evidence that the alien's entry would be prejudicial to the interests of the United States in accordance with the wartime visa regulations. If, however, the visa applicant could establish by positive evidence from reliable sources that he did not voluntarily join the Nazi Party or that he did not voluntarily serve in the Wehrmacht against the Allies, that he had consistently been and continued to be anti-Nazi, and that he believed in democracy in the American sense, it could be determined that the alien was eligible, if otherwise qualified, to receive a visa."

Early in 1948, the criteria were modified to meet changing conditions and to deal more realistically with cases of former nominal members who were the aged parents, or the spouse or the fiancée of an American citizen, particularly if the citizen were a serviceman or veteran of World War II. After having examined many of these cases, and in order that appropriate consideration might be accorded on a uniform basis, under the wartime visa regulations, to all visa applicants who served in the wehrmacht, or who were members of the Nazi or Fascist Parties, or of other similar proscribed organizations, consular and diplomatic officers were informed April 23, 1948, that the Department considers that mere voluntary enlistment in the German Army, or joining the Nazi Party, should no longer be regarded as sufficient in itself to conclude that an alien's entry would be prejudicial to the interests of the United States. People in all countries join all kinds of organizations, often without fully realizing what they are joining. The consuls were then advised that—

"The true criteria in cases of the kind under consideration should be that, in the absence of evidence that an alien has engaged in more than nominal activity against the United States, which presumably was the minimum expected of all Germans while their country was at war with the United States, the alien should not be regarded as inadmissible under the regulations because of his wartime activities. On the other hand, an alien who is, or was, an ardent Nazi at heart, or one in whose case there is evidence of having actively adhered to the Nazi Party and its ideology beyond mere nominal requirements, should be refused a visa under the wartime visa regulations. In a borderline case consideration should be given to the factor of the alien's prospective environment in the United States. An alien who has had only slight leanings toward the Nazis in Germany would not be likely to develop further Nazi ideology, for example, as the wife or parent of an American citizen in a home where the Nazi ideology is not favored, and in such a case the conclusion might reasonably be drawn that the alien's entry would not be prejudicial to the interests of the United States.

"Similar consideration should be accorded the cases of aliens who served in the Italian Army or joined the Fascist Party.

"The above standards are not, of course, to be considered as determinative of the action to be taken on the visa applications of aliens who are mandatorily excludable from the United States under the general immigration laws, particularly the act of October 16, 1918, as amended, or the act of June 20, 1941, prohibiting the issuance of visas to aliens coming to the United States for the purpose of engaging in activities which would endanger the public safety."

The subject of immigration, as we all know, is one that is highly controversial. Few people take an entirely objective view of this subject. They either want more restriction or less restriction; they want the consul to be lenient in those cases in which they have an interest, and strict in other cases. In short, many American citizens are against immigration in the abstract, but are for it when we get down to individual cases.

This reminds me of a remark made some time ago by a distinguished member of the House Judiciary Committee. He was talking about whisky, another controversial subject. "Whisky" he said, "has more public enemies and private friends than anything I know of." Isn't it almost equally true of immigration?

From my 20 years of visa experience in the Foreign Service, and the 18 months I have spent as Chief of the Visa Division, I feel that our consular officers and the personnel in the Visa Division are discharging their responsibilities earnestly, efficiently, and to the best of their ability under most trying circumstances. It is our consistent objective to seek all possible information regarding the circumstances of each case, to examine and evaluate carefully all the evidence and information available, and then to apply the factual conclusions to the law objectively, without bias, without prejudice. We are not infallible; we may err in judgment; we do not expect to please all the people all of the time. All I can say is that we do the best we can. We welcome suggestions; we welcome objective criticism. These help us evaluate public opinion and enable us to do a better job.

The Panama Canal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 4, 1949

Mr. THOMPSON. Mr. Speaker, shortly after being appointed to the Subcommittee on the Panama Canal, I began to inquire into the various problems which were confronting our subcommittee and concerning which I needed to supply myself with information.

It was immediately apparent that far-reaching plans are on foot to alter the present Canal and to improve it to care for the continually increasing tonnage which makes use of the facility. There are two diametrically opposed points of view; one of which is committed to a sea-level canal. The other would improve the present Canal by making some

changes in the system of locks and by the addition of a terminal lake and various other comparatively simple improvements.

In the course of my investigations, I attended a meeting on the evening of February 24, 1949, held under the auspices of the Engineers Club of Washington, D. C. There, I heard an unusually able address by Capt. Willis W. Bradley, a retired naval officer of distinction and a former Member of the House of Representatives. He is presently assistant to the president of the Pacific Coast Steamship Co. with offices in Washington. His speech was objective and authoritative. His approach was from the point of view of an experienced seaman and not especially as a naval officer.

Captain Bradley's statements shed unbiased and important light on one of the most urgent problems confronting those who are charged with the responsibility of the present problems and future destiny of the Panama Canal.

The entire proceedings, including the opening remarks by Mr. Frank J. Hanrahan, president of the Engineers Club, together with those of a former Member of Congress and a former member of the Isthmian Canal Commission, the Honorable Maurice H. Thatcher, in introducing Captain Bradley, and those of the captain himself follow:

OPENING REMARKS BY FRANK J. HANRAHAN, PRESIDENT OF THE ENGINEERS CLUB OF WASHINGTON, AT THE CLUB MEETING ON THE PANAMA CANAL, MAIN AUDITORIUM, DEPARTMENT OF COMMERCE BUILDING, FEBRUARY 24, 1949

Members of the Engineers Club and guests, for the information of our guests, the Engineers Club of Washington is composed of engineers, architects and those in allied professions, most of whom are located in metropolitan Washington. Our clubrooms occupy the second floor of the National Theatre Building. One of the major activities of the Engineers Club is educational in scope. Although the Engineers Club of Washington will not take either a pro or con stand on any recommendations which may develop this evening, the club is pleased to provide the facilities for an open discussion of this important subject.

For many months we have been hearing of the Panama Canal. As both engineers and citizens, we are very much interested in obtaining the best solution.

Those of you who have been following the activities of Congress with respect to the Canal know that, during the present session, two resolutions which call for a study of the Panama Canal have been introduced—H. R. 44 by Chairman BLAND of the House Committee on Merchant Marine and Fisheries, dated January 10, 1949, and Senate Resolution 65 by Chairman E. C. JOHNSON of the Senate Committee on Interstate and Foreign Commerce, dated February 7, 1949. These resolutions indicate a desire on the part of Members of Congress to get the facts. Our discussion tonight will supply at least some of them.

We are honored tonight, not only by the many guests from various parts of the Nation, but also by having in our midst a man who, for several years during the building of the Panama Canal, was a member of the Isthmian Canal Commission and Civil Governor of the Canal Zone. He also was Congressman from the Louisville district of Kentucky for five terms. I now have the privilege of introducing Gov. Maurice H. Thatcher, who in turn will introduce the speaker of the evening.

REMARKS OF FORMER CONGRESSMAN MAURICE H. THATCHER INTRODUCING CAPT. WILLIS W. BRADLEY

This evening I am honored by the request to introduce the speaker for this occasion. It is not possible to tell all of the fine things he has done during his active career, but a few of his outstanding experiences and achievements may be indicated. Graduating in 1906 from the United States Naval Academy in the first section of the class of 1907, he specialized in naval gunnery, and, at the Naval Post-Graduate School and George Washington University, he took post-graduate instruction in advance engineering, and was awarded by the latter institution the degree of master of science.

Afloat, he has served with distinction in subordinate and command capacities of both ships and units of ships which navigated the waters of the scattered seas. These assignments gave him unusual opportunity to observe the problems of navigation in restricted waters and under severe weather conditions.

During World War I, he served as gunnery officer of the U. S. S. *Pittsburgh*, and was awarded the Congressional Medal of Honor for heroism upon the occasion of a magazine explosion on that vessel when he saved the lives of a number of men. During the latter part of that conflict, he was Chief of Ammunition and Explosives in the Bureau of Ordnance of the Navy Department. Also, it may be stated, he was especially selected for duty as Governor of Guam; this during a critical time, 1929–31. In that lone outpost of the far Pacific, he saw what the local needs required and he proposed basic reforms which were adopted by the United States Government. He is responsible for the form of the first representative civil government of Guam, and he is the author of its bill of rights. Parenthetically, I may say that years ago when I was a member of Congress, I visited Guam and one of the most interesting experiences which came to me on that island was to meet—together with some congressional associates—the Chomorro Congress, made up of about 40 native men who then served in an advisory capacity to the Governor.

In World War II, our speaker commanded a squadron of destroyers operating in the Atlantic on neutrality patrol; after which he served on the Board of Inspection and Survey on the Pacific coast until he retired from active duty in 1946. This latter assignment brought him into intimate contact with the United States merchant marine and its problems.

In 1946, he was elected to the Eightieth Congress from the Eighteenth California District, which includes the city of Long Beach.

In Congress his career was unique. He was assigned to the House Committee on Merchant Marine and Fisheries, and made chairman of the subcommittee dealing with ship construction and operation, and maritime labor. He quickly became a leading spokesman on the subject of the merchant marine in Congress; and perhaps its greatest authority on the operational problems of the Panama Canal. Many Members of long congressional service have stated he has one of the most outstanding records of achievement of any single-term Member who has ever served in the House.

Today, he is assistant to the president of the Pacific Coast Steamship Co. which is developing the new method of freight transportation by conveying loaded trucks and trailers on high-speed ships. In this capacity, he is continuing his fight for the best interests of the American merchant marine, the restoration of coastwise shipping, and the practical modernization of the great Isthmian waterway. Thus, in this well-known American, there have been combined in one person, not only the distinguished naval officer and scholar, but also the navigator and ship operator, the engineer, the colonial administrator, and the statesman.

As one who served as a member of the Isthmian Canal Commission during construction days of the Panama Canal and especially charged with the administration of civil affairs of the Canal Zone during that tenure, I am, naturally, very much interested in any discussion which relates to the Canal; and in the presentation of the various plans for increased capacities and protection of this great ocean link, I am glad to hear all the arguments which may be offered touching any plan or suggestion which may be offered; and, I am sure, that this is true of the American public. Because of the questions at issue—and there is a strong variance of opinion concerning them—the fullest up-to-date investigation, discussion, and consideration should be had before final decisions are made. In the Eightieth Congress, our Speaker was the author of a measure providing for the creation of an Interoceanic Canals Commission, charged with the duty of making an exhaustive study and report as regards increased facilities of the Panama Canal, and alternate plans and canal routes. No action was taken on the proposal; but, because of the vast importance of the problems involved, many who are conversant therewith, believe that such legislation should be enacted. On the other hand, there are distinguished students of the subject who favor the construction and operation, at Panama, of what is known as a sea-level type canal in place of the present lake-lock plan; and to this effect an exhaustive official study and report has been made in pursuance of congressional authorization.

The consideration of the issues should certainly be free from passion and prejudice, above any personal considerations, and motivated alone by the highest degree of patriotism and a most earnest desire to have done what seems to be best. In the address which is to follow we shall hear—I am sure—a very able and informative statement of views touching these matters. The speaker has indicated that, after he has finished, he will be glad to answer, or attempt to answer, any questions which may be asked.

I am very happy, indeed, to present a gentleman who is known and admired by many of you, and who, in reputation, is known to all of you, Capt. Willis W. Bradley, of California.

ADDRESS OF HON. WILLIS W. BRADLEY, OF LONG BEACH, CALIF., BEFORE THE ENGINEERS CLUB OF WASHINGTON

THE "WHYS" OF THE PANAMA CANAL

I. Introduction

Members of the Engineers Club, ladies, and gentlemen, I appreciate this opportunity to talk to you about the "Whys" of the Canal at Panama, a subject which should be of great interest to every American at the present time, as the future of the Panama Canal affects not only the security of his country but also the contents of his pocketbook.

Ages ago—I can't say how many because I am not a geologist—when the earth was cooling and getting set to be fit habitation for 100-foot lizards and birds without feathers—a big wrinkle on its surface developed into an irregular ridge extending almost the entire distance between what we now call the North and South Poles. The basic material of this ridge was hard, and as erosion of the passing centuries has worn it down we have had revealed that great mountain chain which, except in polar seas, divides the Atlantic Ocean from the Pacific Ocean, and which we call by such names as the Rocky Mountains, the Andes, or the Cordilleras. In the vast length of these mountains, approximately 10,000 miles from the Bering Sea shores of Alaska to the tip

of Cape Horn in far southern Tierra del Fuego, we find mighty mountains, great plateaus at lofty elevations, and also that stretch between North and South America where in certain places the height of land between the ocean is a mere thousand or less feet above sea level.

Prior to construction of an isthmian canal, there were just three basic routes by which a vessel could pass from the Atlantic to the Pacific, or vice versa. One was to go via the waters surrounding the Eurasian continent, traveling perhaps nine-tenths of the circumference of the globe to arrive at a destination only a few thousand, or even a few hundred, miles from the starting point. Another, was to go around the South American continent, passing either through the Strait of Magellan or around Cape Horn, a voyage for many thousands of miles extending into cold waters on the border of the Antarctic Sea. The third, not used because impossible except under very special circumstances, by traversing the Arctic Ocean along the north coasts of Canada and Alaska. It took many decades to prove that this Arctic voyage could be made, but in the end the little ship *Fram* got through by drifting with the ice for several months, and I should not even list this route except in a desire to be accurate and because I cannot foresee the future so clearly as to say that it will not be used some day for certain waterborne traffic.

II. Historical interoceanic trade routes

Let us step back into the past, and then follow down through the centuries, to see how traffic between the two oceans moved before the opening of the Panama Canal.

The first interoceanic trade of any importance in this Western Hemisphere was that of the empire of the Incas, situated in what is known now as Peru, with Spain, the home of Pizarro and his conquistadores. This traffic was solely for the enrichment of Spain and consisted almost entirely of precious metals and other materials of small bulk but great value being sent from the vice royalty of Peru to the Spanish Crown. The cargoes were sent up the west coast of South America to Panama, there loaded on the backs of Indians or burros and carried through jungle trails across the mountains to Porto Bello on the Atlantic side, where they were once more put in ships to continue the journey to Spain.

Somewhat later the wealth of the Philippine Islands and the Far East began to cross the Pacific bound for the coffers of Spain. One found included in these shipments many articles from the Kingdom of Cathay (now China) and the Spice Islands (now known generally as the Netherlands Indies). Cargoes were boiled down to get maximum value into minimum space as only one galleon with its cargo of tribute was permitted to cross the Pacific each year. The eastbound galleon made its landfall on the coast of California and then skirted the land to the south, finally arriving at the port of Acapulco in Mexico. Here the galleon was discharged and the cargo sent overland by man and beast to Mexico City, and thence to Veracruz, where it was reloaded into ships to continue its eastward travel.

As time went on, citizens of the United States became awakened to the great possibilities in commerce with China, and ships under the American flag began to make the long voyage from our east-coast ports, around the Horn and across the Pacific to the Asiatic mainland. There they loaded tea, sandalwood, spices, and other oriental products before making the passage home. This trade, a two-way commerce, but chiefly from west to east, made the fortunes of many a family of early American shipmasters or traders. This was the real heyday of the American clipper ship, a type which became famous throughout the world for speed and reliability, but which was doomed to virtual extinction by the coming of the steamship.

The fourth distinctive happening in this ocean-to-ocean commerce came with the discovery of gold in California—an event which had a tremendous effect not only in the area in which it occurred, but literally on all the civilized world. Here for the first time we have the major traffic moving from east to west as the migration of men and materials moved from our eastern seaboard to Mexican and Panamanian ports, thence across the Isthmus of Panama or of Tehuantepec, and then up the Pacific to San Francisco. Though this was a comparatively short-lived episode in transportation, it brought home to the United States the pressing need of an interoceanic canal somewhere between the two American continents.

The next striking event in the long history preceding actual construction of the Panama Canal was the picturesque voyage of the battleship *Oregon* from the Pacific to the Atlantic during the Spanish-American War. The American people were at fever heat with war excitement and war fears. The Spanish Fleet was coming across the Atlantic, and, if current reports were to be taken at face value, it was probable that it would destroy New York, bombard Washington, devastate the cotton crops of the Carolinas, and lay waste the orange groves of Florida. The battleship *Oregon* was in the Pacific and was needed most urgently in the Atlantic. She made the run around South America at her best speed and arrived in the Caribbean in time to participate in the complete destruction of the Spanish Fleet off Santiago de Cuba. Now, with our modern propulsive machinery and oil fuel, we should hardly consider this feat worth headlines in a country newspaper, but in 1898, in the strained and excited condition of the American public and with the machinery then existing, it bordered on the heroic and was a tremendous influence in the drive toward the immediate construction of an interoceanic canal.

So, considering the happenings of the past, the then normal commerce between our East- and Western States, and the certain great future ahead of this Nation, the American people determined to have a canal between the Atlantic and the Pacific post haste. But just where was it to be?

III. The Isthmus of Panama was chosen

Three routes were given deep consideration—across the Isthmus of Tehuantepec in Mexico; across Nicaragua, utilizing Lake Nicaragua as a part of the route; and across the Isthmus of Panama, then a part of the Republic of Colombia.

The French had commenced the construction of a canal across Panama, but had been compelled to abandon it due to financial and other difficulties. This route was most attractive to the United States, but we could not reach any kind of a satisfactory agreement with Colombia, even though we did arrange to buy out the French canal company.

Quite naturally, the people of the Province of Panama wanted desperately to have the canal cross their territory as they knew full well that such a canal in their midst would advance their land in almost every way. Yet their overlord—Colombia—dickered with the United States and refused to meet any terms acceptable to us. The inhabitants of the Province of Panama then rebelled against Colombia and declared their province to be an independent and sovereign state. Under normal circumstances it is probable that Colombia would have subdued this rebellion without difficulty, but our urgent need of a canal across Panama had made conditions abnormal to such a degree that, almost without delay, the United States recognized the Republic of Panama as a sovereign state and entered into a treaty guaranteeing her independence. That made intervention by Colombia out of the question, and it also laid the foundation for damage claims against the United States, caused bad blood for many years, and finally cost the United States a neat sum as an indemnity.

Shortly thereafter the United States commenced the construction of the Panama Canal, midway in a zone of land 10 miles wide granted to us for canal purposes but not ceded to the United States; in other words, while the United States obtained the use of the zone in perpetuity, in return for a very definite yearly consideration, and while it exercises the prerogatives of government in the zone, yet it is not sovereign insofar as title is concerned.

One might go into an interesting technical discussion of the reasons for building the present lock type of canal instead of some other type, such, for example, as sea level, but I am trying to keep these remarks as far as possible from the technical aspect—I am trying to make them interesting to all of you, regardless of your degree of mechanical knowledge—so I shall merely say that the canal actually constructed is one of three levels, rising at the Atlantic end by three lifts, from sea level some 85 feet to the surface of Gatun Lake, and on the Pacific side from sea level two steps to the surface of Miraflores Lake, and then one step at Pedro Miguel to the level of Gatun Lake, there represented by the southern end of the channel through Gaillard Cut.

IV. The present Canal

For some years after the Canal was first opened there was a great deal of trouble due to slides in Gaillard Cut—the bottom of the channel rising in places until it was above water and the Canal was effectively closed to traffic. In the end, this trouble was overcome so the present Canal has given many years of reasonably satisfactory service. However, it has had its major difficulties. As we have gained experience through actual operation, we have learned that the arrangement of locks at the Pacific end is poor for operational purposes.

At the Atlantic end, where the three-step lockage is performed, there is a lake of considerable size formed at the high level by the waters held in check by Gatun locks and Gatun Dam. This lake, known as Gatun Lake, provides good anchorage for ships waiting for transit down and for Pacific-bound traffic held up by fog or other reasons. It also provides a large enough body of water immediately adjacent to the locks so that filling the upper lock chamber does not cause any noticeable disturbance of the water in the lake. But at the Pacific end conditions are quite different. There we have a small intermediate-level lake at Miraflores (55 feet elevation) just above the two-step lock structure, and then we have the one-step Pedro Miguel lock to raise the level to that in Gaillard Cut. Anchorage space above Pedro Miguel is nonexistent and, since there is no considerable body of water at this point, to take up the slack, one might say, a nasty surge is set up in Gaillard Cut when Pedro Miguel lock is filled. This surge has an amplitude of as much as 3 feet at times and, as it travels back and forth through the cut, it may reduce the maximum depth of water in the channel, during the dry season, to 40½ feet, thereby endangering a heavy-draft ship. Also the fact that there is no anchorage above Pedro Miguel makes it impossible to utilize the Pacific locks to their full capacity when there is fog in the cut and ships are not able to proceed after getting to the upper level.

These difficulties can be corrected by an arrangement now known as the Terminal lake plan. The essential features of this plan were originally conceived in 1879 by the eminent French engineer, Adolphe Godin de Lepinay. It was authoritatively developed in 1943 by Capt. Miles DuVal, United

States Navy, now Panama Canal liaison officer of the Navy Department, while he was serving as captain of the port at Balboa. This plan would remove the Pedro Miguel locks entirely, raise the level of Miraflores Lake to that of Gatun Lake, and place all the Pacific locks in three lifts at Miraflores. This modification would provide a lake at the upper level of sufficient size at the Pacific end of the Canal to eliminate many of the navigational difficulties now encountered.

When it became apparent that the size of the present locks (110 feet by 1,000 feet) was becoming too small for the largest naval vessels, the construction of a third set of locks (140 feet by 1,200 feet) was authorized and construction of them was begun under the title of the "Third Locks Project." However, shortly after World War II commenced all work on this project was abandoned due to need of labor and material elsewhere and also to the realization that locations of the third locks were not all that could be desired. After the war, due to many opinions that the Third Locks Project would not provide the answer to our problems in relation to a satisfactory interocean canal, the Governor of the Canal, under the supervision of the Secretary of War, was authorized by the Seventy-ninth Congress to investigate the means for increasing the capacity and the security of the Canal to meet the future needs of interoceanic commerce and national defense.

This investigation was held during the years immediately following and was conducted on an elaborate scale with the use of an ingenious model of the canal, by studies of current conditions at the Cape Cod Canal, by studies and experiments at the Navy's Taylor Model Basin, Carderock, Md., and by extensive research work elsewhere. The report of the Governor of the Canal was submitted to the Eightieth Congress. It recommended that the present Canal be converted to one of sea level at approximately the same location.

Now, many have asked, Why Panama? Why not some other trans-Isthmian route? So let's look them over in the light of today.

V. The alternative routes

During years of studies and investigations, three basic routes have been seriously considered—Panama, Nicaragua, and Tehuantepec—while a fourth, through Colombia, has been somewhat of an idea which has been in the background until recently.

The Nicaraguan route has long been a favorite of some promoters, and the United States now has a treaty with Nicaragua which would permit of the utilization of that route. The plan there is to follow the San Juan River from the Atlantic as far as Lake Nicaragua, cross the lake for some 70 miles, and then cut an artificial channel to the Pacific. As the surface of Lake Nicaragua is about 110 feet above sea level, this would not reduce the hazards of locks, for such a canal would require a minimum of three steps up and three down, each with a somewhat greater lift than those at Panama. The length of the proposed Nicaraguan Canal would be 172.8 miles as against 51.2 for the Panama route. Certainly, except for the possible additional safety of having two canals between the oceans, there would seem to be no reason to construct another lock canal there.

Some publications advocate a sea-level canal across Nicaragua, utilizing the same general route as mentioned above. I think this is out of the question, as it would involve either draining Lake Nicaragua—something that I cannot conceive of the Nicaraguans permitting—or digging a channel at terrific cost through mountainous territory just south of the lake.

When we consider the supposed additional safety of having two canals instead of one, we hear arguments on both sides of the problem. Many believe that far greater safety is attained by pooling all available defenses at one location rather than by dividing them. We all grant that if one could provide maximum defense at both sites there could be no question as to the desirability of having two canals, but every realist knows that even the United States cannot afford such a luxury. So it seems to me that the Nicaraguan route should be dropped from consideration under present circumstances.

Now one of the oldest proposed routes is across the Isthmus of Tehuantepec in Mexico. This route has accommodated hundreds of thousands of tons of cargo via the Tehuantepec Railway, between the Pacific port of Salina Cruz and the Atlantic port of Puerto Mexico. It was a route heavily used just prior to the opening of the Panama Canal and the great terminal structures then utilized are now mostly idle and badly deteriorated.

Of late, there have been three proposals for a revival of commerce across Tehuantepec—a ship railway, a canal, and a railway-special terminal set-up designed to transport huge cargo containers which would be moved from ship to flatcars, or vice versa, in a matter of only a few minutes without manual stevedoring. This latter has been called a trailer body system as the containers might well take the form of truck trailer bodies so as to be adaptable to all three forms of transport—ship, railroad, or truck. It is not a fantastic scheme by any means—but rather it is entirely practicable if anyone is willing to put up the money for all the special equipment needed at ports of call, in rolling stock and in specially designed ships.

The idea of a ship-railway across the isthmus has some supporters. This group would provide multiple tracks to carry immense ship cradles across the land. The cradles would be run into the sea, something like a marine railway drydock, the ship would be placed therein, and then the whole would be hauled over the isthmus and run into the ocean on the other side, where the ship would be floated out to proceed on its way. The idea may seem utterly fantastic—but it is possible. However, the expense would be great and the safe handling of even medium-sized ships on the overland jaunt would present some mighty knotty problems for both engineer and operator.

The proposed sea-level canal across Tehuantepec has been developed as a combination of open ditches and tunnels. Where land elevations permit, an open ditch would be provided. Where surface elevations are too great, the promoters would dig a tunnel through the mountains so big that a heavy ship could steam right through. As I recall, the length of the tunnels would total about 60 miles and the proposed channel width in the tunnels would be 175 feet. On my part, I believe the difficulties of safe handling for ships of any size through tunnels such as these would make the proposed canal of little use for anything except small craft, even though other great problems concerning national sovereignty, stability of overhead rock or earth in the tunnels, and tremendous cost could be overcome. The fact is, that I do not consider the Tehuantepec Canal project feasible at this time.

Now let's go south of the present canal, into the territory of Colombia where we find the proposed Atrato-Truando route. This would utilize the Atrato and Truando River Valleys from the Atlantic, thence a cut through the Continental Divide to the Pacific, involving considerable excavation throughout almost its entire length. The maximum elevation of land to be cut on this route is some 932 feet so this would make the deepest canal cuts for sea-level channel about 1,000 feet from the summit to the bottom of cut. The estimated cost in 1947 was $4,834,000,000. Experience indicates that this figure would be exceeded greatly before the project could be completed. So it would seem that unless there is some reason other than the need of an efficient and safe canal, the Atrato-Truando route may well be disregarded.

I have given you only the very briefest picture of these alternative routes and I realize that you couldn't draw any just conclusions from the facts presented, but I have indicated that I feel the logical location—in fact, the only justifiable location—for an isthmian canal between the Atlantic and the Pacific is across the Isthmus of Panama on approximately the present site. This far, I agree with the Report of the Governor of the Canal.

VI. The sea-level proposal

The Governor's report estimated the cost of a sea-level canal at Panama at $2,483,000,000 and utilized possible danger from atomic bombs as justifying this huge outlay in the name of national defense. The proposed canal would intersect the present one at some five places and it would be, in fact, a new canal, not a modernization or a modification of that now existing. It would be provided with a mammoth tidal lock near the Pacific, together with a bypassing channel having a sliding gate which could be withdrawn so as to offer unobstructed passage through the canal when tidal conditions permit. During the greater part of each day, the difference in tidal levels between the Pacific and the Atlantic (about 12 feet maximum) would make use of the tidal lock advisable, although sea-level advocates maintain the maximum currents to be expected in an open waterway would not be such as to make a full-powered ship unmanageable, and that disaster to the tidal lock would not render the canal unusable.

Now here we come into the battle between the sea-level advocates and the terminal lake proponents. Strange to say, I seem to have gotten myself right in the midst of this turmoil for, as a Member of the Eightieth Congress and as a tax-paying citizen, I took it upon myself to try to determine in my own mind if this vast expenditure of the American taxpayers' money is really necessary. The official estimates are about $2,500,000,000. I have repeatedly stuck my neck out by saying that I believe the sea-level canal would cost five billions, and for this I have been roundly castigated by engineers who think I am talking out of turn. Yet I invite you to consider this matter of expense from the long-range viewpoint, and also to ask yourselves if it would not divert funds and resources from other programs and projects, within the continental United States, even more vital to the national defense than a new sea-level canal.

First, who ever heard of the Government completing a job of great magnitude within the first estimated cost. I suppose it has been done, but, having watched Government work for many years, I believe I am entirely safe in pushing up the estimates by at least 25 percent. Then we have the unexpected things that may happen, such as great slides or upheavals. I know the present engineers believe they have this problem licked but the older engineers—those who constructed the present canal—say flatly that it is not licked and that considerable trouble will be encountered if the bottom of Gaillard Cut is to be lowered 100 feet. I don't know which group is right, but it is safest to assume that trouble would be encountered from earth movements of considerable magnitude.

Then we must think of further inflation of the currency if we are to be realists. Proponents of the sea-level idea tell me that this is not fair, but I am trying to figure out what the canal would cost the taxpayers in hard cash, not what is fair to the estimators, and I think it only logical to believe that further inflation will occur due to prospective budgets—Federal, State, and local.

But the biggest item of additional expense is in interest on construction costs. Let us use some real common sense here. There is little reason to believe that a project such as this could be financed with current income, and even if it were the money so used could have been applied on the public debt and thereby reduced interest payable by the Government. No matter how you figure it, or how you camouflage it, the costs must be added to the public debt, and interest must be paid on them until the bonds are retired or otherwise disposed of. Suppose the sea-level canal could be constructed for $3 billions in cash, obtained at 2½ percent interest. That means an interest payment of $75,000,000 a year, or $750,000,000 in 10 years. And is there anyone living who has the least expectation that any payments on canal costs, piled on top of the present debt, could be commenced in even 50 years? If you can find any such person, he is rather naive to put it mildly. You may say that figuring such as this would stop all public works but that is incorrect. The fact is that public works cannot be justified in normal times unless they give an adequate return on the investment involved. This return may be in money, as in electric power projects; in greater agricultural production, as in reclamation; in lessening of human drudgery, as in rural electrification; in better health as in school lunch programs; or in safety from floods, as in flood control works. Here at Panama we have just two legitimate fields in which a return to justify the costs and interest are visible—the first, merchant marine; the second, national defense.

VII. Conclusions

The Panama Canal is a subject which grows on one. As a Member of Congress, I considered it from many angles. A full discussion of these many angles here is out of the question but I do want to summarize some of my conclusions.

First in importance is the effect of the atomic bomb. This has been persistently emphasized as the controlling factor by the advocates of the sea-level project on the ground of alleged greater security against destruction by atomic attack when compared to the high-level-lake type canal. As far as I have been able to ascertain, leading atomic warfare authorities hold that any type of canal would be seriously vulnerable to atomic attack beyond hope of early restoration for service. My convictions, first set forth in an address before the Cosmos Club of Washington, on April 19, 1948,[1] have been strengthened greatly by subsequent publication of additional authoritative information as to the destructiveness of the atomic bomb.[2] A careful reading of these papers has served definitely to confirm my earlier conclusion—that the devastation to be expected from an atomic attack would be catastrophic to any canal regardless of type.

And while on this subject of national defense, I want to point out that the Panama Canal is not the only defense project of the United States. It is merely one of a considerable number of industrial and defense projects some of which seem much more essential to our national security. Nor should we ever lose sight of the fact that the security of any type of canal depends more upon the military and industrial might of the United States than upon the characteristics of canal construction.

An additional important angle of the sea-level project is that it would necessitate the negotiation of a new canal treaty with the Republic of Panama, as some Panamanian territory, outside the present zone, would be affected by new developments. Our fairly recent difficulties in regard to defense bases outside the zone would lead one to believe that a new treaty, granting additional privileges to the United States, probably could not be negotiated without paying a large indemnity and incurring substantially increased annual payments to Panama—payments which must be added to the estimated cost of the sea-level project both during construction and in perpetuity.

Once the atomic-bomb phase and certain other relatively minor confusions of developed plans are removed, the true criterion becomes just as it was in 1905 when Gen. Henry L. Abbot, an advocate of the lake-lock canal, wrote, "The true criterion is ease and safety of transit, and that test leaves no doubt as to which type of canal should be preferred at Panama."[3]

The Terminal Lake plan would not require a new treaty with Panama and, therefore, would not involve an increase in annuities to that state. When freed from many seemingly unjustified defense items included in the estimates of the Governor of the Canal, and also of the excessively large locks suggested therein, I believe the plan could be accomplished for less than $750,000,000, in first costs—for what is probably 20 to 25 percent of the sea-level figure.

As a navigator and ship handler who has actually practiced these arts in many parts of the world over a considerable number of years, I have no hesitancy in stating my firm conviction of the navigational superiority of a canal consisting largely of fair-sized lakes rather than of long and restricted channels such as the sea-level plan would provide. What the maritime world needs is the best canal to get ships from one ocean to the other at a cost which ship operators can pay and stay in business. I believe the Terminal Lake plan provides that best canal.

Certainly this canal problem calls for a clear-cut decision in the near future—for a decision which will affect commerce and defense for many years to come. While the problem is distinctly our own, what we decide to do will be of intense interest to most of the civilized world. Therefore, to ascertain the facts concerning the needs of both commerce and the national defense, to protect the income and property of every American from needless taxation, to keep from fooling the people with the idea that we can construct an impregnable canal at Panama and can defend it successfully against atomic attack, I strongly urge the creation of a strictly American, civilian and military, Interoceanic Canals Commission to study the problems involved and to recommend the solution best suited to the interests of the people of these United States.

Counting of Electoral Votes

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 9 (legislative day of Monday, February 21), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the RECORD the statement I made before a subcommittee of the Senate Committee on the Judiciary on March 9, 1949, on Senate Joint Resolution 2, which proposes a constitutional amendment to change the method of counting the electoral votes.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, if I may be permitted to do so I would like to make for the record a brief statement with regard to my present position on Senate Joint Resolution 2 which is before us as a proposed constitutional amendment to revise the electoral college.

Any proposal for a constitutional amendment carries with it grave implications. It is a revision of the basic law of the land. When it goes to the method by which the Chief Executive is to be chosen it becomes an even more vital concern to every citizen.

Any such matter as this is not a question of political partisanship, and it is not a matter of personalities. Preservation and protection of the political system under which we have flourished for more than 150 years is above such considerations.

I have great respect for the sponsors of this amendment and most sincerely I compliment them for their desire to perfect the machinery of representative government. But without prejudice whatsoever for the thinking of the measure's sponsors I believe the questions here involved are so fundamental they demand the utmost exploration to the satisfaction of every Member of Congress who will pass upon them.

It is in that spirit and I can assure you with no other predisposition on my part that I believe we should continue these hearings.

I recognize that the present electoral college is obsolete and inconvenient. It involves the risk of throwing a presidential election into the House. It contains glaring inequalities and it fails to reflect with absolute accuracy patterns of voting behavior. But it has served us well. And before we abandon it I believe that we should know exactly what any substitute would signify.

A principal argument advanced on behalf of this constitutional amendment is that it will strengthen the two-party system in the United States.

I think the two-party system is the great genius of the American political organism. By vertical alinement it isolates the lunatic fringes, as one keen observer has stated, and it permits the joining of more closely alined elements into an efficient working machine, although delicately balanced. I think we may reasonably require every assurance that such a mechanism will not be upset before we embark on any departures from the present scheme.

There are further questions on which I believe we should have some penetrating and original thinking, and I will list some of them. In the interest of fullest exploration I hope that we may have responses on them from the sponsors of Senate Joint Resolution 2, and from our other witnesses.

QUESTIONS

1. If a constitutional amendment were adopted, guaranteeing electoral votes to every candidate according to popular votes, would candidates be likely to argue that States must put them on the ballot since presidential elections are now Federal and not State contests? In short, would Federal regulation of presidential elections be likely to follow, to protect the right of the candidate to his share of the popular vote? Why grant him an electoral share if States can keep him off the ballot?

2. Are presidential campaigns likely to be more costly under the proposed change? Or, would less money be spent in the big States and more in other areas, without increasing the total cost? Would we have different campaign techniques and what would their change mean to different areas and to individual voters?

3. By offering an incentive to see power grow in the electoral vote, would multiple

parties be encouraged? Formerly, splinter parties were stopped at the State and regional level; would they now retain their identity, resist being swallowed up in the major parties and bid for power on their own? Is the incentive of electoral vote too weak to encourage splinter parties or will it have a tendency to encourage them?

4. What has been the experience in other countries with regard to multiple parties?

5. We have had a number of minority Presidents. Will this tendency increase under the new proposal?

6. By translating popular votes into electoral votes under the unit rule, the tendency was to cancel out smaller candidates having less than a plurality and to give the winning candidate a national character by a larger electoral vote. Would the new proposal change this by accentuating the minority status of a winner?

7. Which is the greater threat to the American system: nuisance minorities under a two-party umbrella or multiple parties in their own?

8. If multiple parties could develop under the new system, could they bid for a share in national government power even though they do not succeed in electing a President? Today we have many bipartisan boards and commissions in the Federal Government; might the new proposal send this into the direction of multipartisan boards with block pressure for concessions? Would not multiple parties, even if they failed to elect their Presidential candidate, be expected to elect Members to Congress, and what would that effect have on congressional organization?

9. Would the new proposal push the representative system in the direction of national popularity contests and thus into "bread and circus" politics?

10. Would the new proposal lead to the setting up of puppet parties in States solid to one party or another for the purpose of drawing off electoral votes from the major parties? Minor parties do this now; would the tendency be encouraged?

11. There is general agreement that the new proposal would break up the South. Do reason and history support the view that the Republican Party, as the existing alternate party, would move in and get a strong share of southern votes to revivify the two-party system, or would the break-up lead to third parties in the South?

12. Would electoral votes under the new system be free of voting inequalities such as now prevail?

13. The amendment proposes to compute fractional electoral votes only to one one-thousandth unless a more detailed computation would change the result of the election. Is this intended solely to apply in case of a tie? Is it possible that a peculiar breakage of fractions might, by a further projection, change the results? If so can these breakages be anticipated, and how should projections be treated?

Accordingly, Mr. Chairman, I would like to suggest that after today's session these hearings not be closed, but held open and an interim report issued, stating findings to date and posing some of the questions that have arisen.

I believe that such an interim report should be circulated widely, among men of public affairs, students of government in our universities, representatives of the political parties, and Members of Congress.

I believe reactions and penetrating thought on the interim report should be invited from all those people, so that at a future date we may have the benefit of their expressions in the form of a full, clear picture of the present proposal and its possible consequences.

The question before us is not one that goes just to the obsoleteness of the electoral college. On that there is general agreement. The question goes to what an alternative might bring, and on that question we need all possible light.

The Equal-Rights Amendment

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 9 (legislative day of Monday, February 21), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the equal-rights amendment by Dr. Louise Pound, renowned author, and professor at Nebraska University.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I surely favor the equal-rights amendment. Times have changed since the individual States have passed their laws concerning the status of women. Relief in their unavailability in industry, because of their uncertain health and inadequate endurance, is not what it was. The inch-by-inch method of bringing legal revision needs to be speeded up.

I believe it was Helen Rogers Reid, of the New York Herald Tribune, who remarked on how beautifully women workers got on during the war period without the protection that is so emphasized. Limitation of their hours of work and prohibition of occasional overtime work and of night work are really handicaps. The protection that men workers have today would be adequate now for women also and would serve them better. Greater possibilities of self-support, mothers' pensions, institutions for children, and other helpful innovations make a difference, too. Some States still award a wife's earnings inside or outside the home solely to the husband, and possession of the children as well; but no doubt there are other States (Nebraska may be one, in a few instances) in which men might well treat themselves somewhat more leniently than they did when they framed their laws. For the benefit of both men and women, legal provisions should be examined and brought up to date. The best and quickest way to do this would be by passing the equal-rights amendment.

Some women, of course, confirmed in tradition, oppose the equal-rights amendment and they do so conscientiously; but they are women of the same type as those who a hundred years ago opposed the admission of women to higher education in colleges and earlier in this country opposed votes for women. Progress had to come without them.

Importation of Japanese Fabrics

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 9 (legislative day of Monday, February 21), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles from the New York Times of March 9, 1949, dealing with Japanese importations into our country.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

EMBARGO IS SOUGHT ON JAPAN'S FABRICS—PATERSON GROUP OPENS DRIVE CHARGING DUMPING IS THREAT TO INDUSTRY HERE

PATERSON, N. J., March 8.—A national drive to have Congress place an embargo on Japanese woven silks, rayons, and labels was launched here today by a committee of local textile manufacturers in an effort to eliminate what they describe as the "ruinous competition forced upon American industry" by the military occupation government in Japan.

Speaking for the committee, David E. Hand, president of John Hand & Sons, one of this city's larger textile companies, said that 6 more months of the Japanese occupation government's practices in dumping millions of yards of woven Japanese textiles on the American market would bring about an almost complete collapse of the textile industry here.

He asserted that already the results of a governmental agency pitting "coolie labor against the high standards of American workmen" can be seen in this city, and that the matter will be taken up with Secretary of Defense Louis Johnson.

Mr. Hand said that following the war the military occupation authorities in Japan set a quota price on raw silk which was purchased by American manufacturers. When the American manufacturers were ready to release their woven products on the market, he said, occupation authorities dumped 8,000,000 yards of Japanese woven silk into this country, "driving the American manufacturer to the wall."

The committee, which has the backing of the Paterson Chamber of Commerce and the Paterson Industrial Commission, plans to contact United States Congressmen and Senators not only to urge them to institute an embargo on Japanese manufactured goods but also to compel Japanese manufacturers to place a "fabric woven in Japan" label upon every garment which is made from Japanese fabrics.

Mr. Hand said that it was a picture of the Government first setting the price of a material by maintaining price levels for the sale of raw materials and then underselling its own manufacturers by dumping finished material on the market.

"A comparison of silk piece goods prices," he said, "indicates that a difference of 20 cents to 30 cents per yard existed between American-made silk fabrics and the Japanese equivalents.

During the year 1948 the American silk weaving industry was going along on an even keel, it was said, until millions of yards of Japanese silk were thrown on the market and thereby created a panic situation in what would have otherwise been a stable market, due to the well-adjusted balance between supply and demand in a specialized field.

Charles H. Romere, a member of the Paterson Industrial Commission, asserted that the military occupation government in Japan is favoring an enemy country at the expense of an American industry. Pointing to the fact that American textile mills supplied the armed forces with millions of yards of parachute silk, Mr. Romere said that "the Department of Defense should know that this segment of the textile industry will be called upon to meet any national emergency if one should arise. We certainly can't permit Japan's occupation government to destroy the American silk industry and depend on Japan for cloth."

KNIT GLOVE PROTEST DUE—ASSOCIATION TO DEMAND MAC ARTHUR TAKE ACTION AT ONCE

The Association of Knitted Glove and Mitten Manufacturers will send a protest to General MacArthur's headquarters in Tokyo as the result of press reports that "cheap Japanese goods are going on world markets," it was announced yesterday by Joseph A.

Milstein, president, following a meeting in the Governor Clinton Hotel.

Domestic manufacturers of knitted gloves, Mr. Milstein said, are not opposed to trade between nations, nor are they opposed to imports from Japan or any other nation. "We definitely favor rehabilitating Japan's economy and putting the country back on its feet," he added, "and we welcome fair competition from any quarter. But the product of American labor can never begin to compete with a product made by Japanese labor receiving in a month what an American worker receives in 1 day.

"We ask the Supreme Commander of the Allied Powers (SCAP) to give an American evaluation to wool gloves in Japan before flooding our home market with them. We would then be more than willing to compete on the basis of styling, value, and quality."

Proposed Establishment of War Claims Commission

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Wednesday, March 9 (legislative day of Monday, February 21), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Francis M. Sullivan, regarding the proposed establishment of a War Claims Commission.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DISABLED AMERICAN VETERANS,
Washington, D. C., March 2, 1949.

Mr. ROBERT D. CASTNER,
Commander, Department of New Mexico, Disabled American Veterans,
Santa Fe, N. Mex.

DEAR COMMANDER: Our organization, and particularly the Department of New Mexico, is very much interested in the proposed establishment and administration of the War Claims Commission authorized under Public Law 896, Eightieth Congress. While the act of authorization is now on the statute books, no funds have been provided as yet for its establishment. President Truman requested such funds from the special session of the Eightieth Congress and again in his budget message requested the sum of $100,000 for establishment of the War Claims Commission.

A deficiency appropriation bill was reported to the House of Representatives and passed by that body, but it did not contain the necessary funds for the Commission. Therefore, upon the initiative of Senator DENNIS CHAVEZ a subcommittee of the Senate Appropriations Committee held a hearing this morning to consider the inclusion by the Senate Appropriations Committee of the necessary $100,000 to provide for the establishment of the Commission so that it may commence to function immediately. This $100,000 is for administrative costs for the balance of the current fiscal year to July 1, 1949.

Senator CHAVEZ, as you know, was one of the outstanding advocates of the bill which became Public Law 896, Eightieth Congress, and he spearheaded the drive for the inclusion of the necessary funds for the establishment of the Commission. This morning he made a stirring appeal and upon conclusion of his presentation introduced the representatives of the American Legion, AMVETS, DAV, and VFW. While I was present at the meeting, Charles E. Foster, assistant national legislative director, made the presentation on behalf of the DAV. Comments made by members of the Senate Appropriations Subcommittee leave Mr. Foster and me to believe that the Senate Appropriations Committee will vote to include the necessary funds. When the bill has been passed by the Senate it will be necessary that the measure go to conference. We are hopeful the House conferees will agree to retain this item in the pending appropriation bill.

Because of the DAV's interest and because of the large number of prisoners of war from New Mexico, we in this office thought you would be interested in having this information.

With kindest personal regards, I am,
Very sincerely yours,
FRANCIS M. SULLIVAN.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. TRIMBLE. Mr. Speaker, the people of the district which I am honored to represent are taking a great interest in soil conservation. The local soil-conservation districts throughout our section are doing great work in the field.

Today I received a report from T. S. McNeil, chairman of the Benton County soil-conservation district, showing what they have done in the past year. Under leave to extend my remarks in the RECORD, I insert that report, as follows:

EIGHTH ANNUAL REPORT OF BENTON COUNTY SOIL CONSERVATION DISTRICT

(Board of supervisors: T. S. McNeil, chairman, Rogers, Ark.; Harry F. Stitt, secretary, Siloam Springs, Ark.; Mac Givens, Gentry, Ark.; E. S. Graham, Lowell, Ark.; Wayne Shields, Gentry, Ark.)

The supervisors of the district had a very outstanding year of attendance in quorums for performing work, there being only one meeting where there was not a quorum. There were two supervisors in this meeting. At all of the other 11 meetings a quorum was present to perform any and all business. There were 7 of the 12 meetings where all of the supervisors were present.

At the April meeting the supervisors took a very active part in placing out the materials for the Soil and Soul Sunday Conservation Day. Material was given out to the different ministers of practically all denominations in the district, and we believe that much good resulted from these sermons.

One member of the supervisors, namely, E. S. Graham, who is a member of the executive committee of the State association of supervisors, has attended three executive meetings during the year.

The annual meeting of supervisors of the State association at Little Rock on December 4 was attended by Mr. Graham and Mr. Stitt. This meeting was of much value and the talk by the president of the national association, Mr. Kent Leavitt, was the keynote of the meeting.

The annual Soil Conservation Day jointly held with the Washington County supervisors was not held this year on account of so little technical personnel. It may be resumed in 1949.

The outstanding meeting of the year was the annual soil conservation leaders training day held at the Royal Theater in Bentonville on February 17 when the supervisors had as their guests the conservation leaders of the district. A copy of the program is shown at the close of the report as exhibit A. We, the supervisors, think that the conservation leaders training day is an outstanding accomplishment.

The district and Soil Conservation Service technicians took part in the pasture development campaign sponsored by the chambers of commerce of the towns of the district, and it is hoped that this will be continued as we believe much good can be developed from these pasture contests.

We all realize the tremendous need of sufficient seed to secure added vegetative cover on our lands to minimize erosion hazards. A very comprehensive survey was made of seed harvested in 1948, and the following figures are very worth while and accurate. District cooperators harvested 711,744 pounds of small grain while noncooperators harvested 652,160 pounds. District cooperators harvested 243,925 pounds of legume seed, and noncooperators harvested 374,600 pounds. District cooperators harvested 51,920 pounds of grass seed, and noncooperators, 24,000 pounds. This is very clear evidence of the value of the seed work that has been done with cooperating farmers which we realize is necessary if we expect to have sufficient seed for our vegetative cover. Several thousand pounds more seed were produced that were lost by all individual farmers due to the unusually large amount of continuous rain during the normal dry, favorable harvesting season which we generally have. A large amount of shocked grain was never thrashed, because it sprouted in the shock. Older natives report they cannot remember a season like 1948 for harvesting of seed crops. We had more vegetative cover than possibly we have had for any period in the last 40 or 50 years. Previous grass seed harvests have run from three to six times the amount shown above for 1948. This is due to the unfavorable conditions. We do not expect to relinquish our efforts to continue encouraging our farmer cooperators to harvest seed in abundance to secure vegetative cover.

STORIES OF ACCOMPLISHMENT IN THE BENTON COUNTY SOIL CONSERVATION DISTRICT DURING 1948

Farming, like other sciences, is improving as new discoveries are uncovered. The sad fact is that too many farmers do not use the present known principles of good farming.

Mr. and Mrs. Harvey Graham of the Accident community near Lowell, Ark., are using good farming practices on their farm.

"I had rather take a farm that is rundown, but not too badly washed, and build up the fertility than to clear timberland for cultivation," says Mr. Graham. He is proving this statement by building up a 117-acre farm that has not been cultivated for 20 years. The entire farm was covered with sage grass and brush.

The run-down farm was bought in the fall of 1947. Bad gullies were his first problems. With the assistance of Soil Conservation Service technicians a pond was located across one of the worst gullies. This pond not only prevents a further washing but also is used as an outlet for two terraces.

After the terraces and ponds were built, Mr. Graham plowed the field on the contour turning under all the sage grass and other vegetation.

"Organic matter is very important," says Mr. Graham. A fire burning over a part of the farm destroys much organic matter and plant food. Soil erodes much faster where it is bare because of fire.

Beans and tomatoes were planted on some 56 acres in the spring of 1948. The beans were not harvested even though he had applied 4-12-4 fertilizer at the rate of 200

pounds per acre. A poor crop of tomatoes was harvested where 600 pounds of 4–12–4 fertilizer per acre had been applied. Unfavorable weather was partly responsible for the poor yield.

A cover crop of small grain and vetch was seeded on 46 acres following the beans and tomatoes. Phosphate and lime as needed were applied. A good crop of grain and vetch was grown; however, only a few acres were harvested because of weather conditions. A good stand of grain and vetch came back by natural reseeding. Oats were planted on 10 acres following the beans and tomatoes, and 60 bushels per acre were harvested. Using the above rotation, Mr. Graham expects to bring the entire farm back into continuous profitable production. The more sloping area will be seeded or sodded to grass for pasture.

Mr. Graham expects to harvest small grain and vetch again in 1949 from the volunteer and seeded fields. These seeds will be used to seed the balance of the farm.

Many recommended soil- and moisture-conservation practices are being carried out on this farm. These are contour cultivation, cover crops (used for green manure or seed), mulch farming, terracing, fertilizing, fire prevention, and other good farming practices. Mr. Graham is cooperating with the Benton County Soil Conservation District where a farm plan was worked out with the assistance of a soil conservation service farm planner.

No farmer can make a success without the assistance of an understanding farm wife. Mrs. Graham is a leader in her community in home-demonstration work. When any undertaking is considered, the husband and wife talk things over before a final decision is made. Only a few minutes talking to Mrs. Graham is enough to convince anyone that she knows farming and is a good farm wife. She likes the farm as is shown by her statement, "I just like to get out and see things grow and to see the land improved."

The Graham family is now planning to use irrigation if water can be made available. Other farm families in this community are doing a good job farming. The Accident community is one of the outstanding farm neighborhoods in Benton County. More cover crops and other good farming practices are used in this community than in most other communities.

The successful growing of alfalfa depends on several factors: type of soil, organic matter, water-holding capacity, fertility, and the necessary minerals. If these factors are not met, alfalfa growing will be a failure with money for seed and labor lost.

Mr. Orville Graham, in the Accident community, 4½ miles southeast of Lowell, is growing alfalfa successfully by using good conservation practices. Mr. Graham has a 6½-acre field of alfalfa that produced 21 tons of alfalfa the first year.

This is how he prepared the soil and seeded the alfalfa. In the spring of 1946 he seeded oats (2½ bushels) with sweetclover (30 pounds). He applied 200 pounds of 4–12–4 fertilizer per acre to the oats and sweetclover. Lime had been applied sometime before; therefore, more lime was not needed.

The oats and sweetclover (clover was as high as the oats) were cut for hay. "Oats and sweetclover is the best kind of hay," says Mr. Graham. The sweetclover was pastured the following fall. The next summer (1947) near the middle of June, the sweetclover was turned under for green manure. The green manure added much nitrogen and organic matter to the soil. The field was fallow cultivated until fall when alfalfa was inoculated and seeded about October 10 at the rate of 25 pounds per acre. This should have been done about September 10. After a good stand of alfalfa was up, 800 pounds of 33 percent phosphate was added per acre. "I think 4–12–4 fertilizer would have paid if added with the phosphate," stated Mr. Graham.

As stated above, Mr. Graham cut 21 tons of good alfalfa from the 6½-acre field. This is not the first time Mr. Graham has used this rotation. He thinks this is one of the best methods to prepare for alfalfa.

Mr. Graham is one of the successful farmers in the Lowell community who is carrying out good conservation farming. He is cooperating with the Benton County Soil Conservation District and calls on the soil conservation service technicians when help is needed.

The feed cost of dairy cows is being kept down by Mr. J. S. Gilbert who lives 3½ miles southwest of Bentonville.

Mr. Gilbert buys very little sack feed. He has high protein feeds in the form of soybeans, sericea lespedeza, and head feed. These high protein feeds are ground together one-third soybeans, one-third sericea hay, and one-third head feed. Mr. Gilbert states, "The cows will run over you getting to their feed."

The reasons these feeds are so good is because they are cut at the right time. The sericea lespedeza is cut when about 10 inches high. The sericea will make a good palatable feed at this time. Sericea will grow on almost any land. It is a perennial and has been grown for 15 years on the same kind of land and with the same fertilization as the alfalfa.

The soybeans are cut before the beans have matured. This gives a higher protein content in the vines.

The head feed is cut stack and all when the seed is a heavy dough. You can see why the cows are so anxious to get to such feed.

Feed for the nine cows is grown on 25 acres—6 acres soybeans, 3 acres sericea lespedeza (10 tons harvested this year), and 16 acres head feed. This is less than 3 acres per cow.

Mr. Gilbert is establishing a complete soil and moisture conservation program on his farm with the cooperation of the Benton County Soil Conservation District. Strip cropping, contour cultivation, drainage ditches, and crop rotations are some of the practices used on this farm.

WORK RECORD

District: Benton County (AK–SCD–25). State: Arkansas. Headquarters: Bentonville, Ark. Period from January 1 to December 31, 1948.

Counting of Electoral Votes

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 9 (legislative day of Monday, February 21), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a statement made before a subcommittee of the Senate Committee on the Judiciary by Basil Brewer, publisher of the New Bedford (Mass.) Standard Times, on Senate Joint Resolution 2, proposing to abolish the electoral college and to divide the electoral votes of each State in proportion to the popular votes in presidential elections.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I would like to say I am appearing before this committee from California, voluntarily and at my own expense, at the invitation of Senator FERGUSON, to oppose Senate Joint Resolution 2, the so-called Lodge-Gossett bill to amend the electoral system. I am appearing as a patriotic duty and in no sense as a partisan, nor am I concerned with personalities.

Lincoln said at Gettysburg the Civil War was testing whether this Nation, or any nation, conceived in liberty and dedicated to the proposition that all men are created equal, can long endure. This testing process of democracy will endure as long as democracy itself exists.

At no time in history has our democratic Government been more severely tested than it is today. This applies equally to every other democratic system in the world, wherever and to whatever extent it exists.

Beset with the great problems of restoring an economy from the greatest destruction in history, we face the equally great problem of trying to help onto their feet the other free peoples, including the victims of our own effectiveness in war.

Grappling sternly with these problems, we face our late ally, who, purloining the word "democracy" makes every effort to balk our attempts to assist recovery of friend and foe, as she puts shackles on and makes slaves of one-half the world.

Standing almost alone is America, strong, courageous, always willing to help, conceived in liberty and dedicated to the principle that all men are created equal, founded on a governmental formula conceded to be the soundest conceived by the mind of man and buttressed by 160 years of experience in living under and practicing successfully the policies of free government.

Not only is the great American experiment in self-government the most successful in the world's history, but it is safe to say it has brought more health, happiness, prosperity, and spiritual and social progress than ever came to one people in the world's history.

In such circumstances it would hardly seem to be necessary to state we should not only proceed slowly and carefully, but humbly, and even prayerfully, about making any change in the fundamental law, and, need I say it, particularly in making any change in the method of popular expression of the people's voice in choosing whom they wish to represent them in government.

Yet I am astonished to find the Congress in process of considering changing the election system of the country without thorough study of its implications.

This is the election machinery which on the whole has worked well for 150 years and has been the instrument of making American elections generally freer and more representative than those of any other nation, and under which, as I have said, we have enjoyed more freedom than any nation in history.

Is our governmental process becoming too complicated, is the demand on the time of our Senators and Representatives so great that they no longer can give due and necessary study to even important measures?

There is some ground for thinking so when we consider the history of Senate Joint Resolution 2, the Lodge-Gossett proposal to amend the election process for choosing the President and Vice President.

The Senate Judiciary Committee on May 3, 1948, made its report merely by lifting verbatim a report that had been made by the House Judiciary Committee on March 26 of that year. In its turn, the House Committee had drawn heavily on a report made in 1934, and that report was indebted for its basic material to a speech made by Representative Clarence F. Lea, Democrat of California, 21 years ago.

In all these instances the evidence presented was predominantly concerned with what were called defects of the existing electoral system. There was presented no original search into the implications of the proposed new system.

I am informed that to date the testimony before this committee has been confined to a presentation of the sponsors' side only, with the exception of comments made by Senators FERGUSON and LANGER and by Congressman PATMAN.

The country's founders did their work well. Being wise, they knew they were not infallible. They knew the Constitution must provide within itself the means for change necessary to meet new conditions and to reduce to a minimum temptation to violate its provisions.

But, in providing for change, the founders made amendment difficult. A majority vote with Presidential approval is provided for legislation, but a two-thirds vote was made necessary for changing the fundamental law. Twenty-one amendments have been passed in 150 years, 10 of which were the Bill of Rights. It has been necessary to repeal only one amendment, the prohibition amendment, passed under the misconceptions of war.

Implied, if not explicit, in the fundamental law is a warning not to tamper with the fundamental law unless it is necessary.

Equally implied is the warning to make no amendment unless the implications are well known; unless, as Senator RUSSELL said on March 2, 1949, quoting Herbert Spencer, noted philosopher and sociologist, "The change caused by his (the legislator's) measure will stop where he intends it to stop."

Or, putting it differently, there should be no room for speculation in amending the Constitution.

When in doubt, don't; that is the warning of the founders.

That is the meaning of the difficulties put in the way of amendment.

In these circumstances, should it not be the duty of Congress to make the most searching investigation into the future implications, as well as the immediate effects, of proposals as fundamental as this?

Senator LODGE's statements in behalf of his amendment are full of inferences and speculation, which will be dealt with later in this presentation.

Senator LODGE says that Senate Joint Resolution 2 will reduce or eliminate the possibility of a candidate getting an electoral vote majority despite receiving only a minority of the popular vote.

On the contrary, his amendment would make this possibility, which has occurred only three times in the Nation's history—in 1824, 1876, and 1888—a probability, if not a certainty.

It also will destroy the Republican Party, of which Senator LODGE is a member, and the two-party system, which is the foundation of the Government, replacing it by a multiparty system.

The Lodge amendment trades large blocks of electoral votes in States other than the solid South, commonly carried by Republicans, for almost negligible electoral votes gained in the Southern States.

Each electoral vote won in the South represents an average of 40,000 popular votes against an average of 110,000 votes per electoral vote in the remaining 37 States of the North and Central States.

To all practical purposes, this will make a Republican Presidential victory impossible as long as the solid South remains solid in its voting habits.

Striking evidence as to the operation of the Lodge plan is shown by applying the formula of the pending resolution to the four elections of Franklin D. Roosevelt in 1932, 1936, 1940, and 1944.

In 1932, under the Lodge plan, Hoover would have been 84 electoral votes behind Roosevelt in the 11 States of the South, each electoral vote that year representing an average of 30,260 popular votes.

To overcome this Roosevelt electoral vote lead in the South and win the election, Hoover would have had to get a lead of 85 electoral votes in the remaining 37 States, where each electoral vote that year represented 85,580 popular votes, on the average.

In other words, to be elected under the Lodge plan, Hoover would have had to pile up a popular vote lead of 7,274,300 votes in the 37 States of the North for a North-South plurality of 4,925,652 votes.

Two electoral votes less (100,000 to 200,000 popular votes) would have meant defeat.

Under such conditions, Hoover, with a popular vote plurality of almost 5,000,000, would have been defeated by Roosevelt with a majority of the electoral vote. Never in the history of the country were such wide discrepancies between popular vote and electoral vote possible.

The elections of 1936, 1940, and 1944 show the same possiblities.

In 1936, under the Lodge plan, Roosevelt would have had a lead in the solid South of 84 electoral votes over Alf Landon, a year when an electoral vote in the South represented 33,570 popular votes.

To overcome this lead, plus one, and win the election, Landon would have had to gain a popular vote lead of 8,352,100 in the remaining 37 States, for a North-South popular vote lead of 5,783,442.

Two electoral votes less (100,000 to 200,000 popular votes) would have given Roosevelt the election by an electoral vote lead of one, and with Landon having a popular vote lead of more than 5,500,000, under the Lodge plan.

Similarly in 1940, under the Lodge amendment, it would have been possible for Roosevelt to have had an electoral vote lead and been elected, with Willkie having a popular vote lead of more than 5,500,000.

In 1944, under the Lodge plan, Dewey could have had a popular vote lead of approximately 5,250,000 and been defeated by Roosevelt having a lead of one in the Electoral College.

Thus, by his plan, Senator LODGE would tie a noose around his party, which inevitably would bring defeat, discouragement, and disappearance.

Senator LODGE speculates that his plan would lead to more party activity of the Republicans in the South, and in this hope he is somewhat encouraged by his colleague, Representative GOSSETT, of Texas, who says he would welcome more Republican votes in the South, meaning, I am sure, so long as there were not too many of them.

Realism says plainly, however, it would take more than campaigning to increase materially the Republican vote in the South, where restrictions on voting have created, in part at least, so wide a discrepancy between population and voting figures as to make an electoral vote in the 37 States represent more than 100,000 votes on the average, against less than 40,000 in the solid South.

This is no proper place to discuss the voting problems of the South, except to point out the 11 States of the South are electing 127

Presidential electors with approximately one-third the popular vote required for the same number elsewhere.

As one of 100 percent southern blood, I think the South would be well-advised to forget the Lodge amendment and let well enough alone.

The Associated Press quoted Senator LODGE on February 23 as arguing his amendment would make the popular vote count, by abolishing the electoral college's traditional unit voting rule.

How about the 5,000,000 popular-vote majority by which Senator LODGE's own party could conceivably lead, only to be defeated by another party's lead in the electoral vote spearheaded by an irreconcilable solid South, as previously discussed?

Would not these 5,000,000 votes be lost?

As a matter of fact, the expression, "lost votes," is a complete misnomer. In the functioning of democracy, no vote properly marked and cast is ever lost, whether or not the party voted for wins. To cast a vote is to exercise the great privilege of suffrage in democracy and, win or lose, like the exercise of the arm, it strengthens the true citizen.

Moreover, in every election where one man is concerned, such as the election of a President, no votes cast, except for the winner, count, and all others are in that sense lost. The Lodge-Gossett plan merely transfers the wasted votes from the State to the national level.

Apparently completely overlooked are the unexplored psychologies involved in the Lodge plan in small States like Senator MCCARRAN'S State, Nevada, which has 60,000 voters and 3 electoral votes, and is traditionally Democratic by a narrow margin.

In a normal Presidential year, Nevada's electoral vote would be divided under the Lodge plan 1⅜ Republican and 1⅝ Democratic, for a Democratic electoral vote lead of one-quarter.

In a Roosevelt or McCarran landslide, the Democratic lead might be one-half an electoral vote. Would the distinguished Senator from Nevada argue this would bring out a full Nevada vote? Would the Nevada voter figure this would make his vote count?

As a part-time resident of Nevada, I know something of Nevadans, who feel three electoral votes are very few for a State so large. It is possible both Democrats and Republicans might be discouraged in voting if success either way meant a lead of only one-half, one-quarter, one-eighth, or one-sixteenth of an electoral vote.

And, finally, Senator LODGE, cosponsor of this bill, argues his amendment will eliminate the possibility of a President being elected by the House of Representatives, when no candidate gets a clear-cut majority of electoral votes.

I am a little surprised at the Senator urging this point, for the way the Senator's plan eliminates the possibility of action by the House of Representatives is to give the election to whoever has the electoral vote plurality, bypassing the House, no matter how small is the electoral vote or plurality.

This is something for future generations to worry about, if not ourselves—minority elections, minority parties, splinter parties, coalition government—the face of western democracy looking east.

Under the Lodge plan, every party to an election is allowed that party's share of the electoral vote, Democratic, Republican, Prohibition, Socialist, Communist—first at the State, then at the national level. No votes are lost in the Lodge sense at the State level; no parties are lost sight of, at State or national level.

Unquestionably the Lodge plan would first eliminate the Republican Party. Then would go on in real earnest the attrition of the Democratic Party, as cleavage after cleavage followed the inability of that party to satisfy the demands of widely-conflicting ideologies and interests.

Without the benefit of the Lodge amendment, according to Cortes A. M. Ewing in Congressional Elections, "Three-way fights determined the control of the House in 10 of 25 elections since 1896."

There have been 73 parties electing one or more members to Congress, or which have nominated a Presidential candidate, in a total of 105 splinter parties, says Representative Patman, quoting the Legislative Reference Service.

The spectacle of democracy in France struggling with a multiparty system is well known.

There are nine principal parties in France, of which all have one or more affiliates. In the December elections, the most any one of these parties won was 79 seats and the least was 12. Until 1900 no French political party had a platform.

Said A. Lawrence Lowell, former president of Harvard and political expert: "Such a government, moreover, is essentially weak, for it cannot afford to refuse the demands of any group whose defection may be fatal to its existence.

"Division of a Chamber into two parties and two parties only is necessary in order that the parliamentary form of government may prosper.

"Among Anglo-Saxon peoples, who have had a far longer experience in self-government than most other races, there are usually two great parties which dispute for mastery of the state."

Gentlemen, the issue raised here is greater than politics or party. It is, of course, beyond personalities.

You cannot destroy the Republican Party without destroying the two-party system. You cannot destroy the two-party system without destroying ultimately the Democratic Party or reducing it to a minority position, surrounded by other minority parties maneuvering and trading with one another in the well-nigh hopeless task of trying to establish workable coalitions.

It is true the Lodge amendment affects immediately only the election of President and Vice President, that multiparties and minority elections are for the moment held at the President and Vice President line.

But no one needs to be told the importance of precedent in democratic government. The Lodge-Gossett bill starts proportional voting at a high level, the highest office in the country, held by some authorities to be the highest office in the world.

When, under the Lodge plan, a minority party has grown to the stature of a substantial electoral vote, will such party be satisfied to be without legislative representation or with only such representation as it may acquire here and there where local strength may give it a Member of the House of Representatives?

Or will some intelligent and ambitious politician see in the strong minority party, represented only by electoral votes, a chance to win distinction and position by championing its cause, and make a fight to secure legislative representation by the same formula which enabled it to obtain electoral vote representation, by proportional voting?

Under the Lodge plan the voting for President becomes federalized. There no longer is voting by States, as has existed for 160 years. Will the State still be allowed to determine the qualifications of its electors as specified in the Constitution?

Or will the courts conclude that this amendment, which guarantees each party its share of the electoral votes at the State level, by the same token must guarantee this party the right to appear on the ballot of the State, regardless of the action of the State?

Again looking toward our friends of the South, having determined that the right to a share of the electoral vote automatically carries with it the right of each party to be placed on the ballot, regardless of the decision of the State, how long a step would it be for the courts under this amendment to authorize complete Federal control of elections within as well as without the State?

Senator LODGE says his bill will enable the Republican Party to invade the Southern States and increase the Republican vote. It is by this plan he hopes to offset the handicap of his party, to some extent, in the solid South, where on the average an electoral vote represents some 40,000 or less popular votes, as against an average of 110,000 in the remaining 37 States.

Obviously such Republican votes cannot come from the tight Democratic majority in these States, which, facing the Truman civil-rights program, still refused to vote Republican. Such votes then could come only from the nonvoting population of the South.

Already the Constitution, in article XIV, section 2, provides "when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the legislature thereof, is denied to any male inhabitants of such State, being 21 years of age and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation (Representatives in Congress and electors) therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State."

Do our friends of the South wish to face the additional pressure for enforcement of this provision which the Lodge campaign for votes in the South would insure, as well as the very real risk the electoral college reform might lead to Federal control of elections?

Gentlemen, we are all, as Americans, in the same boat.

There is here no room for Democrat or Republican, for North or for South.

Our formula of government of 160 years is at stake. You are considering, in this amendment, breaking down barriers without which no one can determine where we can stop.

And all this is to correct evils in the electoral system not much above the level of inconvenience and which readily might be cured with minor, and without fundamental, change.

Again I repeat the warning of the founders. When in doubt, with reference to the wisdom of constitutional amendment—don't.

That is the reason amendment was made so difficult.

Finally, in your deliberations, listen to the wisdom of Benjamin Franklin:

"What kind of a government have you given us?" asked the Constitutional Convention.

"A Republic, if you can keep it," answered Franklin.

Arkansas Plan Offers Basis for Honorable Settlement of Civil-Rights Controversy

---

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. TRIMBLE. Mr. Speaker, most Members of the House are familiar with a compromise proposed by my colleague from Arkansas [Mr. HAYS] for the settle-

ment of the controversial and divisive civil-rights issue. His plan has been enthusiastically endorsed by newspapers in all sections of the country as the basis of an honorable agreement on these basic problems.

Marquis Childs, well-known columnist, stated in a recent column what we of the South have long contended, namely, that southerners have shown more of a willingness to compromise than the pro-civil-rights groups. He said:

> Many Senators believe that a proper approach by the President to moderate and progressive southerners would have resulted in acceptance of 60 to 70 percent of the civil-rights program. A definite social gain would have been achieved with little bitterness or rancor.

The plan proposed by Mr. HAYS covers all areas of civil-rights legislation included in the President's message. It is a reasonable, sane, and workable program. While it recognizes that the Federal Government has a definite role to play in protecting minority groups, the Arkansas plan insists that the problem cannot be solved exclusively by Federal legislative fiat without injury to the rights of the several States.

In light of the urgent necessity of bringing about a settlement of the civil-rights controversy, I recommend to the attention of Members of the House a careful study of the Arkansas plan for civil-rights legislation offered by Mr. HAYS in an address on February 2.

Oleo Threatens Great Industry

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. HULL. Mr. Speaker, the people of Wisconsin, the greatest dairy State in the Union, are alive to the disaster which threatens its biggest industry in the enactment of any of the 40 or more bills which have been presented to the House of Representatives with the principal purpose of repealing the Federal tax of one-fourth cent per pound on uncolored oleo and 10 cents per pound on colored oleo.

They will realize that there are powerful domestic monopolies as well as the international cartels, of which they seem to be part or portion, which have been working for years and very evidently spending millions of dollars to foist their synthetic products upon consumers while destroying the markets for butter.

The taxes on oleo were levied as protective taxes against the frauds which were perpetrated before the Federal enactment occurred. Those taxes stand as the only substantial barrier against the schemes to defraud consumers and the dairy farmers. Their repeal will open wide the doors of interstate commerce and make moonshine oleo a still more profitable industry. To accomplish such a result, the oleo monopolies have spent their millions, and they now want to cash in on their lobbying.

The methods brought into play to prejudice public opinion against all farmers by allegations of profiteering are only part of the program.

The Wisconsin Department of Agriculture has sought in vain to prevent the misleading advertising rograms of oleo interests which have served and still serve to confuse consumers into believing that oleo is as good as butter and that it has the background of the dairy cow and of the dairy barn.

Mr. Milton H. Button, director of the Wisconsin Department of Agriculture, sends to me the following information as to the endeavors of his department to procure the assistance of the United States Food and Drug Administration and the Trade Commission in stopping such false and misleading advertising. It emphasizes how little can be expected of such Federal agencies to help protect our dairy farms and farmers once the taxes on oleo are repealed.

The letter from Director Button is as follows:

WISCONSIN STATE DEPARTMENT OF
AGRICULTURE, STATE CAPITOL,
Madison, Wis., February 28, 1949.

Hon. MERLIN HULL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HULL: Efforts now being made to repeal all restrictions on the manufacture and sale of oleomargarine present extremely serious implications to the consumer, to the dairy industry, and to all citizens of the Nation.

Those who are interested in the long-range aspect of the matter, question the logic of a Congress that appropriates many millions of dollars for a program designed to preserve the priceless heritage of soil fertility and simultaneously considers the adoption of legislation that will change our Nation's agriculture from a grassland animal husbandry structure to a row crop soil-depleting type of agriculture that will inevitably destroy our irreplaceable top soil. The problem is basic and serious and it must be given major consideration by all statesmen of Congress.

The Wisconsin Department of Agriculture is charged by statute with the duty of protecting consumers against fraudulent advertising and imitations. In this capacity it is our contention that the advertising of yellow oleomargarine with pictures of cattle, dairy barns, and pasture scenes accompanied by phrases and slogans designed to make the consumer believe oleomargarine is a dairy product is a direct, intentional, and flagrant violation of the fraudulent advertising statute.

The United States Food and Drug Administration and the Federal Trade Commission have refused to give attention to this problem or are powerless to cope with it.

The oleomargarine industry has sought and received permission to imitate, synthetically or otherwise, the desirable qualities of butter. They are now imitating the distinctive butter flavor and texture, they are adding synthetic vitamins, they are packaging their product in cartons similar to those used by the butter industry, and have appropriated for themselves the age-old butter trade-mark, its yellow color. These facts indicate that oleomargarine was developed and is being marketed as an imitation product. Historically, this Nation has protected consumers against such deceptive imitation.

For many years new legislation has been designed to provide additional protection against fraud and imitation to the consumer. This policy has been extended to include the interests of the producer and manufacturer.

Now great forces are at work to destroy this protection that we have taken for granted. The oleomargarine industry is asking that the controls against imitation and fraud that now exist in other industries be removed from its particular product.

In the main, other nations of the world maintain the consumer controls that the oleomargarine industry is attempting to avoid in the United States. Some nations maintain a tax or fee as we do. Some enforce the statutes relating to fair-trade practices in labeling and advertising. Some require the addition of ingredients that will make identification immediately possible for the consumer. Some have controlled the matter through the establishment of a State monopoly which has removed the opportunity for unreasonable profits. Some do not permit the manufacture of yellow oleomargarine. Still others protect the consumer by rigid and arbitrary price-fixing schedules.

To summarize, the methods vary but other nations do afford consumer protection. We are looking to you and your associates in the Eighty-first Congress for legislation that is in keeping with the principles and traditions of consumer protection.

Sincerely yours,

STATE DEPARTMENT OF AGRICULTURE,
MILTON H. BUTTON, *Director.*

Golf Courses in the District of Columbia

REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. RIVERS. Mr. Speaker, I have today introduced a resolution authorizing and directing the Committee on Public Lands, acting as a whole or by subcommittee, to make a full and complete investigation of all the facts and circumstances surrounding the making or renewing of leases and contracts relating to the control, operation, and maintenance of golf courses and facilities incident thereto in the District of Columbia.

My resolution also gives to this committee subpena power to compel the attendance and testimony of needed witnesses to insure the production of books, records, correspondence, memoranda, papers, documents, and any and all figures needed in such investigation.

It will be noted that the committee is required to report back to the House, or to the Clerk of the House if the House is not in session, as soon as practicable during the present Congress, the result of the investigation with its recommendation.

Numerous and various columnists and radio commentators have made statements and observations on the laxity with which this three-quarter million dollar business is operated with its attendant value in excess of $50,000,000, all of which is maintained and sustained by the some 60,000 golfers who played 700,000 rounds of golf last year on these courses. In addition to all this, miniature golf courses and at least one driving range are likewise included in the concession.

It is a matter of anyone's conjecture how much money passes through the hands of the concessionaire. Some fabulous figures have been suggested.

I have been reliably informed that the Department of the Interior is very lax in the auditing of the books of this gigantic enterprise. I have been further informed that the supervision of the Government's income from these courses has been practically nil. I am also informed that generally the figures submitted by the concessionaire is taken without much ado.

If the many stories which have come to my attention even contain a scintilla of truth, it appears that a sweeping investigation should be made immediately so that those who are compelled to utilize these courses in the District of Columbia are given value received. It looks like the right to operate the golf courses in the District of Columbia is more valuable than an interstate license to steal.

I am enclosing, Mr. Speaker, numerous articles I have clipped from the various newspapers and I ask unanimous consent that they be included with my remarks.

EXHIBIT 1

[From the Washington Daily News of February 9, 1949]

HOW COULD PUBLINX LOSE MONEY?—SALARIES ALONE WERE $210,624 IN 1947

(By Dave Reque)

Washington's public golf course concessionaire paid out $210,624.10 in salaries to course managers and employees during 1947, Interior Department revealed today in partial explanation of high costs that dunked Severine Leoffler's operating company into the red last year.

Interior yesterday announced that Concessionaire Leoffler lost $6,000 in 1948 due to rainy week ends and increased cost of materials and labor.

The Department stated today that it doesn't know how much Leoffler's pay roll climbed last year, as it is still waiting for the complete annual report. But it has been told by Leoffler that the company lost that amount, and that receipts dropped off by an estimated $32,000.

PROFIT, NEVERTHELESS

Despite the hefty $210,624.10 pay roll, 1947 yielded a tidy net of $56,325.45.

Leoffler's 1947 pay roll was for the operation of four courses. Last year the new Fort Dupont course was constructed and put into operation, supposedly causing more hiring.

The Leoffler Co.'s 5-year contract expired last December 31. A new contract is expected to be awarded Leoffler soon, though a rival, the Cleveland Concession Co., has filed a bid. Interior says Leoffler advanced about $70,000 of the $190,000 cost of Fort Dupont with the understanding that he would be reimbursed from future receipts.

Thus Leoffler is anxious to continue operating the courses, even though last year was a loser. It is reported that a hike in green fees is in the works, to insure the repayment of the debt.

TURN IT BACK

Leoffler's old contract provided that he split profits 50–50 with Uncle Sam after Leoffler collected a $3,500 priority profit. The new contract is expected to contain the same arrangement, with Interior handing back its half until the debt is canceled.

The old contract allowed the Government to waive its 50 percent and plow it into an improvement fund. It did so during the 5 years. This money, along with a 5 percent of gross receipts provided by the contract for an improvement and expansion fund, was spent last year to pay the balance of the Fort Dupont construction bill.

The condition of the public links was loudly criticized by the golfers last year, a possible explanation for the falling off of receipts. The gross income dropped from $546,065.07 in 1947 to an estimated $514,000 last year. However, costs jumped over the half-million mark; from $490,000 to $520,000.

Of this half-million-plus, well over $200,000 is for salaries.

The 1947 pay roll of $210,624.10 includes Leoffler's own salary as head of the company, as stipulated by the contract, $8,500. That left $202,000, enough to pay 40 employees $5,000 each.

Next to salaries, highest expense in 1947 was cost of the goods sold in the clubhouses. This came to $188,887.90. The stuff was sold for $280,051.19.

For rehabilitation a cost of $27,332 was listed. Depreciation accounted for $10,184.19.

EXHIBIT 2

[From the Washington Post of February 9, 1949]

SEVENTY-THOUSAND-DOLLAR PROFIT MADE SINCE 1944 BY DISTRICT OF COLUMBIA LINKS CONCESSIONAIRE

The Interior Department yesterday handed over figures to the District Recreation Department disclosing the concessionaire who operates the District's public golf courses has made a total profit of approximately $70,000 from 1944 through 1948.

The figure was included in a report on golf courses, operated by the S. G. Leoffler Co. for the Interior Department. This report was submitted to the District Recreation Board at its monthly meeting by Irving C. Root, superintendent of National Capital Parks, and the Interior Department's representative on the Recreation Board.

Data on operations of the golf courses, and of other District recreation facilities run for the Federal Government by contractors, has been demanded repeatedly by the Recreation Department which wants to control these facilities.

Following receipt of the report, the Recreation Board adopted a resolution asking for a conference between Recreation and Interior Department officials on the operation of the golf courses.

In its resolution, the board asked the Interior Department not to renew the 5-year golf contract, which expired December 31, 1948, until after the conference is held. It asked, in addition, that the Interior Department, consider extension of the contract for only one year "in the event that it becomes necessary to sign a contract."

SIX-THOUSAND-DOLLAR DEFICIT IN 1948

The Interior Department's report pointed out that although Loeffler's profits over the 5-year period averaged $14,000 yearly, the company suffered a deficit of approximately $6,000 for the year 1948. Rainy week ends, and increased cost of materials and labor were cited as the reasons for the deficit.

Gross receipts for the 5-year period totaled $1,877,723, the report stated, and expenses, exclusive of a new development at Fort Dupont Park, totaled $1,747,960.

Under terms of the recently expired contract with Leoffler, the Government and Leoffler split the net profits evenly. Losses are not shared by the Government, however, Park Superintendent Root explained.

The Government has been plowing back its 50 percent share of the profit for improvement and extension of facilities, Root said.

ABOUT THREE PERCENT PLOWED BACK

In addition, a yearly fund, not to exceed 5 percent of the gross receipts is provided in the contract for rehabilitation of existing facilities. Root told a reporter later that the Government had required only about 3 percent of the gross receipts to be plowed back in 1948.

A total of $183,000 has been spent in improving golfing facilities in the National Capital Parks over the past 5 years, Root said. This figure includes the Government's contribution through plowed back profits, and about $118,000 advanced by Leoffler for construction of two miniature golf courses and a clubhouse at the Fort Dupont course, according to Root.

Root said about half of the money had been repaid to Leoffler over the past year, but that he was still owed about $70,000 which would be paid out of profits we hope to make.

NOT RULED OUT

Asked if the Cleveland Concession Co., which has asked to operate the courses is ruled out by this indebtedness, Root said "no—they would just have to repay the Loeffler people out of their receipts."

James E. Schwab, vice chairman of the recreation board asked during the meeting why figures on the value of equipment on the golf courses were not included in the Interior Department report.

He was told by Root that only approximate figures were available on the equipment, but that all the Interior Department's figures on the golf courses were available anytime you want to come down and look them over.

In other actions yesterday, the board adopted a resolution recommending that a drinking fountain at the Bundy School Playground, funds for which are not now available, be installed during the next fiscal year.

It indorsed a bill introduced in the House of Representatives which exempts facilities operated by the Federal Government from the admissions tax on recreation facilities.

The board also approved plans for the Fort Chaplin Playground, and for revisions to the Park View Shelter Building.

EXHIBIT 3

[From the New York World-Telegram of March 8, 1949]

IN THE ROUGH

(By Robert C. Ruark)

WASHINGTON, March 8.—As any golfing widow can tell you, the man who spends his Saturdays pummeling a little ball through cow pastures is apt to be irritable, according to the state of the greens, the violence of his slice, or the accuracy of his chip shots. In Washington about 60,000 week-end clubswingers maintain a state of steady fury.

The United States Government in the form of the Department of the Interior owns Washington's five municipal courses, and leases them for operation to a private concessionaire. Potomac Park, a lowland links, sometimes gets so wet they have to call the city fire department to pump it out. The sight of a duck swimming in the fairway is not unusual.

In summer, Rock Creek Park's fairways grow hip-deep in hay. The bald spots and driving tees are iron-hard. I have actually seen players carrying hammers to sink the tees. Washington golfers have been cursing the courses, the Government, and the concessionaire, a portly man named Severine G. Leoffler, for as long as I can recall. Mr. Leoffler, a man with several golf-club flops behind him, has leased the links from Uncle Sam since 1921.

Interior Department Secretary, Cap Krug, a man of assorted troubles, now adds golf to his hungry Navajos and tideland-oil problems. He is currently stuck with the task of resolving a hearty squabble over Mr. Leoffler's right to continue as concessionaire. It is an odd story of government entangled in outside industry.

Mr. Leoffler's contract ran out last December 31. He has offered no new bid, but still remains in control of the courses by virtue

of a tacit understanding with Irving Root, an Interior executive. This understanding came about peculiarly—Mr. Leoffler lent the Government money. Interior wanted a clubhouse for the Fort DuPont course. Congress wouldn't O. K. the expenditure. So Mr. Leoffler lent $57,000 to Uncle Sam out of accrued profits, with his personal cinch for contract extension as security.

Uncle Sam's golf courses do an annual half-million-dollar business, out of which Mr. Leoffler has taken big profits in past. On that gross figure, however, he says he has lost $6,000 last year—a rather neat trick. Mr. Leoffler has no professionals, provides no caddies, and has always been cavalier about upkeep. He also employs many relatives. He works under no bond, and there is no official audit on income available since 1945. Even his 1948 statement, due at the end of the year, was only turned in last week.

As Mr. Leoffler's contract expired, a big Cleveland firm of concessionaires shot in a bid for the courses, a bid which bettered Mr. Leoffler's proposition on all counts. Even in 1948's losing year, the Government would have made $45,000 after improvements under the Clevelanders' terms. Oddly, again, the bid was shelved, although nobody else, not even Mr. Leoffler, had offered a counter-bid.

A thriving tempest has cooked up around the conflict. The Cleveland firm is represented by noisy little Ray Alvis, a former fight promoter, who is expert in ballyhoo. Ray has swept some Congressmen into the deal, and spends his time baying ominously at the Interior Department and shouting for Mr. Leoffler's scalp. He is joined, to a milder degree, by the local press, and to a heavy extent by the golfers, who scream for Mr. Leoffler's dismissal.

The Department has now officially clammed up, pending Cap Krug's decision. The District dubs were hopeful, but cynical, about the outcome. Mr. Leoffler's greens may be scabby and his fairways unkempt, they said, but he had been around a long time, and had a full quota of friends at court. In final analysis, they feared, Government-operated golf was like so many other Government ventures—the race was not always to the swift.

EXHIBIT 4

[From the Washington Post of February 25, 1949]

THE DISTRICT LINE—GOLFERS COULD ALSO USE SOME RENT CONTROL

(By Bill Gold)

Since my column on the administration of the Interior Department's public golf courses, several District liners have complained that I overlooked an important point.

Public links are used by two general categories of players: the beginner, and the golfer who cannot afford the expense of a private course.

The beginner (I'm reminded) usually rents clubs for each round of play, because the golf bug has not yet bitten him hard enough to cause him to buy an outfit of his own.

The private concessionaire who has the inside track at Interior charges 20 cents per round for each club (and bag) he rents out.

Even a beginner needs a midiron, mashie, niblick, putter, brassie and bag. That's six items; the rental for 18 holes is $1.20.

Irate players point out that many brands of clubs retail for as low as $4 each, and that anybody who buys in large quantities can undoubtedly get a substantial discount.

So, if the clubs cost the concessionaire $3 each and he gets 20 cents per round for renting them out, they're paid for by the time the sixteenth customer shows up.

However, the rusty condition of most of these sticks attests to the fact that they've been in service for years, and are still earning their owner a juicy profit.

But the present concessionaire claims that he is losing money, and will have to raise his prices this season.

Federal Deposit Insurance Corporation

REMARKS

OF

HON. PAUL BROWN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. BROWN of Georgia. Mr. Speaker, on January 1, 1949, the FDIC completed its fifteenth year of successful operation. During this relatively short period a tremendous change has occurred in depositor psychology. Prior to the advent of deposit insurance the slightest rumor of trouble in a bank was sufficient to cause near panic among its depositors which resulted in runs that almost universally hastened the closing of the bank.

It is most remarkable that depositor panic is no longer a factor in bank difficulties. The 90,000,000 depositors in insured banks rest secure in the assurance that Federal deposit insurance protects their funds.

Under leave to extend my remarks, I include an editorial from the Journal of Commerce, of New York, of March 8, 1949, as follows:

KEEP THE FDIC INDEPENDENT

The proposal to place the Federal Deposit Insurance Corporation under the jurisdiction of the Board of Governors of the Federal Reserve System is unsound. Advanced in the name of governmental reorganization and more effective credit control, this suggestion should be rejected outright if brought before Congress.

The objectives of the Federal Reserve System and of the FDIC are radically different in character. The Federal Reserve is concerned primarily with over-all credit control. The FDIC's main job is to minimize bank failures, and to pay off depositors of failed banks up to the $5,000 maximum that is insured where payments are suspended.

Obviously, there are going to be times when the two agencies will be pursuing radically different policies. The Federal Reserve may be favoring aggressive credit expansion to check a depression and price deflation. The FDIC at such times would doubtless be putting pressure upon banks to hold down the volume of risk assets acquired, because of a growing danger of failures.

Were the FDIC under the jurisdiction of the Reserve Board, it is obvious that it could not pursue effectively a program of minimizing bank failures that would conflict directly with a credit expansion policy of the top agency.

The Federal Deposit Insurance Corporation is in a very strong position today. It possesses upward of a billion dollars of liquid resources with which to pay off depositors of closed banks, or to prevent failures by assisting the merger of weak banks with neighboring stronger institutions.

But the experience of the FDIC in the first 15 years of its existence has been exceptionally favorable. There have been very few bank failures. Moreover, assets of insured banks have come to consist mainly of Government securities, which minimize the risk that a deposit insurance agency assumes.

In the past 3 years, however, banks have been acquiring increasing amounts of loans that are classified as risk assets. Should this trend persist, we would again have to face the possibility of banking difficulties. At the same time, the decline in the ratio of commercial bank capital funds to deposits that has occurred since 1939 could become a factor of weakness.

Strong as the position of the Nation's banks remains today by comparison with past experience, a continuation of recent trends could lead to less favorable experience with deposit insurance in the years ahead. It is vitally important, therefore, that the FDIC retain its full independence, so that it may continue to concentrate its efforts on maintaining a strong banking system, regardless of conflicting credit-control objectives the Federal Reserve System may be pursuing.

The argument advanced for placing the FDIC within the Federal Reserve System is that higher legal reserve requirements could then be imposed by the Board of Governors upon insured banks that are not members of the Federal Reserve System.

If such an extension of the credit-control powers of the Federal Reserve System is desirable, it should be sought by separate legislation. Congress is understood to have the authority to pass legislation affecting reserve requirements of State banks, under the money power granted it by the Constitution. The desire to broaden application of higher reserve requirements ordered by the Federal Reserve Board is a very poor excuse indeed for ending the independence of the FDIC.

It is widely believed that Congress will refuse a simple request for powers to change reserve requirements of nonmember banks by Federal Reserve action. It is not straightforward to seek the same objective by confusing the issue with reorganization of the Federal Government, particularly since the future integrity of deposit insurance could be undermined in consequence.

The FDIC, so long as it continues to concentrate upon minimizing bank failures, has ample resources for its task, even with a reduction or elimination of the assessment on insured deposits. However, should banks continue to expand their risk assets aggressively, the fact that insured deposits are more than 60 times as large as the funds of the FDIC could before long put a different complexion upon the whole issue.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Court of Massachusetts:

Resolutions memorializing the Congress of the United States to use all possible means to secure the release of Cardinal Mindszenty, of the Roman Catholic faith and Bishop Ordass, of the Lutheran faith

Whereas the whole civilized world and all individuals who believe in God regardless of race, creed, or denomination, and that freedom of religion is necessary in this troubled world have been profoundly shocked by the arrest, imprisonment, and sentence of His Eminence Josef Cardinal Mindszenty, of the Roman Catholic faith, and the arrest and imprisonment of Bishop Lajos Ordass, of the Lutheran faith, by the Communist Government of Hungary; and

Whereas it appears that there is no justification for such arrest, imprisonment, and

sentence but that it is actuated solely by the desire to destroy religious freedom and freedom of worship; and

Whereas Hungary, recently styled a people's republic, a satellite of Soviet Russia, has shown its utter disregard for freedom of religion in making the arrest and causing the imprisonment of these two men of God: Therefore be it

Resolved, That the General Court of Massachusetts desires to register an emphatic protest to the Government of Hungary in causing the arrest and imprisonment of these two churchmen; and be it further

Resolved, That the General Court of Massachusetts urges the President of the United States and the Secretary of State and the Members of Congress from this Commonwealth to take appropriate action to convey to the Hungarian Government the demand of the people of this country that Cardinal Mindszenty and Bishop Ordass be immediately released; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the State secretary to the President of the United States, to the Secretary of State of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In senate, adopted February 9, 1949.

IRVING N. HAYDEN, *Clerk.*

In house of representatives, adopted in concurrence, February 9, 1949.

LAWRENCE R. GROVE, *Clerk.*

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Veterans Pensions Versus Social Security

EXTENSION OF REMARKS
OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. CARROLL. Mr. Speaker, yesterday I received a report from the Director of the Bureau of the Budget which deals with the subject of veterans' pension legislation now pending before the Congress as compared with other pending bills relating to expanding the coverage and increasing the benefits of the Social Security Act.

I trust that every Member will read carefully the report of the Director of the Budget.

EXECUTIVE OFFICE OF
THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C.

Hon. JOHN A. CARROLL,
House of Representatives,
Washington, D. C.

MY DEAR MR. CARROLL: This will acknowledge your letter of February 26 requesting a comparative analysis of the benefits and the cost to the Government of H. R. 2681, the veterans' pension bill, and H. R. 2893, the administration's old-age, survivors, and disability insurance bill.

There is attached an analysis prepared by staff of this office, which goes as far as time has permitted toward fully answering your inquiry. You will understand, of course, that the figures in this analysis are preliminary. They differ from those submitted to the House Veterans' Affairs Committee by the Administrator of Veterans' Affairs in that they include estimates of the cost of H. R. 2681 in providing pensions for survivors of veterans. These estimates are approximations, but they are the best that can be developed in the time available.

The President's perspective on this problem, as presented in his recent budget message, seems to me to furnish the key to the appropriate course for this Government to follow. Under all of the circumstances indicated in the attached analysis, enactment of H. R. 2681 could not be regarded as in accord with the President's program. It is hoped that the Congress will see fit to move forward with an adequate and appropriate expansion of our social insurances to meet the needs of all of our citizens, including both veterans and nonveterans.

Sincerely yours,

FRANK PACE, JR., *Director.*

COMPARATIVE ANALYSIS OF H. R. 2681 (THE VETERANS' PENSION BILL) AND H. R. 2893 (THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE BILL)

As reported by the House Committee on Veterans' Affairs, H. R. 2681 would provide pensions at age 65 to all veterans of both wars in the amount of $90 per month; totally disabled veterans requiring continuous attendance would receive an additional $30 per month. Widows and orphans of World War I veterans would continue to receive $42 per month, plus additional allowances for children, if income from other sources were less than $2,000 for a widow or orphan alone, or $3,000 for a widow with children. (Under present law these income limitations are $1,000 and $2,500.) Widows and orphans of World War II veterans would for the first time receive these benefits without the present requirement that the deceased veteran also had service-connected disability.

To appraise H. R. 2681, it should be viewed in the context of our general welfare programs and our existing aids to veterans. An appropriate focus was given in the President's recent budget message to the Congress. His statement read in part as follows:

"The program of veterans' services and benefits should reflect the fundamental fact that our primary long-run obligation is to dependents of veterans deceased from service causes and to veterans disabled in the service. In the fulfillment of these obligations we have two basic purposes. The first is to alleviate financial hardship to dependents of veterans deceased from service causes. The second is to help veterans surmount the physical and economic handicaps of their service disabilities. At the same time, we should preserve and stress our basic objective of assisting the recipients of these benefits to be as nearly as possible self-reliant and self-sustaining members of our society.

"The necessity for new or extended benefits for veterans without service disabilities should be judged, not solely from the standpoint of service in our armed forces but in the light of existing social-welfare programs available to all, veterans and nonveterans alike. In recent years social-security protection, including unemployment and old-age and survivors insurance and old-age assistance, has been made available to a large percentage of our general population. Prior to World War I the lack of such general benefits was, of course, one of the main reasons for the enactment of special benefits to veterans. At the present time we seek to broaden and extend these social-security programs and to enact a comprehensive national health and disability insurance program for all our people, including veterans, who with their immediate families will soon constitute 40 percent of the population."

This analysis centers, therefore, on a comparison of H. R. 2681 with these general-welfare programs which are intended to provide for the bulk of the population the kinds of assistance which H. R. 2681 proposes for veterans alone. The administration's general program is embodied in the President's recent proposals for expanding our old-age and survivors insurance system and extending its coverage to all persons not already included in an established Government retirement system. These proposals have now been placed before the House Ways and Means Committee for its consideration and are incorporated in H. R. 2893, recently introduced by Chairman DOUGHTON, as a basis for committee hearings. A comparative analysis of these two proposals involves the following points:

(1) Veterans of World Wars I and II are receiving better treatment than did veterans of preceding wars. With respect to World War I veterans, this was recognized in 1935 when the pension benefits repealed by the Economy Act of March 20, 1933, were restored to the Spanish-American War veterans. At that time President Roosevelt made the following statement:

"The Congress on many occasions has recognized that because of the complete absence of any system or policy initiated during or immediately following the Civil War, the Indian wars, and the Spanish-American War, and because of lack of adequate medical care from the point of view of modern standards, the veterans of these earlier wars could be compensated and taken care of only through some form of pension system.

"In the case of the World War, however, the Congress at the very beginning of the war adopted an entirely new system of care and benefits. This new system applied to all who fought in the World War, extended to them additional compensation if they had dependents, as well as insurance, hospitalization, vocational rehabilitation, and the adjusted-service certificates (the bonus).

"The veterans of the Spanish-American War, now approaching an average age of 62 years, had none of these advantages except hospitalization in recent years. Their case, therefore, cannot be compared to the case of World War veterans. For the same reason the approval of this bill establishes no ground or precedent for pensions for the World War group; theirs is an entirely different case."

Since 1935, when the Social Security Act was passed, this country has made great strides in building general programs for full employment, for increased health services, and to provide greater economic and social security for all the people. In addition, we have provided liberal programs of special benefits and services to veterans and their dependents. In particular, we have been successful in smoothing the readjustment problems of World War I and World War II veterans.

(2) In the special veterans' programs our primary obligation is to the service-disabled veterans and to the dependents of veterans deceased from service causes. For these veterans existing law provides liberal benefits. The basic compensation rate now ranges up to $138 per month for a veteran with permanent and total disability. Since last July, severely disabled veterans with dependents receive additional amounts up to $21 per month for a wife and $14 extra for the first child. Veterans with specific service disabilities (anatomical loss or loss of use, blindness, etc.) receive compensation up to $360 per month, in addition to allowances for dependents. Furthermore, free medical and hospital care is also provided to these veterans. The dependents of service-deceased veterans received an increase in benefits in July 1948. A widow of such a veteran now gets $75 per month with $25 per month extra for the first child and $15 for each additional child.

It must be borne in mind that such compensation even to veterans who are service-disabled is intended to assist, and the amounts paid generally are supplements to the income the veteran or his widow is able to earn.

Of the 2,000,000 veterans of World Wars I and II now drawing compensation for serv-

ice-connected disabilities, only 5 percent have ratings of permanent and total disability. A great proportion of veterans receiving compensation for service-connected disabilities can and do work.

(3) For veterans without service-connected disabilities, the present law already provides benefits. Veterans of World Wars I and II who have permanent and total disabilities not incurred in service can receive $60 per month, with an increase to $72 per month at age 65 or after receiving the pension for a continuous period of 10 years. In this connection, permanent and total disability includes any veteran who is 10 percent disabled at age 65. To be eligible, veterans must be unemployable and cannot have other income in excess of $1,000 for a single man or $2,500 for a man with dependents.

Thus, most veterans aged 65 or over who are in need can now qualify for a pension of $72 a month under existing law and regulations.

A widow of a World War I or II veteran who died of non-service-connected causes now receives $42 per month regardless of age, plus $12 more for the first child under 18 years of age. For a widow of World War II to qualify, however, the veteran must have had a service disability of some sort.

As the President pointed out in the 1950 budget message, the problem of the non-service-disabled veteran in obtaining economic security is the common problem of all our people. Nine-tenths of our veterans do not have service disabilities. The security of this vast group of veterans can best be increased by broadening and strengthening the social-security system and by a vigorous program to assure a continuing high level of employment and production.

(4) The expanded social-security system, as provided in H. R. 2593, would provide protection for nearly everyone, both veteran and nonveteran.

(a) All employees or self-employed persons would be entitled to old-age benefits at age 65 for men and age 60 for women. Persons in the active military or naval service of the United States would be covered in future for their period of active service unless they qualify for military retirement benefits. In this connection the Federal Security Agency is now studying the possibility of retroactive credits for military service during World War II as a basis for eligibility and benefits under the OASDI system.

(b) This is an insurance system. Therefore the amount of benefits would be determined by the length of time during which the beneficiary had been employed and contributing to the system. The upper limits of benefits would be set in relation to an average of the beneficiary's wages during the 5 years of highest earnings. However, the vast majority of veterans reaching age 65 will have been employed for sufficiently long periods to entitle them to full coverage and they will have received wages enough during any 5 years of their employment to entitle them to benefits which would compare favorably with the old-age pensions proposed in H. R. 2681.

(c) Temporary and permanent disability insurance, operating generally along the same lines as old-age insurance, would cover the great majority of both veterans and nonveterans. It would provide income during illness or other temporary disability and also during periods of extended disability. H. R. 2681 does not cover either temporary or permanent disability, except to raise to $90 the pensions now available under existing laws.

(d) The proposed social insurance includes an extensive system of benefits for survivors of insured persons. Widows and orphans of veterans and nonveterans alike who were covered by old-age insurance would be protected by survivors' benefits which are an integral part of the insurance system. In most cases these would be more generous than the survivors' pensions contemplated in H. R. 2681 and would, of course, be paid as insurance benefits without regard for income limitations.

Specific illustrations of the benefits which will accrue to individuals under the proposed old-age, survivors, and disability insurance system are provided for as an attachment to this analysis. These illustrations show that old-age benefits for most single men would be somewhat lower than the flat pensions in H. R. 2681. However, benefits for men with dependents would in general be very much better under OASDI than under the veterans' pension bill.

(5) H. R. 2681 will be exceedingly costly, and its costs will be superimposed on those for our present aids for veterans and our general social-insurance program. This legislation would commit our Government to billions of dollars of expenditures until the end of this century and well into the next. The cost of H. R. 2681 has been reported to be only $62,000,000 for the first year after enactment. But this is an incomplete estimate. It omits the increased cost of survivors' benefits. Moreover, this would only be the beginning of a steeply rising curve. Ten years from now expenditures due to the bill would reach $1,200,000,000, or more annually, as more of the veterans of World War I reach age 65. Expenditures would continue to increase, and would reach an annual rate of $5,500,000,000 or more by 1990, when the veterans of World War II reach age 65 in large numbers.

These expenditures break down into two components. First is the cost of living veterans. The Veterans' Administration has already indicated to the House Committee on Veterans' Affairs that this cost is estimated at over $4,400,000,000 annually after 1990. This estimate appears to be based on conservative assumptions as to the number of veterans applying and qualifying for pensions.

Second is the cost of pensions for survivors of veterans without service disabilities. This cost has not yet been estimated by the Veterans' Administration. But in our judgment the information at hand indicates an approximate annual cost of at least $1,000,000,000 at the peak of the program.

In the aggregate, it is reasonable to assume that this bill would require expenditures of at least $125,000,000,000 in this century, and in the year 2000 expenditures would still be at an annual rate of $4,000,000,000. Approximately two-thirds of this annual total would be for benefits to living veterans. These expenditures would taper off over the next decade or two. But the payments to survivors of veterans would only have reached their peak at that time; they would continue high for several decades thereafter.

These costs would be added on top of the already large veterans' compensation and pension outlays to which existing laws commit the Government. These present programs—including compensation, pensions, and hospital care—are estimated at approximately $3,000,000,000 in the coming fiscal year and at the same level or higher during the rest of the century. Enactment of H. R. 2681 would thus mean $8,000,000,000 to $10,000,000,000 a year for veterans' benefits by 1990.

Apart from these exenditures for veterans' programs, the costs of the expanded social insurance system are expected to reach a peak of $15,000,000,000 to $18,000,000,000 annually by 1990. This includes anticipated outlays under present OASI legislation. These costs will be met out of trust funds built up through equal contributions by employers and employees, supplemented to some extent out of general revenues.

The costs of the expanded social-insurance system will thus be paid by its beneficiaries, either as contributors or taxpayers. In contrast, the costs of H. R. 2681 will be borne by all taxpayers for the benefit only of veterans and and their dependents.

(6) H. R. 2681 raises very serious questions for governmental fiscal policy when taken in relation to our other programs. The heaviest costs of H. R. 2681 would fall on the Federal Treasury at about the same time that it will be called upon to disburse out of trust accounts and to some extent out of general revenue the heaviest annual outlays under old-age and survivors insurance. This will be at a time when the costs of our present programs of assistance to veterans are still running high.

Advance commitments are justified for programs which will meet the basic needs of our population, needs which we can now foresee clearly and unequivocally. Indeed, advance commitments are an essential attribute of an insurance system where contributions collected over an extended period will finance the bulk of eventual expenditure.

But it is not possible to justify a commitment now to pay out of general tax receipts more than $125,000,000,000 for veterans pensions in the next 50 years, and many additional billions thereafter, when we have before the Congress a program which will meet the same needs on a broader basis.

Illustrative benefits payable under the proposed improved system of old-age, survivors, and disability insurance with comparative amounts under the veterans' pension bill

I. RETIREMENT BENEFITS

Average monthly wage, best 5 years	OASI monthly benefits (H. R. 2893)			Monthly veterans' benefit (under H. R. 2681)
	Retirement before 1963, 12 years' coverage	Retirement in 1970, 20 years' coverage	Retirement in 1990, 40 years' coverage	
Man without dependents, retiring at age 65				
$100	$46.20	$49.50	$57.80	$90
200	63.00	67.50	78.80	90
300	79.80	85.50	99.80	90
400	96.60	103.50	120.80	90
Man, retiring at age 65 with wife age 60 or over				
$100	$69.30	$74.30	$80.00	$90
200	94.50	101.30	118.20	90
300	119.70	128.30	149.70	90
400	144.90	150.00	150.00	90

II. SURVIVORS BENEFITS

Average monthly wage, best 5 years	OASI monthly benefits (H. R. 2893) for dependents of covered worker		Monthly benefit under veterans' pension bill (H. R. 2681)
	Death in 1960, 10 years coverage	Death in 1970, 20 years coverage	
Widow alone, age 60 or over			
$100	$34.10	$37.20	$42
200	46.50	50.70	42
300	58.90	64.20	42
400	71.20	77.70	42
Widow with 1 dependent child			
$100	$68.20	$74.40	$54
200	93.00	101.40	54
300	117.80	128.40	54
400	142.40	150.00	54

II. SURVIVORS BENEFITS—continued

Average monthly wage, best 5 years	OASI monthly benefits (H. R. 2893) for dependents of covered worker		Monthly benefit under veterans' pension bill (H. R. 2681)
	Death in 1960, 10 years coverage	Death in 1970, 20 years coverage	
Widow with 2 dependent children			
$100	$80.00	$80.00	$60
200	124.00	135.20	60
300	150.00	150.00	60
400	150.00	150.00	60

III. EXTENDED LIABILITY BENEFITS

Average monthly wage, best 5 years	OASDI monthly benefits (H. R. 2893)		Monthly benefit under veterans' pension bill (H. R. 2681) [1]
	Disabled in 1960, 10 years' coverage	Disabled in 1970, 20 years' coverage	
Disabled man without dependents			
$100	$45.40	$49.50	$90
200	61.90	67.50	90
300	78.40	85.50	90
400	94.90	103.50	90
Disabled man with wife and 1 child			
$100	$80.00	$80.00	$90
200	123.90	135.00	90
300	150.00	150.00	90
400	150.00	150.00	90
Disabled man with wife and 2 children			
$100	$80	$80	$90
200	150	150	90
300	150	150	90
400	150	150	90

[1] A totally disabled veteran requiring continuous attendance would receive an additional $30 monthly.

Wasted Defense Billions

EXTENSION OF REMARKS

OF

HON. ROBERT L. COFFEY, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. COFFEY. Mr. Speaker, under unanimous consent I include in the RECORD an article by Gen. James H. Doolittle, entitled "Wasted Defense Billions," which appeared in the Air Force magazine for December 1948, and an article by George Gallup, entitled "Air Force Has Heaviest Backing," which appeared in the Washington Post of February 20, 1949:

[From Air Force magazine for December 1948]

JIMMY DOOLITTLE SCORES WASTED DEFENSE BILLIONS

(When AFA in convention adopted a statement of policy urging a single Air Force, Board Chairman Jimmy Doolittle was in Europe. When he got back, President C. R. Smith asked for his comments. The Doolittle answer, expressed in this letter, makes vital reading for everyone.)

DEAR C. R.: There are many aspects to the unification problem and all must be considered. The tendency in the past has been to deal with the relatively simpler and less important phases and side-step the fundamental question from which all major service differences evolve: Shall we have one integrated and coordinated Air Force or two competing and conflicting Air Forces?

The National Security Act of 1947, as finally passed, was a compromise—as it has turned out, an unfortunate compromise—between widely divergent, highly conflicting, and strongly held and expressed opinions.

The individuals responsible for the formulation and passage of the law were well aware of its deficiencies, but hoped that the normal processes of evolution would clarify, justify, and strengthen it.

Unfortunately, some of the compromises that were made violated fundamental principles of sound organization and modern military requirements. As a result of this, and also due to a lack of wholehearted cooperation on the part of the agencies involved, time has intensified rather than reduced the undesirable effects of the inherent faults and conflicts.

The time has now come to objectively analyze the results achieved over the past year, the law itself, and the changes necessary to provide a National Defense Establishment which will give us the greatest possible degree of effectiveness, efficiency, and economy—the greatest value in defense and, if necessary, offense, for each defense dollar spent.

Tremendous economies are possible through true unification. They have not been achieved under the present law and will not be achieved through minor modifications of the existent law. Great economies can be realized only through basic changes—through correcting a fundamentally erroneous concept.

As stated in the first paragraph, the present law is an unfortunate compromise. One side, represented by the Army and the Air Force, wanted:

One separate autonomous air force.

Complete coordination of the three armed forces—called unification.

A single Secretary of Defense.

A head to the Joint Chiefs of Staff.

Roles and missions designated by Executive order of the President and not by act of Congress.

The other side, represented by the Navy, was opposed to all of these things. The compromise follows:

The Army Air Force was made separate. The Navy retained its air force.

Unification, of a sort, was achieved.

A coordinating head for the Joint Chiefs of Staff was not authorized.

Roles and missions were designated by law.

The new law was hailed by different groups as: "A splendid compromise." "An unfortunate compromise of fundamental principles." "Fatal appeasement." "The greatest Naval victory since Trafalgar."

The important point is that after a reasonable period of fair trial, although some improvements have been made through this partial unification, we are not enjoying the economies possible through true unification. We are spending unnecessary billions on defense. And, what is more, no minor modifications of the present law will correct the situation and make or permit it to work. It can be made to work (and by working I mean give the taxpayer a fair return on his defense dollar) only by ruthlessly disregarding the selfish desires of the individual services and operating wholly in behalf of national security and welfare—by fearlessly removing the flagrant fundamental faults in the present law regardless of the effect on service pride or prestige.

There are three fundamental media in or on which modern war will be conducted—land, water, and air. We must therefore have three services, each one of which operates in, and whose personnel specialize in operations in, one medium. This means an army operating on the ground, a navy operating on and under the water, and an air force operating in the air. Each agency must operate in its own medium and all must be intimately coordinated. Each must be dependent upon the others for service in the other's particular element. There must be maximum mobility and flexibility to meet the rapidly changing conditions of modern warfare. It must be possible to use the whole or any part promptly and effectively where and when required. It is obvious that we cannot afford three self-sufficient services: An army with its own navy and air; a navy with its own army and air; and an air force with its own army and navy. It is equally clear that two self-sufficient, competing United States armies or two United States navies would be wasteful. We actually have two self-sufficient, competing air forces, each planning to win the air war in its own way. We have the United States Air Force and the naval Air Force. We cannot afford this luxury—this prodigality.

We also have one self-sufficient service. We cannot afford this wasteful extravagance. True, the Navy can do its own job better by having its own Army and Air Force, but so could each of the other forces if they were also completely self-sufficient. We cannot afford three self-sufficient forces and the essential need for maximum economy will not permit us to have even one. Preserving the self-sufficiency of one service reduces the over-all effectiveness of the three taken together, and substantially increases the overall cost in natural resources, equipment, facilities, and personnel.

We do not know what the eventual size of our Military Establishment must be in order to keep us out of war or enable us to win promptly if attacked. It is unfortunate, but true, that Stalin effectively determines our required defense budget. He hopes to bankrupt us; to make us spend so much money on defense that we will destroy our economy and eventually our form of government. Any inefficiency or waste plays into his hands. True unification, with the smallest Army, the smallest Navy, and the smallest Air Force that will assure us of a reasonable degree of security, operating under a sound, coordinated strategic plan and organized to give not only maximum efficiency but maximum economy as well, will substantially reduce our military budget and represent the minimum interference with our economy, our prosperity, and our manner of life. By putting all Air under one head, we can substantially reduce the total expenditure required and greatly increase the flexibility and defensive and offensive potentialities of our Air units. With land-based aircraft and carrier-based aircraft under the same head, they will no longer be competing with each other—one planning to do the entire job of defending the Nation or winning a war through the use of carrier-based aircraft and the other with land-based aircraft. One streamlined service, so organized as to most effectively utilize both types, would minimize size and resulting cost.

As long as it is completely separate from the other services, it doesn't matter whether our Air Force is called the United States Air Force or the Naval Air Force. It could well be the National Air Force, thus retaining the Navy designation of NAF. Personnel, equipment, and facilities would be pooled, and we would end up with one integrated Air Force. Not only could we get along with less of everything, including supporting forces, facilities, and services through combining the two, and thus billions, but the personnel, equipment, and practices remaining would be made up of only the best, hand-picked

from both; and therefore substantially increased effectiveness would be achieved through economy.

The carriers, which are merely mobile air bases, could still be operated by the Navy. Carrier-borne aircraft would be manned and serviced initially by former Navy personnel, and always with personnel specially trained in that type of work. One specialized branch of the Air Force would cooperate with the Navy just as a specialized branch, the Tactical Air Force, now cooperates with the Army.

The Marine Corps, as long as it remained a small, integrated, highly mobile, triphibious striking force, accomplishing the function for which it was originally conceived, could well remain with one of the basic services. If, however, the Marine Corps continues to grow, it must either become a separate service or be absorbed, retaining its identity, in the three basic services. To make four independent services, when there are only three fundamental media in which to operate, is obviously unsound both from the military and an economic point of view.

Am delighted that the Air Force Association came out at the annual convention for a single integrated Air Force. If we are instrumental in the prompt realization of this important objective, we will have made a very great contribution to national security and prosperity and to the establishment of a better and a peaceful world.

As ever,

J. H. DOOLITTLE.

[From the Washington Post of February 20, 1949]

AIR FORCE HAS HEAVIEST BACKING

(By George Gallup)

With the cold war entering its fourth year, a substantial majority of voters questioned on the subject of national defense think that the size of the Army and Navy should be increased, and an even larger majority want to see the Air Force strengthened.

Most of those who favor increases say they would be willing to pay higher taxes for the purpose.

Until the world learns to eliminate force, the hope of our statesmen is that American military strength will prevent war. As many have pointed out, the vital question is, What kind of strength?

To see what the popular conception of the problem is, the institute interviewed a cross section of voters on the questions given below. Obviously the voters are not military strategists. However, since they have to supply the manpower and foot the bill, their notions about defense planning are worth examining.

"Do you think the United States should increase the size of its Army? Navy? Air Force?"

The vote:

	Yes	No	No opinion
	Percent	*Percent*	*Percent*
Increase Army	56	29	15
Increase Navy	57	27	16
Increase Air Force	70	17	13

Those who voted for increases were asked: "Would you be willing to pay more money in taxes to support a larger Army? Navy? Air Force?"

The vote:

	Army	Navy	Air Force
	Percent	*Percent*	*Percent*
Yes	44	45	54
No	9	9	12
No opinion	3	3	4
Total favoring increases	56	57	70

The high vote in favor of the Air Force is significant in the light of discussion over the size of the Air Force for the coming fiscal year. Air Force Secretary Symington advocates a force of 70 combat groups. President Truman's proposed budget envisions a cutback to 48 groups from the present 60.

Airpower became a major love of the American people even before military experts were willing to admit the importance of its role in warfare. One of the very first surveys ever conducted by the institute, in November 1935, used the same questions as those in today's survey. It showed a 70-percent vote in favor of a stronger Air Force.

The President's budget would cut appropriations slightly for the Air Force and Navy, as compared to present outlays, and would raise the amount slightly for the Army.

The number of planes on active service in the Air Force proper would be cut from 9,780 to 9,200. The number of men on active duty in the Navy would be reduced slightly, although the number of Reservists would be increased.

Army troops, on the other hand, would be increased in number, along with a substantial increase in Reserves.

Keep Uncle Sam Solvent

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Henry J. Taylor:

KEEP UNCLE SAM SOLVENT

The Government is pouring out money these days, and some people feel they may as well ride the gravy train. But I think the gravy train will be our funeral train if we don't watch out.

If we want to keep our jobs, we've got to help keep this country solvent. Some place along the line we must do a little choosing. We can't spend everything, spend everywhere, be as blind as bats, and still not go broke.

Most politicians, left to their own devices, will bankrupt anything. That's the record.

I'd like to mention tonight some of their plans for spending, at our expense. You may find it difficult to believe these plans. But they should be revealed to the public. For, if America goes broke, the public goes broke. You go broke. I go broke.

NO WORLD POWER WITHOUT HOME POWER

Our Washington spenders and taxers say that they want to put the world on its feet. But unless some limits are defined, they will try to put so many people in the world on their feet that they will knock us all off our own feet here at home. Then what will happen to our security, and to world security? What will happen to world prosperity, and to world peace?

The future of the peace of the world depends, uniquely and entirely, on what happens inside the United States. Our world power depends on our home power. If our home power is lost, our world power is lost.

THE RUSSIANS' BET

What are the Russians betting on? They are betting we will knock ourselves out in our own gymnasium.

Listen to Lenin. He laid this important idea right on the line. Lenin said, "Some day we will force the United States to spend itself into destruction."

How can our political spenders be so blind as not to see that this is Russia's fundamental aim? They preach security, from the cradle to the grave, as well as unlimited taxing and spending to achieve it. But though we were cradled in liberty, we may well get a grave in bankruptcy.

UNCLE SAM EVERYBODY'S SANTA CLAUS

Although we have less than 7 percent of the world's population—and have already undertaken enormous military commitments to maintain world peace—we are now to charge right into even wider and wider plans, to give nearly everything to everybody, any place and every place, or go broke in the effort.

For example, the newest spending plan will reveal that we are to be taxed for (1) schools and highways in Cuba; (2) railway expansion in Mexico; (3) flood control in Brazil, a new global boondoggle on the Amazon River; (4) industrial development in Colombia, Peru. Ecuador, Bolivia, and Chile; (5) waterpower in the Argentine; (6) industry in Africa, India, Pakistan, along with Rhodes; and (imagine this) a beautiful belt of hotels. Apparently Uncle Sam wants to stop being called Uncle Sap and start being called Uncle Statler.

TAX RELIEF FOR OFFICEHOLDERS ONLY

Meanwhile, officeholders are still being added to the public pay roll here at home. The Federal pay roll al ne has reached $9,000,000,000 a year.

Moreover, top Government employees have voted themselves salary increases, along with amazing and highly questionable tax-exempt allowances. They've given themselves tax relief that separates their own tax burden from the burden carried by all other citizens.

But I, for one, think that there's a certain amount of immorality in this—to say that taxes must go up, then vote themselves enormous exemptions from taxes, and vote those taxes onto the backs of you and me.

What does the bill add up to? What does it mean to every man and woman who is working at a tax-paying job?

THEY CAN TAX THE UNITED STATES INTO A BUST

Assuming that the people give the tax-exempt spenders all they want to spend, the Government in the next 18 months will consume $66,000,000,000. Ten years ago the spenders broke all records when they spent $14,000,000,000 in the same period in which they now propose to spend $66,000,000,000.

This increase alone is at the rate of about $1,400 in new burdens against every American family in your land and mine. It comes on top of a burden we already carry—the largest mountain of debt ever placed on a people in the history of the world.

Do you wonder I say that our Washington spenders must watch their step or they will tax us into a bust? This country's present prosperity is a very touchy thing. It won't stand much more kicking around from Washington, D. C.

The proposed increase in taxes really amounts to $7,000,000,000. It's not $4,000,000,000 more—it's really $7,000,000,000 more, when the full charges are added. That's the simple truth. Yet, not 1 penny of tax increase would be necessary if waste were cut—as it should be cut, could be cut, must be cut.

PEOPLE EVERYWHERE ARE WORRIED

I have just been out in Illinois and Iowa and Kansas—in the heart of the farm country. I talked with farmers, storekeepers, country bankers, and a good many housewives. I talked with anxious workers in railroad yards, where railroads are now being forced to lay off a number of men. Saturday and Sunday I was in upper New York State, around Buffalo and Lockport, and tonight I'm here in Michigan. In all these sections, the same thing applies.

Whether Washington knows it or not, people are worried. Instead of a Roman holiday, this should be a day for very sober action in Washington, D. C., with respect to taxes, labor laws, and everything else.

The working people of the country foot the bill. They have a right to insist that the money they earn should not be thrown around like water.

TIME FOR COMMON SENSE AND PRUDENCE

Taxes should come down—not go up. This is something for public opinion to take hold of—and now. The politicians should be told that the party is over.

This is no time for any more "hey, nonny-nonny, and hotcha-cha." This is no time to be wasted into oblivion and taxed into a bust. Times are too serious for that. This is no time for global boondoggling, or for boondoggling at home, either. This is no time for anything but common sense and prudence on the part of our tax-exempt spenders and taxers.

TAKE HEART

As good citizens, we should be too proud of this country to preach our indifference about a matter of this kind, or to be outshouted. We are not indifferent—and we need not be outshouted.

The future of our homes is at stake. As the spending and taxing of this country go, so goes the country and so go we all.

But take heart. The great days of this country are by no means done. If our high-taxers sober up in time, and give the average working man a chance, we will find that we have not even glimpsed the borders of our individual and national achievement. We will still have a real chance to go ahead.

If we did not believe this, we could not be believers in America. Because that faith is America—and America is your land and mine.

(From questions received through the mail from listeners, Mr. Taylor selected the following for comment on this program.)

THE FLAW IN GOVERNMENT PLANNING

Question. We plan for our city building, and for other things, in a central way. Why not let the Government plan profits, plan prices, and plan production?

Answer. We have no single, unified business machine turning out profits or production as a motor turns out juice.

There are 9,000,000 different American men and women in business for themselves. What about them? There are more people in business for themselves in our country than there are members of either of the great trade unions.

Interwoven with this are the individual problems and hopes of the enterprises of this Nation, owned by 18,000,000 stockholders.

The Nation's whole complex enterprising method—the local bakery, the individual store, the big supplying companies, the mines and mills of our great land—cannot be directed and planned in a central manner.

THE SOCIALIZED APPROACH

That is one of the troubles with socialized medicine. The socialized approach to the problem is entirely political, and not practical.

You know Washington as well as I do. Look at the mess the Washington politicians have got their own bureaus into. It may not be entirely their fault, but Washington is probably the most inefficient locality per square inch, of any place in our land.

The job they should be doing in Washington, before they start running this whole country and the world, is reorganizing their own bureaus.

TAKING THE PROFIT OUT OF PROFITS

Question. You say present corporation profits are not as large as reported. If a company does not earn a profit, why must the company call it a profit, and pay a profit tax on it?

Answer. This is because of another wrong feature in our tax laws. Too low an allowance is made for depreciation—that is, for the wearing out of equipment which must be replaced.

Without being too technical, the general fact is that the tax law requires companies to show an equipment depreciation calculated on the basis of original cost, rather than on what it would cost to replace the original tool today.

Suppose, for example, a railroad purchased a freight car some 25 years ago for $2,500. That is about what a freight car would cost 25 years ago. Over a period of time, the railroad company can charge this $2,500 against expense. Then, when the car is worn out, the company, theoretically, is supposed to have the money in reserve to buy a new car and stay in business.

THE RISE IN REPLACEMENT COSTS

But today, when a car must be replaced, it costs $5,000 or more—twice as much. The bookkeeping has shown just half the cost of staying in business. The other half has been shown as profit, when there has been no profit at all. It has been taxed as profit. The money needed to replace the old freight car with the new car, and thus stay in business, is gone.

This is typical of all business using equipment and tools. It's the kind of thing that makes the reported profits look high, when in fact they are too low to support the capital needs for replacement costs, inventory costs, tax liabilities and concurrent risks of doing business today.

PUNISHING THE THRIFTY

Question. My deceased husband worked hard all his life, putting his small savings into shares in leading American enterprises. With each dividend check falling far behind my increased cost of bare living, I am filled with indignation that such a large share should be confiscated in taxes to support others at home and abroad who won't work long hours and sacrifice for savings, as my husband did. Why do so many so-called liberals call themselves liberals when they discriminate against the rewards of hard work and thrift?

Answer. All shareholders in American companies are being discriminated against shamefully—especially the elderly people who devoted their lives to trying to become financially independent. Eighteen million shareholders are getting an awful kicking around because they are silent and unorganized. Moreover, 75,000,000 owners of savings accounts and insurance funds are being mortally hurt by wild tax-and-spend policies.

We hear much about no discrimination against race, color, or creed. As this lady says, "What about no discrimination against thrift?"

Any man is a false liberal who ducks this issue, in your land and mine.

What Is the Fate of America?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. SHAFER. Mr. Speaker, under leave granted to me, I am inserting in the Appendix of the CONGRESSIONAL RECORD an article by the nationally known writer, Larston D. Farrar. I believe it is a penetrating analysis of the basic problems facing this Nation today and that it deserves consideration of every citizen possible.

WHAT IS THE FATE OF AMERICA?

(By Larston D. Farrar)

The proposals of President Harry S. Truman, embodied in his now famous state of the Union message to the Eighty-first Congress, are big news, in a certain sense, but not a single one of the proposals is new, in the sense that it represents any new thinking on the part of the President or his advisers.

Actually, every one of these proposals already has been enacted into law—in other countries. The so-called health and welfare services the President would have the Federal Government give to the Americans were given to the German people by Bismarck and his successors in Germany. The proposals didn't bring peace, stability, and prosperity to the German people and the same proposals, a half of a century later, will not bring peace, stability, and prosperity to the American people.

Alexander Hamilton wrote more than 175 years ago that "new errors appear as oft as new truths." If there is anything new about the Fair Deal program for America, it is that new errors are appearing in a new place under new sponsorship. We, the people, mostly do not have a vast knowledge of history, of government, or of economics. For these reasons, we, the people, without malice aforethought, frequently make terrific errors in judgment as to the people we support and the policies we favor.

No one can say definitely whether or not the people in the recent election gave the President a mandate to attempt to get enacted into law the socialistic program he has presented to Congress—a program that eventually would socialize the medical profession, socialize the housing industry, socialize the electric-power industry, and, eventually, socialize every phase and facet of our economy. But one thing is sure: If the people gave such a mandate, granting they still believe in individual liberty as I believe they do, they are mistaken. They must be shown the error of their ways. It is a thankless task, but not a hopeless one, to educate the American people.

Alexander Hamilton, who, with John Jay, James Madison, and other youthful and elderly leaders of his day, steered the American people into paths of governmental righteousness, recognized well this tendency of the people to be misled. Here is what he had to say about it: "It is just observation that the people commonly intend the public good. This often applies to their very errors. But their good sense would despise the adulator who should pretend that they always reason right about the means of promoting it.

"They (the people) know from experience that they sometimes err; and the wonder is that they so seldom err as they do, beset, as they continually are, by the wiles of parasites and sycophants, by the snares of the ambitious, the avaricious, the desperate, by the artifices of men who possess their confidence more than they deserve it, and of those who seek to possess rather than to deserve it.

"When occasions present themselves, in which the interests of the people are at variance with their inclinations, it is the duty of the persons whom they have appointed to be the guardians of their interests, to withstand the temporary delusion, in order to give them time and opportunity for more cool and sedate reflection. Instances might be cited in which a conduct of this kind has saved the people from very fatal consequences of their own mistakes, and has procured lasting monuments of their gratitude to the men who had courage and magna-

nimity enough to serve them at the peril of their displeasure."

NO MANDATE FOR SOCIALISM

The persons whom the people have appointed to be the guardians of their interests are the Congressmen of the United States. The President never was elected to be anything but an elected officer, to carry out the laws enacted by Congress. Therefore, if the American people, in the recent elections, gave a mandate to their guardians to take a drastic turn toward socialism, it is up to the guardians to withstand the temporary delusions of the people. The people can be wrong—and, if they gave a mandate to put state socialism into effect in this country, they were wrong.

Congress, thus, remains the only hope. We know that the President, most members of his Cabinet, and a small coterie of White House experts, are in favor of carrying this Nation into state socialism. That fact is written on the record. Their own speech betrayeth them. But Congress is not committed to any such program and the vast majority of the Congressmen would be opposed to such a program, if they were sure that the program would lead to totalitarianism. It is up to the people who can see beyond tomorrow to enlighten their Congressmen. It is up to the thoughtful men and women who have money invested in land, homes, stocks and bonds of any kind, and savings in any form whatsoever, to let the Congress know that this country was based on the capitalistic form of government and that, without capitalism, representative government cannot survive. We say that without capitalism representative government cannot survive because, on the record, without capitalism, representative government never has survived longer than a few decades. The proof of the pudding is in the eating. It is impossible to name a country where the people have lost their economic freedom to move about as they please, work when and where they please, invest as they please, take all the risks of society, and maintain that the people have retained their political freedom in the same country. The Russians claim such a development for their country, but only a fool or a knave can believe or maintain that the average Russian has the basic freedoms for which our forefathers fought and died.

There is evidence in virtually every news item that goes out of Washington that the President's program, as unfolded by himself personally, would vastly increase the powers, prerogatives, and personnel of the Federal Government.

Gould Lincoln, the nonpolitical reporter for the staid Washington Evening Star, pointed this out clearly in a recent article in which he stated:

"The recommendations contained in Mr. Truman's message, if enacted into law, will enormously increase not only the civilian personnel of the Federal Government but also will help to multiply the statutes which touch the lives of the people. Here are some of them:

"Public power lines, in connection with further rural electrification.

"More river valley developments, after the Tennessee Valley Authority model.

"* * * Federalized medicine.

"* * * Federalized public education.

"* * * Federal aid for public (subsidized) housing.

"* * * Continuation of rent controls.

"* * * Stand-by power to limit 'unjustified' wage increases. * * *

"These * * * powers, if and when they are used, will require many new employees and officers. No estimate is made by the President of the number of additional Federal employees all these recommendations would place on the Government pay roll. * * *

"The ever-increasing expenditure of Government money, with its drain upon the taxpayer, may result in driving industry to the wall. And if industry fails, the only step left will be for Government to take over.

"It could happen."

Mr. Lincoln might have been even stronger in his analysis. If all the measures recommended by the President for the electrical power industry and for all industry are enacted, private industry will be driven to the wall and will fail. There is no faint doubt about it. And the end result, of course, will be socialization, and, as night follows sunset, communism in effect in America. It not only can happen here—it is happening here.

THE WELFARE STATE

Dorothy Thompson, certainly no hidebound reactionary, foresees the same results of the President's program, if enacted.

"If he has a docile majority in Congress, we now are full steam ahead toward the 'welfare state' which, in modern times, President Roosevelt started here, Bismarck in Europe, and which has engulfed western civilization.

"This state tends toward a condition in which creative forces are drained out of society and paralyzed within the state; in which those who take no personal risks and suffer no personal losses become the master class; in which the earnings of the people are expropriated and returned to them (minus a high commission) in the form of services they may or may not want or need; in which independence is discouraged, and docility and emotional immaturity fostered in the people; and out of which, finally, dictatorship inevitably emerges as social vitality decays and the monster state is bankrupted through the anemia of society.

"The masses of the people will hail it because they cannot foresee the consequences, are unaware of what a departure it is from the political philosophy which made this country great, and because they will not link the welfare state with the decline and fall of Europe.

"* * * The program, in general, is the triumph of European state ideas—especially German state ideas—over the American revolution, and exactly when Europe is in ruins.

"The greatest contribution which America, especially, made to political science through Jefferson and on down through all the authentic American radicals, notably Henry George, was the clear recognition that the state is the enemy of society, and that when you extend the police power (which is the essence of the state) into overexpanding areas of social and economic life, stagnation sets in.

"Insofar as the state has a function in economic life—so argues the authentic American philosophy—it is to protect the widest liberties of the people in their spheres, and relentlessly prevent their encroachment upon the liberties of others, while holding and conserving the legitimate public domain.

"But when it extends its powers to assuming responsibility for the lives of all, it expropriates the people's liberties, for no matter how you cut the design, liberty consists of the right to make one's own bed and lie in it. Children are not free because they are not responsible for themselves. The welfare state reduces adults to semi-infantile conditions.

"It does not create opportunities for independence. It aggrandizes all opportunities to itself. And once the independence of the people is destroyed, it is never restored until the huge structure pyramided on their backs breaks down into anarchy, either through war or by its own weight—as it invariably has.

"There is nothing new about the development. The posthumous history of all great states shows this graph. It never has been a sign of youth but of senility, not of progress but of decay."

So saith Dorothy Thompson. No matter what else she may or may not have written, it is certain that in this analysis of the President's program, she is walking on authentic historical grounds. Note that she, too, leaves the final decision to Congress. The Congress always is the guardian of the people, but today, more than ever, it must be the guard of America's freedoms and of the liberties of individual Americans.

PLANS FOR BIGGER GOVERNMENT

The Washington Evening Star, long noted for its unbiased attitudes and nonpartisan stands on Government questions of national and international moment, hesitated not one moment in labeling the President's program "a long step in the direction of state socialism."

"The essence of this message is an appeal for big government—for a government that will get bigger and bigger as it takes over more and more new functions," the Star points out. "Repeatedly, the President uses such terms as the 'increasing responsibilities on the Government,' and 'the Government has still other opportunities,' to do one thing and another.

"Perhaps a continued expansion of Government is inevitable, and it may be that this is not, in and of itself, a bad thing. But the President ignores the consequences, and they should be made clear.

"The people should understand that bigger Government means more Federal employees and bigger Federal budgets. They should understand that the area of individual initiative and responsibility diminishes as that of Government expands. And it should also be made clear that, historically, the tendency of expanding Government is to feed upon itself, and to grow constantly larger in the process.

"Is it necessary that the Government take on ever-increasing responsibilities?

"Mr. Truman points out that since the boom year of 1929 there has been a population increase in this country of only 20 percent. In the same period agricultural production has increased by 45 percent and industrial production by 75 percent. So we have been making progress, although, in the President's judgment, not enough progress. He would go faster and further."

The Star's owners, obviously, benefit from more and bigger Government. They do business in the Nation's Capital, where Government is the principal industry and where, if Government pay rolls increase, their newspaper prospers more. But they are not as short-sighted, as, say, the businessmen of the Tennessee Valley, who have worked to augment the powers of the Tennessee Valley Authority and to increase its expenditures and appropriations because it means more money to them. The owners of the Star are in business for a profit, and to that extent can be labeled selfish businessmen. But they are not so selfish as to agitate for reforms, or benefits, that are purely illusory and last only for a limited period. The owners of the Star know that if Government continues to get bigger, Government will continue to look for new tasks for itself. One of these new tasks will be to take over the private power industry. When this is done, the bureaucrats will want to take over the steel industry and make it serve the "peepul" more efficiently. After that the railroads will be nationalized. Then the coal mines and the copper mines and all other mines. After that the big chain stores, then the independent stores, and, finally, we will be regimented and dominated by Government employees down to such details as to when to have our hair cut, when to visit the physician, when to have babies, when to buy and when to sell.

The process seems to work slowly. As Alexander Hamilton wrote, "schemes to subvert the liberties of people require time for their execution." But as the process continues, it works faster and faster.

Inevitably, as Miss Thompson points out, the welfare state reduces adults to semi-infantile condition, once the independence of the people is destroyed.

The one arresting fact which disputes the tragic inevitability of this process is that the United States has millions of citizens who are aware of the history of the decline and fall of other civilizations. These citizens are determined to do everything legitimately in their power to prevent a similar decline of this Nation.

For years, political barriers have separated many of these like-minded individuals. Race, religious, and class appeals have been made to divide them, many of these appeals being so cleverly camouflaged as actually to make it seem they were appeals to do away with such divisions. Now, if these millions, regardless of race, creed, color, or political party, can unite to work and talk against the process of socialization, there still is a chance that the process can be reversed and that we can walk again in the paths of political freedom. This country and these people, the early founders of our Republic said, seem to have been made for each other.

If that be true, it is time for the people once more to reveal their strength, to show a greater awareness of the drift, and to arrest the almost relentless march toward statism that seems to characterize our recent history.

Rent Control

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks, I wish to include a letter received from Mr. Arnold Schlossberg, of Roanoke, Va., which he has asked me to place in the RECORD:

ROANOKE, VA., *March 5, 1949.*

Hon. HELEN GAHAGAN DOUGLAS,
House of Representatives,
Washington, D. C.

MY DEAR MRS. DOUGLAS: While I am obviously not a constituent, I am presuming to address you as one of your long-time admirers. I am prompted to write about the article, Dogs and Children Not Wanted, from the January 1949 Woman's Home Companion, which you had printed in the RECORD. I am a landlord myself and have always welcomed children where the quarters were adequate. In fact, I have even gone further and taken in families with children in one-bedroom efficiency apartments. Now, I find that the tenant class are much more unsympathetic to the plight of families with children than are most of the landlords today. In my apartments I have cases of single individuals occupying two-bedroom apartments next door to families with two children cramped into a one-bedroom apartment. Due to the arbitrary nature of our rent control adjustments, the two-bedroom apartment rents for little more than the one bedroom apartment so the occupant has refused my request to take smaller quarters and let the apartment be occupied by a family with children. I have many others who are doing the same and of whom I have made no formal request merely because I know I would be considered ridiculous. I, therefore, suggest that in your rent control bill you include a provision prohibiting the hoarding of space by tenants. Frequently, a family unit is broken by divorce, separation, or death. In every case, the survivor continues to occupy the family unit on the ground that it is no more expensive than a single room not subject to controls. This could be stopped by a simple provision in the law. In addition, there ought to be included my former suggestion taking away the right to occupy rent-controlled facilities from families of considerable means so that the landlord could take care of those who are in greater need, choosing from a list certified by the Expediter. Finally, let me say from my sad experience that all of the greed and selfishness in the world is not concentrated among the landlords. It is unfair to continue the constant vilification of the landlords as a group or class when so many are trying to do a good job and when the tenants as a class have proved in my experience to be no more considerate or unselfish.

Yours sincerely,

ARNOLD SCHLOSSBERG.

P. S.—Don't you think, as a matter of fairness, that this reply ought to go into the RECORD?—A. S.

Policy on Germany

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes that recently appeared in the Washington Evening Star, as follows:

POLICY ON GERMANY—CHANGE IN TOP COMMAND OF DEFENSE MAY BRING SHIFT IN STAND ON REICH

(By Thomas L. Stokes)

It is about time for us to recognize the cheerless fact that our war-born ideal to create a different sort of Germany, a truly democratic Germany freed from the strangle hold of the powerful financial-industrial clique that precipitated two world wars, has become badly tarnished.

Whether it is entirely beyond hope of redemption remains to be seen. This may depend on whether the change in the top command of our National Defense Establishment, which has been most influential in German policy, also will bring a change in the policy hitherto directed largely by James V. Forrestal, who is retiring as Defense Secretary, and William H. Draper, Jr., who retired a few days ago as Under Secretary of War.

Their withdrawal has been regarded at least as a necessary prerequisite to a shift of course. For what is needed is a change of mind and attitude. They represented the international finance viewpoint tolerant to such interests in Germany. It was only natural to their background. Both came from long careers as investment bankers, Mr. Forrestal from the presidency of Dillon, Read & Co., of New York, and Mr. Draper from the vice presidency of that same firm, which had interests in prewar Germany.

MAY NOT REVERSE POLICY

Any forecasts about what their retirement means, so far as Germany is concerned, would be premature. For the policy they evolved is the result of gradual steps which it may not be possible to reverse at this late date.

Germany cleverly has played off the United States and Russia against each other. How well she thinks she has done and what she regards as the established United States attitude are indicated in the latest development to attract attention here. In what otherwise might be labeled plain effrontery, German officials included half a dozen men identified with the old Nazi regime among the 12 recommended to us and Great Britain as trustees for the German steel industry, which, under a military government order of several weeks ago, is to be returned to German management along with Ruhr coal and iron industries.

They probably were emboldened to do this by other indications of leniency to ex-Nazis by the United States regime and by the almost complete abandonment several months ago of the anticartel program designed to break up big German monopolies that supplied Hitler's war.

The British, jointly responsible for policy, are reported surprised at our soft attitude; but they are hardly in a position to offer much resistance because of their obligations to us under the European recovery program.

REICH FUTURE IN OUR HANDS

The future of Germany is largely in our hands.

What is involved is a whole system that we fought in the war and pledged ourselves to change. Germany was at the core of it because Germany was, and is, at the core of Europe economically. She dominated Europe financially and industrially. The cartel system that she devised had tenacles in all of Europe—and beyond—so that she could influence other governments politically.

If this old system is resurrected in Germany then it will get new life all over western Europe, for it only remains to fit the old pieces back together again, and there is evidence of this already, notably in the reported rapprochement of French and German financial interests to resume prewar ties. Conversely, if democracy is to survive in Europe, then Germany, itself, must be really democratic. It is not a question of the economic restoration of Germany, which is recognized as essential, but as to who and what interests control it, whether it is democratically controlled, or returned to the feudalists.

Our policy has reflected an attitude not represented by our war aims. Big business influence has permeated our set-up in Germany from the start, though in five successive elections we have repudiated the predominance of that same influence in management of our own affairs here at home. We have exported abroad what we have rejected here. Able men drawn from our Government, men familiar with the problems presented in our original German objectives, were sent to Germany to help with policy, but they were shunted aside and most of them finally gave up in discouragement.

Wage-Hour Law

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled, "Notice to Farmers":

NOTICE TO FARMERS

Even as this is written efforts are being made to include farmers under the wage-hour law.

In the United States hired farm labor in 1948 numbered approximately two and one-

half million persons engaged as piece-workers, day laborers, weekly wage earners, and some by the month and year. Many receive free housing, free board, or some of the commodities they help to produce. Exceedingly few of them work on a straight hourly basis.

Think of the difficulty of paying a starting wage of 75 cents to $1 an hour, especially when crop prices are falling. Think of the complications of paying the equivalent of the compulsory wage in cash and board or lodging or other facilities. Think of the endless headaches of figuring and paying overtime if that is required—a feature that labor organizations will demand sooner or later.

If Congress removes the exemption of farmers from the provisions of the wage-hour law even to a limited extent, then every farmer is in for trouble. If this goes through, it is the entering wedge which might lead to doing away with the exemption of all farms from the burden of this troublesome and uneconomic law.

In any even, labor organizations will take credit for this amendment and then probably will organize farm labor.

HOW THE WAGE-HOUR LAW AFFECTS YOU

Maybe you do not know much about the wage-hour law. You have heard of it vaguely but no Government inspector has come around to see that you keep your pay-roll records and that you have paid overtime to your workers. No one of your hands has sued you for overtime. None of your hired help has put in a claim and asked the court to assess you for triple damages because you did not pay him for the time it took him to go from his sleeping quarters to the barn. You have not been bothered by the wage-hour law, which has caused so much trouble to manufacturers and other employers of labor.

But don't get the idea that the wage-hour law has not crept into your affairs silently and insidiously like the weevil that get into your grain.

Although you are exempt under the wage-hour law in its wording and phrasing, yet the law has got you whether you know it or not.

Here is how the wage-hour law affects the farmer:

1. It raises your labor costs.
2. It causes your hands to leave you.
3. It brings on inflation, which means that you pay more for fertilizer, implements, necessities, etc.
4. It is sowing seeds of trouble for the future.

Let us see how we arrive at these conclusions. Let us point out that you, too, are a victim of the uneconomic and ill-advised wage-hour law.

THE WAGE-HOUR LAW RAISES YOUR LABOR COSTS

Like the products of manufacture or of a mine, the big part of the cost of the produce of a farm is labor. Because the farmer and his family do much of the work and do not even get paid a salary, he does not always appreciate the value of his own labor. He does not think of it as cost. But every farmer has to hire help, and if he operates a farm of any size he must employ a good many hands to help him. If the wage-hour law forces up wages generally, then the farmer has to raise the wages of his hired help.

It is now proposed to raise the minimum wage rate from 40 cents to 60 cents or even 75 cents per hour. Farmers will be affected by such a rate increase because, if the workers in the towns nearby are getting this much per hour, the farmer will have to pay it too. And remember that when a factory worker works more than 8 hours a day, he gets a 50-percent increase in hourly pay, so that if the minimum wage is 75 cents an hour for 8 hours, 2 extra hours a day will cost the employer 1.12½ cents per hour or $2.25. In a 10-hour day the worker receives $8.25 or 82½ cents per hour.

THE MINIMUM WAGE CAUSES YOUR HANDS TO LEAVE YOU

It is hardly necessary to point out that high wages in the cities cause migration from the farms. Everybody knows what happened during the war. The young men and even the older men left for the big cities to work in the factories and shipyards. Many farmers were hard put to plant and harvest their crops. It is estimated that 10 years ago 8,000,000 more people were getting their mail RFD rather than city delivered as now. The minimum wage of 60 cents or 75 cents an hour will cause many more to leave the farms and go to the cities in the next few years.

THE WAGE-HOUR LAW CAUSES INFLATION, WHICH MEANS THAT YOU PAY MORE FOR FERTILIZER, IMPLEMENTS, AND THE OTHER NECESSITIES

If you buy fertilizer, a tractor, or even the overalls you wear in the field, the biggest part of the cost of these items is labor. Therefore, when wages are forced up by law, the cost of everything must rise. Inflation is an unseen force which you do not realize is there until it is too late. While farmers often are getting fair prices for their produce, they have to pay so much more for everything they buy, and sometimes in the swap they lose. Inflation gets the farmer as quick or quicker than anybody else.

THE WAGE-HOUR LAW IS SOWING SEEDS OF TROUBLE FOR THE FUTURE

The wage-hour law in its effort to establish a minimum wage by law is playing with dangerous forces. It seems to succeed when all is well and the goose honks high; but if prices begin to fall and business recedes, then the minimum-wage law will cause unemployment, a lower standard of living, and business failures for many people. When this happens, the farmer will be the first to feel it.

THE WAGE-HOUR LAW

The wage-hour law was enacted 10 years ago. Its purpose was a social one—that is, an effort to jack up wages so that certain few poorly paid groups of workers would be able to enjoy a higher standard of living. An important feature of the law, which does not concern a farmer except indirectly, is the limitation on the hours of employment—the 40-hour week with overtime for work longer than this. In other words, the law attempts to put a floor under the wages and a ceiling over hours of employment. Theoretically, the idea was to stave off unemployment by limiting the hours of work, thus spreading the work to more people. Actually, it has not worked out this way, as few concerns work two shifts, and their regular workers get paid overtime. This increases the cost of goods and services.

When the wage-hour law was enacted we were just coming out of a great depression and a period of unemployment.

Since the law was passed, because of increased-business activity, the stupendous war effort, and through the efforts of unions, the wages of skilled workers particularly have gone way up and far ahead of the minimum set by law. All wage rates have advanced accordingly. The effect of overtime payments, however, has been a serious one and undoubtedly has caused the high costs that helped to bring about inflation.

The wage-hour law is uneconomic and against the old American idea.

FARMERS SAID TO BE EXEMPT

The law particularly exempts farmers from the application of its restrictions and obligations. Farmers may be exempt from the wage-hour law, but they are not exempt from the law of economics. This means that the unseen forces which come into play in the production and distribution of the products of the farms, mines, and manufactories cannot be controlled by passing a law. The wage-hour law undoubtedly has produced effects all right—sometimes disastrous to some businesses—but the benefits of such laws are doubtful. The experience of several thousand years of recorded history proves that laws that try to dam up economic forces are sometimes futile, and often harmful in their consequences.

The farmer is exempt from the wage-hour law, but he is not exempt from the economic effects of it. When the rest of the community pays more for its help, he will have to pay more. The minimum wage and the overtime provisions not only increase the cost of farm labor, but they increase the cost of the necessities the farmer has to buy. A farmer is not only a laborer, but he is at the same time a capitalist, an entrepreneur or operator, and a merchant. Laws that affect the other sections of the community are bound to affect him. The claim that farmers will benefit by the act is a fallacy.

FORTY HOURS A WEEK

When farmers hear of people working 8 hours a day or 5 days and then knocking off, it is to smile. The farmer, who works from the time the light appears on the horizon in the morning until way after dark when he feeds the mules and cattle, must view with disdain the city worker who complains about getting up at 7 o'clock in order to get to work at 8, and who quits at 5. Someone has said, "Yes, a farmer works 8 hours a day—8 hours before dinner and 8 hours after."

While in the factories and manufacturing plants and the building trades workers are working short hours, getting high pay, and taking it easy, production is not increasing as it should, on the farms of the United States the hours are long, the production is high, and the net profits are small.

STICK TO YOUR HOEING BUT WATCH THE MEN AT THE CONTROLS

You have plenty of work to do, you are doing your part but take time off to look into what's going on at Washington.

If you don't watch out, the law-enforced inflation will lift you so high that you will have a great fall. And all the king's horses and all the king's men cannot lift you up again.

The proposed minimum wage of 75 cents or $1 will be bad for you if it goes into effect. If such a wage can be created by law, "Why," you ask, "Don't they make it $2 an hour or $5 an hour? Isn't that just as logical?"

Let us not try to make the country rich by inflation or by law. Let us do it by thrift and hard work. Therefore, while you are minding your own business and producing the elemental wealth that feeds and clothes the people of the United States—and a big part of the world—use your American right of petition and protest. Ask your friendly Congressman to go slow in passing foolish laws that attempt to make poor people rich, but which may make well-to-do people poor.

United States Unfair to Spies

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a news letter called Washington Notes, which I am mailing to constituents this week. The letter follows:

UNITED STATES UNFAIR TO SPIES

The fifth semiannual report of the Atomic Energy Commission has just been released

by the Government Printing Office. This report contains the type of information which has been refused repeatedly to American newspapers and magazines and has been given the hush-hush treatment in congressional committees.

It is an impressive 213-page document, illustrated with photographs and charts which have stirred up deep resentment and anger on Capitol Hill. On page 17, for instance, is an air view of K–25, the gaseous diffusion plant at Oak Ridge, Tenn., giving a very excellent foreground view of the K–27 auxiliary process plant. These Oak Ridge installations were built during the war for the purpose of extracting fissionable U–235 from normal uranium, and they are reported to be the largest such operations in the world today. K–25 has 60 acres under one roof, and the photograph clearly shows it as a U-shaped building, four stories high. An enemy bomber pilot could not ask for a better diagram of these Oak Ridge plants.

Another excellent air view shows the layout of the Argonne National Laboratory, situated in Du Page County, Ill., 25 miles from Chicago. Another shows Brookhaven National Laboratory near Patchogue, Long Island, N. Y.

On page 23 the report prints a map of the Hanford area, a tract of land in the State of Washington, approximately half the size of Rhode Island. This site was purchased by the Federal Government in 1943 as an ideal location for three reactors, chemical separation plants, and supporting facilities vital to the production of plutonium.

To make doubly sure that no error could be made in locating the Hanford area, the report indicates it in a diagram at the junction of the Yakima and Columbia Rivers, in the southwestern corner of the Columbia basin project. On the following page there appears an excellent aerial view of one of the reactor areas at Hanford, where large nuclear reactors transmute uranium into plutonium. The picture clearly indicates surrounding terrain, the mountainous background, Columbia River, and the exact positions of the power plants. Further along in the report, another air view shows the location of a remote-controlled separation plant which extracts plutonium from the materials discharged from the reactors.

To bring the identifying landmarks right up to date, the report produced on page 30 an enlightening air view of the construction camp at North Richland on the Columbia River in the same Hanford area which has been constructed since 1947. This camp houses 12,000 workers and their families. Gas tanks, supply and storage depots are plainly visible.

The text of this report tells exactly what the various atomic plants are doing and their progress to date. It gives general outlines for expansion. It informs the reader that at the close of 1948, fissionable materials production in the United States extended into 15 States and is now carried on in 30 separate plants at 25 locations. Throughout the report are references to the various plants and to the Atomic Energy Commission's contractors. On the whole, it is a very handy and compact reference for anyone looking for this type of information.

This report is available to one and all for the price of 45 cents. While on one hand it may be considered just another example of the ineptness and poor judgment of such left-wingers as David E. Lilienthal, Chairman of the Board of the Atomic Energy Commission, there is the provocative angle of the United States horning in on the livelihood and security of enemy spies. Granted that spies in the United States are sincere in turning in a day's work for a day's pay, they have been trained and taught to operate by infiltration, corruption, and deceit. They expect to steal or copy and photostat highly important and revealing United States documents and forward them via the usual devious routes to headquarters, let us say, ultimately to the Kremlin. Soviet Russia and her satellites would pay handsomely for such information as is contained in the Atomic Energy report. With such a haul, a good Soviet spy could retire for life. Instead of that, Lilienthal makes the stuff available to everyone for a pittance, and snatches the 1949 Red Star Award for distinguished service right out from under the nose of some deserving Russian espionage agent.

There isn't much point in ranting at the treasonable stupidity of the men charged with the security of this Nation. Despite the now undisputed fact that the Roosevelt administration had been warned months in advance of the Pearl Harbor attack, few Americans have been able to absorb the implications of that crime. Responsibility has been effectively shrugged off by the White House, State Department, and the armed forces.

History repeats itself. For years now, irrefutable evidence has been made public showing that the Federal Government is infiltrated with fellow travelers and Communist Party line followers. At the risk of boring, it has been pointed out time and again that these are by far more insidious, more vicious, and dangerous to the welfare of this country than the card-carrying Communist. They are protected by flannel-mouthed politicians who are beholden to them for votes and political support. Behind the protection of the tangled red tape of a swollen and unmanageable bureaucracy, they consciously or otherwise operate to undermine and weaken the structure of the American Government. Facts, charges, and corroborating evidence have been given to the public, but what has happened? The Administration has effectively throttled the Un-American Activities Committee for its pains in exposing many of these characters, it has smeared and degraded legislators who had the guts to publicize such findings, and more recently it has released an avalanche of propaganda to inform the public that Federal employees are 99 percent pure according to the standards set by the President's loyalty program.

With this as the tip-off to the administration's reaction to any and all exposés of its laxness and ineptness in safeguarding the national security, we merely make the following information available to those interested, knowing full well that nothing will be done to correct the situation.

Last year, under the chairmanship of Congressman JOHN TABER (Republican, of New York), the House Appropriations Committee, in the course of checking over the budget for the Post Office Department, looked into the vast distribution of Government reports, pamphlets, directories, etc. In response to an inquiry to furnish the committee with a list of authorized bookdealers and quantity purchasers, the Public Printer advised that no such official list is maintained. Only the 443 bookdealers who have deposit accounts with the Government Printing Office were listed and upon investigation it was found that among these were 163 bookdealers in 32 foreign countries. They were accorded a 25 percent discount on the purchase of all United States documents.

It was revealed that one of the most active accounts at the Government Printing Office was that of the Four Continent Book Corp., located at 253 Fifth Avenue, New York 16, N. Y. This company is a subsidiary of the Amtorg Trading Corp., official Russian purchasing organization and listening post in this country.

During the year 1948, the Four Continent Book Corp. charged up $5,290 for United States Government publications, many of which were airmailed directly to Russian institutions by the Superintendent of Documents. These United States Government publications, at the discount rate, cost the Russian Government between 20 and 30 cents each and this would indicate that they had ordered approximately 21,160 in the course of that year.

Further probing revealed that the Bureau of Standards, under the direction of Dr. Edward Condon, finally got around to checking its mailing list in January 1948, and decided to drop certain Russian agencies which were getting the Bureau's technical reports and findings. This may have caused some inconvenience to the Russians, but it was quickly corrected by the Four Continent Book Corp. which merely ordered them through its account.

An examination of the subscriptions entered by the Russian book shop indicates a keen interest in all technical and research documents produced by the War Department, National Bureau of Standards, United States Weather Bureau, United States Bureau of Mines, United States Geological Survey, Departments of Commerce and Interior, the Atomic Energy Commission, and the Patent Office. The "Smyth Report," for instance, referred to by our Government officials as one of the most significant and revealing documents published in a decade, deals with the Development of Methods for using atomic energy for military purposes. As of August 1948, over 25,000 copies were sold by the Superintendent of Documents, who has no record of the purchasers.

Upon the receipt of the above information, Congressman JOHN TABER inquired about the courtesy list of embassies and legations to which the Government Printing Office sends free of charge any and all United States Government publications. This list is maintained and authorized by the Department of State. And here, Mr. TABER hit the jackpot. The Superintendent of Documents advised him that no embassy or legation had been withdrawn from the official list, which includes 67 foreign governments located in Washington, D. C., including the embassy of the U. S. S. R. and the embassies of nine Russian satellite nations.

It was further discovered that for 3 months after the declaration of World War II, the State Department continued to authorize the issuance of Government reports to agents of Germany, Japan, Rumania, Italy, and Hungary. Finally G-man John Edgar Hoover suggested that the Government Printing Office cease sending these official documents to diplomatic representatives of the Axis Nations. In a letter dated March 10, 1942, Hoover said:

"It has come to our attention that material published by the Government Printing Office is still being forwarded to the diplomatic representatives of the Axis Powers in the United States who are now being detained at White Sulphur Springs, W. Va., and Hot Springs, Va. This pertains specifically to many diplomatic representatives of Germany, Italy, Japan, Rumania, and Hungary.

"It is noted that these individuals have been particularly interested in various reports prepared by the Government Printing Office relating to patents, the daily statement of the United States Treasury and other material relating to the economic and national-defense conditions and preparations throughout the Nation.

"In view of the fact that this material has undoubtedly been used in the past and may be utilized by these diplomatic representatives upon their return to their native lands in a manner detrimental to the national defense and safety of this Nation, it is suggested that you may wish to remove the

names of these individuals from the mailing list of your office."

Apparently Congressman TABER's investigation, plus the turn of world events, gave the Superintendent of Documents some qualms because on April 1, 1948, he wrote to the State Department inquiring about the status of the diplomatic courtesy list. After due meditation, the Department of State, on May 11, 1948, gave forth with the following words of wisdom:

"It appears from the information available to the Department of State at the present time that all the embassies and legations in Washington are entitled to receive documents and reports free."

The moral of this investigation? If you are an American citizen, you pay for United States documents. If you are a foreigner, you get them for free.

Resources and Resourcefulness

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mrs. DOUGLAS. Mr. Speaker, we will soon be considering the President's bold new program for aiding in the development of underdeveloped areas of the world. The words of his inaugural address have lifted the hopes of people everywhere and have placed in proper perspective our own role in working for world peace and security. The bold new program being a long-range one makes it necessary for us to think in long-range terms. In this connection, I would like to insert in the RECORD a summary of remarks made by someone who has given considerable thought to resource development, both in this country and abroad, and who has in this paper emphasized some of the reasons why a bold new program must be undertaken in our own interest and in the interest of the people of the world.

RESOURCES AND RESOURCEFULNESS

(By Arthur E. Goldschmidt, U. S. Department of the Interior. Summary of communication presented before the academy, January 12, 1949)

In celebration of the sesquicentennial of the publication of Malthus' Essay on Population, we are again engaged in speculating upon the problem of whether the natural resources of the earth can long support the human populations that are growing upon it; and, if not, what are we going to do about it?

Human resourcefulness is frequently a major ingredient in natural resources. For that reason, natural resources are necessarily changing and flexible. A substance—a river or an ore body—may become important natural resources or may dwindle in importance as a result of what men do about them. The forests of New England of 300 years ago were as often an obstacle to the utilization of the soil resources that were needed by our forebears as they were resources themselves.

We understand the truism that in order to use resources it is necessary to have them. But in an economic sense it is equally true that in order to have resources it is necessary to use them. My point is not merely that of the pragmatist—that you cannot really have your cake unless you eat it—rather that natural resources can often be enhanced and increased through proper use, and that they will be valuless and may deteriorate if they are not used. This must be taken into account in evaluating our resource position and in developing programs of conservation and utilization.

To be sure, if the two and a quarter billion people on earth today would simply drop dead, there would be no natural-resource problems. These current fears of population pressure upon food supply, which is assumed to result from mankind's agility for survival, would be dispelled, for the earth could amply provide for the more cooperative forms of life that seem to live and die in order to maintain nature's balance.

But this would hardly be a measure for the conservation of resources. For the very concept of conservation assumes that our species is here to stay, that we have a place here and that we have a future. For time and place and condition of servitude to man are as necessary to the idea of conservation as they are to a definition of resources. Conservation is not leaving things untouched—it is wise utilization, and it changes as circumstances and technologies change. It is concerned with the economic well-being of people through sustained-yield production.

While we may disregard the fanciful mathematics of Malthus, the fact is that we still do not know the answer to the question of how many people the earth can support at a minimum level of living—or any other level.

This fact provides, of course, a great temptation to the speculative mind. Any schoolboy can figure out the time when a given rate of increase in the world's population will leave us without standing room on our planet. From time to time eminent scientists, generally somewhat removed from their own particular field of competence, have engaged in this discovery.

Just 50 years ago Sir William Crookes based his inaugural address before the British Association for the Advancement of Science upon this theme of the world's population and food supply. According to the press, he produced a formidable array of statistics on the trends in the ratio between the supply and demand of wheat—all tending to show that, before many decades of the twentieth century would be past, the demand for wheat would be far in excess of the earth's capacity to produce this staple food.

One might wonder whether this eminent physical scientist might have been willing to speculate in one of the fields with which his practical work had made him more familiar, such as electricity, and, if so, whether Sir William might have guessed, for instance, that in these last 50 years we would be using electric power to the extent we use it today. Indeed, the total cropland of this country, including its wheatland, if given over to hay, could not support the horses that would be equivalent to the horsepower in use in our electric motors.

The fact that past speculations on population and food have not been exact does not detract from the seriousness of the present world problem of maintaining and developing resources adequate to its populations. Indeed, the current discussions of population pressure upon resources are doing a service in calling attention to the great need for vigorous and intelligent programs for meeting the problems of placing our own resources on a sustained-yield basis.

When these discussions lead to proposals to solve the resource problem by the elimination of people—other people, naturally—they seem not only premature in the light of our present limited knowledge, but assume an expertise that does not exist. Competent population studies present no basis for an assumption that it is to our national interest or that of the world's future to withdraw medical aid or relief from areas of the world where population and resources are not in balance or otherwise to take measures to raise death rates to conform to birth rates.

Indeed, quite the contrary conclusion might be drawn—that, by raising living levels, a more positive population control is developed. For certainly disease and starvation, where they have persisted, have not proved a cure for overpopulation. Higher levels of living resulting from balanced economic development, on the other hand, have resulted in more stable populations.

Though our knowledge may be too limited to embrace population control as a primary conservation measure, these things we do know: That there are more people on the earth today living at levels below minimum standards of health and well-being than above such levels; that a greater portion of the earth's surface devoted to agricultural production is producing at levels below optimum efficiency; that serious deterioration of soil, forest, water, and other resources is taking place through wasteful and improper use; and that there is presently a net annual gain in the world's population.

It is, therefore, obvious that we cannot continue to disregard our current resource problems, but must undertake programs for their conservation and development; programs of research in techniques of conservation and utilization; programs for protecting our soils, forests, and water from unwise exploitation and placing them on a sound sustained-yield footing; programs for investing in comprehensive river-basin developments to protect and build up our resources; programs for building up underdeveloped areas at home and abroad.

Our limited knowledge of the possibilities of hydroponics, of algae-fed yeast plants, of solar energy, of chemurgy and plastics, can help to fire the popular imagination and stimulate scientific research and discovery, but reliance upon ersatz optimism can become as dangerous as a guide to our resource economics as the dogma of despair.

We cannot rely upon wishful thinking that the natural scientist will invariably find substitutes for failing resources. Or that the social sceintist will find popularly acceptable measures for speedy reversal of birth rates and thus cut our population shoulder to fit our resource cloth.

Substandard living levels and inadequate resource utilization must goad us to the realization that we must take measures to achieve a better balance of resources and people. To this end, we must extend our research. We do not even have an accurate soils map of the world. We need to know more about the possibilities and problems of agricultural production in tropical and subarctic climates. Our knowledge of the world's mineral supplies is still in its infancy. We must develop new sources of usable energy. But bold programs of resource development, based upon known and proved techniques, must be initiated if we are to solve the resource crisis that we recognize here and abroad.

Let us look for a moment at our own resource situation. The last few years of unprecedented levels of production have stretched our resource requirements so taut that we have become acutely aware of our weaknesses and the need for taking measures to overcome them.

Our current economy is converting the labor, raw materials, and savings of our people into our annual gross national product of about $250,000,000,000. The natural-resource input required for this production is staggering and we must be prepared to increase these amounts substantially.

Can we maintain the stability and productivity of the soil under such heavy use? Already 110,000,000 of acres of some of our best croplands are being damaged at critical rates. And 115,000,000 more acres are eroding at a less rapid but still serious rate.

Among our most serious immediate resource problems are those in the mineral field. We are consuming iron ore at the rate of more than 100,000,000 tons annually, and the drain upon our best domestic ores is serious. We are producing only about two-thirds of our copper. Our dwindling supplies of lead make it possible to produce less than half of our requirements. We are deficient in the production of over 30 different metals and minerals which our economy requires.

Our productive economy is dependent upon an input of more than thirty-five quadrillion B. t. u.'s of energy, and our requirements are growing steadily. But only less than 10 percent of our energy is supplied by nonexpendable sources such as wood and water power. More than 90 percent comes from coal, oil, and gas assets that are not unlimited.

Energy is a basic factor in maintaining living standards. One might paraphrase Archimedes and say that with a large enough energy supply, we can raise the level of living of the people of the earth.

There is no question that the heavy utilization of our resources in our current high-level economy is producing problems that call for immediate action to preserve the basis of our national well-being and security. The scope of that action must be as wide as the subject of natural resources itself. And the action required must be taken by individuals and through their common institutions, particularly their governmental organizations.

The land resources of the country can be maintained and improved only through the cooperation of the nearly 9,000,000 individuals, upon whom as farmers, farm owners, and workers we are finally dependent for the protection of this basic asset. To be sure, researches of colleges, experiment stations, and other public and private agencies must aid in our gaining the knowledge necessary to this job. And Government programs are essential. Public funds for soil erosion work for improvement of conservation practices, for the irrigation of arid lands, and other efforts to prevent the waste of soil resources are investments of a high order.

The recent increases in farm production owing to improved technology were in the main results of true conservation measures. They reflect progress in mechanization, increased use of lime and fertilizer, use of superior seeds and planting stocks, more effective control of diseases and insects that destroy crops and livestock, use of cover crops and other soil- and moisture-conservation practices, increase in irrigation of land and the fuller electrification of rural areas that permit better utilization of the farmers' time.

Such conservation measures are also production measures and they depend upon the well-being of the individual farmer and farm worker. A farmer struggling to maintain his family may not be able to afford, in his individual capacity, to undertake the conservation practices that the Nation cannot afford to have him disregard. A poor farmer may not have the time and money to learn better ways of farming, to apply soil-building materials, to improve stocks and herds or to invest in check dams and terracing.

In other fields, programs of protection and improvement of our resources are similarly essential and possible, and they are linked to maintaining a high-level economy.

The problems of our nonrenewable mineral resources are particularly serious, for by their nature they are not subject to sustained-yield production. Here, to be sure, sound mining methods, that assure the use of all of the ores, instead of leaving half of them in the ground, are a primary conservation necessity. In addition, the utilization of lower grades of ores must be encouraged through the use of newer processes that have been developed to make this possible.

In the realm of nonrenewable resources more than in any other, our localized view of the resource problem must be broadened. For in this field our interdependence with other areas of the world is becoming more and more obvious. To be sure our interest in developing the undeveloped resources in the rest of the world is broader than our concern for raw materials, but this problem is pressing in the field of minerals. Such splendid isolation as we may have enjoyed in the past, on the theory of our unlimited natural resources, must be reconsidered in the light of our serious inadequacy to produce the ores for steel, copper, lead, and a host of minor metals that our economy needs. Even in petroleum our imports are beginning to match our exports.

The development of synthetics and substitutes and the utilization of lower grades of ores are dependent upon the availability of energy. If we are to beneficiate taconite to maintain our iron-ore supply, we must have energy. If we are to develop light metals as substitutes—aluminum, magnesium, or titanium—we must have an astronomical number of kilowatt-hours. If we are to irrigate arid lands for greater production of food, we must have energy to pump water upon them. If we are to increase production by the use of fertilizer, energy is a principal component of its manufacture. Indeed, in resource economics we laymen learn as surely as the atomic physicist that energy is matter.

In the unused powers of our rivers we lose nearly 400,000,000,000 kilowatt-hours annually, or more power than we produce in all of our electric plants today. This waste is not only on the Missouri and the Columbia or the Colorado, a substantial portion of it is taking place right here in New England, where at least 13,800,000,000 kilowatt-hours annually are lost in the unused powers of your rivers. A pioneer in the use of water power, this region has developed less than a fourth of its potential.

In discussing our own resource problems and possibilities of solution, I have emphasized the close connection between economic conditions and conservation practices. This is not because I believe that conservation programs can be properly measured in dollars and cents, or that we can view so basic an asset as the soil, on which we and our children and theirs must live, in the same manner as we should the operation of a peanut stand. Indeed, we sorely need a new concept in bookkeeping—as fundamental as some of the newer concepts in physics—to assay resource problems and guide us to solutions. Were the terraces upon which the Andean Indians spent the equivalent of $20,000 to $30,000 per acre unwise investments? For hundreds of generations their agriculture founded the basis of a stable and highly developed civilization.

What is the value of a modern water-conservation project, like that in the basin of the Columbia River, that not only creates homes and livelihoods on a million acres of land, but that provides power for industrial developments and results in a balance of agriculture and industry? What are cities like Phoenix and Yakima and Spokane and Boise "worth"?

Recognition of the interrelationship of high levels of economic activity with conservation is also necessary to consideration of the world problem of natural resource development. The areas of the world that have been used merely as sources of raw materials, that have not been taken into partnership in the growth of world civilization through industrial and agricultural balance, are the areas where conservation practice has lagged most lamentably, and where the problems of population pressure upon resources are most evident.

In the development of those newer areas of the world, either for the addition to the land resources of the world, or for their mineral resources, attention to the balance of industry and agriculture is essential. In newer areas, such as the great untapped regions of Alaska, resources must be developed in combination—soils, water and forests, power and minerals must be considered together. Exploitation of one resource alone will lead to an unbalance that may take decades to undo, and will result in improper use and waste of resources.

We have learned the value of combined resource development in our own Tennessee Valley, and in our multiple-purpose river-basin work on our western streams. We have learned that river planning must include planning for watershed protection, adequate forest and grazing management, fish and wildlife preservation. We have learned that cheap power brings industry and raises the level of living of the farmer. We have learned that it makes possible the utilization of mineral and other resources of the area. Such combined resource development makes for the economic stability necessary for the full flowering of our democratic institutions and for the hopefulness for the future that will ever be the real drive behind proper conservation.

Other countries are also taking steps toward combined development: in Venezuela, resources from oil are being invested in programs for the conservation and development of assets that will create a balanced economy when oil supplies dwindle. In the Philippines, plans for the fitting of the resources of the islands into a balanced economic program are under way. In India, in Ceylon, in Pakistan, programs for multiple-purpose water developments to provide for irrigation, navigation, and power are a first order of business of these newer governments. These developments are motivated by the pressure for higher levels of living. Their encouragement will pay dividends in the struggle to achieve a balance of food and population and at the same time result in improved conservation practices.

The United Nations itself has concerned itself with the problem of resource conservation and development. Through its Economic and Social Council, a United Nations Scientific Conference on the conservation and utilization of resources has been called and will be held in the United States next summer to bring together engineers, economists, scientists, and other experts from the various resource fields to exchange experience.

The world's store of scientific and practical knowledge of techniques of resource conservation and development is itself one of the world's greatest resources and one that grows with use and is enlarged by sharing.

The postulate that proper resource conservation and utilization practices are dependent upon the maintenance of adequate levels of living provides a guiding principle for action. That action is to encourage the development of the world's resources for the benefit of its people. In his review of this Nation's resources position a year ago, Secretary Krug pointed out that "world-wide production and world-trade leading to an intelligently balanced use of the world's resources * * * is an essential to our own continued well-being and security. * * * Without a sound world economy, the United States cannot hope to provide the raw materials necessary for the peaceful development of its economy and cannot expect to be secure in its future."

Low living standards and depressions add immeasurably to waste and deterioration of the world's natural resource base. And low living standards and depressions are as catching as the common cold.

The task of this country, therefore, is not to seek an isolation that we cannot achieve, but to move against the disease of resource destruction and disuse. We can provide the knowledge and facilities that will bring un-

developed resources of the world into being. We can share the experience that will assure their conservation and proper utilization. Indeed, we are in the best position to provide the leadership to such necessary programs.

The problems are intermeshed and their solutions are interrelated. Proper resource conservation and development anywhere will profit the planet everywhere.

Great Child Hunt Is on—Host of Stolen Waifs Sought in Europe

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Theodore H. White that appeared in the Detroit News of Tuesday, March 8, 1949:

GREAT CHILD HUNT IS ON—HOST OF STOLEN WAIFS SOUGHT IN EUROPE

(By Theodore H. White)

STUTTGART, GERMANY, March 8.—Fifty international investigators are starting on the greatest child hunt Europe has ever known.

Backed by United States and British military governments, and financed by half a million dollars from the International Refugee Organization, the International Tracing Service will scan every adoption record and orphanage roster in Germany for the last 10 years to find an estimated 100,000 missing children.

Most are waifs seized from homes throughout Europe by Adolf Hitler's mass-kidnaping organization, the Lebensborn.

Children whose blond hair and blue eyes made them racially eligible were adopted into the German population.

Between 30,000 and 40,000 of these children were sent home by UNRRA and the Allied armies in the early postwar years.

How many are left, and how many can be found, no one now knows precisely.

LAST TRY IS MADE

Last year, cramped by lack of funds and blocked by local stubbornness, the ITS could locate only 1,000 children. This year's new dragnet will probably register half a million children adopted in Germany since 1939; from these records the tracing service hopes to pick up enough clues to locate another 10,000 children kidnaped from foreign lands. It is a last try.

At best, authorities guess that 50,000 children will be lost forever.

Looking for a child 6 years after it has been stolen, in a torn country where most records have been scattered if not deliberately falsified, makes finding a needle in a haystack easy. Investigators have to be linguists, detectives, and child psychologists. An 8-year old seized when he was 3, and who now speaks only German, can scarcely remember his origins.

AWAKEN MEMORIES

Sometimes the investigator relaxes the child by speaking soothingly in German, then casually drops a question in Polish, French, or Croatian into the conversation. The child answers casually in the same language, and his nationality is proved.

Occasionally a lullaby or snatch of Christmas song will kindle remembrance. Once his nationality is established, the investigators must go on to find his original name, his home town, his parents' names.

Sometimes the child's only memories are odd impressions—the color of the house next to the baker shop; his uncle's beard; the shrill voice of his aunt.

The nerve center of the child hunt is a loft in a wing of a woolen factory in Esslingen, in southern Germany. On cards are recorded the names of 75,000 children about whom inquiries have been made or information is available. There are 75,000 cards in the catalog—but there are only 18,000 case histories of children located.

GERMANS HOLD BACK

German cooperation has so far been cold and forced; Germans who have adopted foreign children are reluctant to give them up, and their officials shield them.

Merely locating a child is not enough. Frequently the complications begin only after the child is found.

Take the case of Marian Gajewy, a Polish boy born in Poznan in September 1935. He was seized by the Lebensborn and certified as fit for adoption by German couples. He was moved first to an orphanage in Kalisch, then to another in Austria, and finally was adopted by a German family.

The Lebensborn destroyed all records of his origin, but forgot to destroy the files of a company with whom they insured children under a group policy. In the office of the insurance company, an alert investigator discovered the boy's name, birthplace and ultimate disposition.

He had been taken in 1944 by an SS colonel who lived in a handsome gray stucco home right in Esslingen, two miles from the headquarters of the child hunt!

PARENTS MISSING

Checking the record further, the tracers found that the colonel, one Karl Denzler, was listed in category II of Nazi war criminals, was an unrepentant Nazi, had adopted the child in 1948 in Esslingen with documents of questionable validity and refused to give him up.

It is now up to the Polish Government, through diplomatic channels, to convince the United States military authorities that the boy should be handed back.

Meanwhile Colonel Denzler, who appears to be doing quite well, blusters and says no one can take the boy away from him.

In preparing for the big operation, the ITS ran an experimental dragnet through Esslingen itself.

When they checked Denzler's possession of the child against the Esslingen records, they found that local German officials had omitted the case entirely. How many other thousands of foreign children will remain hidden in undiscovered files no one will ever know.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. CELLER. Mr. Speaker, the New York Herald Tribune today reports that the New York County Medical Society, the largest constituent body of the American Medical Association, has turned down the AMA's $25 assessment to provide a fund for lobbying against the national-health-insurance legislation.

I want to call particular attention to the reasoning of those opposed to the assessment as reported by this Republican newspaper. It said:

Opponents of the assessment accused the AMA of consistently fighting change and charged that the "educational plan" was merely propaganda for maintaining the status quo.

Apparently the AMA's biggest group of members agreed, for the vote against the assessment was 432 to 333.

Under leave to extend my remarks in the RECORD, I include this article from the New York Herald Tribune of March 1:

NEW YORK PHYSICIANS REVERSE STAND ON AMA LEVY—COUNTY SOCIETY, LARGEST IN ORGANIZATION, VETOES $25 ASSESSMENT, 432 TO 333

The New York County Medical Society, largest member group of the American Medical Association, last night withdrew its support of the AMA's plan to combat compulsory health insurance. The AMA plan calls for a $25-a-member assessment to raise $3,000,000 for an "educational campaign" in behalf of various voluntary prepayment systems.

At its last meeting, on January 24, the society passed a resolution which approved the assessment and in general backed the AMA's stand on the matter. Approval was carried by a clear majority, but only after bitter debate. It was then voted to reconsider the motion at the next meeting.

That meeting was held last night and the resolution was defeated, 432 to 333. The meeting was held at the New York Academy of Medicine, 2 East 103d Street.

Also defeated in last night's session was another resolution, offered by the society's executive committee, to approve a 12-point program that has been offered by the AMA as a "constructive" answer to the Government's proposed compulsory insurance plan. This resolution, however, will be reconsidered at the next monthly meeting of the society, March 28, and could be adopted or amended at that time.

Opponents of the assessment accused the AMA of consistently fighting change and charged that the "educational plan" was merely propaganda for maintaining the status quo. Proponents answered that they were in favor of voluntary health-insurance plans because they have proved workable. They said they were opposed to government control of medicine because such a plan had been tried in other countries and had led to the demoralization of medicine.

In some cases the speakers resorted to invective and often ill feeling was obvious. Both sides charged at least once that the other was trying to slip something through by unethical parliamentary procedure.

General Pulaski's Memorial Day

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the City Commission of Grand Rapids, Mich.:

Whereas the city commission, under file 88239, has received a request for a resolution memorializing the Congress of the United States to pass and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution: Now, therefore, be it

Resolved by the City Commission of the City of Grand Rapids, and the State of Michigan in session assembled:

SECTION 1. That we hereby memoralize and petition the Congress of the United States, to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending designating October 11 of each year as General Pulaski's Memorial Day.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, the Speaker of the House of Representatives of the United States, and each of the United States Senators and Representatives from Michigan.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following letter which has been directed to the President from Mr. Ernest H. Gaunt of the Andover-Gaunt Textiles, Inc., Lawrence, Mass.:

MARCH 4, 1949.

Hon. HARRY S. TRUMAN,
President of the United States,
White House, Washington, D. C.

DEAR MR. PRESIDENT: May I respectfully suggest that if your advisers on tariff and reciprocal trade agreements have not apprized you of these facts, that you yourself take them into consideration. You can have their accuracy checked. I myself have checked their accuracy and believe them to be correct.

Greater Lawrence, which depends almost entirely on the manufacture of woolen-worsted cloth, now has 10,000 employees out of work. This has come about gradually, but the speed of displacement has increased very rapidly in the last 3 months.

This accelerated displacement of woolen-worsted wage workers is very largely the result of the reciprocal-trade agreements in the form they were before the now proposed further reduction which has passed the House.

During 1948, there were 8,000,000 yards of cloth, 2½ times as much as in 1947, imported from England. The British Board of Trade has announced that it expects to increase this by 80 to 90 percent during 1949.

This 8,000,000 yards of cloth, all of which can be woven here in the city of Lawrence, at high wages, would currently employ on three shifts the 10,000 unemployed for the first 3 months of this year.

On one shift this 8,000,000 yards will employ 10,000 for 9 months of this year.

Your advisers on tariff and reciprocal trade agreements can easily tell you what further disaster will happen to this area of Greater Lawrence (as well as to other textile areas in New York, New Jersey, and Pennsylvania)—if the tariff rates are further reduced as proposed in the pending legislation.

From the point of view of small manufacturing establishments in the woolen-worsted industry, this exporting of 10,000 jobs to England, has also hurt many small woolen-worsted manufacturers. The woolen-worsted industry together with the clothing-manufacturing industry, is one of the two remaining industries which still have a large proportion of small plants.

This 8,000,000 yards of cloth would run 32 plants of my size for a full year; or 16 small plants employing 200 for one year; or 64 smaller plants employing about 50 workers, for 1 year.

I doubt if your advisers from the west and south, who have products to export, and those from Detroit who want to export automobiles, and those who want to export American office machines—will tell you how they are benefiting at the expense of the large woolen-worsted cloth manufacturing industry, the watch industry and other industries.

I doubt that your advisers have pointed out to you that the English and Italian and Japanese (and soon the French, Belgian and Czechoslovakian) woolen-worsted manufacturers—are not going to supply funds to the United States of America to pay the rapidly rising unemployment benefits to United States wage workers.

Nor can our United States Government tax the profits of English, Italian, Japanese, French, Belgian and Czechoslovakian woolen-worsted manufacturers.

How do your advisers propose to raise the vast sums necessary to pay these unemployment benefits during the approaching recession or depression?

And how do your advisers propose to raise taxes to replace those which your free-trade policies will make United States manufacturers unable to pay because they will have no profits to be taxed?

Under the principle of indemnification, as when land is taken by right of eminent domain, when a project is considered to be for the general welfare—shouldn't the wage workers in the textile industries and other industries affected by the reciprocal trade agreements, be fully indemnified for the export of their jobs?

And shouldn't the owners and stockholders of small textile and other industries who are now losing their assets, be paid from the general treasury on the theory that the reciprocal trade agreements are for the general welfare of the United States of America, and of the world?

I sincerely doubt whether in the short long-run, the lowering of tariff rates will benefit the general welfare either of the United States of America, or of the world.

But if I am wrong and your advisers are right—shouldn't this parity or indemnification be paid to United States displaced wage workers and United States displaced small manufacturers?

Yours respectfully,
ANDOVER-GAUNT TEXTILES, INC.,
ERNEST H. GAUNT.

Reed-Bulwinkle Act Hurts South—Relaxation of Antitrust Laws Not Proper Method for Solving Freight Rate Problem

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an article concerning the Reed-Bulwinkle Act, passed during the last session of Congress, which law exempts the railroads from the provisions of the Federal antitrust laws. This article has been called to the attention of the members of the Select Committee on Small Business of the House of Representatives, and I commend its reading to the membership of the House and others interested in this subject.

The article is as follows:

The Georgia rate case in 1944 against the principal eastern and southern railroads was not just another lawsuit under the Sherman Act. It was an unprecedented appeal to the courts by one of the sovereign States to strike down the man-made discriminatory freight rate barrier to the development of the human and material resources of the Southern States. It was a major attempt to eliminate the poverty that was an evil in itself and the source of some of the gravest problems of this underdeveloped region. The suit by the State of Georgia gave the promise of better living standards for 25,000,000 people resident in 9 States.

In March 1945, the Supreme Court accepted jurisdiction in the Georgia suit. Over the next 3 years the financial interests controlling the railroads waged a determined fight to exempt the carrier rate-making organizations from the Sherman antitrust law and thus destroy the Court's jurisdiction. Finally, in 1948, the Reed-Bulwinkle measure providing for such exemption was enacted into law by the Eightieth Congress over President Truman's veto. The high purposes of the Georgia suit were swept aside. At the dictation of a powerful financial lobby the Supreme Court was deprived of jurisdiction. They demanded and retained their ability to extract monopoly profits even at the cost of lower living standards for millions of people in many States.

The basic contention in the Georgia suit is that the defendant railroads were linked in an alliance with northern manufacturing and financial interests to enforce a system of discriminatory freight rates against the products of southern industry. The conspiracy was designed to prevent the products of southern industries from competing with the products of northern industries in their rich and populous home markets. The rate discriminations had, over a period of years, brought widespread complaints from southern shipping and producing interests, Congressmen, and governors during the thirties without any remedial action by the Interstate Commerce Commission.

TVA ATTACKS DISCRIMINATORY RATES

In January 1939 a Tennessee Valley Authority study of this problem, issued as a congressional document, held that high, discriminatory freight rates constituted a great handicap to the development of manufacturing industries in the South and West. In February 1939 a Senate committee held hearings on proposals to eliminate these discriminations by statutory enactments. Finally, in July 1939, after years of prodding by southern governors and Congressmen, the Commission launched an investigation to determine whether the existing system of freight rates caused undue preference and prejudice among the regions of the country. Five years later in 1944 the Commission had not yet submitted its report.

In this situation, the State of Georgia in 1944 attacked the principal eastern and southern railroads in the United States Supreme Court, charging the defendants with conspiracy to cripple the economy of the State of Georgia and the entire South. Destruction of this conspiracy would benefit not only Georgia but the entire South.

The Supreme Court took jurisdiction in March 1945. The defendants are charged with conspiracy to restrain trade and commerce by fixing arbitrary and noncompetitive rates for transportation of freight by railroad to and from Georgia. The rates are alleged to be fixed as "(a) to deny to many of Georgia's products equal access with those

of other States to the national market; (b) to limit in a general way the Georgia economy to staple agricultural products, to restrict and curtail opportunity in manufacturing, shipping, and commerce; (c) to frustrate and counteract the measures taken by the State to promote a well-rounded agricultural program, encourage manufacture and shipping, provide full employment, and promote the general progress and welfare of its people; and (d) to hold the Georgia economy in a state of arrested development." The complaint alleges also that the rates so fixed are approximately 39 percent higher than the rates for like commodities and distances between points in the North.

Justice Douglas expressed the Court's position with eloquence and force.

"If the allegations of the bill are taken as true, the economy of Georgia and the welfare of her citizens have seriously suffered as a result of this alleged conspiracy. Discriminatory rates are but one form of trade barriers. They may cause a blight no less serious than the spread of noxious gas over the land or the deposit of sewage in the streams. They may affect the prosperity and welfare of a State as profoundly as any diversion of waters from the rivers. They may stifle, impede, or cripple old industries and prevent the establishment of new ones. They may arrest the development of a State or put it at a decided disadvantage in competitive markets. Georgia, as representative of the public, is complaining of a wrong, which if proved, limits the opportunities of her people, shackles her industries, retards her development, and relegates her to an inferior economic position among her sister States."

MORE DISCRIMINATION: 1945–48

From 1945 to 1948 when the Reed-Bulwinkle proposal to exempt the railroads from the antitrust laws was being urged on Congress important and authoritative new evidence on freight rate discrimination against the South was made public. The ICC in May 1945, a few weeks after the Court took jurisdiction in the Georgia case, handed down a decision and order on discrimination in interterritorial freight rates culminating the investigation begun in 1939. The order made a beginning toward correcting the discriminations.

The Commission's order was upheld by the Supreme Court which declared the inference of prejudice to the South and West to be irresistible and that its continued maintenance "preserve not the natural advantages of one region but man-made trade barriers which have been imposed upon the country."

The decisions by the Supreme Court in accepting jurisdiction in the Georgia case (1945) and in enforcing the order by the Interstate Commerce Commission (1947) indicated a very real possibility that the discriminatory rate practices against the products of southern industry by defendant northern and southern railroads would be held to violate the Sherman Act. Since they had no intention of surrendering their control over railroad affairs, the financial interests who controlled the rail carriers took the only course open to them. They coerced the Eightieth Congress into exempting the railroads from the Sherman Act thus denying the people of the South the right to have this issue decided in the country's highest court.

The combination was formed in 1934 in an effort to ward off indulgence in competitive business practices by the operating officials of the railroads. The depression of the early thirties genuinely alarmed the managers of industrial and railroad investments who came to believe that the only way of preventing a wholesale decline in the value of securities of railroads and other industries controlled by them was to preserve the high and discriminatory freight rates that made monopoly profits possible. The task of forming a new organization was entrusted in 1933 to a national steering committee of railroad directors. The members of this committee and their principal financial and industrial affiliations were:

Pierre S. du Pont—director, Pennsylvania Railroad, E. I. du Pont de Nemours, General Motors. Mr. du Pont was, of course, a powerful financial figure by virtue of his holdings in the various du Pont companies, including General Motors. According to Senate Document No. 206, Seventy-ninth Congress, Economic Concentration and World War II, the Pennsylvania Railroad is in the Kuhn Loeb & Co. financial interest group.

Under the leadership of Pierre du Pont and General Atterbury and associates of the Pennsylvania Railroad a plan for the private government of the railroads of the United States was evolved which was consummated on September 21, 1934, the new organization being known as the Association of American Railroads. The overlordship of the new organization by the railroad directors on the steering committee was provided by naming a member of the director's steering committee as financial adviser to the new association. While there was no provision for the systematic review of the AAR's decisions such as was provided under the western agreement by the committee of directors, the steering committee stood ready to compel "a subordination of individual initiative to the dictates of group interest." The Georgia brief charges that "gradually the financial groups came to regard the association as merely a convenient vehicle for carrying out the recommendations they arrived at in Wall Street."

The domination of the big northern railroads over the railroads of the South was affected through a maze of rate-making associations all of which were subordinate to the new AAR. The Interstate Commerce Commission conceded this control (235 ICC 329–1939), "we are persuaded that the northern carriers as a group actually do effectively control the rates within the North and also the north-bound interterritorial rates * * *."

The Georgia complaint charges that results detrimental to the South were brought about by some 60 private-rate bureaus, committees, conferences, and associations which were utilized by the defendants to fix freight rates; that no southern road could change joint through rates without the approval of these private agencies; that this private rate-fixing machinery which was not sanctioned by the Interstate Commerce Act and which was prohibited by the antitrust acts put the effective control of rates to and from Georgia and other States of the South in the hands of the defendant northern railroads and the AAR.

The complaint also charges that the defendants whose lines were wholly or principally in the South are "dominated and coerced" by defendant northern roads and that they cannot publish joint through rates because in many instances the northern carriers refuse to join in such rates. One of the means through which the coercion was executed was the joint conference of contact committees in which each of seven regional freight associations have one vote. Since the four freight associations in official territory usually stood united in opposition to the proposals by southern carriers for interregional rates equal to those in official territory the proposals would fail even where the two western associations supported the South.

AAR BOOSTS SOUTHERN RATES

At the height of the dissatisfaction in the South with interregional freight rates into the northern or official territory, Mr. Pelley, president of the AAR, in 1937 reminded the presidents of the southeastern railroads that the South lacked the "highly integrated system of filings, docketings, reviews, and appeals" used by the organizations in the East and West "to better control the rate situation and to avoid to the fullest extent consistently possible rate erosion." Mr. Pelley strongly recommended an organization substantially the same as was used in the East and West and the executives of the dominant southern lines readily accepted the proposal, one southern executive even reporting "that for several years it has been entirely too easy a matter to get on the docket propositions for reduction in rates."

The southern tariff executives devised a plan to "prevent improper whittling away of rates." The scheme followed the lines of the plan found effective in the North. Thus southern industry has been saddled with high discriminatory rates in shipping to the northern and eastern sections of the United States.

Lake Calumet-Sag Channel Project

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. O'HARA of Illinois. Mr. Speaker, in the city of Chicago and especially in the sections on the South Side of that city is a keen interest in the Lake Calumet waterways development. This is a project which when completed will affect most beneficially the entire Nation. For the States of the Middle West, reaching out to share in the growing export trade which more and more is becoming a vital factor in our national economy, it is a project of urgent necessity.

During the war years progress on the Lake Calumet waterways project was necessarily halted. Now it is the universal sentiment among the people of Chicago, and I think rather generally among the people of the Middle Western States, that actual work on this project should be resumed with the least possible delay.

With this objective, a request has been made for an appropriation sufficient to do certain preliminary work and to deepen what is known as Sag Channel, one of the tributary waterways. In support of this appropriation arguments were made on March 2, 1949 before the Civil Functions Subcommittee of the House Committee on Appropriations by Stuart Bradley, Esq., a distinguished Chicago lawyer representing the Chicago Chamber of Commerce and industry and by Congressmen Thomas J. O'Brien, James V. Buckley and Neil Linehan, the last two of whom represent districts in which the project is located. Responsive to the wish of my constituents, and in service to their interest, I accompanied this delegation and presented such argument in support of the appropriation as due regard for the time of a busy subcommittee of my colleagues seemed to me proper.

That the Members of the House may be familiar with the merits of this vitally important development, as seen by the people of the Second District of Illinois, and under leave to extend my remarks in the Record, I include my remarks before the subcommittee of the Committee

on Appropriations on the Lake Calumet-Sag Channel project:

Mr. Chairman, to the people of the district which I represent in the Congress no project of the Federal Government could hold greater interest than the development of Lake Calumet and the system of waterways connecting it on the one side with Lake Michigan and on the other side with the Mississippi River and the Gulf of Mexico.

For the 8 years of their distinguished service in the Congress the Honorable Raymond S. McKeough and the Honorable William Rowan, with vision of the tremendous benefits ahead for Chicago and indeed the entire Middle West, devoted themselves tirelessly and with fruitful efficiency to the advancement of this great project. By their efforts they brought the project to a place where but for the intervention of conditions arising from World War II the dream of our people for several decades surely would have been realized.

As the present representative in the Congress from the Second District of Illinois, so outstandingly represented by my predecessors, Mr. McKeough and Mr. Rowan, I could not do less than appear here today to urge upon this committee the provision for an appropriation adequate to do the work immediately required to be done and working toward the ultimate completion of a development of gigantic potentialities and upon which the hard and essential legislative spadework was so well done by the two gentlemen who for four successive terms brilliantly represented the Second District of Illinois.

Since that time there has been in Illinois a reapportionment of the congressional districts, and the area wherein is located this project is mainly in the district now represented by the Honorable JAMES BUCKLEY and in part in the district represented by the Honorable NEIL LINEHAN, who are here today to urge this appropriation more forcibly than can I, and with more particularity. To them, as properly I should, I leave the principal presentment.

But whether the project is in the Second District or, as is fact, in territory closely adjacent thereto, is of no moment. Every man and woman—I would say every child of high-school age—in my district is keenly alerted in enthusiastic championing of this great development. There is not, in my knowledge, a business or a labor group, or a women's club, or a post of war veterans, or indeed of any civic group in all the Second District of Illinois which is not for this project.

It is because the people in my district, having had the benefit of a discussion of the matter for several decades, are thoroughly familiar with it and the endless possibilities certain to be opened up when the ships of the world come to anchor and to load in Lake Calumet and for many miles will stretch the factories and plants of the greatest of all industrial districts.

For my own part I have believed in the future of Lake Calumet and the navigation project about as long as I have had adult years. To me it seemed inevitable that the improvement in all its fullness would come and with its completion Chicago, as the servitor of all the rich Middle Western domain in a new era of world and domestic commerce opened up, would surpass by far her marvelous growth from a village on the river to the great inland metropolis of the United States.

It is my well-considered judgment, shared in I am certain by many men and women of balanced minds and conservative sense in evaluations, that with the completion of the entire improvement there will come a metropolitan growth on the South Side of Chicago and extending to the Indiana line which will equal if it does not surpass in population the Chicago of today, all adding up to making the new Chicago resulting therefrom conceivably the first city of the world in wealth, territory and population.

It is natural, therefore, that the people of the district I represent, being so advantageously located to benefit directly from the marvelous expansion expected are looking with such keen eagerness to the Eighty-first Congress to clear the way after the halt enforced by the destructive years of warfare, to clear the way for the resumption of this great constructive work by making available the appropriation immediately needed in certain preliminary work and in deepening the Sag Channel to permit the free passage of vessels in their voyage to and from the dockage at Lake Calumet.

Of this, Congressman BUCKLEY and Congressman LINEHAN, who by diligent study and long periods of personal inspection and investigation, have acquired a broad and comprehensive technical knowledge and understanding of the subject, will speak at great length.

I wish to address myself briefly to the phase of how this improvement fits into the pattern of the modern America we are setting about to build in a changed and of-the-today world. Suffice to call to mind the trend, forced by modern developments in efficiency of production and of distribution, toward staggering industries and widely distributed areas of industrially employed populations. In times of peace and contented normal living, which devoutly we hope and pray will ever be our blessing, it is the trend which inevitably will continue. In time of war, which, while we stand united in our firm determination, must never come again, yet must we never in folly forget that in atomic warfare no nation with concentrated industries and population can hope to survive, it is much more than the following of a trend. It is the acceptance of the only rule of survival known to common sense.

This project contemplates that ultimately ocean-going vessels will come through Calumet Harbor from Lake Michigan and the Atlantic beyond, that ocean-going vessels will come through the Sag Channel from the Mississippi and the Gulf of Mexico beyond, that these vessels will discharge their cargoes on the docks at Lake Calumet from whence run a network of railroads servicing a vast territory.

With such facilities for the cheap and prompt handling of coal and other freight, made available throughout a wide range, it follows as day the night that industrial plants, not clustered together fighting for breathing space, but separated and well scattered, will dot this extensive area.

While the direct benefits of the development will go first to the territory in Chicagoland and in adjacent Indiana, and then generally to the States of the Middle West, the indirect benefits will be general throughout the Nation. That the prosperity, well-being and security of the country will be greatly advanced no one, I believe, will question.

Mr. Chairman, I appreciate the generous allowance of the time of a very busy committee which you have granted me and in closing wish to remark that if any proof of the vital interest of the great city of Chicago in this project were needed such is furnished by the presence here of the Honorable THOMAS J. O'BRIEN, distinguished and beloved member of the Ways and Means Committee of the House and, in the esteem of his colleagues of Illinois and of the people at home, spokesman for all Chicago in matters of great importance and of deep concern to that city.

Stalin Tries To Undermine Slavic-Americans

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. DONDERO. Mr. Speaker, while Dictator Stalin is trying to distract us with his phony peace offensive, the agents of the Kremlin are working desperately to undermine the loyalty of the American people to the United States. This is part of the Communist scheme of conquest by fifth-column tactics, in exactly the same manner as it was part of Hitler's method.

Soviet propaganda has been directed chiefly at the 10,000,000 Americans of Slavic descent. The importance of this activity is evident if we recall that as much as 50 percent of the working force in many of our major industrial centers—such as Detroit and Pittsburgh—is of Slavic origin. The American Slavs were part of the sinews of our wartime industrial armament, just as they are a vital part of our peacetime prosperity.

The deadly parallel between Hitlerite and Stalinist propaganda methods was brought forcefully to our attention on November 18, 1948, when the Moscow propaganda radio network launched a "permanent weekly broadcast for American Slavs." The tactics and the purposes of this radio series are in every way identical to the Berlin wartime broadcasts aimed at the Nazi Bund. I am convinced that Stalin will fail in subverting the loyalty of foreign-born Americans as miserably as did Hitler.

During the weeks that the Moscow series has been on the air, the viciousness of the anti-American attacks has increased. Reminiscent of the defeatist broadcast of Axis Sally, is the constant emphasis on the invincibility of Russia and the weakness of our Nation and the invincible strength of the Soviet Union. On the very first program of the Moscow series, Comrade Mochalov, the secretary of the Soviet All-Slav Committee, set the keynote of the defeatism that the Communists hope to spread among us by telling American Slavs that the democratic anti-imperialist camp, headed by the U. S. S. R., is immeasurably stronger than the reactionary imperialist camp headed, of course, by the United States.

"There is no doubt," he went on, "that in the struggle between democracy and reaction, democracy will win." We all know that in the vocabulary of the Kremlin democracy is defined as the brutal terrorism of communism; and our free institutions—institutions under which individual rights are the paramount concern of the state—are described as reactionary.

The Slavic broadcasts from Moscow have been particularly emphatic in stirring our people against the foreign policy of their Government. "Progressive Americans of Slav origin" are constantly

urged to work for a "policy of collaboration with the U. S. S. R."

Equally emphatic has been the attempt to stir up discontent and to turn American Slavs against any firmness toward domestic Communist agents. Following the arrest of George Pirinsky, the executive secretary of the Communist-controlled American-Slav Congress, Moscow radio told American Slavs that the arrest of this well-known Communist "called forth not only your anger but the anger and indignation of the Soviet people."

On December 2, Gene al Gundorov, chairman of the Soviet All-Slav Committee, broadcast to this country a completely untruthful attack on the State Department which conveyed the false impression that Slavs had been discriminated against. Gundorov and other top Communists were sent to the United States 2 years ago to attend a meeting of the American Slav Congress in New York, and immigration authorities insisted that under the law delegates of foreign governments must register as agents of such governments. But Comrade Gundorov made a sensational falsehood out of the incident, asserting that the State Department "demanded that we register as enemy agents. In case of noncompliance with this order it threatened us with arrest and court procedure. We were not able to take advantage of your hospitality only because State Department officials failed entirely to take into consideration the desires of progressiveness—progressive in Soviet speech means Communist—progressive organizations."

Not a word of this tale is true, because Gundorov and the other Reds were permitted to attend the Slav Congress as guests and did so. The State Department insisted that they must register as foreign agents, not as Gundorov claims—"enemy agents"—only if they represented themselves as official delegates. Perhaps Comrade Gundorov was being truthful about his mission when he used the term "enemy agents." We all know that every Communist, whether he is here or abroad, is an enemy agent.

The current propaganda line of the Moscow American series is Stalin's latest "peace offensive." American Slavs are now being urged to intensify their opposition to America and to American foreign policy. They are urged to unite against the country which has adopted them and given them shelter and freedom. Already, the American Slav Congress—which has taken the place of the Nazi Bund in subversive activity—is trying to organize peace rallies among Americans of Slavic origin. Peace rallies which are intended to destroy the loyalty of people, to weaken our will to defend our democracy, to make us an easy prey to Communist domination.

Again I say, in this the Kremlin will be as disappointed as Hitler. Slavs, just as other Americans, are and have always been loyal citizens. They fought with equal valor in World War I and in World War II. If Stalin foolishly decides to plunge the world into the third world war, he will find American Slavs playing a heroic part in the victorious American armies.

What happened to Hitler and to Tojo should be a warning to Stalin. We cannot be destroyed by vicious propaganda. We stand ready, with God's help, to defend our liberties.

We will not surrender and we cannot be defeated.

Information About General Accounting Office

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. McCORMACK. Mr. Speaker, I herewith include in my extension of remarks an informative letter sent to the Members of the Congress by Hon. Lindsay C. Warren, the Comptroller General of the United States:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, February 23, 1949.

DEAR CONGRESSMAN: The other day two Members of Congress came to me seeking some information about the General Accounting Office, and the conversation broadened into a general discussion. They expressed amazement at some of the things I told them, and called my attention to the large turn-over in the Congress since my term began on November 1, 1940, and to the inability of so many Members to find time to inform themselves about the Office. They mentioned that the Annual Report of the General Accounting Office had not yet been printed, and that at best few Members have time to read such reports. They suggested that I tell other Members of Congress some of the things I said to them, and that is the reason for this letter.

The General Accounting Office is a nonpolitical agency. It is set up as the agent of the Congress and has always been a part of the legislative branch of the Government. Congress emphasized that in the 1945 Reorganization Act, and the same provision is now in the pending reorganization bill which has already passed the House. The Comptroller General is appointed for a term of 15 years and cannot be reappointed, and can only be removed by the Congress.

On April 15, 1946, we reached our peak employment of 14,904. On February 1, 1949, our personnel numbered 9,499, showing a net reduction of 5,405. This reduction was made without any instructions from the Congress, which has always given us the appropriations we have requested. For the next fiscal year we hope to have a still further small reduction in personnel. At the time I took office the annual appropriations made for the entire Government were about $17,000,000,000. They are nearly forty-two billion for the present fiscal year.

The General Accounting Office is one of the very few agencies in the Government that not only pays its way but in addition makes a substantial contribution each year to the Treasury and saves untold further amounts by the deterrent effects of its work. I am sure it will be interesting to you to know that in the last 8 years and up until January 1, 1949, the General Accounting Office has collected back and put back into the Treasury over $608,000,000. This money had been illegally or otherwise improperly paid out by various offices in the Government, and it is a fair statement to say that little of it would ever have been recovered except for the General Accounting Office. Our appropriation for the current fiscal year is $35,901,000. The latest pay raise amounted to $3,000,000 for the Office. I am happy to report that we will absorb $1,000,000 of this in our current appropriation. During the last five fiscal years the General Accounting Office has returned $13,000,000 of its appropriations, unused because we were unable to obtain the type of employees needed.

During the last fiscal year we audited over a year's payments by all the departments of the Government, with over half of our audit force working outside of Washington and on the site; we settled over 550,000 claims; settled over 62,000 fiscal officers' accounts; made 429 legislative reports to the Congress and its committees and handled 6,605 inquiries from Members of Congress; rendered over 12,000 decisions to the departments and agencies, claimants, and others; visited 1,166 different offices in 395 cities on inspections and surveys; examined over 800,000 contracts; and audited the multi-billion-dollar operations of the Post Office Department. We are constantly sending to Congress our commercial-type reports on audits of Government corporations.

Our methods and systems are under constant review to effect economies and improvements, wherever possible. We are continually lending assistance to agencies in the executive branch on legal and accounting problems, and are now carrying on with the Treasury Department and the Bureau of the Budget, with participation by all of the agencies, a joint accounting program which has met with enthusiastic reception. This program bids fair to produce outstanding accomplishments for better government.

The General Accounting Office is an office of law. Its duty is to enforce the will of Congress with respect to expenditures of the taxpayers' money.

As the General Accounting Office is one of the few agencies of the Government that does not have a press agent, I am sending you this information which I hope will be of interest to you.

With best wishes, I am,

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General of the United States.

Can GOP Beat Truman?

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article by Ralph W. Page, which appeared in the Philadelphia Evening Bulletin, under date of March 5, 1949, entitled "Can GOP Beat Truman?":

CAN GOP BEAT TRUMAN?

(By Ralph W. Page)

WASHINGTON, March 5.—The President is certainly right in one statement. This is that the protagonists in Congress are engaged in rehashing all the issues and arguments battled up and down the land during the late campaign.

The hearings before committees, the roaring of the Senators on the floor, the fulminations of the party organs, the editorials in the partisan press contain hardly a new adjective or even a new syllable. Over and over and over the same stale, shopworn contentions are reiterated, precisely as if an election settled nothing at all.

As a matter of fact, practically every phrase and innuendo used during the campaign and now repeated in Congress were coined and broadcast to the saturation point by Landon and Roosevelt in 1936.

From that day to this the Democrats have been pursuing a consistent program which the Republicans castigate as socialistic, totalitarian, extravagant, and particularly ruinous to business with a capital B. Besides advocating their program, the Democrats charge that the Republicans are the minions of privilege and corporate combines; champions of retrogression, protection and isolation.

If there exists a man, woman, or moron in the country who doesn't know these recriminations by heart they are deaf, dumb, and blind. And everytime the issue is presented to the Nation the vote goes the same way.

The difficulty BOB TAFT and company face in this Rip van Winkle revival is the palpable fact that Truman looks about as much like a dictator as the corner grocer, and that this business whose ruin they have been predicting is incomparably bigger and four times as profitable as when they started their baleful prophecies in the dim past.

They seem to have an obsession that some sort of victory can be obtained by using the archaic procedures of the Senate to drag out and fritter away decisions and postpone or frustrate the administration's program by endless palaver and parliamentary legalistics.

"Look," they say, "the President is defeated."

They seem to fancy that this sort of negative success proves that public opinion has changed and so provides a hopeful background for the next campaign.

All this may be so. But there is nothing in recent history that supports such a conclusion. A steady policy of obstruction has not prevailed to garner them enough new votes to carry a township in the last 16 years. None of the voters who shifted jumped on this wagon. Those who did change wandered off after Wallace's moonbeams or the Ku Klux complex.

The Late J. "Perry" Alvey

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. MACK of Washington. Mr. Speaker, last week when I learned of the death of J. "Perry" Alvey, who for many years has been in charge of the Bonneville Power Administration offices in the National Capital, I paid a tribute on the floor of the House to the memory of this courteous and able public servant.

I said that of all the public employees I have met during my 2 years here he had been to me one of the most helpful.

The high esteem which I entertained for Mr. Alvey was held by others who knew him even better than I did. Today, I had a letter from Dr. Paul Raver, Administrator of the Bonneville Power Administration, in which Dr. Raver pays a high tribute to the memory and work of Perry Alvey.

Under leave to extend my remarks in the Appendix of the RECORD, I include Dr. Raver's letter to me in which he pays a high tribute to the memory of his friend and associate of many years. The letter follows:

DEPARTMENT OF THE INTERIOR,
BONNEVILLE POWER ADMINISTRATION,
Portland, Oreg., March 4, 1949.

Hon. RUSSELL V. MACK,
House of Representatives,
Washington, D. C.

MY DEAR MR. MACK: The death of J. "Perry" Alvey, who was one of the first Bonneville Power Administration employees and helped draft the original Bonneville Act, is an irreparable loss to all of us.

Perry, as he was known to all of his friends, was not only widely known in engineering and utility groups of Washington, D. C., and the Pacific Northwest, but was an intimate friend and counselor of hundreds of Senators, Representatives and high officials in all walks of government. As the Washington, D. C. representative of the Bonneville Power Administration since his original appointment by the first Administrator, J. D. Ross, Alvey was a kindly, efficient and effective public servant whose integrity and honesty were never questioned. Having worked closely with him for the past ten years, his passing comes as a great personal loss. His life crusade and first loyalties were always directed toward furthering the sound basic policies of his government and of the Nation's public power development and the principles which were so firmly inculcated in him by the late J. D. Ross, father of Pacific Northwest power development.

The entire staff of Bonneville Power Administration would like to join you in extending its deepest sympathy to Mrs. Alvey in her bereavement.

Sincerely yours,

PAUL J. RAVER,
Administrator.

Completion of Processing of Visa Cases

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. RODINO. Mr. Speaker, on Monday, March 7, 1949, the House passed a joint resolution, House Joint Resolution 160, with amendment. This was to authorize completion of the processing of the visa cases, and the admission into the United States of certain alien fiancées and fiancés of members, or of former members of the armed forces of the United States; as was provided in the so-called GI Fiancée Act (60 Stat. 339), as amended.

I am very happy over the passage of this bill. During the past several weeks, a number of ex-GI's from my district called by attention to the fact that because of the expiration of the GI Fiancée Act on December 31, 1948—their prospective brides, who were still overseas, were unable to join them here in the United States. In every case, the reason cited was beyond the control of the GI or his fiancée. In all of these cases, which were brought to my attention, the pleas have been heartrending.

These men—our ex-GI's—felt that an injustice was being inflicted upon them. They asked me to intercede in their behalf.

In accordance therewith, on February 2, 1949, I introduced H. R. 2150, a bill to extend the period of validity of the act to facilitate the admission into the United States of alien fiancées in cases where the failure to enter within the period heretofore prescribed was the result of causes beyond the control of the parties to the proposed marriage.

It was with a great deal of enthusiasm, therefore, that I joined in the passage of House Joint Resolution 160, which will accomplish the same purpose.

I am certain that not only will the ex-GI's of my district, who solicited my aid, be grateful for this action on the part of our House, but the many others who reside in the United States and who are in similar circumstances.

Virginia's Wildlife Haven Cited as Model for States

EXTENSION OF REMARKS

OF

HON. TOM B. FUGATE

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. FUGATE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include an article that appeared in the Richmond Times-Dispatch on February 20, entitled "Virginia's Wildlife Haven Cited as Model for States."

We of Virginia are proud of the fine work of conservation and propagation of wildlife through services of the department of game and inland fisheries. The last decade has seen the supply of game increase until nimrods are finding undreamed of hunting in our mountain and piedmont areas. Restocking and effective protection have provided the basis for a high level of maintenance.

The article follows:

VIRGINIA'S WILDLIFE HAVEN CITED AS MODEL FOR STATES

Hemmed off from the rest of the State by the towering wall of the Blue Ridge Mountains lies more than 1,500,000 acres of forested game lands which have gained for Virginia a Nation-wide reputation.

This haven for the angler and nimrod in the George Washington and Thomas Jefferson National Forests recently was singled out by the Wildlife Management Institute as a model for action in other States.

Here is what Dr. Ira N. Gabrielson, institute president, had to say:

"A management plan for the Virginia national forests evolved by the State commission of game and inland fisheries and the United States Forest Service has produced startling results during the past 10 years.

"Under the Virginia forest-game management plan deer have multiplied tenfold and bear, turkey, squirrel, raccoon, and ruffed grouse are increasing steadily."

During the past decade the State's program in the two national forests has been directed toward habitat improvement and increasing wildlife resources, game commission officials explained.

Roughly, 1,000 miles of trails and wooded roads have been opened and improved for

game in the two forests. Hundreds of water holes have been established and thousands of food-bearing shrubs and trees planted in clearings along forest edges.

Old orchards have been rejuvenated and their grounds seeded. Clearings have been planted with wildlife food plants. In addition, some 1,700 white-tailed deer have been placed in the two areas.

So successful has been the restocking of many streams in the mountain counties that Virginia can now be said to have some of the best fishing in the East, game commission officials reported.

The program started back in 1938 when the general assembly authorized the State game commission to enter into a cooperative agreement with the United States Forest Service for the management and rehabilitation of the wildlife resources in the two national forests.

It also authorized a special $1 hunting stamp to cover the privilege of hunting and fishing on Federal property. This money reverts right back to the forests in the form of improved wildlife management practices, game officials explained.

When the plan was first adopted there was little hunting in the mountain counties of the State, C. S. Phelps, game official who serves as a coordinator between the State and Federal Government on national forest land issues, remarked. Since then, hunting and fishing in Virginia's vast game lands have been marked by steady improvements.

"This season hunting was better on the national forests than it has been in a long time," J. J. Shomon, publications division chief of the game commission, reported. "In fact, so sharp was the contrast between conditions today and those of one decade ago that many wildlife observers predict that Virginia may soon step out as one of the leading wildlife States in the Nation."

That the Commonwealth may move into the lead as a significant game State is not pure conjecture, State game commission officials point out.

It has all the necessary elements that make for a greater wildlife potential; ideal climate, long growing season, heavy rainfall, rich plant growth, a good interspersion of vegetation, and 3,000,000 acres of potential national forest land of good quality. Roughly 80 percent of the State is forested.

Right now it is believed by State game officials that Virginia has the largest acreage in game lands east of the Mississippi River.

How To Regiment the Country

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Greenfield (Ind.) Reporter of March 7, 1949, entitled "How To Regiment the Country":

HOW TO REGIMENT THE COUNTRY

The debate over price control, which dominated the news not so long ago, has slackened. The most apparent reason for this is that, in most lines, prices have leveled off, and in some lines there has been a distinct downward swing. That is reflected in the various cost-of-living indexes.

This does not mean that the issue has gone permanently out of the limelight. Strong inflationary factors—notably the enormous spending of the Federal Government—are still with us. It is possible that the upward trend in prices will again be resumed. Should that happen, political pressure for price controls of some kind will be turned on full blast. The public should keep in mind the issue involved, and what a dictated economy could mean.

The basic fallacy of price control is that people cannot be forced to produce goods and sell them at a price which allows no profit, or may entail a loss. Take meat for an example—it was the center of the price controversy some months ago. If farmers and ranchers saw that the Government was determined to fix the price at an unprofitable level, they would gradually stop producing it. The result would be scarcity and then an actual shortage. More and more of the available supply would go into channels which scoffed at the law.

Price control, by its very nature, would necessitate complete control of the entire economic system if it were to even partially succeed. It would be unworkable, for example, without ironhanded wage control. Thus, in time, it would create a regimented economy—which is the basic step toward the totalitarian state.

The Basing-Point Issue

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. MANSFIELD. Mr. Speaker, in my opinion the real danger of H. R. 2222 is a hidden one. The danger of this bill is that it dignifies a false issue. This false issue is that the antitrust laws need so-called clarification. Because of this alleged need of clarification it is claimed that it is necessary to amend these laws. H. R. 2222 proposes certain amendments which are claimed to be innocuous in their impact on the basic foundations of the antitrust laws. However, by proposing amendments at all, and by embracing this false issue of clarification, H. R. 2222 opens up the door for even the most vicious bill deliberately designed to scuttle the antitrust laws completely. At least this is my view of it.

Moreover, H. R. 2222, judged solely by its own provisions and entirely apart from the consideration that it may be used as an entering wedge for avowedly unfriendly proposals, is alarming to that part of our business community which is sincerely and naturally dedicated to antimonopoly principles. I have in my hands copies of three telegrams addressed to various Members of this House by the vice president in charge of the Washington office of the National Federation of Small Business. These speak for themselves and I respectfully commend them to the attention of the Congress and of the American public:

Hon. EMANUEL CELLER,
Chairman, House Judiciary Committee,
House Office Building,
Washington, D. C.:

Small business of this Nation will be amazed when they receive the word of the favorable action by House Judiciary on H. R. 2222, which we believe will place a moratorium until July 1, 1950, on the Supreme Court decision in the basing-point case. We look upon this action as another attempt to suspend antitrust laws. A year ago it was exemption for the railroads and other interstate carriers. Now for the cement and allied industries. The future of antitrust enforcement looks very bleak and another blow to destroy small business.

Hon. ADOLPH J. SABATH,
Chairman, House Rules Committee,
House Office Building,
Washington, D. C.:

I recall your splendid remarks on the floor of the House when your Committee on Rules urged the adoption of the Patman resolution setting up the Small Business Committee. Apparently members of the House Judiciary paid no attention to your committee's recommendations in their approval of H. R. 2222 which means, if the House approves it, it is another death blow for antitrust law enforcement. In the Eightieth Congress exemption to antitrust laws was given to the railroads and other interstate carriers. Now, for a year or more, to cement, steel, and other allied concentrated industries. in the sole interest of independent small business of this Nation and for 100,000 or more members of this association, we urge you and your committee not to report out H. R. 2222. The Democratic platform pledged—one, intensive enforcement of antitrust laws, with adequate appropriations; two, strengthening of existing antitrust laws where gaps exist; three, a positive program to promote competitive business, independent trade. The Republican platform pledged aggressive antitrust action. We believe if the House approves H. R. 2222 both party platform pledges are repudiated and small business finds themselves sinking deeper into the quagmire of concentrated industry. It is beyond us to understand how career men in antitrust agencies have the courage and fortitude to carry out the mandates of Congress in the enforcement of antitrust laws when such bills as H. R. 2222 are introduced to make their task more difficult. We hope your committee, in the sole interest of small business reports "No" on H. R. 2222.

Hon. FRANCIS E. WALTER,
House Office Building,
Washington, D. C.:

The Democrats pledge themselves to:

1. Intensive enforcement of antitrust laws, with adequate appropriations.
2. Strengthening of existing antitrust laws where gaps exist.
3. A positive program to promote competitive business, independent trade. Do you believe the approval of H. R. 2222 is in keeping with your party's platform pledge? Our opinion is definitely "No." A year ago it was exemption for the railroads from antitrust laws, now it will apply to cement and other allied concentrated industries.

A real blow to small business of this Nation and a forerunner of total by-passing of antitrust laws. Hope Congress votes "No" on this bill.

Each of these three telegrams is signed "George J. Burger, vice president in charge Washington office, National Federation of Small Business, 714 Bond Building."

Resettling Displaced Persons in America

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like

to include a recent address delivered over radio station WSPR, Springfield, Mass., on the Justice for Poland program, by Attorney Charles Rozmarek, president of the Polish American Congress.

Mr. Rozmarek's address, entitled "Resettling Displaced Persons in America," follows:

Ladies and gentlemen, I wish to discuss the subject of displaced persons because today that problem is properly uppermost in the minds of all charitable Americans who feel the moral responsibility for the plight of these unfortunate people.

The displaced persons, as we know, are the people who have been uprooted from their homes by the Nazis and the Communists—and today find themselves living—or to use a more appropriate word—stranded in the displaced persons camps in western Europe, under the care of the International Refugee Organization.

Since the end of the war there have been many proposals for the solution of the displaced-persons problem. One was the vicious practice of forced repatriation of these refugees to homes that are no longer theirs; another was the cynical approach of liquidating the camps and letting the victims be governed only by the instinct of survival; and the third was the humane approach, that is in allowing them to resettle in a free world with an opportunity to earn their livelihood and spell out their own future.

The United States out of civic, moral, and political responsibility wisely adopted humanitarian legislation permitting some 205,000 of these displaced persons to resettle in this country. The legislation was supported by major civic, social, labor, and church organizations and gained general public approval, although it did contain certain discriminatory features. Currently the Congress is considering amendments which will liberalize some of the provisions of the Displaced Persons Act. We hope that of the several submitted amendments one will be approved which provides that "Visas should be made available to each group and element of the displaced persons in the proportion that each bears to the over-all total of displaced persons. This would apply to race, religion, and national origin."

The problem of resettling the displaced persons in America within the provisions of the displaced-persons law appeared relatively simple. The cost of transportation of displaced persons from the respective camps to the port of entry in this country was assumed by the International Refugee Organization, to whose fund our Government makes heavy financial contributions. The screening for determination of the eligibility of those displaced persons as to their moral, physical, and educational qualifications in accordance with the immigration provisions was to be done by qualified and experienced personnel. Upon their arrival in the United States the displaced persons—through the help of many American voluntary organizations and societies—would quickly assume their position in our dynamic society and become a cultural and economic asset.

However, in practice the resettlement program experienced a stumbling block. For the displaced-persons law, wisely or not, provides that any displaced person to be eligible for admission into the United States, having first met the general immigration requirements, must also be provided with an assurance, that he will upon arrival be given employment and a place to live. And thus the actual key to the solution of proper resettlement of these displaced persons is the need to secure assurances from amongst the American people.

It is apparent that if to date, after the displaced-persons law has been in effect for 6 months a relatively small proportion of displaced persons and even a frightfully smaller percentage of Polish displaced persons have arrived in this country—it is due to the seeming indifference or unfounded apprehension of us Americans to provide the requisite assurances.

Many well-meaning Americans eager to contribute their part to this great humanitarian project are reluctant to sign an assurance blank for fear they might assume some legal obligation. "Must I sign a bond in connection with such an assurance or pledge my bank deposit or my home as collateral?" they ask. "To what extent will I be charged with the responsibility of maintaing a sponsored displaced person in case he fails to find suitable employment?"

In answer to these questions I am happy to quote Mr. Harry N. Rosenfield, one of the three members of the Displaced Persons Commission, who recently officially declared the following: Signing an assurance is not a legally enforced obligation so far as the sponsor is concerned. There is no legal obligation to hold a displaced person for 5 days, or even 2 days. Congress wanted only the assumption of a moral obligation, because no displaced person can come to the United States unless he has the necessary assurance from a sponsor.

It is plain, therefore, that signing such an assurance entails no material obligation. It is a mere formality to comply with the law. Unlike the requirement of the affidavits of support for general immigration, there is no requirement to list any real estate or to schedule any bank accounts.

The displaced persons represent many nationalities and many church denominations, but if I speak on behalf of the Polish DP's, it is because their plight appears most appalling, and because by ancestral background and blood ties the Americans of Polish descent feel their lot most acutely.

The Polish displaced persons are the thousands of survivors of Nazi concentration camps, disarmed veterans of the gallant Polish armies, and those who fled from Communist domination of their homeland. Today they can neither return to their homes for fear of liquidation by the Communists nor can they continue to subsist in the DP camps and look for daily handouts. They are proud people who did not forsake their God for false communistic ideologies and today seek only opportunity to eke out a living without charity or alms. They appeal and look to us overseas to give them a helping hand by submitting assurances.

The Polish-American Congress initiated and organized the American Committee for Resettlement of Polish Displaced Persons with headquarters in Chicago, Ill. This committee, headed by Judge Blair F. Gunther, of Pittsburgh, Pa., and many other members, representing large fraternal and civic organizations, has assumed the burden of soliciting the assurances and providing moral and material help to the displaced persons upon their arrival in this country.

Many distinguished American leaders volunteered as members of our advisory commission to offer assistance in our program of activity. Amongst others the advisory commission consists of Senator J. Howard McGrath, Congressman John W. McCormack, of Massachusetts, Mayor James M. Curley, of Boston, Mayor Bernard J. Dowd, of Buffalo, N. Y., Mayor Eugene I. Van Anterp, of Detroit, Mich., and Mayor David L. Lawrence, of Pittsburgh, Pa.

Affiliated with the American Committee for Resettlement of Polish Displaced Persons are State district displaced persons committees in some 26 States. In addition new local committees are being established to cooperate in soliciting assurances for the Polish displaced persons.

I appeal to you all to do your share in helping the resettlement of displaced persons. I appeal to you to sign at least one assurance, offering a job and home opportunity for the Polish displaced persons. I know that for every assurance you will have saved the life of your fellow man to gain his everlasting gratitude. Let us all reflect the spirit of our great America and allow haven here for the oppressed, even as our forefathers founded theirs.

To get an assurance blank and for all information regarding displaced persons write today without delay to the American Committee for Resettlement of Polish Displaced Persons, 1514 West Division Street, Chicago, Ill.

Sixteen Years Ago Today

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an editorial from the Boston Post of March 6, 1949:

MARCH 6, 1949.

Hon. JOHN W. McCORMACK,
Hotel Washington, Washington, D. C.

DEAR JOHN: This fine editorial in today's Post just caught my eye, and the thought struck me that you might have something to say about this subject in the House. If so, I thought you might quote this or, perhaps, have it printed in the CONGRESSIONAL RECORD. Of course, if you think different, it is perfectly all right, as nobody knows anything about my sending this to you except myself.

With kind personal regards to Mrs. McCormack and yourself, I am,

Your friend,

JOHN MEADE.

SIXTEEN YEARS AGO TODAY

The strains of a popular song hit—"Happy Days Are Here Again"—were still echoing through Washington and the Nation 16 years ago this morning. Its lilting, catchy tune, and its carefree lyrics carried for gifted singer and nonmusical hummer alike something he wanted—something to help him forget days and months just behind; something to help him turn his eyes to the future with confident hope.

Then came the first of the amazing acts and decisions of Franklin Delano Roosevelt. On March 6, 1933, 2 days after he had taken the oath of office, not a bank door in the entire Nation opened for business. By Presidential proclamation the tiny savings depository in the smallest hamlet and the huge, marble-lined structure of world-famous banks in Boston, New York, Chicago, and Los Angeles were dark and silent.

It was a bold move—a move unprecedented. The man on the street did not quite understand it—but he found no fault. He went right on singing or humming "Happy Days Are Here Again." He knew that presently the banks would open again, and he felt, with the confidence that only an American can know in America; that they would be stronger than ever before.

He didn't know he was standing on the threshold of a new, and startling era. Two months before he was only vaguely interested in the fact that a man named Adolf Hitler, who appeared to be something of a madman, had had himself named chancellor of Germany, where they were talking strange things about making guns instead of butter. He was only passingly interested that at Leipzig someone named Marinus von der

Lubbe had been condemned to execution by beheading because he openly admitted he was an adherent of a viciously, corrupt philosophy called communism.

In a few days, bank doors did swing open again. Some of the little savings banks had used the holiday to repaint their wooden walls; and workmen had made the marble glisten brighter than before in the big banking houses. Men, women, and children continued to sing "Happy Days." Professional comedians made poor jokes about the closings.

Out of Washington in the months that followed came strange alphabetical combinations, letters which ran close together with no periods to indicate they were initials, NIRA, AAA, HOLC, PWA. Out of Washington, too, came newly sounding names for American ears, names like General Johnson and Harold Ickes, William H. Woodin and Cordell Hull, Claude A. Swanson and Henry A. Wallace.

On the political stage at home things were moving fast as a great Nation flexed its muscles somewhat clumsily and uncertainly and dug itself out of the deep and muddied ditch of the worst economic depression the world had known.

On the international stage things were moving just as swiftly but with more deadly certainty toward a maelstrom that was to become known as World War II.

Yet, on March 6, 1933, Americans sang, Happy Days Are Here Again, and they knew that they had nothing to fear but fear itself.

Behind them that morning were the memories of the pitiful army which marched to Washington and demanded a bonus for veterans. Behind them was the shameful pictures of that little ragged army's final dissolution in the cold, swampy flats near the shadows of the Capitol. Forgotten was the bursted bubble of the golden days of the twenties.

March 6, 1933, seems a long way behind us today. Yet, as the sands of time are measured, 16 years is really only a brief period—nothing more than an interlude, even in the life of man.

Because he was singing, Happy Days Are Here Again, the way some happy author meant it to be sung, the average man didn't know it 16 years ago today—but as he stood on the steps of a closed bank in Caribou, Maine, or Coronado, Calif., he was also standing on the steps of an amazing era.

It is an era still unended—an era for which neither the Nation nor the world can yet divine the answer.

Yet, just as true today as the day they were first uttered are the words of 16 years ago—"The only thing we have to fear is fear itself."

Magnuson Plan Fails To Make Substantial Contribution to Discussion of Health Insurance

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. KLEIN. Mr. Speaker, Dr. Paul B. Magnuson, medical director of the Veterans' Administration, recently came out with a plan which was hailed in the press as a middle-of-the-road compromise between the American Medical Association's and President Truman's programs for extending medical care.

Because of Dr. Magnuson's reputation, I was much interested in his program, although I could not see how it proposed to solve the problem of medical care, because it seemed to apply only to the problem of diagnosis. Meanwhile, I have been waiting for a more authoritative analysis of the Magnuson plan.

That is now available in two columns recently written for the New York Post by Albert Deutsch, a noted medical writer, who finds the same weakness in the much publicized Magnuson plan that I detected. Mr. Deutsch points out that diagnosis is only a part of medical care and that Dr. Magnuson has proposed nothing to solve the problem of treatment for those who cannot afford it. The danger is that the public will be led to believe by such proposals as Dr. Magnuson has made that there is some easy middle-of-the-road solution to the problem, short of national health insurance. For those who may have been misled by the publicity given the Magnuson plan, I am inserting in the CONGRESSIONAL RECORD, Mr. Deutsch's two columns from the New York Post of March 4 and March 7 as follows:

[From the New York Post of March 4, 1949]

MEDICAL PLANS

(By Albert Deutsch)

WASHINGTON.—As the controversy over national health insurance gets hotter, we are likely to be deluged with compromise plans aimed at resolving the bitter conflict between the stand-pat American Medical Association and advocates of the Truman program.

Many of these compromise plans will be the ill-conceived creations of crackpots and publicity hounds, certain to add to the current confusion. Others will be the thoughtful contributions of genuinely concerned experts which, even if they are not adopted, will help clarify an area densely clouded by irrational controversy.

To the latter group belongs the plan for Nation-wide medical care proposed last week by Dr. Paul B. Magnuson, medical director of the Veterans' Administration. Magnuson was a noted Chicago orthopedic surgeon before he went into the Federal agency.

Magnuson's plan is based on his belief that the weakest link in our chain of medical care results from the lack of diagnostic and public health facilities, particularly for people who are neither indigent nor wealthy.

The VA medical chief belongs to that group of successful specialists who are disgusted with the do-nothing attitude of organized medicine but who fear that governmental health insurance would introduce bureaucratic futility into medical practice. He offers his plan as a middle-of-the-road program, aimed at what he believes to be the heart of the medical-care problem.

The Magnuson plan may be summed up as follows:

1. The core of the proposed program is a Nation-wide network of community diagnostic clinics, which would provide complete medical check-ups for the sick and periodic health examinations for the well. These clinics could be established in existing hospitals, incorporated into new medical centers, or maintained separately.

2. The diagnostic clinics would be staffed by medical specialists, nurses, laboratory technicians, chemists, and other personnel. Since there is a serious shortage of these professional groups, Federal subsidized training would provide more doctors, nurses, etc., for these diagnostic clinics.

3. Patients would be referred to the clinic by the family doctor, military and veteran agencies, Government and voluntary hospitals. Individuals could obtain diagnostic services by direct application.

4. Patients would pay the clinic on the basis of income. Indigent patients would get free treatment.

5. The diagnostic clinics would be financed by a 50-percent subsidy from the Federal Government, with the remaining 50 percent being made up by the State, local government, and lay contributions—in addition to patients' fees.

6. Each State would have a State medical director to supervise the diagnostic services. This official would be appointed by the governor on recommendation of the medical school deans or of the State public health authority.

7. The diagnostic clinic or clinics in each community would be governed by a local board representing State, county, or local public health officials, the medical profession and lay contributors.

In addition to these diagnostic clinics, the Magnuson plan calls for extension of public health facilities throughout the country.

Its author points out that 40,000,000 Americans live in areas lacking the basic protection of full-time public health departments and that only 1 in every 10 local public health departments is provided with physical facilities "even approaching reasonable standards of decency."

The Magnuson plan probably will be widely discussed in the coming months as a possible alternative to national health insurance.

While I have the highest respect for Dr. Magnuson, personally and professionaly, I don't think his proposal constitutes a national medical plan at all. What the good doctor has given us is a fragmentary contribution which we advocates of national health insurance will be willing to incorporate as a part of our general design.

[From the New York Post of March 7, 1949]

MAGNUSON PLAN

(By Albert Deutsch)

WASHINGTON.—Dr. Paul B. Magnuson, an outstanding orthopedic surgeon before he became medical director of the Veterans' Administration, is convinced that "solo" medicine, as practiced in the average general physician's office, is "lousy medicine."

That is one of the main reasons why he drafted his much-discussed "substitute national plan for medical care" as an alternative to national health insurance.

"Look," the big-framed orthopedic specialist told me, "you go to a family doctor with a backache. You don't know what's wrong; you just feel a pain.

"The doctor doesn't know for sure what's wrong, either. If he's one of those pill-doctors, he may give you fancy pills for anything and everything, in the hope that nature will do the rest. If he's looking for a sound diagnosis he'll probably send you to an orthopedist (a specialist in treating skeleto-muscular disorders).

"Then this specialist examines you. He doesn't find enough to make a sure diagnosis. So he sends you on to an internal-medicine man.

"The latter says you need some glandular check-ups, so he sends you to a diagnostic laboratory for tests. Before you're finished, you may be passed on to another doctor or two, and maybe sent back to laboratories for X-rays or what-not.

"By the time you've been through the medical mill, it may cost you from $120 up for these diagnostic services.

"The main trouble with present-day medicine, as I see it, is that the average solo physician (who practices alone) can't afford to equip his office with the expensive diagnostic devices needed for thorough check-ups, and the average patient can't afford to pay for really thorough diagnostic tests."

That's why Dr. Magnuson has presented a plan centered mainly around local diagnostic clinics, to be financed mainly by Federal and

State subsidies, with patients charged on the basis of their ability to pay.

"Before you can treat a patient properly," Magnuson said, "you've got to find out what's wrong with him. Diagnosis is the most important—and most expensive—part of modern medical care."

I spent several hours with Magnuson, taking up his plan in detail. These were my reactions at the conclusion of our discussion:

1. No student of the field would deny that diagnostic services are an important and expensive part of medical practice. But Magnuson, in his enthusiastic discovery of this fact, has mistaken the part for the whole. He has grossly minimized the importance of treatment, in terms of both finances and organizational structure.

2. Far better than Magnuson's tendency to separate diagnosis from treatment is the idea of group medical practice, where teams of medical specialists, general practitioners, and auxiliary professionals could provide both diagnosis and treatment as a unit under a single roof.

Magnuson's diagnostic clinics would return or transfer the patient to his family doctor or to a specialist or hospital for treatment. The organizational chart he has drawn up tends to divide diagnosis and treatment, functionally and physically.

3. Magnuson has solved only part of the patient's economic problem. It is small comfort to the patient to learn what's wrong with him at a diagnostic clinic, only to have to worry about getting treated for what ails him.

4. The Wagner-Murray-Dingell health insurance bill makes appropriate provision for diagnostic, as well as all other, medical services. It creates no artificial separation among different types of medical service.

5. Magnuson hasn't the faintest idea of what his plan would cost, if put into effect. He has formulated no clear answer, as yet, to the question of building up a huge diagnostic machine that might outrun treatment services and that might, indeed, result in grossly elaborate diagnostic tests for insignificant ailments that can be handled by the average physician.

6. Magnuson's network of diagnostic clinics would be supervised by a State medical director in each State, to be appointed by the Governor upon recommendation of public health or medical-school officials. When I asked Magnuson where organized medicine came into the picture, he answered:

"Who'd want to seek the advice of organized medicine (meaning the American Medical Association and its local affiliates)? What do those medical politicians know about good medical practice?"

Magnuson is right in his premise, but wrong in his assumption that organized medicine would stand complacently by while State medical officials were appointed without asking its approval.

"How did you come to draft this plan?" I asked Magnuson.

"Oh, I got to talking about this thing with friends, and kept trying it on my wife as it shaped up. Finally, she said: 'Why don't you put the thing on paper?'

"I took up her dare, and here's the plan."

Survey on Closed Shop

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the Rogers Dunn survey and his analysis of the congressional view on the closed shop.

Mr. Speaker, it seems to me that it is the duty of Congress, when it considers the labor-management legislation, to make sure that the public has the proper protection. In all of these squabbles between labor and management, it is the public that always suffers. It is my judgment also that we should think of the little fellow in the labor unions. He also is entitled to protection. He is not organized in the big pressure groups like management and the labor leaders.

Every survey that has been made on the provisions of the Taft-Hartley law indicates that the laboring man and the public feel that most of the law should be kept. I feel there are some clarifications and minor changes that need attention and will support all constructive suggestions to that end.

The survey follows:

A CONGRESSIONAL VIEW OF THE CLOSED SHOP

We have just asked each Member of the House of Representatives, Republican and Democrat:

"In principle, do you favor continuing to outlaw the closed shop as a national policy?"

Of the 151 Members replying to date, 69 percent answered "Yes," and 30 percent answered "No."

Exactly 2 years ago, while the Taft-Hartley law was being considered, we asked each Member of the House:

"In principle, do you favor outlawing the closed shop as a national policy?"

Of the 152 Members replying, 75 percent replied "Yes" and 18 percent "No."

As a sidelight, 73 percent of the Members of the House voted for the Taft-Hartley law in 1947.

Rent Control in Idaho—A Typical Example of How Rent Control Is Functioning in Boise, Idaho, and in Other Cities of the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. WHITE of Idaho. Mr. Speaker, with the consent of the House, I would like to have inserted in the CONGRESSIONAL RECORD a copy of my letter to the Honorable BRENT SPENCE, chairman of the House Committee on Banking and Currency, which is now holding hearings on rent control. The letter follows:

FEBRUARY 11, 1949.

HON. BRENT SPENCE,
Chairman, House Banking and Currency Committee, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Reference is made to the rent-control bill now under consideration by your committee, and I want to express my vigorous opposition to it, at least so far as it concerns the State of Idaho, where we have no large cities, and where our housing problems can best be served through free competitive enterprise.

At the beginning of the war, many of our people left their homes to work at the shipyards and other war industries on the Pacific coast, and rented their homes at or below current rentals at that time. This is particularly true in the city of Boise, Idaho. Now that the war is over and most of the war industries closed, their homes are occupied at rentals much below a fair return on the property when you consider that during the interval the dollar has lost at least 40 percent of its value.

I would like to present for your consideration a typical case with which I am most familiar. For many years Mr. W. R. Kehrer was employed by the Union Pacific Railroad as a telegrapher and station agent. He saved his money, invested in a three-unit apartment, one unit of which he occupied, and with the hope that the income from the other two units would provide him a living for his declining years.

By the time war was declared he had retired because of age and service, but volunteered to return to railroad service during the war emergency, when there was an acute shortage of telegraphers and station agents. He was transferred to another city and rented his own apartment furnished for $35 per month.

In 1944 Mr. Kehrer needed some carpenter work done and at the request of his carpenter-tenant, employed the tenant to do the work at the then union scale of $1.25 per hour. In 1948 Mr. Kehrer again required the service of a carpenter and again employed his tenant.

But the union scale had advanced from $1.25 per hour to $1.87½ per hour—an advance of 50 percent. Other services and commodities that landlords must pay for have increased approximately the same amount, but the carpenter-tenant still occupies the afore-mentioned apartment at a rental of $35 per month.

Such a policy in my opinion amounts to a confiscation of private property and will discourage rather than encourage the building of more homes and rental units. There is no better way to dry up the sources of venture capital so essential to keep our economy and free enterprise going.

I would appreciate having this letter made a part of the record in your hearings and trust that your committee will give this matter your thoughtful consideration.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Nonstop B-50 Flight Demonstrates Need for Big Army and Navy

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. VAN ZANDT. Mr. Speaker, David Lawrence, one of America's outstanding journalists, in his daily column in the Washington Evening Star, March 7, 1949, clearly defines the necessity for a well-balanced national defense.

While Mr. Lawrence's column deals with the nonstop B–50 flight around the world, he also points out the over-all lesson in global strategy to be derived by the Army, Navy, and Air Force.

Mr. Lawrence's article is so interesting that I am inserting it at this point for the benefit of those who are interested in

a well-balanced and adequate national defense:

NONSTOP B–50 FLIGHT DEMONSTRATES NEED FOR BIG ARMY, NAVY—SEEN PROVING NECESSITY FOR BASES PROTECTED BY NONAIR SERVICES

(By David Lawrence)

There is an over-all lesson in global strategy for the Army, Navy, and Air Force to be derived from the round-the-world nonstop flight just completed.

It's a lesson which teaches more forcibly than all the debate that has gone on between the services that the Air Force, no matter how well equipped, is helpless without bases strategically located around the earth.

It teaches that unless the Navy and Army can take and hold those bases and occupying troops can maintain those bases against opposition, there can be no long-range bombing of a sustained nature.

The plane which made the round-the-world nonstop flight was refueled first at the Azores, then at Saudi Arabia, next at the Philippines and finally at Hawaii.

Portugal owns the Azores and submarines of a hostile navy could interfere with the landing of supplies at such a base, even if Portugal surrendered her sovereignty and allowed America to use the Azores.

NEAR EAST IN TURMOIL

Saudi Arabia is in the middle of an area of political turbulence in the Near East. Unless the United States were permitted to occupy bases there during peacetime with enough men and supplies to refuel our planes, there could be no use of such a base for a sudden defense by our planes against attack or for offensive operations if war came overnight.

The Philippines are a friendly country but in the last war a hostile navy actually wrested from the United States the bases there on which American strategy had counted for decades.

Hawaii is an American base, but unless the Pacific is made safe against submarine attack on the supply ships, gasoline required for refueling nonstop planes and the food and equipment for the troops stationed there cannot be counted on to be available when needed.

The fact that planes can stay up for 5 or 6 days while being refueled could be proved without leaving continental United States. Many such experiments in refueling on endurance tests have been successfully carried out before.

What, then, was the purpose of the round-the-world nonstop flight? Was it done to impress Russia with the speed and scope of our planes? Or was it done to give Congress the impression that it should appropriate more money or the bulk of national defense funds for big planes and that it can afford to forget about ground armies or a navy such as helped win stategic bases in the Pacific in the war?

The idea of airplane stunting to impress Congress is not novel but it would be a disservice to the cause of national defense and security if the impression were given that the round-the-world flight has introduced any element that was not known before or any element of strategic strength that permits neglect of either a strong Army or a powerful Navy.

NAVY ENDURANCE FLIGHTS

Actually, Navy fliers have flown longer without refueling than did the Air Force. The Air Force could doubtless fly just as long as any other service, but all this was pertinently disregarded because the Air Force fliers had to refuel where there were bases available. The approaches to three of the four bases used are today protected by the Navy, which is rapidly developing air defenses against submarine operations of all kinds, and this means escort carriers and supply ships to help keep the bases intact against interruptions to the flow of gasoline and food.

While theoretically long-range bombing from the continental United States is possible, it is not yet regarded as being as effective as bombing directly from strategically located bases. Such bombers cannot venture back and forth without the protection of fighter planes and nobody has as yet come forward with a fighter plane that can accompany bombers on long-range missions such as have just been dramatically portrayed by the round-the-world fliers.

Nobody, moreover, has arisen from any quarter, including the Air Force, to claim that long-range bombing can be carried on in sustained fashion from continental United States. The Russians are well aware of this, and it remains to be seen whether the peoples of any other countries will be misled by round-the-world flights, endurance tests, or similar stunts.

While bombing ranges have been increased since VJ-day, nothing is as yet available to change the fundamental concept of the need for bases away from our shores. Either fixed locations must be obtained by agreement ahead of time with friendly powers or else floating bases must be built in the form of huge aircraft carriers which can approach the seacoast of any potential enemy and launch for sustained operations planes carrying the atomic bomb.

Dynamite Our Monuments, Says McLemore

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. WILLIAMS, Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to insert an editorial appearing in the Post-Herald, Vicksburg, Miss., under date of March 6, 1949:

DYNAMITE OUR MONUMENTS, SAYS M'LEMORE

With amazement, we have read Henry McLemore's column on the Vicksburg National Military Park. To us, the article seems ill-mannered and in poor taste.

The column labeled "Vicksburg" was as follows:

"VICKSBURG, MISS.—It is high time that all memorials dedicated to keeping alive the memory of the War Between the States be abolished.

"Let the grass grow high over the headstones. Dynamite the monuments. Yank up the markers which show where, quite often, brothers fought face to face.

"It is high time, I say again, that the Department of the Interior quits spending taxpayers' money on things which only serve to keep the old hate alive.

"Thousands and thousands of dollars a year are spent to keep alive the embers which should long ago have died out.

"I got to thinking about this yesterday when I went on a tour of the Vicksburg National Military Park, a vast acreage which serves as a memorial to the siege of this city by Grant and Sherman and its capitulation after days and days of bloody fighting.

"What good does it serve? The Mississippi folk hate it because it is a constant reminder of defeat. The northern visitors hate it because wherever they look there is a headstone under which a Union soldier lies a-moldering.

"From the siege of Vicksburg, the Battle of Gettysburg, Chickamauga, and others, a great nation was born. The greatest nation on this earth. In World War I and World War II, southerners, and northerners fought side by side. They fought as brothers, not as men separated by an engineer's gadget. There was no Mason and Dixon's line when the Stars and Stripes was threatened.

"The upkeep of Civil War parks, is in my mind, a sign of national juvenilism. The same thing, in my mind, holds true for people who still talk about that war as if it happened yesterday. There is nothing more boring than a southerner who doesn't have sense enough to know that 1949 isn't 1863, unless it be a Yankee who feels the same way.

"Illustration of retarded mind: An elderly southern woman on visiting the park here for the first time, was taken to a high bluff just at sunset. The view was glorious. The Mississippi coiled and twisted for miles. The dogwood, azaleas, and camellias were in full bloom. The soft colors of the setting sun gave a gentle glow to the whole scene.

"So what was the elderly gal's reaction? She saw only the Union headstones and said:

"'We got a lot of 'em, didn't we.'"

That type of American should be denied the right to vote. Taken out, in fact, and hanged on the nearest cypress tree. No feeling. No thought of the southern and northern men who died only a few years ago so she could wear her velvet collar and spend an hour a day practicing slurring her "r's."

"Another example of retarded mind: This time it is a woman from Illinois. She took the tour of the park and when it was over complained that she had seen no graves of southern soldiers. It was explained to her that this was a national park, and only soldiers of the United States could be buried here, and as Confederate soldiers were not members of the Nation they had to find final resting places somewhere else.

"Good, good," she said, "Serves them right. Hope they weren't buried at all."

"She should be hanged on the adjoining cypress tree.

"Don't think I'm tough. All I want is Americans who are just that, and nothing else.

"I wasn't built to be patient with folk with small, tiny, undersize minds."

For the benefit of Mr. McLemore, and any others who may think in the some vein, the memorials at Vicksburg and Gettysburg, and at Chickamauga and Chattanooga; at Morristown and Saratoga; at Chalmette or the Alamo do not keep alive the animosities of the battles they commemorate.

We are stirred to sympathy for any man whose heart is so cold that he cannot be moved to a greater, deeper and more abiding love for our land, when he looks upon the scenes of conflict where lives were given for the ideal and hope of the new world.

We shudder that anyone would let the grass grow high over the headstones of any man who has died in preserving the heritage of America. The monuments, the markers even the ground whereon the battle raged, have been consecrated by the blood that spilled there. They are our legacy, our priceless heritage. It is unthinkable that we should cherish more the few dollars spent for their upkeep.

We are the Mississippi folk of whom Mr. McLemore speaks. We are offended that he has told other Americans that we hate this priceless heritage. We have never considered our park as a reminder of defeat. On the other hand, we cherish it as a symbol of a people who rose to magnificent heights in the defense of an ideal. If our northern visitors are not stirred to the same depth of feeling we are sorrowful. If they cannot eye the studded terraces of the cemetery without feeling a surge of pride in united America, then cold indeed are their sensibilities.

If the upkeep of our park is a sign of national juvenilism, then we feel privileged to be juvenile. If cherishing the highest, the

noblest, and the most sacrificial deeds of our forefathers is the sign of small, tiny, undersized minds, then we are happy to know in which category we belong.

We feel differently toward these things.

We feel that if our heritage of the past were removed, there could be no America as we know it. Vicksburg, Gettysburg, Valley Forge, the Alamo, Flanders Field, and Iwo Jima are the panorama of a free people. On these, and all that has transpired between them is anchored in the vision of the American ideal.

No nation has survived the desecration of its own heritage. To assume that America's tangible wealth is greater than its vision would be fallacious. It is unthinkable that we could trample the graves of men who gave their lives for us without losing our own faith in the new world.

We honor Mr. McLemore's right to say what he thinks. That privilege, to us, is as priceless as any heritage he would have us destroy. Yet, we cannot fathom his reasoning.

America, without its honored past, would be as dead as a church without God.

Ruhr Eased Back Under Cartel

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Drew Pearson that appeared in the Washington Post of Monday, March 7, as follows:

RUHR EASED BACK UNDER CARTEL

(By Drew Pearson)

It's been squeezed off the front pages by other news, but certain things have been transpiring in Germany that may some day affect every United States citizen qualified to carry a gun.

The German Ruhr, from which sprang two world wars, is gradually easing back into the control of some of the big German cartelists who built up Hitler's war machine.

Twelve Germans have just been nominated to control the Ruhr steel industry, despite the bitter protests of German labor unions and the liberal political parties now struggling against German communism.

The man who selected the Ruhr cartelists—Dr. Herman Puender—is, himself, interesting. When Hitler first threatened to come into power, Puender was an adviser to Chancelor Bruening, the last democratic leader of Germany, and wrote a confidential memo advising Bruening not to oppose Hitler too vigorously.

After the war started, Puender served as lieutenant colonel in Division III,H, Abwehr of OKH, which made him the German equivalent of a Soviet political commissar. For the Abwehr was in charge of morale and ideology and had the job of suppressing Anglo-American propaganda in the Nazi ground forces.

It is this one-time trusted servant of Adolf Hitler who has now been permitted to choose the German steel barons who are to govern the vital industry of the Ruhr.

UNITED STATES STEEL IN RUHR

The man who helped set up this plan, Under Secretary of the Army William Draper, was a member of the Wall Street firm of Dillon, Read, which loaned millions to this very same German steel industry prior to World War II. Without these millions, Hitler probably could not have started war when he did.

Draper has now departed the Washington scene to rejoin Dillon, Read. And his banking partner, James Forrestal, who also helped loan money to the steel cartels, is on his way out as Secretary of National Defense.

These men justify the juggernaut they leave behind to govern the Ruhr on the ground that a committee of Allied steel moguls will supervise the 12 German cartelists.

However, let's take a careful look at this committee. The American members are: William J. Brinkerhoff, Werner P. Neumann, Ronald Clark, and Ian F. L. Elliott, all of the United States Steel Corp., together with Frederick M. Dillies of Inland Steel.

To get the full background, you have to look at the files of the Justice Department regarding United States Steel's secret conversations with the Nazis prior to the war. Especially important is one of the gentlemen on the above Ruhr committee, Ian F. L. Elliott.

For the United States Steel Corp. and other big American steel companies were playing hand in glove with the European steel cartel, including the Nazis, prior to the war, and Mr. Elliott was the chief go-between in organizing the deal.

SECRET STEEL DEAL

All this remained secret until the United States Army got into Luxemburg and took over the files of the steel cartel. At that time the Justice Department got its first good look at what the barons of the American steel industry had been doing with the Nazis right up to the war. A total of 4,000 documents were seized, showing that during 1938-39 various secret meetings were held in London, Paris, and Luxemburg to organize a world steel cartel.

The American representatives for this deal were none other than Tom Girdler of Republic Steel, who has had a virtual pipe line into Harry Truman through Truman's close friend, George Allen; Eugene Grace of Bethlehem Steel, and Ben Fairless of United States Steel, the company which now supplies four of the men supposed to keep an eye on the Ruhr.

The European manager for the United States Steel Corp. and the chief go-between for both the British and the Americans was Ian Elliott, who now sits on the board of governors for the Ruhr.

During the dates when this deal was organized—1938-39—Hitler had already marched into Czechoslovakia and was greedily eyeing Poland. American correspondents in Europe were constantly warning of war, and this columnist had categorically predicted it.

FEARED JUSTICE DEPARTMENT

Despite this, the biggest leaders of American steel worked out a deal whereby they would not compete with Germany, though they admitted they could not control "little steel" in this country. Significantly, also, they refused to sign a written cartel agreement on the ground that they might incur Justice Department prosecution. Instead, they entered a gentleman's oral agreement which they said would be just as binding as a written contract.

Today, therefore, control of Ruhr steel, the key to war in Europe, will be under 12 German cartelists picked by a former Nazi officer, and under the supervision of four United States steel men whose boss made a secret deal with the Nazis even while Hitler was waving the big stick over Czechoslovakia and Poland.

CAPITAL CHAFF

The Hungarian Government is going after other religious groups besides the Catholics. The Hungarians have cut off Jewish emigration out of Hungary and closed down the offices of Jewish relief agencies in Budapest. The State Department has just received an encouraging report on the French political situation. Both the Communists and General de Gaulle are losing strength. The French middle-of-the-road group is steadily picking up influence—a great victory for democracy.

Cut Back the Excise Taxes

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Traveler of Thursday, March 3, 1949:

CUT BACK THE EXCISE TAXES

The Republican policy committee, headed by Minority Leader MARTIN, has called for a measure that has the majority of Americans behind it. The GOP group is calling for a cut-back of excise taxes to the prewar level.

Excise taxes, often misnamed luxury taxes, were set at 20 percent in 1944, with the promise that they would end 6 months after the war. Three years and 6 months have passed, and we still are paying a 20-percent tax on such "luxuries" as ladies' handbags, babies' dusting powder, and tockets to the movies or the ball game. Or such further "luxuries" as telephone bills and railroad tickets, which also carry excise taxes.

Hidden taxes are bad enough, but these taxes do not have the decency to go into hiding. They are certainly discriminatory, since they are levied on articles just as vital to ordinary living as other articles not so taxed. With the rates as high as they are, it may well be questioned if they do not defeat their own purpose by discouraging the sale of articles bearing these excessive imposts.

The proper thing for the Government to do is to live up to its pledge and cut back the excise-tax rate to the prewar rate. The golden goose has been laying so fast of late.

AMA Versus Public Health—Medicine and Free Enterprise

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1949

Mr. BIEMILLER. Mr. Speaker, America is full of people who need more and better care than they can get or pay for. Yet the doctors are willing to spend time and money they should be devoting to their profession in a fight against the only plan which will bring that medical care to the people who need it.

K. M. Landis, of Logansport, Ind., has written two excellent columns on this subject in the Chicago Sun-Times. I include these columns in the RECORD:

AMA VERSUS PUBLIC HEALTH

LOGANSPORT, IND.—Why is the American Medical Association assessing doctors $25 a head to fight national health insurance?

In my opinion it is doing so because it has a basic misconception of the role it should play in American life.

You would think offhand that the leaders of the medical profession would be interested primarily in bringing better medical care to more people.

Certainly there is plenty of room for improvement. It is known, for example, that we are the richest country in the world.

Yet before the war, the American death rate was higher than in eight other countries. Maternal mortality was higher here than in 21 foreign nations.

Is this anything to brag about?

When the war came, 40 percent of American men in the prime of life were rejected as unfit to serve their country because of mental and physical defects.

Is this something to explain away?

According to Government estimates, more Americans die each year because of inadequate medical attention than were killed in any year of World War II.

On this record, you would think that the doctor's union would be out in the street crying "Murder," and leading the fight for more and better medicine.

All over the country, the waiting rooms of doctors are filled with sick people. In rural areas the shortage of physicians has become a scandal.

Nothing is more obvious than the inadequacy and unevenness of medical care in the United States. But what is the attitude of the American Medical Association?

For more than a generation, it has used its power over medical schools to restrict rather than expand the training of new doctors. It has had the psychology of the glaziers' union.

Fewer doctors were graduated in 1940 than in 1905, although the population of the country had increased by 60 percent.

Now the AMA uses the scarcity of doctors as an argument against national health insurance. Isn't it about time we had more doctors?

Even when doctors are available, less than half the people in this country can pay for adequate medical care. Isn't it about time we had medical care for everybody?

Why is organized medicine fighting national health insurance? Socialism, it cries.

The sad truth is that the AMA looks upon sickness as a private field for exploitation rather than as a social evil to be attacked on a broad front.

MEDICINE AND FREE ENTERPRISE

LOGANSPORT, IND.—In the next few months, you are going to hear a lot about the dangers of socialism.

This is because the American Medical Association is assessing doctors $25 a head to build up a propaganda fund against national health insurance.

Our medical societies are hysterical on the subject of socialism. Way back in 1932, President Hoover's committee on the costs of medical care reported:

"Human life in the United States is being wasted, as recklessly, as surely, in times of peace as in times of war. Thousands of people are sick and dying daily in this country because the knowledge and facilities we have are inadequately applied."

The chairman of Hoover's committee was Dr. Ray Lyman Wilbur, a former president of the American Medical Association. He was not a radical gentleman.

Yet what did the Journal of the American Medical Association call the report? It described it as "socialism, communism—inciting to revolution."

Almost every proposal to extend better medical care to more people has been denounced on these grounds.

For many years organized medicine openly fought public-health vaccinations against diphtheria and other communicable diseases. Why? It was socialism.

When workmen's compensation insurance was first suggested, it was bitterly opposed by medical societies. William Green, now president of the AFL, was then a member of the Ohio legislature.

"I recall," he says, "when the medical profession came in in groups and the employers came in in groups, and said 'This will drive us out of Ohio. It will confiscate our property, destroy our profession. It is socialism in the most violent form.'"

In 1934, the AMA rebuked the American College of Surgeons for flirting with a voluntary health insurance. Why? It was a scheme for the "mechanization of medical practice."

Now the AMA has changed its mind, and is supporting some private insurance schemes in a desperate effort to head off a uniform system of compulsory health insurance.

Is it socialism? The first compulsory health insurance system in this country was approved by Congress in 1789 to take care of the medical needs of merchant seamen.

Today we have compulsory old-age pensions, compulsory unemployment insurance, compulsory workmen's compensation. We have free medical care at Government hospitals for Congressmen, war veterans, Indians, and idiots. Is this communism?

Of course not. Insurance or no insurance, we will still have free enterprise in this country in ovaries and tonsils.

Un-Christian Doctrine

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following Justice for Poland radio broadcast, Station WSPR, Springfield, Mass., entitled "The Infiltration of Pro-Communists into American Education," by Hubert Kregeloh:

A wave of cynicism is engulfing thinking people throughout the world. Most of us fight this condition. We do not want to be cynical, we should like to be idealists and optimists and believe in a glorious future for mankind. But all too often we cannot help ourselves. We hark back to the lofty slogans that spurred men on during World War I, and we remember all too clearly that it was not a war "to end all wars"; neither did it "make the world safe for democracy."

Something went wrong after 1918. And although we have since studied all kinds of learned explanations of what went wrong and why and how, the only important fact remains that the statesmen were incapable of creating that promised better world and that 20 years later, after an uneasy armistice, we found ourselves drawn into the whirlpool of another carnage, many times more frightful than the one which was to have given us lasting peace.

And again men were inspired to heroic deeds and patient suffering with another set of slogans promising them a great new world after victory. The democracies would smash tyranny. Men everywhere would enjoy freedom and dignity. Great plans were being laid—so they said—to alleviate promptly all the conditions which made human beings miserable, hungry, and dissatisfied. A new organization, much better than the defunct League of Nations, was being set up to build the peace and to watch over it. And from America came words thrilling millions of simple people—the words spelling out the noble promises of the Atlantic Charter and the Four Freedoms. Those who doubted that such sweeping promises could be kept, or expressed bewilderment regarding the sudden promotion to the rank of a fellow-democracy of totalitarian Soviet Russia, were dismissed as cynics, pessimists, defeatists—yes, even as Axis agents.

In those days it was definitely in bad taste to question the long-term intentions of the Soviets, who had become our allies by accident, not by choice, or to suggest that leopards do not change their spots even when attacked by tigers. The Nation was hypnotized into believing the excellency of the newly discovered Russian fellow democracy by the men in high places, some of whom were consistently pro-Communist, while others were simply naive, gullible, and inexperienced. I had always felt that the late President Roosevelt could not have studied the writings of Marx, Lenin, and Stalin. Otherwise, despite his frequent flirtations with the political far left, he could not have pursued his tragically fatal Soviet policy, culminating in the unfortunate agreements of Tehran and Yalta, which sold Poland and China down the river and paved the way for the construction of the aggressive Soviet postwar threat in all its present urgency. We learned recently from Mr. Bullitt, former United States Ambassador to Russia, that President Roosevelt had indeed never read the writings of the Communist doctrinaires.

There is scant comfort in the knowledge that Mr. Roosevelt himself, in the last weeks before his death, had begun to worry about the integrity of Stalin. There is even less comfort in the fact that today the entire freedom-loving world again sees the Bolsheviks as they really are; of hindsight we have had plenty, but never apparently do we heed the bitter lessons we profess to have learned.

Let us suffice to note that the United Nations has been paralyzed by the Soviets who joined the Organization to make sure it would not interfere with Moscow's plans of aggression and expansion; that millions of betrayed and bewildered people were liberated from one form of oppression only to be placed under another—in some instances worse—type of tyranny; that more millions live in constant fear as they listen to the rumblings from behind the iron curtain; and that the Atlantic Charter is as dead and useless a scrap of paper as the one Neville Chamberlain once waved to cheering throngs of swindled Britons as he returned from Munich in 1938.

At Yalta, in proceedings which future historians can only describe as strictly dishonest, the brave and long-suffering Polish people were delivered into the custody of the Bolsheviks without their consent or even their knowledge; also, at Yalta, the Russians were given rights in Manchuria which probably made it inevitable that this region would be skillfully maneuvered into the hands of the Chinese Communists and lost to the government of Generalissimo Chiang Kai-shek. This, too, was arranged without the presence of a Chinese representative and without prior consultation with the Chinese Government, which at the time was our fighting ally. However, so much has been said and written about the ethics of Yalta that to go into details would be redundant.

Important at this time is the fact that the poison of communism, with its rule by gangsters and its destruction of freedom and religion, which has already corroded so many foreign nations, is constantly launching subversive attacks against the United States, the only power with the strength to curb bolshevism's ambitious aspirations.

These attacks are the more dangerous since, with few exceptions, such as the Canadian spy case and the current spy sensation—they are carried out subtly, with less drama and directness than we witness in foreign lands; they are therefore less obvious and less disquieting to an indifferent and preoccupied public.

The assaults against the American way of life take the form of attempted thought corruption. The Bolsheviks set up front organizations with attractive names, such as that notorious outfit, the National Council of American-Soviet Friendship or the Joint Anti-Fascist Refugee Committee, to lure the innocent. Communists and fellow travelers worm their way into veteran, civic, and religious organizations, where they pose as liberals, influencing resolutions, volunteering to secure speakers, etc.—always skillfully exploiting the traditional American sense of fair play and also, alas, in many cases, the ignorance of Americans regarding the methods of communism. That tragicomical figure, the "Red Dean" of Canterbury and the Reverend Howard Melish, of Brooklyn, are only two of many examples to prove that propagandists of communism, the most un-Christian doctrine, are even to be found in pulpits. And Judaism and Roman Catholicism are not free from Bolshevik infiltration, either.

Above all, there is the fruitful field of education. Young people are impressionable, easily inflamed by ideals—real and phony—awed by the knowledge of their teachers, and inexperienced in ideological analysis. Not without good reason did Lenin specifically recommend that every effort be made to win youth over to bolshevism.

Lenin's disciples in America are carrying out his recommendation. We have, in the majority of our colleges and universities, teachers who, with the aid of complicated intellectual double-talk and armed with the flaming sword of academic freedom, consistently toe the Communist line. Examples are Prof. Frederick Schuman, of Williams College, and Prof. Dirk Struik, of MIT. The latter gentleman, who is Massachusetts State chairman of that Soviet-American Friendship Council, has a long record of affiliation with affairs sponsored by the Communist Party and its intellectual hatchery, the Jefferson School of Social Science. He has been written up warmly in the Daily Worker, and, together with Professor Schuman, is just one of many far-leftist teachers to whose deplorable influence American parents are forced to expose their sons and daughters. Dr. Struik, by the way, was also awarded a Soviet decoration. I have met many parents who expressed amazement and consternation that their sons and daughters returned from college with ideas which the parents could not associate with what they believed to be Americanism. In all such cases the parents need only scrutinize the faculty of whatever institution of learning is involved. They will be sure to find at least one or more professors whose names they also remember in connection with Henry Wallace rallies or as speakers for the various Communist-front outfits, clearly listed as such by the Attorney General. They should not be surprised that these men, so disdainful of capitalist society to which they owe everything they are, seek to corrupt the thoughts of young Americans.

Another case in point is the one involving Assistant Prof. Arthur P. Coleman who, after 20 years of distinguished service, resigned from the department of Slavic languages at Columbia University in protest against the acceptance by Columbia of $30,000 from the Polish Communist Government to set up a chair of Polish studies. The whole case was written up comprehensively on the last page of the Saturday Evening Post of November 6. The appointee for the new chair was Prof. Manfred Kridl, formerly of Smith College, who is regarded as not unsympathetic to communism. The head of the department at Columbia is Prof. Ernest J. Simmons, who has written articles for the pro-Communist publication, the New Masses, and for Soviet Russia Today and has long been regarded as friendly to the Soviet Union. The Saturday Evening Post, feeling that Professor Coleman got a very raw deal, writes that surely a gift from a government which only recently sponsored a congress of intellectuals at which everything American was lambasted in the crudest terms might be subjected to more suspicion than it appears to have aroused at Columbia. In the face of floods of public protests, including those by the Polish American Congress, the publication fears that Columbia and General Eisenhower, its president, have been dangerously indifferent to what could be the beginning of a new penetration by Soviet propaganda into Columbia's department of Slavic languages.

Entrance of Italy Into the Atlantic Pact

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an open letter to Senators TOM CONNALLY, WALTER F. GEORGE, and ARTHUR H. VANDENBERG, written by Generoso Pope and published in Il Progresso on Sunday, March 6, 1949:

To Senators Tom Connally, Walter F. George, and Arthur H. Vandenberg:

There have been recurrent reliable press reports in recent days that you, as members of the Senate Foreign Relations Committee, are opposed to the entrance of Italy into the contemplated Atlantic Pact at this time. In view of your not issuing any statement whatsoever to the contrary, the American people are justified in accepting these reports as truly embodying your position. Hence, I must write you to urge with all my sincerity and strength that you reconsider your present position and drop your opposition to Italy's immediate entrance into the projected Atlantic Pact.

I have been doing much thinking trying to figure out what reasons you may have for your opposition to Italy. If these reasons attributed to you in the press are not the ones, I would appreciate it exceedingly if you would let me know precisely and definitely any other objections you may have.

It is inconceivable that any outstanding and authoritative leader of our country could oppose Italian entrance into the Atlantic Pact on the ground that Italy is not a member of the United Nations. You know very well that at Potsdam, our country, Britain and Russia agreed to consider favorably Italy's early admission to the United Nations. You know equally well that our country and its associated democratic powers have repeatedly urged and sought Italian membership in the United Nations. Surely you have not forgotten that it is only aggressionist Russia's opposition to Italian admission to the United Nations which alone accounts for Italy's not yet being a full-fledged member of the United Nations.

Under these circumstances it must indeed be clear to you that it is utterly unjust and dangerously unsound for any responsible democratic statesman to punish Italy further by now keeping her out of the Atlantic Pact because of Russia's reprehensible attitude. What sense of justice is there in keeping Italy out of the Atlantic Pact because Russia is keeping Italy out of the UN? As long as our country believes Italy is fitted to and deserves to join the UN, Italy is eminently qualified for immediate entrance into the Atlantic Pact. For our Government to pursue any other course is to play right into the hands of the Russian imperialists who want to divide and defeat the ranks of the western democratic world.

Nor can I get myself to believe that statesmen of your stature could oppose Italy's entrance into the Atlantic Pact on the ground that she is a Mediterranean and not an Atlantic nation. At a moment when our planes are making historic nonstop globe-girdling flights, it is inconceivable that anyone should draw such arbitrary and untenable lines of geographical and military demarcation. For some years, it has been true that there could be no effective control of the Atlantic without a secure hold on the Mediterranean. Britain, with its centuries of naval tradition and experience, has long ago realized that it would be sheer suicide to separate the Atlantic from the Mediterranean in any concept of effective defense or successful striking power against an enemy. This is the real meaning of the life-line of the British Empire and Britain's continuous concern for making the Mediterranean secure in order to keep the Atlantic clear. Precisely because of Italy's pivotal position in the Mediterranean, is it most vital to have her in the Atlantic Pact. Otherwise, we should be leaving wide open a most important flank as an inviting and unprotected target for an aggressor.

The argument that if Italy were to join there would not be enough American arms for the nations of the north, holds no water. Our country was able to provide more weapons and equipment to help win World War II—after it was started. Surely we can today provide an adequate—though really far smaller—supply of arms to prevent world war III and enable the freedom-loving nations to win the peace.

To welcome Italy into the Atlantic Pact today is to save millions of American and other lives tomorrow. But to spurn Italy's offer to join now is to discredit and discourage her democratic government which is our true friend and to help make Italy an easy prey for the totalitarian Communist savages operating there as Russia's fifth column. The frantic opposition of Togliatti to Italy's joining the pact and the threat of this chief Kremlin henchman in Rome to sabotage and defeat Italian assistance to the United States in the event of a conflict between our country and Russia should only strengthen our country's determination to take the lead in having Italy admitted immediately into the Atlantic Pact.

The Italy of today is a free and democratic Italy. Its leadership is a tried and true leadership of democracy. Its people are hard-working and liberty loving. They have shown it on the battlefield as our co-belligerents. They have shown it in the historical elections of last April. They have shown it in the encouraging progress in economic reconstruction. The Italians are forty-seven millions in number—far in excess of the total population of the Benelux and Scandinavian countries. Italy has many industrial skills and fine plant capacities which could be a great asset in strengthening the camp of world democracy and peace.

The American people have been extremely generous in helping the Italian people reach this stage of inspiring progress. We must not, we dare not, throw away, undo and destroy all our own achievements and all the successes of the long-suffering Italian people themselves—as worthy and valuable members of the community of free and peaceful nations. I earnestly appeal to your good sense and high patriotism, to your devotion to de-

mocracy and the cause of enduring world peace to do everything in your power to have our great country, our own America, take the lead in assuring Italy's immediate entrance into the Atlantic Pact.

GENEROSO POPE.

Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include some questions I answered on a radio program in connection with the Missouri Valley Authority:

Question No. 1. What would an MVA propose, and how does it differ from the Pick-Sloan plan now in operation?

The Missouri Valley Authority, as proposed in the bill introduced by Senator MURRAY and others, would set up an over-all agency with a five-man board and directors to control all of the economic and social development of the Missouri River Basin. It would be a supreme authority over the present agencies now developing the basin. The agency would have exclusive and absolute control over the watershed. I believe that it would be an autonomous state, outside the reach of local and State governments and responsible to no one but itself. If they operate as they are now in the Tennessee Valley, they would have the right to acquire, construct, operate, and maintain roads, terminals, sewage disposal and water power plants, plus recreational facilities. I believe that under the broad authority of the Murray bill, it would be possible to engage in the banking business, operate grocery stores, establish schools, and run farms. The MVA would produce a planned economy, a super-duper board with no local control; one putting into effect arbitrary regulations, restrictions, and orders. The people of the Midwest would resent these controls because they do not like dictators, benevolent or otherwise.

Now, as to the Pick-Sloan plan. It follows States' rights. In its operation and construction, it would keep the controls close to home. It would assist our farmers in developing their water rights and the farmers are independent and good managers. The Pick-Sloan plan is helping to develop the Missouri River and contemplates 174 projects.

The Missouri River is 2,460 miles long. The basin has an area of 529,000 square miles. The Pick-Sloan plan came into being when the President signed Public Law 534 in the fall of 1944. This plan is a nucleus and has formulated definite comprehensive plans for the development of the Missouri River Basin. The plan includes flood control, drainage, irrigation, hydroelectric power, soil conservation, improved land uses, forestation, recreational facilities, fish and wildlife, industrial expansion, public health, and many other conservation and developmental measures.

Under the Pick-Sloan plan, there is an interagency committee, composed of the governors of the 10 Missouri River States, with two additional representatives from each State. They are working in unison, promoting closer cooperation and understanding between the States. It seems to me that the sole issue between an MVA or a Pick-Sloan plan should be which method of procedure in development of the river basin will do the greatest number the most good. Today we have the reclamation interests, the Army engineers, and the Agriculture people, who have resolved their differences and are making progress. Contracts for dams to store water have been let. The conflict over flood control, irrigation, and power has been resolved. The water rights of the irrigators from Scottsbluff to Grand Island are being protected.

I have never seen any argument advanced that the MVA or some unknown authority can do a better job in the Missouri Basin than will be done through the use of the dams and irrigation projects constructed through the Army engineers and the Bureau of Reclamation.

Question No. 2. Considering the initial support from both the Democrats and Republicans for the Missouri Valley Authority, what chance of passage has the measure at this session?

This bill was introduced in the Senate and has 17 sponsors, 15 Democrats and 2 Republicans. Of the 17 sponsors, only 5 are in the Missouri River Basin area.

Undoubtedly the bill will have a hearing. It will be controversial and studded with emotional outbursts. It promises to be quite a slugfest. There is a definite need for a common-sense approach to the whole problem of developing the valley. It is so controversial that there may indeed be more heat than light. Where name calling begins, their reason leaves off. I do not believe the bill will pass.

Question No. 3. What do the people of Nebraska say about the MVA, and is there a general demand for this agency?

In my opinion, there is a very small minority, representing the more liberal groups, who would like to see such an authority. I checked the hearings of 2 years ago, and found the following quotations from several witnesses from Nebraska, who appeared against the bill:

One witness said: "The MVA plan would destroy the century of experience held by the Army and the Bureau of Reclamation as it relates to the planning and operating of flood-control and irrigation projects."

Another witness said: "The MVA plan would destroy all State rights, and it should be remembered that all States have certain laws and regulations, governing their water rights."

Another witness said: "The MVA Authority could make effective and carry out their plans without approval by the Congress or the States involved. The employees of the Authority would be outside of the civil service and therefore subject to the spoils system. The bill would effect change in our form of government, totalitarian and socialistic in its trends."

Another witness said: "The creation of an MVA would amount to the welding of economic and political powers which would result in nothing short of an autocracy. It would mean the substitution of arbitrary power for democratic action. It would subject the social, cultural, and economic welfare of the Missouri Basin to the dictates and whims of a five-man board not responsible to the people and largely irresponsible to the Congress itself."

Another witness said: "It would challenge State sovereignty, and destroy systems of law, both State and Federal, under which western agriculture has grown and prospered. Yes, it would throttle, in the West, the reclamation program which has been carried on through the many years by an experienced agency."

Question No. 4. Since water and power is of primary concern in the farm area of the West, do you think that an agency such as the proposed MVA would serve to more adequately distribute irrigation and water power to the several States in the area?

We do lack adequate electrical energy. There is a real crusade on among our farm population for more REA lines. There is now a rapid expansion under present agencies. Dams are being built on the Republican River for irrigation purposes. The Randall Dam, in South Dakota, now under construction, will bring much electrical energy into the State. Construction is proceeding in Wyoming and Colorado, under both the Army engineers and the Bureau of Reclamation.

The Pick-Sloan plan proposes power plants on the Niobrara, the Loups, the Platte, and the Republican Rivers. It proposes more irrigation in these areas, under State and local control. I truly feel that when we fully develop and use our resources we will see new population, new wealth, and new industries coming into our State. I do not understand how an MVA can do a better job than the agencies now in the field.

Question No. 5. Is there much dissatisfaction in Nebraska with the joint program sponsored by the Department of Army engineers and the Bureau of Reclamation?

I have found no general dissatisfaction. There are many people who feel the agencies move too slowly. I do believe that the threat of an MVA has caused the several agencies to work more in harmony.

There is a feeling in Nebraska that all plans of the Bureau of Reclamation and the Army engineers ought to be examined very closely by the State and local communities who will be affected. That is being done. Hearings have been held. Groups have had an opportunity to express themselves. No action will be taken until plans are approved by the State and the communities affected. This is as it should be.

It is my belief that under MVA the people will have little control over the authority. Under the Pick-Sloan plan all proposals must be studied by the State, and when the people involved want to form an irrigation district, they do so under State and Federal regulations. Nothing is forced upon them. Their own destiny and future is in their own hands. I cannot understand how a super-duper agency could do a better job than is being done by our own present experienced group of engineers and the Reclamation Service.

All but five of the sponsors of the bill are outside of the Missouri River Basin. I am sure that the people of Nebraska and of the basin do not want the bureaucrats and the yapping social uplifters from Washington and the East, imposing a socialistic theory which calls for regimentation and control of their lives. I am sure that Congress must protect not only State rights, but the rights of individuals already established. If we do otherwise, we would be derelict in our duty.

National Health Insurance and the AMA

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1949

Mr. CELLER. Mr. Speaker, physicians throughout the Nation were shocked and dismayed a few weeks ago when the National Physicians Committee, which is fighting hand in hand with the American Medical Association against President Truman's health-insurance legislation, circulated a letter with anti-Semitic overtones by a questionable character known as Dan Gilbert.

The backfire was so strong that the AMA has finally come out with a statement disassociating itself from the Gilbert letter, which the National Physicians Committee sent out with the apparent approval of the AMA. But, as Albert Deutsch, the noted medical writer, pointed out in a column in the New York Post, Sunday, March 6, the AMA did not disavow the National Physicians Committee, which has used questionable methods in the past in fighting health-insurance legislation.

Under unanimous consent, I include in the CONGRESSIONAL RECORD this column by Mr. Deutsch:

(By Albert Deutsch)

The national physicians committee, stooge propaganda agency for organized medicine, last week got a slap on the wrist from the American Medical Association and a smack on the snoot from the AMA's largest component—the New York County Medical Society—for distributing the Dan Gilbert News Letter addressed to "Dear Christian American" and attacking national health insurance as "the monster of anti-Christ."

The significant action of the New York County Medical Society at its monthly meeting last Monday was eclipsed completely in the press by the news of its unexpected vote to disapprove the $25 propaganda tax levied on doctors by the AMA.

The local society's resolution on the NPC not only condemned the agency for circulating the bigot-slanted Gilbert letter, but officially announced the withdrawal of the society's previous endorsement of the NPC.

The American Medical Association, through its journal last week, declared that the Gilbert letter was sent out without the knowledge of any official of the AMA; that every official of the AMA joins in condemning the letter as an expression of medical opinion in this country, and that the AMA does not require allies of doubtful repute in its campaign for the maintenance of a high quality of medical care.

The AMA skillfully disassociates itself from the rabid Gilbert letter but refrains from condemning the NPC for circulating it and hailing it as one of the few really vital pronouncements of an age.

The local medical society notes the AMA's failure to rescind its approval of the NPC and reproves the parent body indirectly for not going far enough. The NPC, in a circular accompanying the Gilbert letter, boasted that it had been endorsed officially on three occasions by the AMA.

How can the AMA now repudiate its own brain child? It is known that the NPC was born in 1939 after weighty conferences of key AMA officials. It has been stated in official medical publications that the NPC was created as a propaganda and lobbying agency because the AMA would lose its tax-exempt status if it went directly into the field itself.

Dr. Morris Fishbein, AMA factotum, presided as "midwife" at the official launching of the NPC 10 years ago. Its roster of officers reads like a Who's Who of ex-presidents and trustees of the AMA. The present chairman of the NPC, Dr. Edward H. Cary, is an AMA ex-president. Another AMA ex-president, Dr. Harrison H. Shoulders, serves on the NPC board of trustees. Dr. F. F. Borzell, speaker of the AMA's house of delegates—a powerful post—is another NPC trustee. The other 15 NPC trustees are drawn from the top circles of the AMA—its board of trustees and house of delegates.

Nearly every State NPC chairman is an ex-president of the medical society in his respective State. The NPC is careful not to have current medical society presidents; that might betray the tie-up as too official.

A number of State and local societies have actually forced their members into supporting the NPC by imposing a special annual NPC assessment on them.

The false and often vicious propaganda emanating from the NPC has outraged many physicians—even among those who vigorously oppose national health insurance. But they have never succeeded in getting the AMA to withdraw its official endorsement of the stooge agency, which is headed by former newspaper executive, John M. Pratt, who used to run a physicians' free enterprise committee for Frank Gannett's committee on constitutional government when Gannett was nursing dreams of getting the Republican Presidential nomination.

The American Dental Association, last September, did what the AMA still refuses to do. The NPC had set up an auxiliary national committee of dentists which for years had the ADA's endorsement. The American Dental Association adopted a resolution at its annual meeting in Chicago opposing the policies and methods of the national committee of dentists and repudiating its previous endorsement of it.

The NPC, meanwhile, is in the middle of a campaign to raise a million-dollar-war chest to help the AMA's announced $3,500,000 campaign to fight President Truman's health-insurance program.

The NPC raised nearly $600,000 last year, including $122,000 from large drug manufacturing companies. Among the latter, Parke, Davis & Co., the Upjohn Co., and Eli Lilly Co. kicked in $15,000 apiece, while Hoffman-LaRoche and American Cyanamid contributed $10,000 each.

Arizona Combats Dust-Bowl Threat

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. MURDOCK. Mr. Speaker, Arizona is so far away from Washington and the Atlantic seaboard, and it is so difficult for a voice from that distant corner to be adequately heard here, that it was a distinct surprise and pleasure when I saw on page 12 of the New York Times for Monday, March 7, 1949, a well-written article informing the great reading public of this outstanding newspaper something of the serious condition confronting the State of Arizona. Central Arizona has staged one of the most remarkable developments in this generation and has reached the apex of economic growth and agricultural production. And now having reached that apex, wherein that small area constitutes an oasis in the desert and contributes as much as $66,000,000 in income taxes annually to the Federal Treasury, it finds itself faced with an economic crisis. This is a curable crisis, but the great question is, Will it be cured? And that question can only be answered by the Congress of the United States. This article in the New York Times, in a relatively brief space, portrays the danger and pictures the situation better than the senior Congressman from Arizona has ever been able to do. I commend this article to my colleagues and urge a careful reading of it, not alone for Arizona's benefit, but for the economy of the entire Nation.

The article is as follows:

ARIZONA COMBATS DUST-BOWL THREAT—PUSHES TO GET WATER FROM THE COLORADO TO SAVE RICH LAND REVERTING TO DESERT

(By Gladwin Hill)

PHOENIX, ARIZ., March 6.—Confronted by a water shortage which threatens a drastic curtailment in agriculture, one of the State's main sources of income, Arizona leaders are marshaling renewed support for one of the most ambitious projects in the 47-year history of Federal reclamation work.

This is the $738,000,000 program by which water would be diverted from the Colorado River at Parker Dam, on the Colorado-California boundary 170 miles west of Phoenix, raised 985 feet and sent by gravity flow through a 235-mile canal, to be known as the Granite Reef Aqueduct, to the fertile but parched 1,200-square-mile farming area of central Arizona.

Congressional hearings on the project have been tentatively scheduled for this month.

By the project 1,300,000 acre-feet of water (an acre-foot is the amount necessary to cover 1 acre to a depth of a foot) would be provided to alleviate a deficit which is causing farmers to look anxiously at the 1,000-year-old ruins of an Indian civilization in the area supposedly extinguished by a similar water shortage.

RECORD OF RECLAMATION

A generation of reclamation work, leading to a system of eight impressive dams on the Salt, Gila, and Verde Rivers, which converge near here, has turned 725,000 acres of desert into some of the Nation's most productive farmland.

Since the construction of the Theodore Roosevelt Dam on the Salt River, the Government's first reclamation dam, the population of this central Arizona area, in Maricopa and Pinal Counties, has jumped from 43,500 to more than 387,000—half the State's population.

This area contributes the major part of the State's agricultural income, which last year hit a record of $200,000,000 and was nearly one-third of the State's income total.

The biggest chunk of this farm revenue was from cotton—a record 32,000 bales, worth $59,000,000. Beef and truck crops contributed nearly equal amounts. Central Arizona boasts that it now produces half the Nation's supply of winter and spring lettuce, 10 percent of the Nation's carrots, and 60 percent of its spring cantaloups. Its alfalfa production rate of 2.7 tons per acre is claimed to be the second highest in the country, twice the national average.

Pinal County, the cotton center, produces 550 pounds per acre, against a national average of 350 pounds.

GROWING SHADOW OF DROUGHT

But the picture of abundance is being darkened by a growing shadow of drought.

The central Arizona development, amounting to only 1 percent of the State's total area but comprising the bulk of its irrigated land, has been getting about half of its farm water from the dam system via channels and about half from natural underground reservoirs by pumping.

Exceptional aridity for two decades and the water demands of expanded wartime food production have sapped the dam reservoirs and brought critical depletion of natural underground reserves.

In only 3 years since 1927—1932, 1937, 1941—has there been good rainfall in the central Arizona watershed. By last December, the University of Arizona reports, seven deficit years in water supply had consumed more than 95 percent of the 1941 reservoir surplus, while the area's water tables fell from 5 to 50 feet or more.

In Pinal County, the cotton center, the underground supply was depleted by 3,000,000 acre-feet—the equivalent of nearly a year's water needs for the whole 725,000-acre area.

Melting snows last week filled dam reservoirs of the Salt River project, the main part of the central Arizona area, up to 412,995 acre-feet, twice the storage of a year ago and four times as much as was behind the dams in December, but still only one-tenth of the area's annual water needs.

WATER-DEFICIT FIGURES

The net result, according to the Central Arizona Project Association, is that in the face of a total annual requirement of 4,100,000 acre-feet the area has been getting on the average only 1,800,000 acre-feet from rivers and the same amount by pumping, leaving an initial deficit of 500,000 acre-feet. But the pumping itself is a deficit operation, depleting underground reserves by an estimated 800,000 acre-feet for a total deficit of 1,300,000 acre-feet a year.

The allotment of dam water to farmers this year as last is only 2 acre-feet per acre—about half the amount necessary for full agricultural production. Some key districts on very depleted dams received as little last year as .85 acre-foot. Pump farmers have been driving their wells down as much as 300 feet to levels where pumping is no longer economical.

Since you can't grow a crop on half enough water, farmers have just had to take part of their land out of production and concentrate available water on the rest. As a result fertile land has been reverting to the poison goldenrod, greasewood scrub and sage of the primeval desert.

Ten percent of the land, according to authoritative estimates, already has gone out of use this way, and Federal and State reclamation officials are agreed that the present course of water shortage can end only in the enforced retirement of at least one-third of the whole 1,200-square-mile central Arizona development.

WAR BROUGHT STIMULUS

Local observers acknowledge that there undoubtedly has been some improvement in expenditure of underground water resources and some speculative expansion of irrigation farming. But, they point out, this occurred largely during the war, when the Government itself was encouraging all-out production of food and other farm products, as it still is to a degree.

If the threatened one-third of the central Arizona land were all in one spot, solution of the problem might not be so complex, but because water is fluid, its lack is also fluid, and has spread throughout the area, without regard for ownerships or property lines.

Again, if only land were involved it might be dealt with summarily. But also involved are the livelihoods and lives of many thousands of persons—not only the ones on the 18,000 farms in the area but the multitude of others in the complex economy that has grown up around agriculture.

The pinch of the water shortage has been aggravated by falling agricultural prices—first cotton, late in 1946, grain a year ago, beef last summer and vegetables last fall.

"Another 20-percent drop in cotton and grain prices, with power costs staying up, and half the pump land in this area will go," William Rugg, a farmer in Casa Grande, in Pinal County, said today.

In Pinal County about 300,000 acres of land have been cultivated from desert by irrigation—100,000 acres on the San Carlos project, fed by the Coolidge Dam on the Gila River, and 200,000 acres supplied by pumping.

REPORT OF COUNTY AGENT

Kelvin K. Henness, the Department of Agriculture's county agent for 20 years, estimates that last year not over half of the 100,000-acre San Carlos project was worked and that around 35,000 acres of pump land were out of use.

Mr. Rugg, who came here from Worcester, Mass., 20 years ago, has a 2,000-acre farm. He is working only 1,200 acres of it, in cotton, alfalfa, maize and barley.

"I'd be working all of it if there was water," he said. "Ten years ago, with one pump and a reasonably good well, you could irrigate 320 acres. Today that same pump will irrigate only about half that. I used to pump from 125 feet. Now I'm down to 235."

Leigh Larue, who has a dairy farm in the same area, came here from Indiana 10 years ago, bought a 40-acre tract, and worked up from poultry raising to a 30-head herd of pure-bred Guernsey cows, expecting to feed them off alfalfa from the tract.

"The first year I got a reasonable amount of feed," he said. "But since then it's been going down steadily."

The growing water shortage has forced him to abandon half his tract and the rest has barely been paying its cost.

"Last year," he recounted, "I raised about $500 worth of pasturage, but it cost me just about that much to produce it, between feed, planting, water, and taxes.

"I've had to buy 75 to 80 tons of hay a year. I figure I'd be just as well off operating in the desert, buying all my feed."

Indications of a nascent dust bowl are on every hand.

"That's the Roy Johnson farm—35 acres," Mr. Henness pointed out during a tour of the district. "That cotton stubble's been there 6 years. He quit and went into carpentering.

"That 70 acres belongs to J. M. Norwood. He gave it up in the fall of 1946. Went to California, trucking vegetables. That place is owned by a man named Earl Weaver. He went to Oregon. Last I heard he was running a store."

A boost in the San Carlos project surface-water ration from last year's 0.85 acre-foot to 2 acre-feet has brought new attempts to cultivate some of the district's idle land on a restricted basis, since water rights, however small, are not to be spurned. But neither farmers nor officials are at all optimistic about long-term prospects under present facilities.

Federal and State reclamation officials are in agreement that the present central Arizona dam system, even with more favorable weather conditions, cannot be counted on to rectify the situation and that a supplementary supply is necessary.

Arizona's only hope at present for this supplementary supply is in the $738,000,000 central Arizona project.

The 235-mile canal from the Colorado is only one detail of the plan. The project calls also for the construction of a dam at Bridge Canyon on the Colorado 100 miles above Boulder Dam and 170 miles northwest of Phoenix. With a power capacity about three-quarters that of Boulder's, this would provide energy both for the pumping operation at Parker Dam and to help alleviate the general scarcity of consumer power in the Arizona-southern California area.

Supplementing both the Boulder and Bridge Canyon Dams on the Colorado would be additional ones on the tributary San Juan River at Bluff, Utah, and at Cameron, Ariz., on the tributary Little Colorado River, both of them for silt and flood control. That at Cameron would be called the Coconino.

Then down in the central Arizona area itself the project calls for four dams in addition to the present eight—the four being designated Buttes, Charleston, Hooker, and McDowell—plus aqueducts and other facilities to distribute the water.

SEVENTY-EIGHT YEARS TO PAY FOR ITSELF

The project is planned to pay for itself in power and irrigation water charges in 78 years. It has been approved by the Department of the Interior. But its authorization by Congress has been bitterly fought by the State of California. California contends that the diversion would take water on which it has a future legal claim under interstate agreements which have been subjects of heated controversy for 25 years.

Ironically, while the dispute rages the ancient Colorado, future claims on which by its seven basin States amount to more than 100 percent of all its water, continues to spew unused water into the Gulf of California, upward of 8,000,000 acre-feet a year.

Arizona is equally adamant in asserting its legal right to the needed water and, while California continues its long fight to get the issue into the Supreme Court, in pressing for enactment of the project.

Arizona's hopes, fruitless in the Eightieth Congress, plummeted a month ago when the Bureau of the Budget stated that the Central Arizona project was not on President Truman's program, but they rose again with subsequent indications from the White House to the contrary.

While proponents of the project have tried to keep it out of partisan politics, it is felt that the outcome of the November election was favorable to its chances rather than otherwise and that the forthcoming congressional hearings may further Arizona's cause.

The Central Arizona Project Association, a nonprofit organization of farmers, businessmen and civic leaders which has spearheaded the campaign for the project, opened over the week end a community drive for $100,000 to finance expenditures in connection with the hearing.

Causes of America's Failure in China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. JUDD. Mr. Speaker, it is popular nowadays for the architects and apologists of American foreign policy in China during the last few years to try to explain its catastrophic failure by laying all the blame on the inept, incompetent, inefficient, and corrupt Chinese Government and on the immoral Russians. It is not that simple.

It is not enough to announce that the Chinese have lost the will to fight. The important questions are: First, Why have they lost it after almost 20 years of valiant resistance against Japan and more than 20 against Communists; and, second, How can it be restored?

No one knows more about the basic factors that led to the break in Chinese morale than Gen. Patrick J. Hurley, who was the agent in China of President Roosevelt's successful policy of supporting the Chinese Government, and who resigned rather than be the tool of those who were determined to change that policy to one of forcing peace and unity with the Communist rebellion in China—a policy which led to conquest by the Communists in every country where it has been tried.

General Hurley has recently spoken frankly of the fundamental causes of our failure in China, the seriousness of which

for our own future cannot be overestimated.

It is to be hoped he will make further reports. Only as we learn more about what and who were responsible for the changed American policy in China, which led so directly to defeat of America's proper interest in the Pacific, can it become possible perhaps to retrieve the situation and save a free Chinese Government, if necessary in exile, as the foundation for eventual liberation of China and Asia from Communist tyranny.

Under leave to extend my remarks, I include the following speech by General Hurley:

AMERICA'S FAILURE IN CHINA

(By Patrick J. Hurley, before the Georgetown University Foreign Service School, Washington, D. C., March 3, 1949)

America's failure in China today is the result of America's surrender of principles in the secret Yalta agreements.

Every domestic issue in the United States today is affected by our international policy.

Notwithstanding all this, the fundamental issue by which we are confronted internationally is not new. The basis of all our international conflicts is still the struggle for individual human rights and self-government. In the past this struggle has been described as the conflict between the divine right of kings and tyrants against the rights of individuals.

More than three-fourths of the people of the world today are still fighting for self-government and individual liberty.

Today we may define the issue as a conflict between the rights and dignity of the individual against collectivism, communism, imperialism, and the various forms of totalitarianism. The battle of the individual against oppression is world-wide today. Free enterprise, labor unions, freedom of religion, self-government, and justice cannot exist under any form of totalitarianism.

In the age-old fight for liberty, Socrates, a Greek philosopher, drank hemlock and died in defense of his right to express his own opinions. Socrates died nearly 500 years before the birth of Christ.

Christ taught the fatherhood of God and the brotherhood of man. He promulgated the Golden Rule and emphasized the importance, the dignity, and the glory of the soul of the individual.

I will not attempt to follow for you tonight the signposts of the everlasting conflict throughout history between the individual and government for individual liberty. Let me, however, call your attention to a few of these signposts in the struggle for liberty in the United States.

The rights of the individual against tyranny were defined in Patrick Henry's "Give me liberty, or give me death"; in Thomas Jefferson's Declaration of Independence, which pledged Americans to support "governments deriving their just powers from the consent of the governed." In the Bill of Rights in the Constitution of the United States; in Abraham Lincoln's Gettysburg Address, in his Emancipation Proclamation, and in his second inaugural address; in Woodrow Wilson's Fourteen Points; and finally, Franklin Roosevelt's and Winston Churchill's Atlantic Charter.

Let us have a brief glance at a few of the principles of the Atlantic Charter.

(We, the signatory nations) "seek no aggrandizement, territorial or other."

(All the territory and all the nations given to or taken by Russia was a violation of that principle and that commitment by Russia, but all was done with the consent of our diplomats.)

(We) "desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned." (The people whose territory has been absorbed by Russia were not consulted—they were conquered.)

(We) "respect the right of all peoples to choose the form of government under which they will live." (That principle has been violated by the imperialist, colonial governments in their resubjugation of colonial mandated people. We furnished lend-lease equipment and weapons to the imperialists to resubjugate colonial people at the same time that we were liberating the Philippines.)

The promulgation of the principles of the Atlantic Charter as the objectives for which the United Nations were fighting, gave new hope to all of the oppressed people of the world. The Atlantic Charter was intended to secure for our cause the support of all people everywhere who were denied self-government, and individual liberty, and whose labor and resources were being exploited by more powerful nations.

Personally, I had occasion to know in more than 20 nations where I served during World War II that the ideals of liberty and self-government gave great strength to our cause long before the power of American men and munitions became effective on the battlefields.

These principles of the Atlantic Charter were quickly approved by 31 nations, including the 4 great antiaxis powers which later became known as the United Nations. The United Nations, as you know, were not united in fact; they were merely associated in the war. They represented ideologies that were in deadly conflict with each other.

After the Atlantic Charter had been finally approved by 45 nations, there were those who could see that the principles of liberty would be detrimental to imperialism, communism, to totalitarianism, and conquest. It was then that the Communists and imperialists who opposed liberty and self-government began to say that the Atlantic Charter had no binding effect as an international agreement; that many of the peoples of the world are not qualified for self-government; that the Atlantic Charter was just a press release. These objections were first voiced by the imperialists and later by the Communists.

I brought to the attention of President Roosevelt the dangers that lay in discarding the fundamental principles of liberty. At the President's direction I prepared for him what is now known as the Iran Declaration, which contains this statement:

"They count upon the participation of Iran, together with all other peace-loving nations, in the establishment of international peace, security, and prosperity after the war, in accordance with the principles of the Atlantic Charter, to which all four governments have subscribed."

The Iran Declaration was signed at Tehran on December 1, 1943, by Stalin for Russia, Churchill for the United Kingdom, and Roosevelt for the United States. The Iran Declaration unquestionably reaffirmed the principles of the Atlantic Charter as the objectives for which the United Nations said they were fighting the war.

But every principle for which we told the world we were fighting as stated in the Atlantic Charter and reaffirmed in the Iran Declaration, was surrendered in the secret agreements at Yalta and in subsequent conferences.

WHAT HAPPENED IN CHINA

This brings us again to what happened to China. Remember that China relied upon us as her ally and upon the principles of the Atlantic Charter.

What is our policy in China? What is the cause of the failure of America's policy in China? Let us examine the history of our Chinese policy.

In 1787 our first Secretary of State, John Jay, expressed America's interest and America's right to trade in China. In 1842 Great Britain defeated China in war and exacted from China a treaty granting Britain extraterritorial rights and ports. Our Government immediately dispatched Caleb Cushing to China. In 1844 Mr. Cushing concluded a Sino-American trade treaty which gave America the same rights to trade in China as those being enjoyed by Great Britain. In 1899 it was evident that the imperialist powers intended to partition and dismember China. At that time the American Secretary of State, John Hay, sent notes to Great Britain, France, Germany, Russia, and Japan, which countries at that time constituted the imperialistic powers in Asia, declaring the American open-door policy. Out of this background grew America's desire to support the territorial integrity and the political independence of China.

Only a few days before the Japanese struck at Pearl Harbor, Secretary of State Cordell Hull on November 26, 1941, made a demand upon Japan. Historically speaking, I am sure that you will remember that Japan had invaded China and had set up puppet governments and control over large parts of Chinese territory. I will quote only one sentence from the Hull declaration:

"The Government of the United States and the Government of Japan will not support—militarily, politically, economically, any government or regime in China other than the National Government of the Republic of China with capital temporarily at Chungking."

In keeping with this outline of our policy in China, I now summarize for you the import of the directives that were given me at the time I was the personal representative of the President of the United States in the Far East, and later as Ambassador to China:

1. To prevent the collapse of the National Government of the Republic of China.
2. To keep the Chinese Army in the war.
3. To sustain the leadership of Chiang Kai-shek.
4. To harmonize the relations between the American and Chinese military establishments and between the American Embassy and the Chinese Government.
5. To prevent the economic collapse of China.
6. To unify all anti-Japanese military forces of China.
7. To support the aspirations of the Chinese people to establish for themselves a free, united, democratic government.

I obtained the approval of the British and Russians for nearly all of this policy, specifically for item number 7.

Our traditional policy in China still supported the fundamental principles of individual liberty and self-government, and opposed imperialism and forceful territorial expansion.

The directives which were given me in China were not stated publicly as the policy of the United States by the State Department until after my resignation in November 1945. American diplomats and the imperialists and Communists who opposed self-government and liberty contended that the policy that I was making effective in China was my own policy and not that of the United States. Of course, that charge was untrue.

Remember, we made war against Japan to uphold the Government of the Republic of China. With China's aid we won the war. Why did the American policy in China fail? What is the cause underlying the Communist conquest of China? What is the cause of the failure of the Government of the Republic of China?

Clearly and unmistakably, the answer is that the fundamental principles that have made America the greatest unit on the face

of the earth, and on which our policy in China was based—individual rights and self-government—were surrendered in secret agreements at Yalta.

That part of the secret agreements made at Yalta pertaining to China and Japan is as follows:

"1. The status quo in Outer Mongolia (the Mongolian People's Republic) shall be preserved;

"2. The former rights of Russia violated by the treacherous attack of Japan in 1904 shall be restored, viz:

"(a) The southern part of Sakhalin, as well as all the islands adjacent to it, shall be returned to the Soviet Union,

"(b) The commercial port of Dairen shall be internationalized, the preeminent interests of the Soviet Union in this port being safeguarded and the lease of Port Arthur as a naval base of the U. S. S. R. restored,

"(c) The Chinese-Eastern Railroad and the South-Manchurian Railroad, which provides an outlet to Dairen, shall be jointly operated by the establishment of a joint Soviet-Chinese company, it being understood that the preeminent interests of the Soviet Union shall be safeguarded and that China shall retain full sovereignty in Manchuria;

"3. The Kurile Islands shall be handed over to the Soviet Union.

"It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures in order to obtain this concurrence on advice from Marshal Stalin.

The Yalta agreement surrendered the freedoms of three-fourths of the people of the world. But let us confine ourselves now to what the Yalta secret agreements did to China.

In violation of the Atlantic Charter, at Yalta, the United States agreed to the aggrandizement of Russian territory to include the Kurile Islands, half of Sakhalin, and the surrounding islands.

In violation of the territorial integrity of China, and in violation of the Atlantic Charter, a naval base was leased to Russia in China at Port Arthur.

In violation of the Atlantic Charter, and in violation of the territorial integrity of China, the United States agreed at Yalta to the internationalization of the port of Dairen. The United States also agreed to give Russia the "preeminent interest" in Dairen which Russia immediately translated into exclusive right.

The United States in secret agreement at Yalta agreed to give Russia a half interest in the Chinese Eastern and South Manchurian Railways. Again the United States gave Russia a preeminent interest which Russia immediately construed to mean an exclusive right to the control of the railways.

As if all these concessions to Russia, in violation of the Atlantic Charter, which had been reaffirmed by Marshal Stalin, were not enough, the United States further agreed that all these concessions to Russia by China would be concurred in by China and "the President will take measures in order to obtain this concurrence on advice from Marshal Stalin."

The student of history and of diplomacy must see in these secret agreements by the United States the blueprint which has been followed by the Communists in the conquest of China.

At Yalta the United States surrendered not only the principles of the Atlantic Charter, but also every element of the traditional American policy in China. President Roosevelt was a sick man at Yalta. One of his chief diplomatic assistants has proved a complete alibi for what happened at Yalta. I do not know who was responsible for the American diplomatic debacle at Yalta.

Let us examine for a moment the arguments against liberty and self-government presented by the colonial imperialists. You will remember that in the Atlantic Charter the imperialists as well as the Communists agreed to "respect the right of all people to choose the form of government under which they will live."

When I raised the question of reaffirmation of that principle at Tehran, the colonial imperialists stated that the French, Dutch, and British are America's best friends as well as our nearest blood relatives. Of course, that is true. I suggested, however, that the German is the largest single blood stream in America and notwithstanding this close relationship we seem to have had a few difficulties with the Germans.

Our imperialist friends argued that they would be overpopulated, and impoverished at home without their colonial monopolies abroad. I think that argument is also correct. You will notice, however, that the arguments of both the Communists and the imperialists leave unanswered the question of the ages, which roughly is something like this: Do the ambitions, the greed, or even the dire necessity of one nation ever justify the transgression of the rights of weaker people?

In the Declaration of Independence America answered that question in the negative. For 168 years—up to the secret agreements at Yalta—America always answered that question in the negative. On the insistence of the imperialists and the Communists this fundamental American principle was surrendered at Yalta.

WHY THE REPUBLIC OF CHINA COULD NOT SURVIVE THE YALTA SURRENDERS

Let us not be misled into believing that the surrender of the rights of individual liberty, territorial integrity, and self-government at Yalta is the sole cause of China's present situation.

When the paternalistic, monopolistic monarchy was overthrown in China, Dr. Sun Yat-sen became the leader of a movement to establish "* * * a government of the people, by the people, and for the people."

The wise leader said that it would take considerable time and training to prepare the 450,000,000 Chinese people for self-government.

To give some idea of the transition period that would be necessary we need but state that there is less than 10 percent literacy in China, compared to 99 percent literacy in the United States.

It should be realized that the Chinese must pass through a long period of education and experience in liberty before there can be real self-government in China. The totalitarians offer both security and self-government at once. They, of course, will not be able to deliver either. Individual liberty and self-government must be based upon integrity and intelligence. Communism is based on force.

Our Communists, both at home and abroad, have been shouting that the Government of the Republic of China is corrupt. Of course it is. The Republic of China is weak, inefficient, and corrupt, after nearly 40 years of revolution and civil war, illiteracy and poverty, oppression and exploitation, and including 7 years of war against Japan.

China has a corrupt system that is known as squeeze. We call it graft. We should remember that the squeeze in China has been rather "slim pickings" during the revolution and Japanese war. The disposition of the crooks was the same as it always has been, but the Chinese Government did not have very much that could be stolen. China was too weak to punish the crooks. A few got rich.

Our Government was strong enough to send the chairman of the powerful Military Affairs Committee and one of the distinguished generals of the Army to the penitentiary for graft. Our Communists and fellow travelers in the United States condemn the Republic of China because it is too weak after its years of vicissitudes to punish its malefactors.

Chiang Kai-shek is the successor of Sun Yat-sen and the leader of that element in China whose purpose it was to establish in China "a government of the people, by the people, and for the people." Chiang Kai-shek chose to sustain the ideals of individual liberty and self-government against imperialism and communism. It is true that Chiang Kai-shek could not create self-government in China overnight. That would have been a miracle. Those who know China know that China has a long, hard road to travel before arriving at self-government. The Chinese people are not prepared for self-government—either by education or by experience. An election of the kind we hold in the United States would be impossible in present-day China. China did want to emulate the United States. The followers of Sun Yat-sen and Chiang Kai-shek prepared a constitution for China that is similar in every respect to the Constitution of the United States, including the Bill of Rights.

Chiang Kai-shek led our allies in China. With his aid we won the war in China. It was his purpose to build a self-government in China. We let him down. The Communists have won. We have lost China. We are now talking about how we can maintain a moral and military bridgehead in China that will not be inside of Russia's iron curtain.

We failed at San Francisco to evolve a workable Charter for the United Nations. We then set up the Council of Foreign Ministers for the purpose of bypassing the United Nations. Instead of building a lasting world peace through the United Nations, we began making treaties between nations that notoriously have never respected a treaty obligation. Instead of relying upon fundamental principles to which our associates in two world wars had agreed, we surrendered these principles and placed our reliance upon dollars and upon force.

We are now operating in a power bloc. There is but one thing certain about a power alliance, and that is that historically speaking, power blocs have always led to war.

It was encouraging to hear the President say in his inaugural address that we as a Nation are against both communism and imperialism and that we will endeavor to build peace for the world through the United Nations.

I remarked once before that there is a vast discrepancy between our announced foreign policy and our actual foreign policy.

I said in the beginning that our foreign policy affects every domestic issue in our Nation. Our give-away foreign policy that enables us to pay for our own surplus with our own taxpayers' money and give it away abroad, does maintain high prices, high national debt, high rate of depletion of our national resources, high rate of employment, high subsidies for our producers, high military preparedness, high taxes, and at least temporary prosperity.

Our policy in giving away money and supplies abroad is also intended to gain the favor of the nations which appear, just now, to be on our side against Russia. How long the American system of free enterprise can endure under such a policy remains to be proven.

We seem today to be relying upon dollars and force and the atomic bomb to overcome our mistakes in foreign policy and our surrender of fundamental principles.

We must remain strong and true to our own principles if we are to lend our strength to the weak and helpless in the everlasting battle for liberty against oppression.

Walter G. Andrews, Soldier and Statesman

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. JOHNSON. Mr. Speaker, I was not able to be present at the session when the death of Walter Gresham Andrews was announced in the House of Representatives. When I became a Member of the House, it was my good fortune to be assigned to the Military Affairs Committee of which "Ham" Andrews was the ranking Republican member. I came to know him intimately and the more I knew him and the more I knew about his work, the more I admired him.

He had a very interesting and colorful career. Apparently, in his early youth he became interested in national defense. He joined the National Guard of New York and went to the Mexican border in 1916, when Pershing was ordered to capture Villa.

When World War I broke out he became a member of the famous Seventy-seventh Division. He commanded a machine-gun company and participated in much of the combat of that famous division, of which the Lost Battalion was one unit. He made a distinguished record in combat, such a record in fact that he was recommended for and awarded the Distinguished Service Cross. I doubt if anyone can really understand the tough assignment that the doughboys in the Argonne had in 1918, unless he was there and knew personally what their mission was and how hard it was to accomplish. "Ham" Andrews lived through the rigors of that campaign. He knew what warfare was because of his experience in looking down the barrel of a machine gun toward the enemy lines. The tough outdoor life in October and November in France in 1918 required sturdy men to live through it and come back in good health. The Seventy-seventh Division took more ground than any other American division. The machine gunners and the infantrymen took the brunt of the attack.

I merely mention these matters as I think it helps interpret the conduct and the work of Mr. Andrews as a Member of Congress. From the time I first met him at the commencement of the Seventy-eighth Congress until the termination of the Eightieth Congress, I saw him almost every day when Congress was in session. In his conduct in the committee and on the floor of the House I have never once seen him take a partisan or selfish attitude on any matter involving our national security. He was indeed a statesman in his conduct in our committee and on the floor of the House.

When the Republicans captured the Congress in 1946, the committee structure of the House was reorganized pursuant to the Reorganization Act passed in the Seventy-ninth Congress. Mr. Andrews was the chairman of the new Armed Services Committee. It merged the two former committees of the House, namely, the Military Affairs Committee and the Naval Affairs Committee. He had a difficult assignment, perhaps the most difficult of any chairman. These two strong committees were now merged into one. The so-called Unification of the Armed Services Act had also been passed. Mr. Andrews' job was to merge these two committees in such a manner as to make them work as a united team on the many problems confronting the committee. He set to work long before the opening of Congress to plan the committee program. He was an excellent administrator. He knew how to get along with and handle people. He understood how to get the most work out of the members of his committee. As others have said, he did a magnificent job; in fact, in my humble opinion he did the outstanding job as a committee chairman in the Eightieth Congress.

It was my great honor and pleasure to be chairman of a subcommittee by appointment of Mr. Andrews. It was a pleasure and an inspiration to work under him. We worked hard. We accomplished many useful things and some very useful legislation passed the Eightieth Congress, which was reported by our subcommittee. I do not want anyone to get the impression that I am taking too seriously the work which our subcommittee did as the others also had very important work and reported important bills. However, I wish to speak, in trying to present Mr. Andrews' characteristics, about the things of which I have personal knowledge. He gave us complete cooperation and encouragement in every way. He was tolerant and understanding of our problems. I think it is fair to say that Mr. Andrews molded the general shape of the policy which this committee will follow in the future. All of the matters considered by us were nonpartisan matters involving our national security.

I believe sincerely that the Armed Services Committee of the House and the Armed Services Committee of the Senate are the particular units of the Government that will have more influence in bringing about a real merger of the armed services than any other agency of Government. Before us are paraded the problems of th Air Force, the Army, the Navy, and in every instance that I know of, the subcommittees of the Armed Services Committee of the House and the main committee itself, are always trying to find ways in which unnecessary activities of either branch or duplicating facilities of the various branches may be avoided, and not only better administration be brought about, but more efficiency and more national security for the taxpayer's dollar.

Mr. Andrews did not spare himself in this work. He worked with the zeal of a crusader and a crusader he was in national security and also in unification of the services.

It was unfortunate that he became ill following the closing of the Eightieth Congress. Undoubtedly the heavy load which he carried had something to do with his illness.

Those of us who worked with him can look back with pleasure and also with profit because of our association with him. I believe it is not too much to say that he was indeed a gallant soldier and an eminent statesman.

Price Fixing Under Basing-Point System Held Illegal by FTC and United States Supreme Court—H. R. 2222 Proposes To Overrule These Decisions

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks, I desire to include two letters from officials of the National Federation of Small Business for the attention of the Members of Congress.

The letters are as follows:

NATIONAL FEDERATION
OF SMALL BUSINESS, INC.,
Washington, D. C., March 8, 1949.

Hon. JOE L. EVINS,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN EVINS: Early in 1948 the United States Supreme Court rendered a momentous decision condemning the use of the basing-point system, an organized system, in violation of antitrust laws. Shortly after the decision of the Supreme Court a leading spokesman for the steel industry said that the industry would have to look to the Congress to amend the Court's decision or to give relief to these concentrated industries. Shortly thereafter a Trade Policies Committee was set up in the Senate to explore the decision of the Court. This committee held extensive public hearings and recently made a report of these hearings covering 1,400 printed pages.

Now bills are being proposed in both the House and Senate (the House bill is known as H. R. 2222) which will in substance place a moratorium which would last from 16 months to 2 years on certain portions of the Robinson-Patman Act and other antitrust laws.

The federation opposes any softening or weakening of the antitrust laws. In other words, to protect small business at the local level we must have all-out vigorous enforcement of the antitrust laws.

I am herewith enclosing copy of a letter which went to all Members of Congress on March 4, 1949, from Mr. C. Wilson Harder, president of the National Federation of Small Business.

It is my opinion that you would be doing a great service to small business if you would find it convenient to insert the enclosed messages in the CONGRESSIONAL RECORD. I am sure that small business, not only in your State, but throughout the Nation would welcome such helpful action.

Thanking you in advance for your cooperation, I am

Sincerely yours,
GEORGE J. BURGER,
Vice President in Charge Washington Office.

NATIONAL FEDERATION OF
SMALL BUSINESS, INC.,
San Mateo, Calif., March 4, 1949.

To All Members of Congress:

This is a protest against House bill H. R. 2222.

It is also a protest against the tactics employed to get this bill out of the House Judiciary Committee without hearings being held.

To small-business people this bill is extremely important because it is designed to break down the antitrust laws to a very great extent.

There can be no question in the minds of any Members of Congress about the importance of protecting the welfare of small business today as never before.

We are confident that if Members of Congress blindly enact this bill into law they might just as well scuttle the Robinson-Patman and the other antitrust laws entirely. This, of course, would mean, to a very great extent, eliminating small business from our economy. It would mean the rapid growth of monopolies.

The National Federation of Small Business, Inc., has the largest individual membership of any business organization in the world and our members have already cast their ballots and committed the federation with regard to the strict enforcement and strengthening of the antitrust laws. This, of course, includes the opposing of all such legislation as H. R. 2222.

In view of the importance of this issue, this organization intends to publicize the House action on same, not only in our bulletins going to federation members in every congressional district but through press releases to the large daily newspapers, as well as in our weekly coast-to-coast radio broadcasts.

We sincerely trust that you consider that your independent business constituents are entitled to your cooperation in protecting them by taking all possible action in opposing H. R. 2222.

The federation would appreciate knowing how you stand on this issue.

Sincerely,

C. W. HARDER.

Jack Nichols

EXTENSION OF REMARKS
OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. STIGLER. Mr. Speaker, the last remains of Jack Nichols, Member of Congress from the Second District of Oklahoma from November 1934 to July 3, 1943, have been brought back to the United States by the Government from Africa. Internment of the body will be made at his home town of Eufaula, Okla., on Sunday, March 13, at 2:30 p. m.

Jack was a graduate of the great school of experience without the benefit of any college or university degrees. Born in Joplin, Mo., August 30, 1896, he attended the public schools there and in Colorado Springs, Colo., and was enrolled for a short time in the Teachers College at Emporia, Kans. He came to Oklahoma with his parents in 1914 and lived in the little town of Hanna, in McIntosh County, the heart of the full-blood Creek Indian settlement in that country. He learned the ways and customs of the Creeks which aided him greatly in his future law practice in their behalf. He enlisted and served in the ranks of the Infantry branch of the Army during World War I.

After several business ventures, he entered his brother Clark's law office at Eufaula for study and practice. In 1926 he passed the State bar examination and entered the active practice. He developed into one of the best trial lawyers in the State, being especially successful in criminal cases and Indian litigation. His clients were mostly Creek Indians who had been made wealthy by oil production from their individual allotments and inherited land. This practice brought him before the Indian offices in Oklahoma and the Secretary of the Interior in Washington where he built an enviable reputation for vigorous and honest prosecution of matters in behalf of the property rights of his Indian clients.

When W. W. Hastings decided not to run again for Congress in 1934, Jack, who had never before run for public office of any kind, entered the primary race.

Although he was opposed by two powerful candidates from the biggest city in his district—Muskogee—and was from the extreme southern small county in his district—McIntosh County—he placed in the run-off. He was matched against a strong young candidate from Muskogee who had been prosecuting attorney for several terms. With the aid of members of his family and a few loyal friends, he made a remarkable campaign, based mostly on his own speeches and his own personal appeal. His main slogan in the campaign was "Jack Nichols, your fighting friend." The rank and file rallied to his banner and the voters from the forks of the creek overwhelmed the city centers to nominate him. This caused consternation in the ranks of some of the old-timers, who could only say, "Who is this fellow Jack Nichols?"

They soon found out, for he carried his fighting spirit into Congress with him, where his activities soon attracted attention. Speaker Joe Burns publicly dubbed him as "his seed corn." I have been told a warm personal friendship developed between this new Oklahoma man and Speaker Burns. During the perilous and turbulent days of WPA he weathered all the storms and was never defeated for his seat in Congress, although opposed at all times by those who attacked him for his support of Roosevelt's New Deal. He served under two other Speakers after Joe Burns—Will Bankhead and Sam Rayburn. Always in the thick of the fights on worthwhile matters, he gave special attention to the coming industry of civil aviation.

In 1940 he was appointed chairman of the Select Committee to Investigate Air Accidents, the other members of the committee being Richard M. Kleberg, of Texas, vice chairman; Herron Pearson, of Tennessee; Evart M. Dirksen, of Illinois; and Carl Hinshaw, of California. The report of this committee was printed and published in 1943.

The members of the committee adopted the following resolution:

WASHINGTON, D. C.

In the absence of Mr. Nichols, a special meeting of the Select Committee to Investigate Air Accidents was called in room 516, Old House Office Building, by Hon. Richard M. Kleberg, vice chairman, at 10 a. m., February 22, 1943. Hon. CARL HINSHAW of California, thereupon offered the following resolution, which was unanimously adopted:

"Be it resolved, That we, as members of the Select Committee to Investigate Air Accidents, wish to express our appreciation to Hon. Jack Nichols, of Oklahoma, for his sincere devotion, untiring efforts, and sound judgment as chairman of this committee. As members of the committee we are proud of the harmony which has prevailed and of the work which has been achieved under the leadership of Hon. Jack Nichols.

"R. M. KLEBERG, *Vice Chairman.*
"HERRON PEARSON.
"EVERETT DIRKSON.
"CARL HINSHAW."

Because of his keen interest in aviation and his thorough study of it, the Transcontinental Western Air, Inc., offered Jack a position on its staff as vice president. After serious consideration he decided to resign his seat in Congress, to which he had just recently been reelected, and devote his life to the advancement of this great new transportation industry. His resignation became effective July 3, 1943, at which time he was a member of the Rules Committee.

He established his office in Washington, D. C., where he advanced the interests of his company until August 5, 1945. On this date he started on a mission, entrusted to him by the TWA, to negotiate contracts with countries in Africa situated on either side of the TWA main-line route through that country.

He arrived at Cairo, Egypt, on August 9, 1945, where he established an office, from which he operated during the time he worked on his mission. His work took him to Iran, Iraq, Tehran, Alexandria, Asmara in Eritrea, Addis Ababa in Ethiopia, Jidda in Arabia, Saudi Arabia, Italy, France, Germany, and Belgium.

After conferences with the rulers of these countries he finally negotiated and executed a contract with Haile Selassie and his cabinet for establishing an airport at Addis Ababa and a route from there to the main lines of TWA. Other contracts were in process of negotiation with several other countries.

On November 2, 1945, two representatives from TWA here in Washington, D. C., Austin Naylor and Milor Campbell, who were to establish operations from Addis Ababa, arrived in Cairo. After briefing them on the situation the three took off in General Giles' B–25, piloted by a captain, with a crew of three, from Asmara, which is on a plateau of 6,000 feet elevation, and on which was an American landing field. As there was no refueling facilities at Addis Ababa, they had to take on enough fuel to make the round trip to Addis Ababa and back to Asmara. The take-off was slower than usual by reason of the extra load and the altitude. After a run, near the end of the runway, the copilot thinking they were airborne, drew up the landing gear. They were not airborne, however, and settled down until the propeller tips struck the ground. Immediately thereafter, however, they got airborne. The pilot, undoubtedly realizing the propellers might have been damaged, started to turn back to make another landing and check his damage. He turned the

wrong way, for there was a cable line strung on poles on which was operated a hoisting car from the top of the mountain to the valley below, on that side. The pilot lacked just a few inches of clearing this cable, and the plane plunged into the ground instantly, killing Jack, Naylor, Campbell, the pilot, and his three crew members. The ground crew of the airport arrived quickly so the bodies were not burned. All of the deceased were buried with military honors in the United States Government cemetery at Cairo, where they remained until they were brought back here on February 5, 1949.

Arrest and Trial of Protestant Clergy in Bulgaria

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an editorial from the New York Times:

DIOCESAN UNION OF HOLY NAME SOCIETIES,
Buffalo, N. Y., March 7, 1949.

Hon. ANTHONY F. TAURIELLO,
Member of the House of Representatives, Washington, D. C.

DEAR MR. TAURIELLO: We have observed with deep interest the action of the Bulgarian Government in the trial of 15 Protestant Church leaders in Bulgaria.

We regard this action of the Government of Bulgaria as another attempt in the series of events to erase the name of God from the hearts of right-minded men.

Our sympathy goes out to all Christians and religious persons in this inhuman attack upon the God-given rights of mankind.

Upon the request of all the members of the executive board, duly authorized representatives of the more than 100,000 Holy Name men in the diocese of Buffalo, we protest most vigorously this diabolical attack upon religious freedom. We trust that you will use your good office to defend the fundamental principles embodied in our Bill of Rights so that those accused may be spared any further humiliation and miscarriage of justice.

Respectfully yours,
THE EXECUTIVE BOARD,
ROBERT K. DORAN,
President.

[From the New York Times of March 9, 1949]

SENTENCE IN SOFIA

Communism's latest attack on organized religion—the "treason" trials in Bulgaria—has ended with the sentencing to life imprisonment of the four principal defendants—ministers, respectively, of the Methodist, Congregational, Baptist and Pentecostal churches. Other defendants have received prison terms ranging from 1 to 15 years. Once more the outside world has been treated to a series of too pat "confessions" and asked to give credence to the spectacle of hitherto devout clergymen suddenly turned miserable black-marketeers and reckless speculators. And again, as in other similar trials, American imperialism has been portrayed as the real culprit on trial. For, among their other sins, these clergymen were accused of attempting to ferret out secrets about Bulgarian affairs for the benefit of the United States: though what the United States needs to know about Bulgarian affairs, beyond what appears on the surface of that nation's present abject bondage to Moscow, it would be difficult to understand.

The Sofia trial has been denounced by our Government as a blatant terroristic effort, in cynical disregard of the facts, designed to intimidate the small, respected Protestant religious denominations in Bulgaria and to discredit their sincere religious leaders. The British Foreign Office has carried the analysis a step further: "Communist governments in eastern Europe, having eliminated all democratic parties which might oppose their dictatorships, are in the process of a concerted assault on churches, the object of which appears to be to get a clear run for Communist ideology."

The peace treaty imposed on Bulgaria as a defeated enemy nation required that country to secure to all persons * * * the enjoyment of human rights and of the fundamental freedoms * * * including religious worship. The United States is one of the powers which imposed that treaty. It is this fact which gives us a special and legal right to hold Bulgaria to account for this new travesty of justice.

William Jewell College

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. CANNON. Mr. Speaker, William Jewell College is the sixteenth oldest school among the 358 colleges and universities west of the Mississippi River. Although founded by an act of the State Legislature of Missouri and under a charter signed by Gov. Austin A. King February 27, 1849, the college has for a hundred years been affiliated with the Baptist denomination.

With 3 teachers and 137 students the college opened January 1, 1850. Today its students are drawn from practically every State of the Union and from foreign lands. And graduates from its "campus of achievement" have attained distinction in every profession and field of industry.

This month the various alumni chapters scattered throughout the Nation are holding formal exercises in commemoration of the centennial anniversary of the establishment of the institution.

The most notable of these was sponsored by the Missouri State Legislature, as follows:

RESOLUTION BY THE MISSOURI STATE LEGISLATURE

Whereas 100 years ago, February 27, 1849, Austin A. King, then Governor of Missouri, from Richmond, Ray County, signed the charter of William Jewell College, at Liberty, in Clay County; and

Whereas this college has had 100 years of rich ministry to thousands of students from all parts of the world; and

Whereas this college is at its peak of prosperity and success under the leadership of Dr. Walter Pope Binns and his splendid faculty and the efficient board of trustees; and

Whereas on February 27, 1949, Gov. Forrest Smith, also from Richmond, Ray County, will appear at the centennial celebration: Be it

Resolved, That this Missouri State Assembly join our felicitations and congratulations and well wishes for the future of this outstanding college of Missouri; be it further

Resolved, That a copy of this resolution be sent to the president of this college and the press.

Unanimously adopted February 22, 1949.

The address on this occasion was delivered by Hon. Forrest Smith, Governor of Missouri:

ADDRESS ON FOUNDERS' DAY, WILLIAM JEWELL COLLEGE, FEBRUARY 27, 1949

Gov. FORREST SMITH, of Missouri. I am happy to join with you tonight, and thousands of others throughout the Nation, as you proudly celebrate 100 years of achievement by William Jewell College. You are to be congratulated on having, through the years, built a Christian college whose scholastic standing is recognized all over the world.

A few days ago I turned to page 232 of the Session Acts of the General Assembly of 1849 and read again the act granting a charter for what a few months later was to be William Jewell College. It was approved by Gov. Austin A. King 100 years ago today, just 60 days after he was inaugurated. While the act of the signing was ministerial on the part of the governor and in line with his official duty, I am confident that it was a great pleasure to him, as he had always been a strong advocate of higher education. Fifteen years before he became governor he was secretary of a meeting to establish Columbia College, the seeds from which grew the University of Missouri, and that same year he helped organize Columbia Female Academy, one of the first institutions of learning for young women in the State and the forerunner of Stephens College and Christian College.

Governor King was from Richmond, my home town, and it pleases me very much that 100 years later I can join with you in this service.

A brief review of conditions of a century ago compared with developments of the moment presents an amazing contrast. Those of us who remember the easy-going ways at the turn of the century and the decade that followed find ourselves caught in a fast-moving current of present-day activities. The progress of this age challenges the best that is within us in order to cope with the problems of adjustment our complex society presents.

A century ago Liberty was 20 years old. Pioneers from Virginia, Kentucky, and Tennessee were still coming in great numbers, some to remain and establish a homestead, others to join the forty-niners for that long trek across the plains to riches beyond the Rocky Mountains. Steamboats were plying the river in ever-increasing numbers, while the railroads were still 20 years away. Churches had already found a prominent place in settled communities and at the crossroads. When the year closed the first young men were arriving to enter William Jewell.

I consider it an honor to have the privilege of joining with you tonight to pay tribute to those stalwart Christian characters of a century ago who gave without stint that there might be a college on the wilderness frontier. For all of us know that it was to the efforts of those devoted early-day pioneer women and men and those of succeeding generations that we owe so much for formulating the cultural society in which we live today.

All of us can join with the college and point with pride to the many men and women who received their training here and have gone out into the world to become

leaders in every field of endeavor. I am confident that there is not a country in the world that has not felt the influence of those who received their training on the "Hill."

The official centennial statement by the president of the college, Dr. Walter Pope Binns, reviews the hundred years of William Jewell history:

President BINNS. For 100 years William Jewell College has maintained a place of leadership among the smaller colleges in the field of higher education. Her graduates who have achieved distinction in careers of useful service now look back with gratitude to this college as the source of their inspiration. This record is the natural result of the established policy of a limited student body chosen from a wide area, a highly trained faculty who give individual attention to the students, a consistent emphasis upon high standards of scholarship, a Christian atmosphere conducive to the development of character.

William Jewell is a liberal arts college, granting only the Bachelor of Arts degree, attempting to meet the need for broad liberal education as preprofessional and prebusiness training.

William Jewell is a Christian college affiliated with the Baptist denomination with a faculty of Christian teachers who believe that education should concern itself with values as well as materials, with the intelligent use of the things created by our hands and brains, with adjustment of the intricate relationships which have emerged from a complicated industrial age, with moral problems as old as the race, with the spiritual issues which have their source in man's eternal longing for fellowship with God.

The subtitle "The Campus of Achievement," is justified in the large proportion of William Jewell graduates who attain distinction in their chosen vocations. These graduates and their friends are celebrating the centennial in a series of regional meetings in principal cities throughout the country. These meetings and the centennial commencement afford opportunity for class reunions, the renewal of old friendships, rededication to the ideals inspired in college days, concerted thought upon the present program of the college and its plans for the future.

We look backward a hundred years to the period of limited facilities for higher education and of meager financial resources when the founding fathers exhibited courage and foresight in the boldness of their planning. The passing years have vindicated their wisdom.

We now look forward to the dawning century to see a world which needs more than ever the ministry of the Christian liberal arts college.

Supplementing Dr. Binns' statement I append the following chronology of the history of the college:

CHRONOLOGY OF WILLIAM JEWELL COLLEGE

1789, January 1: Dr. William Jewell born in Loudoun County, Va.

1843: First offer of Dr. William Jewell of Columbia, Mo., to the Baptist General Association of $10,000 for a college.

1848: Offer accepted.

1849, February 27: Gov. Austin A. King signed the charter granted by the State legislature.

1849, August 21: At a meeting in Boonville, Liberty was selected for the site of the new college which was named in honor of Dr. William Jewell.

1849, November 12: First meeting of the board of trustees.

1850, January 1: Classes opened with J. S. Dulin as principal.

1852: Death of Dr. William Jewell. Jewell Hall completed.

1853, September 1: R. S. Thomas became president.

1853: Philomathic Literary Society organized.

1855: First graduating class with bachelor of arts degree.

1857, September 1: William Thompson became president.

1857: Excelsior Literary Society organized.

1861: William Jewell students enter the Civil War.

1861, June: College closed when Union troops occupied Jewell Hall.

1868, September 29: College reopened after Civil War.

1869, June 30: Thomas Rambaut inaugurated president.

1875: First intercollegiate oratorical contest. First student publication, the Jewell.

1881: Ely Hall erected.

1883: James G. Clark, chairman of the faculty.

1888. First football squad, M. D. Eubank, captain.

1890: Erection of the three dormitories.

1892, June: John Priest Greene became president.

1893: Vardeman Hall erected.

1894: First issue of the Student. Brown Gymnasium built (burned in 1927).

1896: Wornall Hall erected (burned in 1913).

1898: William Jewell students enter the Spanish-American War. First intercollegiate debate.

1899: First intercollegiate basketball. First intercollegiate track.

1905: President's house built. First college annual, The Tatler.

1906: Charles Hadden Spurgeon Library of 7,000 volumes added to library.

1908: Carnegie Library erected. Cooperative book store established.

1911: New Ely Hall built.

1914: William Jewell Press established.

1915: Marston Science Hall built.

1917: William Jewell students enter World War I.

1918: Ten girls admitted as students.

1920: D. J. Evans became president. First woman graduate, Mrs. Arthur O. Kresse.

1921, September 1: John Priest Greene became acting president.

1921: William Jewell College officially coeducational.

1923, March 21: H. C. Wayman elected president.

1925: Melrose Hall built.

1926: John Gano Memorial Chapel built.

1928, July 3: John F. Herget elected president.

1928: William Jewell's first national champion, Ted Malone. First woman member of William Jewell faculty, Mary Elmore. New Brown Gymnasium built.

1936, November 18: Louis Mertins' Holograph collection.

1938: Hubmaier collection.

1939, February 14: Ted Malone collection of poetry.

1939: Two William Jewell students represent all American colleges and universities in the annual international debates in England—Maurice Winger and J. B. Breckenridge.

1940, October 29: Centennial program for expansion adopted by the board of trustees.

1942: William Jewell students enter World War II.

1942–43: H. I. Hester interim president.

1943, January 6: Arrival of the first contingent of naval cadets for William Jewell College's naval flight preparatory school.

1943, July 1: Walter Pope Binns became the ninth president.

1944, November 20: First Achievement Day, Robert A. Millikan, speaker.

1945: Four dormitories for girls acquired.

1946, May 20: The President of the United States, Harry S. Truman, attended commencement.

1948: Modernization of Jewell Hall in honor of John F. Herget. New heating plant installed.

1949: John Priest Greene Memorial Administration Building erected.

1949: Centennial celebrated, November 15, 1948, to May 24, 1949.

In this connection, I include the program of events of the centennial celebration:

THE CENTENNIAL EVENTS OF WILLIAM JEWELL COLLEGE

1. Because of the widespread location of William Jewell alumni, a series of centennial dinners was scheduled for the year, to be attended by President Walter Pope Binns and other members of the college staff.

Chicago, November 15, 1948: Albert L. Reeves, Jr., speaker.

Denver, December 13, 1948: Judge E. V. Holland, speaker.

San Francisco, January 17, 1949: Dr. Alfred G. Fisk, professor of philosophy, San Francisco State College, and Dr. Sandford Fleming, president of the Northern Baptist Convention, speakers.

Los Angeles, January 21, 1949: Dr. Robert A. Millikan, Nobel prize winner, California Institute of Technology, and Dr. Rufus B. von KleinSmid, chancellor of University of Southern California, speakers.

St. Louis, February 14, 1949: Dr. C. Oscar Johnson, president of the Baptist World Alliance, speaker.

Boston, March 28, 1949: Dr. Kenneth C. M. Sills, president of Bowdoin College, speaker.

New York, March 29, 1949: Dale Carnegie, speaker.

Washington, March 31, 1949: East room, Mayflower Hotel, Senator MILLARD E. TYDINGS, speaker.

2. Founders' day, February 25, 1949: Denominational day for the Baptists of Missouri. The city of Liberty's connection with the event—union services of Liberty churches. Speaker: Gov. Forrest Smith, of Missouri.

3. February 27, Centennial Founders' Day: Radio program, WDAF, Kansas City, Mo.; speaker, Gov. Forrest Smith, of Missouri.

COMMENCEMENT WEEK, MAY 21–24, 1949

4. The historic city of Liberty, incorporated in 1822, where the wagon trains outfitted for the California gold rush, has organized, through scores of committees numbering more than 200, to welcome returning alumni and their families for the centennial commencement. The general chairmen of this organization are Lewis B. Dougherty, Jr., and Robert H. Gadberry.

5. May 21: Fireworks pageant, stadium.

6. May 22: Baccalaureate Sunday. Aeons-Panaegis breakfast, 8 a. m. Baccalaureate sermon, 10:30 a. m., President Walter Pope Binns. Historical pageant, 8 p. m., Gano Chapel.

7. Liberal Arts Day, May 23: College and university presidents and delegates from more than 100 colleges in attendance. Speakers: Dr. Kenneth S. Latourette, director of graduate studies, department of religion, Yale University; and Dr. Elmer Ellis, dean of the College of Arts and Science, University of Missouri.

8. Alumni reunions: Monday, May 23, followed by the centennial alumni dinner; Herbert H. Schwamb, speaker.

9. Centennial Commencement Day, May 24: Dr. Arthur G. Coons, president of Occidental College, Los Angeles, commencement speaker. Centennial awards and conferring of centennial degrees.

10. As the climax of the centennial celebration, William Jewell College will be host to 2,500 people, including all returning alumni and their families, the graduating class and their families, and visitors to commencement, with a barbecue dinner prepared for the college by the Clay County Cattle Raisers Association.

Paying Britain's Bills

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier, of March 8, 1949:

PAYING BRITAIN'S BILLS

Socialism is bankrupting the British Empire. The Government is already insolvent, and going further in debt day by day.

Why doesn't it fold up?

Why hasn't the crisis led the British people to throw the bankruptcy-bound Socialists out of power, and put in some other government which will save what's left?

You ought to know!

It's your money that's meeting the English deficits.

It's your dollars that are keeping the English Socialists in office—creating the illusion to the British voters that the Socialist program is working out.

And it is your money the Socialists are counting on to fool the British people into giving them another 5-year term of power, in the crucial coming elections.

The American press is only faintly interested in the parade of deficits in England. The American people appear to be still less so.

Yet, they should be interested. They've been paying these bills—will go on paying them, if President Truman and his State Department have their way.

Every major step taken by the Socialists in their British program has been financed by the American people.

The first postwar British loan let the British cut their own taxes, and paid for setting up the Beveridge plan.

The first installment of the Marshall plan (about a third went to Britain, and hardly any to feed starving babies in mid-Europe) let the Socialists cut British taxes again, and also allowed them to set up the nationalized health program. You are paying for the vast quantities of eyeglasses, false teeth, and wigs being handed out by the Socialists to the British people.

The second installment of the Marshall plan, now being pushed through your Congress, is intended to furnish the British Socialists with a spot of cash with which to buy the coming election—buy it with gifts to voters which the Socialist government could never afford on its own steam.

Broadly speaking, the American gifts have checked off almost dollar for dollar against the British deficits.

The first loan, back in 1946, was for $4,000,000,000. If you deduct the large share of this money which went to pay for tobacco and movies to keep the British people in a good humor, the rest of it just about covered the big deficit of the first year of socialism.

The hidden gifts to the Socialists contained in last year's installment of the Marshall plan just about covered last year's deficits.

Now new deficits are piling up—and the Socialists are waiting impatiently for Uncle Sam (which means you) to foot the bill. Hence the rush to shove the Marshall plan appropriation through Congress without taking time to examine the program or what we are getting for our money.

The 9-month deficit of the British Government, for the home-front program alone, has recently been revealed. It is approximately $900,000,000. That's about one-eighth, or 12.5 percent, of the original budget appropriations.

A great deal of this comes because the nationalized health program of the Socialists is running hog-wild. The free false teeth and free eyeglass programs are each more than $40,000,000 in the red. Other free services have brought the health program alone into a deficit of some $250,000,000.

The Government is also far overboard in its food-subsidy program by which the voters are being kidded into thinking the Socialists are able to supply food at less than it really costs.

The Socialist scheme of paying a bonus for British babies is building a new financial problem for the future. Within 3 years it is expected that the school population, already far too great for the accommodations, will have jumped another million.

Here is another bill which eventually, on the present policy at Washington, will be handed along to you for payment. That's only fair. You helped pay for the baby bonuses of the Beveridge plan. Why shouldn't you help pay to send these extra babies to school?

In addition to paying for what the Socialists are doing, you are paying also for what they aren't doing.

The British Socialists have pulled England out of nearly all the responsibilities she formerly accepted as a world power. When the Britons walked out of the Greek situation, you began paying the bills as Uncle Sam took over. Likewise in half a score other parts of the world.

When the British pulled out much of their contributions to occupied Germany, your bills for American occupation there soared accordingly.

Now Uncle Sam is about to furnish billions of dollars' worth of arms to western Europe. Under former British standards, the British Government would have shared this burden. Now you will be paying for it all.

Observers in England declare that the issue in the coming election there, which will decide the future of British socialism, will be the issue of retail prices.

The British people, it is declared, are uninterested in world affairs, apathetic over whether they are headed for serfdom as a race and a tin-cup future as a nation.

They will stand for rationing, scarcities, inferior products, regimentation, restrictions, mass poverty—if only the Socialists will make it possible for them to buy food, clothing, and entertainment at cheap prices.

There's only one way under the sun by which the Socialists can do this. That's to make you pay part of the bill, every time a Briton buys a loaf of brown bread, or a bottle of skim milk, or goes to the movies.

The Socialists are all set to do this with a new and enlarged program of subsidies. The only thing they need is the money. That's where you come in. They want you to put up the money, so they can fool the British people, so they can be reelected, so they can finish the job of wrecking the British Empire's economy and future.

What do you think about it?

Sol Bloom

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following editorial which appeared in the Newark Evening News, Wednesday, March 9, 1949.

It is a fitting and eloquent tribute to our late colleague, SOL BLOOM:

SOL BLOOM

Representative SOL BLOOM, Democrat, of New York, dead at 78, had been a member of the Congress since 1923. His principal official distinction was attained when he became chairman of the Committee on Foreign Affairs, a post which he relinquished to Representative EATON, of New Jersey, in the Eightieth Congress, but which he resumed when the Democrats regained control in the Eighty-first.

The President said of him, in a message of condolence to his daughter Vera, that Mr. BLOOM had been a tower of strength to his country in the most critical period of our international relations. Mr. BLOOM was devoted to the principle of American leadership in world affairs, and he made good that devotion through a series of attitudes and acts that won him the respect and admiration alike of his colleagues and his constituents.

But it was on the human side that Representative BLOOM had the widest appeal. Much to his surprise, he had made his first great financial success at age 19. He was a millionaire long before he entered politics. The son of Polish-Jewish immigrant parents, he liked to think of his career as one full of American characteristics, which it in all truth was, but he never ceased to marvel that this should be so.

This was Mr. BLOOM's modest side, which sometimes found compensation in the simple, frank delight with which he boasted of his association with the world's great and famous. He had been in show business and never lost the showman's touch, which he described with enormous gusto in an autobiographical account of his life published last October.

He had vigor; he had integrity; he had pride; he had the gift of friendship, and he was a patriot. Surely these are the qualities for which Representative BLOOM would have liked to be remembered.

Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, there has been, and understandably so, a great deal of confusion and misunderstanding about veterans' pensions, both by Members of Congress and by the general public, due to the pending legislation for additional benefits.

I shall not attempt to blame or criticize anyone for a lack of dissemination of news regarding fairly recent changes in the pension laws, but they do have a marked effect upon the proposed legislation and I believe it is imperative that every Member of this House should be familiar with the provisions of the present law before attempting to pass upon any changes in the statutes.

Insomuch as the general pension bill which is about to receive consideration

deals solely with those veterans who do not have established service-connected disabilities, I shall not touch upon the compensation—service-connected—rates now payable.

On October 7, 1948, 5 months ago, the Administrator of Veterans' Affairs, Major General Gray, issued a regulation known as extension 5, of the 1945 Rating Schedule for Permanent and Total Disability Ratings.

This schedule applies to all pensions, World War I, World War II, and Spanish-American War pensions. However, the last-named category was not affected by the change because existing law provides payments in excess of those named in the schedule.

The basic law provides that a veteran with 90 days or more service, who was discharged under conditions other than dishonorable, or less than 90 days if discharged on a surgeon's certificate of disability, can receive a pension of $60 per month if he is permanently and totally disabled. In the case of those veterans who have been in receipt of a permanent and total pension for a continuous period of 10 years or who reach the age of 65 years and is permanently and totally disabled, the rate is $72 per month.

The Administrator's new extension of this law broadened the provisions and facilitated entitlement to veterans who are suffering from non-service-connected disabilities, regardless of age, provided that they could meet certain restrictions that were clearly defined. I shall attempt to explain these provisions as simply as possible.

The principal provision, which is applicable to all of the classes described below, is that the veteran must be determined to be unable to secure and follow substantially gainful employment by reason of his disability. Certain guides are provided and used in making such determination: Marginal employment, for example, on own farm, or in own business, or at odd jobs, at less than half the usual hours of work or less than half the usual remuneration will not be considered incompatible with a determination of unemployment and unemployability, if the restriction as to securing or retaining better employment is due to the disabilities. Also, the fact that unemployable persons meeting the percentage standards have also physical, mental, or personality defects of congenital or development nature, which may be a partial cause of the unemployability, will not preclude favorable rating.

It is fair to say that this determination of unemployability is made on a very liberal basis.

For the veteran who is under the age of 55, there must be a single disability of 60 percent or two or more disabilities, one of which is 40 percent in degree, combined with other disability or disabilities to a total of 70 percent. When the veteran attains the age of 55 years, a 60-percent rating only is required, whether it be singly or in combination. At the age of 60 a 50 percent rating is required for one or more disabilities in combination. While at the age of 65 years only one disability rated at 10 percent or more is required.

The last sentence merits repetition. In other words, after a veteran reaches the age of 65 years, under existing regulations, all he has to show is a 10-percent disability and unemployability to receive a pension of $60 per month, and if he is permanently and totally disabled at that age he receives $72 per month.

There is one other factor that should be borne in mind in adjudging the above prerequisites, and that is the income limitations. In the case of a single veteran the limit is $1,000 a year, while it is $2,500 for a married veteran or one with children.

As a part of these remarks I would like to include in the RECORD a letter and a statement I have received from Mr. Guy H. Birdsall, Assistant Administrator for Legislation, Veterans' Administration. The letter outlines in departmental terms the provisions explained above. The statement defines the Veterans' Administration policy in dealing with character of discharges so far as they apply to eligibility for veterans' benefits:

The letter and statement follow:

MARCH 9, 1949.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: In compliance with your telephonic request of March 8, 1949, I am submitting the following statement outlining the provisions of existing law providing pensions for veterans of World War I and World War II and also the provisions of extension 5 to the 1945 Schedule for Rating Disabilities, dated October 7, 1948.

Under existing law (Veterans Regulation No. 1 (a), pt. III, as amended), veterans of World War I and World War II are eligible for pension benefits based on permanent total non-service-connected disability. This pension is payable to any veteran who served in the active military or naval service for a period of 90 days or more during one of these wars and who was discharged therefrom under conditions other than dishonorable, or who, having served less than 90 days, was discharged for disability incurred in service in line of duty. Such a person must have been in active service before the cessation of hostilities and the disability upon which the claim is based must not have been incurred as a result of his own willful misconduct or vicious habits. The rate is $60 per month, except that where the veteran shall have been rated permanent and total and has been in receipt of pension for a continuous period of 10 years or reaches the age of 65 years and is permanently and totally disabled, the rate is $72 per month. Pension is not payable to any unmarried person whose annual income exceeds $1,000 or to any married person or any person with minor children whose annual income exceeds $2,500.

Permanent total disability is defined by paragraph I (e) of part III, Veterans Regulation No. 1 (a), as amended, as any impairment of mind or body which is sufficient to render it impossible for the average person to follow a substantially gainful occupation where it is reasonably certain that such impairment will continue throughout the life of the disabled person. The Administrator of Veterans' Affairs is authorized, notwithstanding this definition, to classify as permanent and total those diseases and disorders, the nature and extent of which, in his judgment, are sufficient to justify such a determination.

The studies and experience of the Veterans' Administration over a period of years in rating claims of permanent total disability have resulted from time to time in certain liberalizations in rating such cases. At the present time, administrative regulations contained in the Schedule for Rating Disabilities, 1945, prescribe certain minimum percentage standards applicable when the disabled person is, in the judgment of the rating agency, unable to secure or follow a substantially gainful occupation as a result of his disabilities. These regulations provide that a permanent total disability may be assigned when the requirement of permanence is met and there is a single disability of 60 percent or more, or two or more disabilities, one of which is 40 percent or more in degree, combined with other disability or disabilities to a total of 70 percent, and unemployability attributed thereto. Although age alone is not considered as a basis for entitlement to such pension, it is considered in association with disability and unemployability in arriving at a final determination.

Pursuant to extension 5 to the Schedule for Rating Disabilities, 1945, dated October 7, 1948, the aforementioned percentage requirements were reduced on the attainment of age 55 to a 60-percent rating for one or more disabilities, with no percentage requirement for any one disability; at age 60 to a 50-percent rating for one or more disabilities; and at age 65 to one disability ratable at 10 percent or more. When these reduced percentage requirements are met and the disability or disabilities involved are of a permanent nature, a permanent and total disability rating will be assigned, if the veteran is determined to be unable to secure and follow substantially gainful employment by reason of such disability.

Inasmuch as it is the policy of the Veterans' Administration that all veterans who are basically eligible and who are unable to secure and follow a substantially gainful occupation by reason of disabilities which are likely to be permanent, shall be rated as permanently and totally disabled for the purpose of Veterans Regulation No. 1 (a), part III, as amended, the cases of all veterans who fail to meet the specific percentage standards will be referred to the central office for final determination.

Very truly yours,

C. H. BIRDSALL,
Assistant Administrator for Legislation.

CHARACTER OF DISCHARGE; ELIGIBILITY FOR VA BENEFITS

1. Sections 300 and 1503 of the Servicemen's Readjustment Act of 1944 provide:

"SEC. 300. The discharge or dismissal by reason of the sentence of a general court martial of any person from the military or naval forces, or the discharge of any such person on the ground that he was a conscientious objector who refused to perform military duty or refused to wear the uniform or otherwise to comply with lawful orders of competent military authority, or as a deserter, or of an officer by the acceptance of his resignation for the good of the service, shall bar all rights of such person, based upon the period of service from which he is so discharged or dismissed, under any laws administered by the Veterans' Administration."

"SEC. 1503. A discharge or release from active service under conditions other than dishonorable shall be a prerequisite to entitlement to veterans' benefits provided by this act or Public Law No. 2, Seventy-third Congress, as amended."

2. The question of whether a discharge was under conditions other than dishonorable within the meaning of section 1503 of the Servicemen's Readjustment Act depends upon the facts of each case. VA guides in making such determination are set forth in R. & P. R. 1064.

3. Section 1 of H. R. 2681, Eighty-first Congress, as reported by the House Committee on Veterans' Affairs on February 16, 1949, requires a discharge under conditions other than dishonorable in order to qualify for the pension therein provided. It will be noted that the qualifying type of discharge in such section 1 is the same as required under existing law by section 1503 of the Servicemen's Readjustment Act. Thus it would appear that the determination of eligibility under section 1 of H. R. 2681 would be made in the same manner and under the same guides as presently govern determinations under section 1503 of the Servicemen's Readjustment Act (see par. 2 above). Of course, section 300 of the Servicemen's Readjustment Act would apply in determining eligibility under section 1 of H. R. 2681 because such section 300 is concerned with "rights * * * under any laws administered by the Veterans' Administration."

Flood Control

EXTENSION OF REMARKS
OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made March 3, 1949, before the Deficiencies and Army Civil Functions Subcommittee of the House Appropriations Committee in the interest of flood control:.

Mr. Chairman and gentlemen of the committee, for the benefit of the record, my name is OTTO E. PASSMAN. I represent the Fifth Louisiana District in Congress and have the distinct honor of being a member of the Appropriations Committee of the House of Representatives. I am here to testify, and insofar as I am able, to justify an increase in the amount provided in the budget for the lower Mississippi River and its tributaries.

In the outset, Mr. Chairman, I should like to say not only for myself, but I am sure for the people whom I represent, that the objective of economy and reduction of unnecessary Federal expenditures should be the chief concern of the Congress. However, I do not consider funds expended wisely for flood control as an expense. Rather, they should be considered as a capital investment because soil erosion and floods are costing the American people in excess of $1,000,000,000 annually. Certainly if we permit this waste to continue for many more years, then a large part of our rich farm land will have been washed into the oceans, never to be recovered, leaving us with hundreds of thousands of square miles of red clay hills and ugly gullies. If we will invest wisely in flood control, reclamation, and soil conservation, then the investment will pay great dividends to the people of America and to our Federal Government.

I make no pretense of being an expert in the field of flood control, but for many years as a businessman and resident of Louisiana, and especially since I became a Member of Congress 2 years ago, I have studied the problems of the lower Mississippi Valley and the problems of my district relative to the effects of the floods that fall upon us almost every year. It is indeeed true that Louisiana is the spigot of the national funnel comprising the middle section of the entire Nation, which, on account of Louisiana's geographical location must act as a reservoir for an almost incomprehensible volume of water.

On April 10, 1945, standing on the Mississippi River levee at Vidalia, La., I observed in excess of 1,000,000,000 gallons of water per minute passing a given point, as established by a scientific registering process, swiftly rushing between the two guide-line levees of the Mississippi River. Thirty-one of our 48 States must necessarily pour their floodwaters upon a good part of Louisiana, and in all cases, through Louisiana to reach the Gulf of Mexico. Therefore, we could assume that flood-control problems of the lower Mississippi Valley, especially in Louisiana, are 31 times greater than those of almost any of the 31 States whose floodwaters pour through Louisiana to the Gulf of Mexico.

I am sure that this committee would be interested in learning that the longest continuous levee line in the world lies between Pine Bluff, Ark., and Shaw, La., a distance of 389 miles, mostly through flat country; with a short gap at Shaw, this levee continues an additional 210 miles to the Gulf of Mexico, or a total of 597 miles. The millions of people living along the levee's path are almost in constant fear of the floodwaters of the unpredictable, mighty Mississippi, and in too many instances their homes and property, even their very lives are endangered. The lower Mississippi Valley is the oldest authorized flood-control project in America and the great majority of my fellow Louisianians feel that the progress in this area is falling behind that of projects authorized many years later.

I am confident that if you gentlemen of this committee could find time to study the problems of the lower Mississippi Valley, you would lend your support in helping to expedite completion of the flood-control project for the lower Mississippi and its tributaries. If I could describe to you the conditions as they actually exist, then I am sure that your committee would increase the amount in the budget's recommendation for the lower Mississippi River and its tributaries to $104,000,000, the minimum asked for by the Corps of Army Engineers. The Army engineers informed the Bureau of the Budget that any sum less than a very minimum of $100,000,000 would not be sufficient to maintain a fair schedule of construction. It is my understanding that the Bureau of the Budget placed a limitation of $70,000,000 for construction and maintenance on the lower Mississippi River and its tributaries.

Mr. Chairman, I state, and the available information and the record will bear me out, that $70,000,000 is inadequate to keep the Mississippi and its tributaries on a workable schedule. Certainly the main river itself cannot be neglected, because to do so, may bring destruction to millions of people in the valley and cost hundreds of millions of dollars. I am sure that this committee has studied the tentative expenditure schedule of $70,000,000 recommended in the budget. For a break-down, the main stem of the Mississippi River will require a very minimum of $38,000,000, and maintenance on the main Mississippi River an additional $15,000,000. That makes a total of $53,000,000 of the $70,000,000 recommended in the budget, leaving only $17,000,000 for off-river work on the dozens of authorized projects on the Mississippi's tributaries. I believe this amount to be wholly inadequate if the mammoth and very necessary flood control authorized project is to be completed in our lifetime.

Mr. Chairman, obviously when an inadequate amount is appropriated for the lower Mississippi and its tributaries, it affects not the Mississippi River proper, but the river's tributaries. I make this statement because certainly I understand, and the gentlemen of this committee understand, that the main levees of the Mississippi River, including bank stabilization and maintenance, must be carried on at any cost, and certainly at the necessary expense of the off-river construction. In my candid opinion, just so long as the Congress fails to provide adequate funds to keep up a minimum schedule—just so long will my fellow Louisianians lose millions of dollars annually caused by overflows and backwater.

As I testify before this committee I am deeply concerned because at this very moment Louisiana is facing one of its greatest floods of all times. At this very moment over 200 square miles of rich farm lands in my own district are inundated. Many towns are under water, and families have had to be evacuated from Black Hawk, Shaw, Acme, New Era, Eva, and Monterey. Thousands of their cattle and it is estimated 15,000 hogs have been drowned. Five years out of the past seven, these people have experienced the unfortunate act of nature, aggravated by man. The condition in many parts of Louisiana is the unavoidable, but necessary result of what has been done in the general over-all flood control program. Even though the program in other States was necessary and proved of value in enhancing the properties of those States hundreds of millions of dollars, it has made the condition somewhat disastrous in Louisiana. In other words, cut-offs in the Mississippi River and the resultant raising of the levees moves great volumes of water more rapidly creating a backwater situation that should and could be corrected if the Congress would provide a minimum of funds to keep these authorized projects progressing.

I should like to call to the attention of this committee certain facts which may startle you. There are 10,268 square miles in my district alone, and at one time only a few years ago, 4,625 square miles of this total area were inundated, and it is now predicted that the present flood may equal or surpass that of a few years ago.

With an appropriation of $70,000,000, there is very little hope, if any, that my district would benefit materially. The Tensas-Cocodrie sector of the Red River backwater area and the Boeuf-Tensas River Basin projects rate high on the engineers' agenda, but without funds, additional contracts cannot be let. Certainly progress cannot be made on these projects unless this committee decides it is justified in increasing the amount recommended for the Mississippi River and its tributaries to $100,000,000, the very minimum by which the Corps of Army Engineers can carry on this all-important work so vital to the very existence of so many of the people residing in the lower Mississippi Valley.

Mr. Chairman, I realize that the $100,000,000 urgently needed for the lower Mississippi Valley stands out like a beacon, but we should not forget that the mighty Mississippi River which accommodates floodwaters from 31 States and 2 Provinces in Canada, stands out as a constant threat to many millions of our fellow citizens, and will continue to do so until such time as we are given the minimum needed to keep this all-important project on a reasonable schedule toward final completion.

Mr. Chairman, with your indulgence I should like to make another brief statement relative to flood-control conditions as they exist in my district at this very minute. The Red Cross has set up emergency headquarters in three towns in my district: namely, Harrisonburg, Jonesville, and Ferriday, and are caring for over 200 families. The adjutant general of Louisiana informed me that the Fourth Army was flying in tents in preparation for further disaster which is anticipated. The adjutant general has alerted a duck platoon; also 600 motor vehicles, all standing by at Camp Beauregard. Two hundred and fifty tents have been sent into the Monroe area of the Fifth Congressional District. I am told that my fellow Louisianians have been informed by the Louisiana Secretary of State that in all probability there will be 20 per-

cent more water during this year than there was in the devastating flood of a few years ago, at which time 14,200 square miles of the 50,000 square-mile area of Louisiana was inundated.

Mr. Chairman, I have not attempted to present in detail all the information available on the lower Mississippi Valley because much of it is at the committee's disposal and much more has, or will be covered, by other witnesses, but I do want to plead with you, Mr. Chairman and gentlemen of the committee, to increase the appropriation for the Mississippi River and its tributaries to $100,000,000, which is a figure that the Corps of Army Engineers states emphatically it must have if satisfactory progress is to be made on the lower Mississippi and its important tributaries.

Mr. Chairman, I should like to mention just one other project in Louisiana and that is the Jonesville ring levee. Last year the Congress provided $268,000 for this project, with the understanding that local interests would provide an additional $100,000. The $100,000 was delivered to the Army engineers in New Orleans. Later it was ascertained that the amount of money requested was based on an estimate made 7 years ago. Current estimates reveal that an additional $150,000 is needed to complete the project. It is my understanding this amount has been requested this year. From the State's total funds of $200,000 earmarked for such projects, the Jonesville ring levee received $100,000, and I do not believe the State of Louisiana will have sufficient funds available to provide an additional sum for completion of this project.

Thank you, Mr. Chairman and gentlemen of the committee, for hearing my testimony.

You, Too, Work for Uncle Sam

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the United States News and World Report of March 11, 1949:

YOU, TOO, WORK FOR UNCLE SAM—MANY A DAY'S LABOR NOW GOES TO PAY TAXES

(Taxes, despite 1948 cuts, make part-time Government workers out of nearly everybody. Few work entirely for themselves. Some work more than half the year for Government. In 1939, a $20,000-man put in only 17 days to pay his taxes. It takes a $2,500-man 18 days now. President wants to claim still more working time. Congress may shelve tax increases.)

Taxpayers, figuring their income taxes at this time, are finding again that they put in a sizable part of the year working for the Federal Government.

At that, most people worked less time for the Government in 1948 than in 1947. For some married persons, those earning $20,000 to $35,000 a year, 1948 tax cuts reduced the number of working days claimed by the tax collector by as much as one-third. Even so, people at these levels still work 2 to 3 months of the year for the Government, and a few at the top of the scale work more time for the Government than for themselves.

Pay-roll taxes for social security and excise taxes take additional portions of working time. So do State and local taxes, which are in a rising trend. In 1948, some people found that increases in State and local taxes offset the cut in Federal taxes.

How many days a person must work each year to pay his Federal income taxes depends upon how much money he earns. The more money he makes, the more time he puts in for the Government. The covergram and the table on this page give you a means of determining approximately how many days the tax collector claims out of your work year. Figures are for married taxpayers with no children. A 10-percent allowance is assumed for charity, interest and other deductions permitted under the tax laws.

At $2,500 of annual salary, a married man, at present tax rates, has to work 18 days to earn the money it takes to pay his Federal income tax. That is on the basis of a 5-day week. In other words, this man hands over to the tax collector his whole pay for 3½ weeks out of the year.

At $5,000, he works 28 days, or 5½ weeks, for the Government.

At $7,500, the tax collector's claim on working time rises to 33 days, or 6½ weeks, out of the work year. To put it another way, a man at this income level signs over nearly 1 day's pay out of every 8 to the Federal Government.

At $10,000 of income, taxes take the pay of 36 working days. Here, a man who starts out on January 1 to earn enough money to pay his tax does not finish until February 21.

At $15,000, a married man puts in 42 working days a year for the Government. That amounts to more than 8 weeks out of the 52.

At $20,000, the time a man gives the Government rises to 47 working days a year. This means, in effect, that from January 1 to March 8 he is working entirely for the tax collector.

At this level of income, a married man cashes in heavily on the privilege of income splitting. This was voted by Congress in 1948. In 1947, a $20,000 man had to work 70 days to pay his tax, 23 days more than in 1948.

At $25,000, despite a 1948 tax cut of more than one third, a married man still has to work 52 days for the Government, or a full day out of every week.

At $30,000, it takes 57 days to earn enough money for the Federal tax.

At $50,000, the Government takes all the pay a married man earns between January 1 and April 18. In other words, he puts in 76 days out of the year to earn his tax money.

At $100,000, a man works 104 days out of the year to pay his taxes. The Government claims the entire pay of this man between the beginning of the year and May 26. The year is nearly 5 months gone before he starts working for himself.

At higher levels, people work still more days for the Government. A $1,000,000 man pays the tax collector all the money he earns in 185 out of the 260 working days of the year. In effect, he works for the Government from January 1 to September 16, for himself the remaining 3½ months of the year.

This is the burden of big, high-cost Government after a 1948 reduction of $4,800,000,000 in personal taxes.

In prewar years, even after the New Deal brought rate increases, taxes were mild by comparison. In 1939, just 10 years ago, a man had to get into a fairly high income bracket before the Government claimed any substantial portion of his working time.

At $2,500, a man worked for himself alone in 1939, as he had no income tax to pay. At $5,000, he worked 3 days for the Government, and at $7,500 he could pay his whole tax with his pay check for 1 week. At $20,000, a high income in those days, a man worked less time for the Government than a $2,500 man today. A $50,000 man 10 years ago put in less time for the Government than a $15,000 man now.

In the future, if Mr. Truman has his way, people will have to put in even more time working for the Government.

In regular taxes, he asks an immediate increase of $4,000,000,000 a year, part to be taken out of corporate income and part out of the incomes of individuals earning $5,000 a year or more.

In pay-roll taxes to finance social programs, he asks even greater increases. This, again, would come out of the incomes of businesses and individuals, reducing take-home pay, adding to the amount of time people put in for the tax collector.

But Congress, watching the signs of a business downturn, is skeptical of new taxes. Rises in pay-roll taxes may not come as rapidly as Mr. Truman suggests. Rises in regular taxes may be shelved, at least for 1949. If business declines sharply, there will be demands for tax cuts.

But, whatever happens, taxes are to stay high by any prewar standards. Nearly everybody is to keep working part time for the Government.

TAXES AS MAN-DAYS

The table below shows how many working days out of each year it takes a married man, at various salary levels, to earn enough money to pay his Federal income tax. These figures assume a 5-day workweek.

Annual pay	Tax	Days worked to pay tax
$2,500	$174	18
5,000	548	28
7,500	964	33
10,000	1,400	36
15,000	2,433	42
20,000	3,649	47
25,000	5,041	52
30,000	6,588	57
50,000	14,610	76
100,000	40,067	104

Hon. Walter G. Andrews

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Buffalo Courier-Express of Monday last in reference to the life and accomplishments of our departed colleague:

WALTER G. ANDREWS

Former Representative Walter G. Andrews, who died in Florida at the age of 59, achieved distinction as an athlete, a businessman, soldier, and Congressman. A civic-minded citizen, he occupied an important role in many organizations devoted to the interests of the community.

One of the few Congressmen to be awarded the Distinguished Service Cross, Mr. Andrews saw military service on the Mexican border in 1916, and the First World War where his valor in leading an attack on the Hindenberg Line, an engagement in which he was wounded, brought him his high honor.

His experience as a soldier initiated an interest in military affairs, which continued throughout his life. As a Representative of the old Fortieth District and its successor, the forty-second, Mr. Andrews continually demonstrated this fact. During World War

II, he was ranking minority member of the House Military Affairs Committee, and there he exerted his influence to the utmost in behalf of the strengthening of the military power of the Nation. In the Eightieth Congress he served as chairman of the House Military Affairs Committee and later as chairman of the Armed Services Committee. His assignments in recent years included work on the peacetime draft and the Bikini test of the atom bomb. He was a member of the nine-man committee appointed by the President to observe the effects of the Bikini demonstration.

Mr. Andrews' devotion to the military interests of the Nation did not deter him, however, from exerting his efforts in behalf of his own constituents, and his accomplishments for his region were many. It may be said of him that he was the most distinguished Representative that the Niagara Frontier has ever sent to Congress.

The Birthday of Bock Beer

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. HART. Mr. Speaker, it has come to my attention that the brewers of the United States this year are celebrating the seven hundredth anniversary of bock beer, that rich dark brew which traditionally heralds the approach of spring.

Since the year 1249, when the first kegs of bock were tapped in the manorial village of Einbeck, in Germany, this beverage has traveled far and wide to delight appreciative generations of beer drinkers all over the world. In the United States, which today is the No. 1 producer of beer, the art and science of brewing bock have reached fruition. We produce the most—and we produce the finest.

On this occasion, it seems both proper and fitting that we pause for a moment to salute the industry which not only tickles the palate but which also contributes a good part of the money required to run the Federal Government. Last year the United States Treasury collected almost $700,000,000 in taxes from the more than 85,000,000 barrels of brew produced. Approximately 80,000 men are employed directly in the production of beer, and many times that number make their living from the distribution and sale of this beverage of moderation.

The brewers of my home State are celebrating this occasion with a gigantic bock-beer festival for the benefit of the American Red Cross. The following item from the New York Times of March 1 is of interest in connection with this celebration:

BOCK-BEER SEASON SEEN AID TO SALES—BIGGEST OUTPUT ON RECORD HERE WATCHED NATIONALLY AS POSSIBLE YEARLY PROMOTION

Opening of the bock-beer season here March 10 with the greatest output ever produced by local brewers is being watched nationally as a possible yearly promotion for the entire country, it was learned here yesterday. Pointing out that bock-beer season is the only promotion opportunity the industry has during the year, brewers believe that a nationally recognized festival would do much to stimulate sales.

The promotion here, which is being sponsored by the Brewers Board of Trade, Inc., and the New Jersey Brewers Association, is a joint undertaking of 18 leading breweries in the 2 States.

The fact that bock beer has not been available in quantities since 1941, plus the belief that heavy promotional emphasis may aid in stemming a general decline in beer sales, accounts for the all-time bock production of hundreds of thousands of gallons, it was explained. If public response measures up to present hopes, it is believed that other beer-producing centers will make similar moves next year.

It was explained that although during prewar years bock beer season always heralded the opening of the beer-drinking season, the industry never established a universal period for the promotion. Such a move would aid not only in focusing public attention on the brewing industry through unified promotions, but would also aid the industry and its outlets by establishing set delivery dates, it was believed.

Official opening of the bock festival here will take place at the One Hundred and Sixty-fifth Regiment Armory at Twenty-fifth and Lexington on March 9, where the public may drink at various exhibits and listen to music by name bands. All proceeds from admissions and sales will be given to the Red Cross.

Local tavern associations reported that their members will back the promotion enthusiastically and at least one group is issuing point-of-sale posters to member bars. The two associations sponsoring the drive have prepared bus posters, with radio and newspaper advertising to be used by the brewers participating. Distribution will be both by kegs and bottles, it was said.

Federal Amusement Tax on Elementary- and Secondary-School Activities Curtails Educational Opportunities

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. BOGGS of Delaware. Mr. Speaker, on January 13 of this year I introduced H. R. 1310, which provides for an amendment to subchapter A of chapter 10 of the Internal Revenue Code. The proposed amendment states:

No tax shall be levied under this subchapter in respect of any admissions all the proceeds of which inure exclusively to the benefit of elementary or secondary schools if no part of the net earnings thereof inures to the benefit of any private stockholder or individual.

I take this opportunity, Mr. Speaker, to direct the attention of all the Members of this House to H. R. 1310. I do so because the present application of the amusement tax on admissions to activities of elementary and secondary schools is unfair and unnecessary, and works a distinct hardship upon the promotion of proper and desirable educational activities in our elementary schools and high schools.

Let us review first, Mr. Speaker, the history of the Federal amusement tax, especially as its relationship to admissions to elementary- and secondary-school activities is concerned.

I am informed that the first Federal amusement tax was enacted in 1932 and provided for a tax of 10 percent on admissions of 41 cents or more. In 1940 this law was amended, so that the tax was 10 percent on admissions of 21 cents or more. In 1941 it was furthermore amended to provide for a 10-percent tax on admissions of 10 cents or more. Finally, in 1943 the law was further amended to provide for a tax of 20 percent on all admissions of 5 cents or more.

Mr. Speaker, let me point out, however, that prior to the amendment of the act in 1941, all admissions to affairs or activities for the benefit of religious, educational, and charitable organizations, and all other nonprofit organizations, were specifically exempted from the amusement tax. While it is true that other factors were present in 1941 when this exemption was removed, it is also true that an important consideration at that time was the need for increased revenues to provide for our tremendous national defense activities.

Mr. Speaker, in view of the foregoing outline of the history of this tax, and in view of the fact that the war has been over for more than 3 years, there is real reason, even without consideration of other facts which I will present, for the removal of the amusement tax on the activities of elementary and secondary schools.

Since the introduction of H. R. 1310, I have received considerable correspondence from school administrators in support of this bill. In that connection, many of them have made statements which to my mind demonstrate quite clearly that the present tax on school activities is unfair, as well as unnecessary.

One such school administrator pointed out that extra-curricular activities in the schools are financed by admission charges and by public tax funds from State sources. He then went on to state:

It seems rather radiculous to tax the political subdivision of the State when they in turn must tax to pay the tax paid to the Federal Government.

In another letter which I received this thought was expressed:

To tax good entertainment for children is to encourage juvenile delinquency by denying such cultural influences to the very children who need them, and to penalize the very parents who are trying to bring up their children to be good citizens. This tax is one of the most undemocratic of all our taxes, bringing in only a trifle, so far as the Government is concerned, but making cultural plays a heavy burden to those interested in child welfare.

From the principal of a small rural school came this message in support of H. R. 1310:

Basketball is the only athletic activity which is self-supporting in our school. The tax which we have to pay on basketball games would go a long way toward paying for uniforms and proper equipment for other activities. It is seldom that we have a class where the ticket sales amount to $75. After we pay 20 percent tax, the balance seems a meager remuneration indeed for many weeks of night rehearsals.

The superintendent of another rural school wrote to urge that this bill be passed, and pointed out that small schools "have great difficulty in meeting their obligations for expenses incurred by student activities. To be free from the amusement-tax obligation would help to a great degree."

And another high-school principal writes, Mr. Speaker, to point out that "all revenue from school activities is used for the good of the school and its pupils, hence it is definitely of benefit to the public in general."

Following the same trend of thought, an elementary-school principal pointed out that the money which must now be paid as an admission tax "could be used by the individual schools to help finance the type of program essential to the best all-around development of its pupils. There are," he also pointed out, "many programs which schools could use as money-raising projects, but which are not used because the tax makes the profit so small that it simply is not worth the time and trouble to put them on."

Mr. Speaker, we discuss frequently the need for improving and increasing educational opportunities for our young citizens in the elementary and secondary schools. In my opinion, H. R. 1310 offers a splendid opportunity by which, at very little loss of revenue, we can actually contribute to the growth and development and improvement of educational opportunities of real value for our young students. Consequently, I urge that every consideration be given to the enactment of H. R. 1310.

Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement which I delivered before the Education and Labor Committee of the House of Representatives:

Mr. Chairman and members of the committee, I want to go on record as favoring H. R. 2032, which is a bill to repeal the Labor-Management Relations Act, 1947, to reenact the National Labor Relations Act of 1935, and for other purposes.

The climate most favorable to the real settlement of industrial disputes is one in which labor and management work out a compromise without interference.

This is the voluntary, mature, and responsible way, free from the heavy hand of government.

Some day we shall have to define the limits of government before it becomes the lord and master of all our actions and perhaps of our thoughts. We shall have to stress and encourage those voluntary groupings by which people compose their differences in order to forestall the encroachments of a government that just grows and grows until it chokes out all freedom of compact.

A true constitution has its roots in the people, developing from their traditions and customs, and they, through experience, have evolved practical ways of adjusting differences.

From this common law has come the written law of our statute books. This is the process of social organization, at least it is so, or intended to be so, in a democracy.

In a totalitarian state, by way of contrast, a constitution is imposed from above. There are forced solutions, accepted for the moment because there is no alternative.

Behind the lip service to arbitrary law, there is discontent. The people have not participated in the making of such law. It is not representative of them.

In the present discussion concerning the formulation of a labor-management relations act which will help the two principal parties of an industrial dispute to reach an understanding a third consideration, that of the public interest, has been injected.

Neither management nor labor is without conscience. From their experience of the past 20 years, both have learned that one cannot have progress without the other, and that one cannot prosper at the expense of the other. And the good will of the public is important to both.

In our efforts, as one nation, to find basic security for all our people without sacrifice of our fundamental liberties, we are adopting a voluntary form of collective bargaining.

To cry "havoc" at this statement is only to deceive ourselves.

Look at the various economic controls exercised by our Government today, and authorized by a Congress representative of the people.

Consider the range and meaning of the social-security program which will, in our time, embrace every American. To have mentioned such a possibility 25 years ago, would have been considered as heresy, and would have raised doubts concerning the sanity of the individual who dared to suggest such a revolutionary step.

Today it is regarded as a necessity. Both major political parties are pledged to increase the coverage and the benefits of old-age insurance and assistance.

Take another pressing problem, that of national health. It was not so long ago that the medical profession opposed voluntary health insurance. Now they warmly advocate such group cooperation to head off compulsory health insurance and Government control.

With these examples before us, we should go slowly on legislation which would lead to the compulsory arbitration of industrial disputes. If Government should acquire too much power in the determination of such problems, the freedom of management and labor to negotiate would be restricted, if not eliminated. Government would be the sole judge, and we would be on the road toward the all-powerful state.

I contend that the Taft-Hartley Act is a step in that direction. I am going to vote for its repeal. My present concern is that it may be repealed by name, but that its substance may be retained in another bill which purports to be a new and different bill but which is only a rephrasing of Taft-Hartley, couched in disarming language.

There is no basis for the argument that the Federal Government should intervene to stop a local strike by the exercise of arbitrary power. For work stoppages which constitute a national emergency, under the Taft-Hartley law, the President, after studying the report of a fact-finding board, can direct that the Government seek an injunction to block a strike, or decide against that course.

The injunction can stay in effect up to 80 days. It occurs to me that this is a one-sided restriction on labor, depriving it completely of its only recourse. There is no equivalent or balancing compulsion exerted against management.

Seeing the cards thus stacked against labor, it is likely that management, in some instances, will take advantage of it. Just by sitting tight, and going through the motions of the bargaining process, they can defeat labor.

When it happens once, there is injustice. When it happens several times, the whole process of collective bargaining breaks down.

Under such circumstances, the Government abandons its role of conciliator and, in effect, sides with management. Even before a dispute arises, Government says that it will bear down on labor singly and exclusively, by enjoining labor's right to strike. There is no thought of expectancy of management going on strike. The provision concerning injunctions is therefore aimed at labor, and labor alone.

Collective bargaining has no chance to function in such a prejudiced atmosphere.

It is a retreat from the development of that industrial democracy which is necessary if our way of life is to survive.

I maintain that we should encourage the collective-bargaining process with a minimum of Government interference, because this is consistent with the American tradition of individual and group responsibility.

By bringing labor and management together around the conference table, mutual suspicions tend to dissolve and old habits of thought are reexamined in the light of mutual interest. No longer is management solely concerned with the welfare of the enterprise. In turn, the horizons of union leadership have widened. Both are beginning to sense that they are partners in the business. Most unions now understand that the security of their members depends upon the welfare of the business. The action of the garment workers in deciding not to seek another wage increase is a case in point.

They realize that under present conditions such a move would weaken the competitive position of the clothing industry and result in unemployment.

Some management representatives believe in the continuance of management prerogatives. Others take a static view and prefer to maintain the present set-up. There are many others, however, who understand the fluid character of the collective-bargaining idea.

It is a living organism which must grow and mature to prove that democracy can make the necessary social and economic adjustments to a developing technology without reducing mankind to a machine-like existence as pawns of an all-enveloping state.

They have faith that collective bargaining will survive the passing uncertainties of its growth and develop to the point where trade-unions play an increasingly important part in areas which are presently considered as the exclusive province of management.

Instances of union-management cooperation in matters relating to the advancement or survival of the enterprise in which both have a real interest have not been given the recognition they deserve.

I refer to the 500 companies which have adopted the multiple-management experiment, or the setting up of three subordinate boards of directors, one a piece for junior executives, factory workers, and sales.

Ideas agreed upon unanimously by the junior boards have to be given serious consideration by the regular board. Management gets its problems across to the workers. The workers' problems, in turn, reach the management quickly, dissolving the artificial tensions of the past where management and labor were regarded as natural antagonists, instead of partners both necessary to the success of the enterprise.

I also refer to those occasions where clothing workers' unions have made financial loans to enterprises which were in difficult straits.

It is the voluntary nature of collective bargaining which develops the favorable climate of gradual understanding and cooperation without interference from a third party.

It is unfortunate that the many cases which prove this have not been given as much publicity as those instances where the parties have failed to reach an understanding.

We are fully informed concerning the sensational divorces in this country, but we are not given the positive and constructive story of the millions of marriages which are succeeding.

By way of analogy, I contend that the major and responsible virtue of the collective-bargaining process is that it provides an opportunity for the private parties immediately concerned to work out their own answers to their mutual problems.

The postwar hysteria engendered by strikes obscures the fact that the mass of union membership is a major element of the consuming public and overlooks the concern for the broad aspects of national welfare which is to be found in the conduct of collective-bargaining negotiations and in the legislative programs put forward and diligently supported by the CIO and the A. F. of L.

It is significant that the conduct of many negotiations has reflected public pressures. There is increasing evidence that management and labor consider the effects of their actions upon the public.

The Taft-Hartley law was brought about through the tendency of the public to place the burden for more responsible action on the unions, rather than management.

To counter this, the unions conducted a broad information program, designed to correct the imbalance. It is safe to say that this changed the composition of Congress to the extent that the Taft-Hartley law is now up for repeal.

The administration bill seeks to eliminate many of its provisions, including:

The ban on the closed shop.

The right of employees to refrain from union activities and be free from union coercion.

The ban on strikes by Federal employees.

The provision relieving employers of a duty to bargain concerning foremen.

The powers of the Labor Board's general counsel to have sole charge of the investigation and prosecution of cases and to seek injunctions in unfair-labor-practice cases.

The non-Communist provision requiring union officers to file affidavits for access to the Labor Board.

The ban on union political spending.

And the requirement for unions to bargain in good faith.

Steps for dealing with national-emergency strikes affecting the public welfare, under the administration bill, provide that:

1. The President would issue a proclamation saying the public interest is affected by a dispute, and asking that there be no work stoppage.

2. The President would appoint an emergency board to investigate. The Board would report its findings and recommendations in 25 days. The disputants would be asked to refrain from a work stoppage another 5 days.

3. The Government would rely on acceptance of these recommendations. There is no provision in the bill for forcing acceptance of or for a court injunction to block a strike.

This is in line with the Wagner Act, which should be restored, an act which, in the words of Leon Keyserling, and I quote: "Was pointed toward more than strengthening labor or bettering its economic position. It was founded on the proposition that the whole economy would prosper through a better distribution of the Nation's goods. It also evaluated collective bargaining as an essential attribute of a free society, and as the only alternative to an intensely centralized economy in the modern industrial state."

The Wagner Act was a simple law which restricted Government intervention to a minimum. The Taft-Hartley Act covers the whole field and pushes Government right into the middle of the collective-bargaining process, where it doesn't belong.

This is dangerous. It weakens that voluntary quality without which there cannot be collective bargaining, in the democratic sense of the word.

The Taft-Hartley Act, by prohibiting the closed shop, by dictating the provisions of a union shop, and by the limitation of health and welfare provisions, is an attempt to undermine progress by those who believe in feudalism.

The extensive use of injunctions, employed so often in the past to crush the labor-union movement, has the effect of giving to the National Labor Relations Board and the courts, a decisive role in the collective-bargaining process.

It must be repudiated, by repeal of the Taft-Hartley Act, and by reenactment of the Wagner Act.

Responsive only to public opinion, labor and management need the opportunity to work out the collective-bargaining experiment to its full realization. Through this they will fashion a free people's solution to the modern industrial problems which Fascists and Communists would solve with iron controls.

The issue is not one of labor versus management.

The issue is freedom or dictatorship, with labor, management, and the public, working for the American way.

Catholic Labor Alliance and Repeal of the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. YATES. Mr. Speaker, recently the commission on human relations of the city of Chicago presented an award in human relations to an outstanding citizen of Chicago, Mr. Edward Marciniak, which read as follows:

Commission on human relations, city of Chicago, award in human relations to Edward Marciniak, who as founder and leader of the Catholic Labor Alliance, has shown how religious groups may advance the principles of Christian behavior and universal brotherhood without racial discrimination among all men who work, and who, as editor of the magazine Work, constantly upholds these same principles, thus giving practical direction to democratic sentiments and faiths.

No more worthy individual could have been selected for this award. As head of the Catholic Labor Alliance, an organization composed of Catholics, Protestants, and Jews, Mr. Marciniak has unceasingly worked for social reform to benefit all mankind. Aided by Father Daniel M. Cantwell, the chaplain of the Catholic Labor Alliance; Mr. John Loser, the president of the alliance, and other far-sighted assistants, the Catholic Labor Alliance and the magazine Work have recently brought outstanding speakers to Chicago, such as Bishop Francis J. Haas, of Grand Rapids, whose speech on essentials of social order, the first of the John A. Ryan lectures, was widely acclaimed. The alliance, through Work magazine, has continually brought to the attention of their readers valuable information on our present labor laws.

The March 1949 issue of Work magazine contains an editorial which brings together the opinions of leading Catholic clergymen writing on the subject of repeal of the Taft-Hartley Act, which I believe merits our most serious consideration.

The editorial follows:

IF WE WROTE THE NEW LABOR LAW, HERE'S WHAT WE WOULD AIM AT

Quite a few Americans are hot and bothered over the law which would replace the Taft-Hartley law. Should the law require non-Communist affidavits for both employers and union leaders? Should the law grant injunction-asking powers to the President in strikes that cripple the country?

Those are just two items that a lot of people in and out of Congress are debating. The controversial points get the X-ray treatment of two labor experts in the weekly magazine, America (February 19 and 26 issues). Father Benjamin L. Masse, S. J., and Charles W. Anrod wind up their article thus:

"The Wagner Act did not go far enough. The Taft-Hartley Act went too far."

Another man who knows his labor law, Father George G. Higgins, writes in the February issue of Catholic Action:

"The Wagner Act was a good law—as far as it went; but it didn't go far enough."

Both articles say that the Wagner Act "didn't go far enough," but they don't quite mean the same thing.

Father Masse and Anrod see labor legislation as a sort of pendulum which swings at one time too much in favor of labor, at another too much in favor of management. "Somewhere between these two extremes lies the kind of law that should be acceptable to labor and management and satisfy the general public," they write.

Under the present system, labor law (like most of labor-management relations) actually does work like a pendulum, with each side jockeying to see that things swing their way whenever possible.

But Father Higgins points out that, at least in the long run, we should eliminate this jockeying, or else we'll be up to our necks in the class struggle, which the Communists talk about but which we often practice. According to Father Higgins, the Wagner Act didn't go far enough to eliminate this struggle, and the Taft-Hartley Act fell far short even of the Wagner Act.

THREE VIEWS

To understand Father Higgins' view, we must look at the three predominant views toward collective bargaining, in which workers band together to assure themselves better wages, hours, and working conditions. Here are the three views:

1. Collective bargaining is just another one of those things which, like warts, you don't especially like but have to put up with. So you might make a concession here and there to labor, but this is only because you don't see any other way out, especially with labor getting strong politically. This is the underlying philosophy of many an employer. This view—in more velvety terms—is held by the National Association of Manufacturers.

2. Collective bargaining is fine, period. We need more and more unions, and these unions should try to get more and more for the workers. This view is held by the majority of labor unions, faced as they are with the pressing problem of meeting the needs of the workers.

8. Collective bargaining is fine, but it is really just a starting point for a good social order. In the industrial warfare of the thirties, the right to bargain was just about the best deal that workers could get. Such a condition is still not up to the ideal. This view is held by the editors of Work, among others, and by Father Higgins.

"The important thing now is to see to it that the new law * * * will look beyond the mere protection of labor's right to organize and bargain collectively," Father Higgins writes. "The new law ought to lift the sights of the Federal Government by encouraging the cooperation of Government with labor and business * * *."

"The organization of labor, management, agriculture, and the professions is absolutely necessary, but it isn't enough. It's only the first step toward the Christian social order. The all-important thing is to get these free organizations to cooperate among themselves and with the Government—'in companies, in industries, and in economic life as a whole'—for the general economic welfare."

Father Higgins says it's time that we move from the Wagner Act era of organized haggling (wholesome as that era was in contrast to what had gone on before). We should go into an era of organized cooperation for the economic welfare of the whole community and all its separate, but closely interrelated parts.

In other words, Father Higgins wants a labor law that seeks cooperation rather than conflict.

The new law should give most of its attention not to holding back either labor or management, but to pushing both of them forward to cooperation for the common good. The law should not ignore the rights of labor and capital, but should stress the duties of both to the community.

True, all this may sound like nothing more than so many slogans—like saying we're against sin. But the reason this sounds like a collection of abstract slogans is that we really haven't tried cooperation in everyday economic life.

People think you're a socialist if you talk about the free organization of capital and labor in permanent agencies (industry councils) of cooperation for the common good. That's what the Catholic bishops of the United States called for in their official statement of last November. We're still a long way from that ideal.

Fascism in Action To Be Available Free Through Members of the House and Senate

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. PATMAN. Mr. Speaker, the House of Representatives today passed a resolution providing for the distribution of 100,000 copies of Fascism In Action, 84,000 to be distributed free by Members of the House and 16,000 to be distributed free by Members of the United States Senate. Heretofore it has been necessary for this book to be published through the Government Printing Office at 40 cents per copy.

The Congress has done a good job alerting the people to the evils of communism by distributing free, through Members of Congress, more than 500,000 copies of the booklet, Communism In Action.

Although no free copies of Fascism In Action have been available, approximately 370,000 people have purchased single copies directly from the Government Printing Office at 40 cents per copy.

When anyone reads the book, Fascism In Action, who is acquainted with present-day lobbying activities by certain groups, he will quickly discover earmarks of fascism in certain campaigns that are going on today. We must not permit fascism to become the only alternative for communism. Neither must we permit communism to become the only alternative for fascism.

Our own Government and type of government—the parliamentary system, a democracy—is the best government on earth, so it is becoming that we make it possible for the people generally to be advised about the evils of both communism and fascism.

The booklets will not be available until the resolution which passed the House today is also passed by the Senate, but usually the Senate concurs in matters of this kind and no trouble is expected in this particular instance.

World Government Week

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. ADDONIZIO. Mr. Speaker, this week, March 6–12, is being nationally sponsored as World Government Week by all organizations interested in world federation. The mayors of Orange, East Orange, and West Orange, N. J., and the president of the village of South Orange, N. J., have issued proclamations setting aside this week as World Government Week and calling upon their citizens to devote the week to consider and discuss how best to strengthen the United Nations into a limited world government with authority and power adequate to prevent war between nations. Under the sponsorship of the Oranges and Maplewood Chapter, United World Federalists, a varied program has been set in motion in these communities for the observance of World Government Week. The following editorial on the subject appeared in the Orange Transcript and West Orange Chronicle of March 3, 1949:

WORLD GOVERNMENT ON CITIZENRY BASIS

World Government Week opens this Sunday, having been proposed and promoted by the United World Federalists, an organization dedicated to the belief that there will be no permanent peace in the world until a world-wide government is set up to assure it. They would extend the type of government that has proved so successful in our country to the entire world, setting up an international government to supervise affairs that are world-wide in scope but leaving all other powers to the individual countries.

As an average local citizen asked to give some thought to world government during the next week, two thoughts of local application come immediately to mind. It is said time and again that wars are made by national leaders who have reached positions of power and yearn for even greater power while if it were possible for the ordinary citizens of the world to vote on a declaration of war there would be no more wars. The average families which must contribute members to the military service would go to all extremes to find means of preventing war. To them, the United Nations appears a step in the right direction, but it, too, appears far away from them and those who make its decisions are the same ones in power in the member nations. Here then, in the United World Federalists, is an organization in which everyone can participate, an institution based on the individual citizens.

Secondly, the average citizen, in reading the papers and fearing the Russian war menace, often wonders where its proponents, who invade other countries and attempt to establish the Russian system in that country, get their enthusiasm for the Russian Government. All reports indicate that life in Russia is something from which to escape. Russian behavior toward even its most enthusiastic proponents is so erratic and unpredictable that most of its representatives must realize that although they are in favor today they are likely to face a firing squad or be vacationed in Siberia tomorrow without even being given a fair hearing. Yet those protagonists will risk their lives in other countries to sell the Soviet system on a world basis. On the other hand there is hardly an American citizen who would not be happy to attest that he believes that our system of government is the finest the world has ever known, but how many salesmen do we have out on the international highways selling the American system? It is not our nature. We believe that every nation should have the right to determine its own type of government without any pressure groups attempting to influence it. However, if it works so well for us, is there any reason why it should not do so well for the citizens of the world? And, as any successful fighter will tell you, the best defense is a good offense.

Here is a very brief statement of the United World Federalists which merits serious thought sometime during World Government Week. They say: "In the town, in the county, in the State, in the Nation, we have learned that the difference between war and peace is government. When there is no other way to settle disputes, men will fight, but within a framework of law, differences can be settled peaceably. Now we must put this knowledge to use on a world scale. We must strengthen the United Nations and give it the powers of government—the power to make, interpret, and enforce world law concerning world affairs—the one area in which the law of the jungle still reigns.

As a means of achieving it, the Federalists say: "As the strongest member of the UN, the United States must take the lead in bringing about the transformation of the UN into a federal world government. This can be done at a general conference of the UN, called under article 109 of the Charter and followed by ratification by the various nations according to their constitutional processes. Fortunately, the United States is a democratic Nation, and as a citizen of that Nation, you can do a great deal. You can help carry out a definite program. You can make your voice heard. United World Federalists isn't interested in tea parties or in a social organization, we are aiming at political action within these next years—in the little time left us. For that, you need us, and we need you."

They ask three things of those interested in their ideas: Become a member so that you

can be counted when it is necessary to tell a Congressman how many in his district favor a certain stand, be available to write Congressmen regarding certain specific legislation that is favored, and also be available as a volunteer for the organization if needed. It is fundamentally an organization of the citizens of the world.

The Difference Between State Socialism and Freedom Under the Bill of Rights

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article written by Edward F. Hutton emphasizing the difference between state socialism and freedom under the Bill of Rights. This article stresses the inestimable value of your American citizenship. Protect it by combating state socialism. The article follows:

To Mr. Vishinsky of Union of Soviet Socialist Republics and to all the people of the United States of America.

Mr. VISHINSKY: It is reported that at the UN meeting, Paris, you announced your country had acquired the atomic bomb, developed in the United States of America. This is the first time in modern history that a nation has admitted to acquiring a secret of another nation without its consent. That bomb was developed at an initial cost of $2,000,000,000, paid for by "we, the people" of these United States. It was not developed as a threat to Russia or as a threat to world peace. It was developed to save millions of lives as our contribution to winning a war in which you were our ally and we were yours.

If you have acquired the atomic bomb, you probably believe you have our greatest asset. But you haven't. You can, however, acquire our greatest asset without any spywork, without any underhanded techniques. We gladly hand it to you free, and with our blessing. That great asset of ours is the United States Constitution and the Bill of Rights.

You, Mr. Vishinsky, with Premier Stalin, and 12 others of the supreme Soviet, hold in your hands the destiny, the lives, and the liberties of over 300,000,000 people. They, literally, are serfs of your Communist state. You cannot give them the atomic bomb. But you can give them the life, liberty, and freedom of spirit that all people can enjoy under our Constitution and Bill of Rights; and you can drop this upon your people and upon the world with greater effectiveness for world peace than the destructive power of our entire stock pile of atomic bombs.

You claim, Mr. Vishinsky, that the supreme Soviet in governing the lives, the thinking, and the activities of all the people of Communist Russia, desires only to free the world from its political, social, religious, and economic chains. You speak of world freedom as an endowment invented by communism. You seek world revolution for the people's freedom.

Mr. Vishinsky, have you ever studied the United States Constitution? It is not only a plan for government that has given us all we have, it is a logical pattern for world government because it puts government precisely where it belongs, at the source from which it must forever derive * * * the hands and minds of the people. Our Constitution, on which we have no copyright, makes government the servant and not the master of the people. It makes all people potential capitalists, but it puts capitalism in the hands of a free people and not in the hands of the state, which uses capitalism to keep liberty and freedom from the people. In all of your damning of capitalism, you damn only free capitalism when you damn the United States.

You must believe in capitalism because the Union of Soviet Russia is the only state on the face of the earth that monopolizes all capital.

Communism holds, Mr. Vishinsky, that man must be free from the chains of religion and the domination of God. It maintains that all religions for the worship of God are bad for the people and bad for the state. You have displaced God and have set up the state as the supreme authority.

Has your state, in any of its scientific laboratories, ever created seeds which would sprout into food to feed your people? Only God can do that! Have any of your state laboratories managed to upset a single natural law? Can the Kremlin lengthen a day, shorten a night, or change a climate? Can you stop blizzards or create them? Can you deal in any way with the forces of nature, and change them?

To eliminate belief in God, you must change man from a human being into an animal. You must reverse all the forces of evolution and reduce man to the equivalent of a unit in a herd, a hive, or a nest. You must stop man's progress in thinking and action. You must control his mind. You have had some success—temporary success—in this approach. So did Hitler. So did Mussolini. So did the warlords of Japan. So did Nero. They have passed.

Any effort to control the thinking of man is in opposition to all the laws of God and nature, and must fail. You cannot stifle man's inner desire to make personal progress, to increase in importance, to have knowledge, to have possessions, to have liberty of mind and freedom of spirit.

What would happen in Soviet Russia if you took the United States Constitution and Bill of Rights and gave them to your people? What would happen if you gave to all the people of Russia freedom to worship God in any way they pleased? What would happen if you reopened all the churches, permitted entry and activity of missionaries, and restored all of the religious rights and privileges of Jews, Catholics, Protestants, Greeks, Mohammedans, and all other religions?

All of your people would have an inward lift. Pravda, carrying the announcement as news, would be kissed on the streets of Moscow. You, who announced it, would be blessed by the people on their knees.

What would happen in Russia if you said to all your people, "You have complete freedom of speech without reprisal"? Your people would go wild with joy, and you know it. Imagine how your people would react to be told that they could work where they pleased, and at what they pleased, without any dictation by the state. What would happen if you offered your people the right of private enterprise, to create a telephone system, a new railroad system, a new broadcasting system, the right to produce all kinds of merchandise and services? And the right to build and use radios, to listen to worldwide programs and to uncensored programs of Russian stations? Your people would believe that at long last communism had become a heaven on earth.

You should like the United States Constitution and the Bill of Rights for one particular thing: The United States Constitution provides, within itself, the means of change without revolution and without counterrevolution. We, the people, living under the Constitution and the Bill of Rights, can change that Constitution, wholly or in part, and provide for ourselves any other kind of government we want—totalitarian, communistic, state socialism, or no government at all. The Constitution provides for amendment by vote of the majority of the representatives of the people in three-fourths of the States.

You could say to your people, "This bombshell of liberty and freedom is not a 5- or 10-year plan. It is yours for a day, and if you like it, it is yours forever, but with this proviso: if ever you don't like it, as a majority, you can vote it out of action and return to any other form you like, without war, without bloodshed, without revolution."

You have the atomic bomb, so you say. So do we. That makes us equal as to destructive power. But that is not establishing parity. You should be equal also in constructive forces, the only force that nature's God smiles upon and blesses those who use it. The constructive force, far more important than the destructive force, doesn't have to be stolen. It is yours, for all the people of Russia, free. Free! Free! Take it. We are only a people lucky enough to have it. We didn't invent it.

We have no copyright or patent on it. Yet it is the greatest force in the world because it frees the creative powers of every man and woman.

In our Constitution and Bill of Rights is the secret of all our productive success; all of the secret of our happiness, our high standard of living, our high wages, our short hours—everything we have, even the development of the atomic bomb.

EDWARD F. HUTTON.

Basing-Point Definitions—No New Law Needed in Form of Moratorium or Otherwise—Small Business Apprehensive—Any Change Devastating to Antitrust Laws

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. PATMAN. Mr. Speaker, the nomenclature of business is varied and ofttimes picturesque. Many of the terms used to describe a particular situation or type of transaction are interchangeable. In the several geographic sections of our country terms which may be synonymous become adapted to sales and deliveries of different products in slightly different ways. Generally, however, language which involves the transportation of goods or merchandise is understood throughout the country as meaning the same thing in every State, city, town, and village. For example, "freight rate" is understood by all to mean the charge or charges necessary to be paid to a public carrier for moving goods and merchandise from one part of the country to another. It is pretty generally understood, too, that these freight rates, truck rates, river, or other rates used by public carriers are rates approved by some governmental body. Such governmental body may be the Interstate Commerce Commission or the regulatory commissions and boards established under the

laws of the several States. It is understood that these rates, when charged by a public carrier, have been approved by such regulatory bodies and are published in such manner that any interested party may have quick access to them.

It is when shippers or manufacturers attempt to set up transportation rates which have no basis for a fair charge for service rendered that terms applicable to transportation become confusing, misleading, and misunderstood. Of course, the number of public-carrier transportation rates on the thousands and thousands of commodities, basic and manufactured, run into the millions. However, we are not concerned with these rates which every day are used throughout our country by thousands of consignors and consignees to carry on business and personal activities. We are concerned about the rates which have been devised to control prices, create monopolies, and unfairly place an enormous burden upon commerce and industry by "conspiratous" action.

What are these terms and what do they mean in simple business language, and why should there be confusion or misunderstanding in business as to their meaning? I shall cite a few examples:

First. F. o. b.: Certainly everybody understands f. o. b. to mean free on board. The shipper here loads the products in a railroad car or delivers it to a freight depot, river or lake dock, terminal warehouse, or other transportation facility where the shipper's responsibility ends and the receiver's begins.

Second. F. a. s.: This term, free alongside ship or vessel, has the same natural meaning as f. o. b., the only difference, as is indicated, is in type of transportation facility.

Third. F. o. b. point of origin: In other words, where the shipment originates, which may be a mill, factory, a warehouse, or a freight depot located in or at the point of shipment. Certainly no one can misunderstand this term.

Fourth. F. o. b., with freight allowed to destination: Businessmen understand this term, as I am sure most people do. It simply means that the shipper will allow freight charges to be deducted from the face of the merchandise invoice after payment of the freight by the consignee. If the destination is a prepay point where there is no station agent to collect the freight, then in that case the shipper would pay the freight and enclose with the invoice a receipted freight bill.

Fifth. F. o. b., with freight equalized to destination: To both the consignor and the consignee this term spells out the fact that the shipper is willing to pay part of the freight cost so that his price for goods is no more than that of his competitor who may be nearer to the buyer's destination. In other words, freight is equalized with the nearest competitive point from which goods and merchandise of a similar kind and quality may be purchased at an equal price.

Sixth. Delivered price: A great deal has been said about delivered price. What is a delivered price? It is simply the price with all charges included for goods or merchandise which has come to rest at the point of consumption. Now everybody knows that the elements which make up a delivered price are the costs of the merchandise f. o. b. point of origin, plus transportation charges and plus handling charges. There is nothing of a secretive nature about delivered price; it is the way in which the term is used for conspiratous purposes that often lends unnatural color to the term.

Seventh. Freight absorption: The term "freight absorption" is synonymous in effect with freight equalization. It is a term which is often a misnomer as well. In many transactions, particularly in basic commodities, freight is allegedly absorbed. I say allegedly, because any uniform system involving freight absorption is not predicated on that basis. The predicate is to counterbalance absorptions with overcharges not based on actual freight rates. So-called freight absorption rarely accrues to the benefit of the consignee. It is designed as a weapon to benefit the consignor and to assist in the control of prices.

Eighth. Phantom freight: This term arises from the basing-point system. It is, of course, an unreal freight charge which purchasers have paid to maintain an artificial price structure on cement, steel, and other commodities. As far as wholesalers, dealers, or consumers are concerned, it is a phantom freight charge they are paying. The only reality in the term "phantom freight" is the money—real money which the steel and cement trusts extract from the well-worn pockets of the taxpayer.

Ninth. Basing-point system, single and multiple: This is the system that surely everybody has now heard about. This is the system of pricing which small business has endured in one form or another for nearly 75 years. This is the system that for 25 years the Federal Trade Commission and the Department of Justice have sought to bring out into the open and call it by its right name, the right name being "coercion"—"monopoly"—"collusion"—take your choice; the effect is the same. This is the system which the general public heard little about until the recent decisions of the Supreme Court. Although the public heard little about the basing-point system, it has paid millions upon millinos of hard-earned dollars in the conspiratous maintenance of the system by certain large segments of industry engaged in the production and manufacture of basic commodities.

The simple explanation of the basing-point system, whether single or multiple, is that it sets up an artificial freight rate structure on the transportation of commodities by producers and manufacturers who use the system.

The term "basing point" is more or less self-descriptive. The single point system, of course, uses only one base as was the case in the steel industry for many years when it used the Pittsburgh base for shipments everywhere in the United States. No matter where another steel mill was located, whether it was next door or in the next country or the next State, the consumer or customer paid the mill f. o. b. price plus freight from Pittsburgh. Many illustrations have been made of the operation of the single point basing system so one more would not hurt. For example, a purchaser of steel located in St. Louis, Mo., purchased his steel requirements from a mill across the river at Granite City, Ill., yet this St. Louis concern paid the freight from Pittsburgh, Pa., to St. Louis, Mo. There is no doubt in my mind that under this method the steel trust was born and grew to its full maturity because of this immense added increment of cost to the consumer, which was pure velvet. In other words, it was unearned, an arbitrary and a fantastic charge—and a fraud upon the American people.

The multiple basing point system, as the term indicates, includes several points on which freight is predicated and charged to destination. It is frightening to think of the effect upon our economy had the multiple basing system been applied to all commerce and industry. Fortunately, by far the greatest tonnage of goods and merchandise is moved on an f. o. b. point of origin basis. The multiple basing point system, however, has been made applicable to every possible basic commodity, including steel, cement, and many others. But it is in the steel and cement industries that the system reached near perfection. If the people of this country could count the cost of the multiple basing point system as it has affected them, the trains would have difficulty carrying the mail addressed to their Representatives in Congress. These letters would voice disapproval of any legislation designed to weaken the antitrust laws, the Clayton Act, or the Robinson-Patman Act.

Total abolition of the basing-point system will, within a reasonable period of time and without serious readjustment, relocate the steel and cement industries. This does not necessarily mean that the plants now in existence will suffer, for the country is growing year by year and the demand for basic commodities such as steel, cement, and other materials increases day by day. My earnest hope is that the Congress of the United States will stop, look, and listen before it passes any stop-gap legislation undermining the antitrust or fair trades practices laws, and will look hard at any force which importunes for such legislation, and will listen to the still, small voice of its conscience—the people.

Address of President Truman

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I include in the appendix of the RECORD the text of the address of President Truman, given on the occasion of the conferring upon him the honorary degree of Doctor

of Humanities at Rollins College, in Winter Park, Fla., on Tuesday last:

Governor Warren, President Holt, distinguished educators, and all friends of Rollins College, this for me is a very happy day and a very solemn occasion. The Governor's address was a masterpiece. It covers the situation with which we are faced. It brings to realization a hope I have long cherished. I am deeply sensitive of the honor which this college has bestowed upon me.

Rollins College has served the State of Florida and the Nation faithfully and well through more than three sccre years. I shall always treasure the memory of this day and the parchment which admits me into the noble society of Rollins alumni. The men and women which this institution has given the world now for sixty-odd years have upheld the ideals of democracy wherever they have found their life work.

It gives me special pleasure by my presence here today to bear witness to the debt which we owe to the man who has guided the destinies of Rollins College for almost a quarter of a century.

Since he assumed the presidency of this institution he has made it a focal point in our effort to educate American youth in principles of freedom under true democracy. Dr. Holt has brought to his work distinguished leadership with a background of accomplishment in many fields. Although he will soon retire from active academic work, he will continue his labors for peace and international good will.

Never before has this country needed as it does today the leadership of thoroughly trained men and women. We must have leaders inspired from their earliest years with the ideals of democracy.

You know there isn't a word in the English language that has been so severely abused during the last 10 years as that word democracy. Some people make a travesty of that word. That is one of the greatest words in the history of the English language, and it should stand for just exactly what we mean when we say democracy, and not for a counterfeit.

Education is our first line of defense. In the conflict of principle and policy which divides the world today, America's hope—our hope—the hope of the world is in education. Through education alone can we combat the tenets of communism. The unfettered soul of free men offers a spiritual defense unconquered and unconquerable.

We may not know what is behind the iron curtain, but we do know that the intelligence of the people of the embattled democracies of Europe, who live in front of the iron curtain, is the world's best hope for peace today.

Education is the most important task before us. The Congress should enact legislation authorizing Federal grants to the States to assist in meeting the operating expenses of elementary and secondary schools. There is general agreement that such aid can be given without interference with State responsibility for the scope and content of the teaching.

If our country is to retain its freedom in a world of conflicting political philosophies, we must take steps to assure that every American youth shall receive the highest level of training by which he can profit.

A soundly conceived Federal scholarship program in our colleges and universities is a necessary step in attaining this goal.

Education has been defined as a bulwark against the acids of fascism and communism. Neither of these totalitarian forms of government can survive examination by educated men and women—men and women free to search for truth and imbued with the principles of liberty set forth in the preamble to the Constitution of the United States, the greatest document of Government, in my opinion, that has ever been written by the hand of man. That Constitution gives us the ability to live together in peace. It gives us the ability to see that justice comes to every man, be he big or be he small, be he rich or be he poor.

If this great institution will continue to turn out leaders, I am not at all afraid of what the next generation in the world will bring forth.

We are working for peace. We want peace. We pray for peace all the time in the world. And to attain that peace, we must all learn how to live together peaceably and do to our neighbors as we would have our neighbors do to us. Then we will have a happy world, and that is what we want.

Civil-Rights Compromise

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. RAINS. Mr. Speaker, our colleague, the gentleman from Arkansas, the Honorable BROOKS HAYS, has focused the attention of the press and the Nation on a new approach to the bitterly contested civil-rights program. While I am not apprised of the details of the program which the gentleman from Arkansas has presented, and I do not know that I could subscribe to it, I am greatly interested in observing the reaction to this proposals, both in the Nation's press, and especially in the newspapers of the South. I attach herewith an editorial which appeared in the Memphis Press-Scimitar.

HAYS' COMPROMISE ON CIVIL RIGHTS

The preliminaries to a Senate filibuster on the civil-rights issue are in progress. The issue there now is a proposed change in the Senate's rules to permit filibusters to be more easily broken.

Southerners there cannot be blamed for trying their best to defeat legislation they are convinced will be bad for their section and for the Nation. In support of that conviction, their duty is to oppose changes in the Senate rules; and to use those rules to protect what they regard as their rights.

It looks now as if it's going to be another bitter fight.

But, meanwhile, an outstanding Congressman from the Democratic South, Representative BROOKS HAYS, of Arkansas, has proposed what appears to us to be a good sensible compromise that would settle the issues and not sacrifice principle.

Instead of repeal by law of the poll-tax requirements in seven Southern States, HAYS proposes the submission of a constitutional amendment. If the anti-poll-tax forces want action instead of a fight, they'd be smart to accept this proposal. We're convinced such an amendment would be ratified.

In place of the fantastic antilynching bill with its provision for finding whole masses of the people guilty, HAYS proposes that the Government declare lynching a Federal crime, but be restrained from going into a State to prosecute lynchers if that State, by law, makes adequate provisions for such prosecutions.

In the third place, he proposes to meet the problem presented by discrimination in industry by a sensible and useful procedure which would help toward education against discrimination, but not invoke any penalties.

If the President and his congressional leadership, especially in the Senate, are going to be adamant about the civil-rights program, they might as well recognize the fact that they thus will endanger all the remainder of their legislative program.

Congressman HAYS has, in fact, proposed a way to bail out the President. But, more important, he has suggested common-sense means of settling an old problem that has succeeded in dividing the Nation for years and which will continue to engender bitterness.

Cynics say there are those in national politics who would prefer to spend their time fighting over the civil-rights issue rather than settle it.

We'd like to believe there are none such.

But if Congressman HAYS' compromise program is not accepted as the good, middle-of-the-road way out, we'd be inclined to believe the cynics speak truth.

Enforcement of Antitrust Laws and Moratorium Provision—No New Law Needed

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. PATMAN. Mr. Speaker, it is said again and again by critics of the Portland Cement decision that it has introduced uncertainty into the law, that it is no longer certain whether or not freight absorption is or is not per se illegal, that therefore some kind of new legislation is needed to clarify the legal situation.

The reverse is true. The Portland Cement decision, a forthright decision with only one dissent, introduced certainty into the law by underlining the real issue—combination or conspiracy in violation of the antitrust acts. Freight absorption is not illegal in the absence of combination or conspiracy in violation of the antitrust acts and in the absence of bad faith. The general standards laid down by the Congress in the antitrust acts will be enforced by the courts, which will, as a judicial function, supply, on the facts of actual cases, clarification and delimitation to effectuate the intent of Congress.

That is what the Portland Cement decision does, and that is what any further court decisions on freight absorption and basing points will continue to do.

CONGRESS SHOULD NOT ATTEMPT IMPOSSIBLE

Congress chose long ago not to attempt the impossible and impractical task of describing in rigid detail all the specific practices forbidden by the antitrust laws. Such rigid specification would merely be a boon to monopoly-minded concerns which could then easily devise evasions. Congress made conspiracy, common planning, and intent the important thing.

The present demand for so-called clarification of the antitrust laws is simply a device for breaking down completely the whole philosophy and spirit of the antitrust laws, and to reverse judicial precedents patiently accumulated thereunder for years, regardless of the good intentions of the authors.

Sometimes these proposals for amendments to clarify the law are bold enough to leave no doubt in any reasonable mind of the real intent to sabotage the antitrust laws. Sometimes they are suave and subtle enough in their content to conceal their real purpose. Sometimes they are offered in good faith by persons who are misled by this false issue of needed clarification.

LAW CLEAR

Just the other day a bill was introduced in Congress which proceeds on the clarification theory but uses wording designed, apparently, not to whittle down the existing antitrust laws. Under the wording Congress reaffirms its antimonopoly policy but declares that "it has not been the intent of Congress to deprive individual companies of the right to use delivered-price systems or to absorb freight," provided such activities are carried on independently and not through any combination or conspiracy in violation of the Sherman Act, as amended. It also provides that for a period of 2 years the Federal Trade and the Clayton Acts shall not be construed as restraining such activities. It further states that nothing contained therein shall affect pending litigation.

Now I say that no matter how carefully this bill may have been drawn so as not to whittle down existing antitrust legislation, it is a mistake. It is a mistake even if it does not directly impair existing legislation; this is because, by adopting the clarification theory, it opens up the door to much more sinister bills introduced on this theory. Secondly, I say it is a mistake because it does in effect whittle down existing legislation.

On the first point I say again that since the existing laws on the subject are declarations of standards and principles, Congress has already chosen to allow clarification and elucidation to come from the courts. The Portland Cement case is perfectly clear that delivered price and freight absorption systems are not of themselves illegal. If further elucidation is needed it will come from the courts, whether through the Rigid Steel Conduit case or other cases.

On my second point, I say that any language such as that used in the bill is bound to shake the structure of time-hallowed antitrust legislation and the existing court interpretations that already are erected on it. The lawyers for monopoly can find a weighty meaning for every new phrase, however innocently intended. When the bill, if enacted, states that there is now uncertainty of meaning, those lawyers will argue there always was uncertainty and therefore there never was any law capable of being fully enforced. The judges will be resentful because of the alleged intrusion of Congress into what they may regard as a purely judicial function of statutory construction.

However, the first point is the more important. The bill, even if never passed, nevertheless by predicating itself on the false issue of clarification, opens up the door to the introduction of more obnoxious bills based on the same false issue.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. TOWE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial entitled "Tell It to Jones," published in the March 1949, issue of Medical Economics:

TELL IT TO JONES

When John Jones hears that 9 doctors out of 10 oppose compulsory health insurance, he's likely to mumble something about vested interests—and go back to his sports section.

Why? Because we've failed to show him what his stake in the matter is. In 15 years of debating the problem, we've gotten too far away from the Jones'-eye view.

So let's forget, for a moment, about capitation fees and advisory councils. Let's talk about the new Wagner bill (S. 5) strictly in terms of what it would mean to Mr. Jones.

Consider, for example, what's good about compulsory health insurance. Some of us have become so embroiled in the argument that we fail to see what any intelligent layman can see—that the Wagner plan has definite points in its favor. For instance:

It would spread and space the cost of medical care. Since medical bills would be paid via pay roll deductions and other taxes, the WMD scheme would substitute small, periodic payments for large, unpredictable ones. Any insurance or tax scheme has this feature. The Wagner plan is no exception.

It would raise the volume of medical care and distribute it more widely. Knowing they were entitled to almost unlimited medical care without additional direct cost, people would visit the doctor oftener. So it's probable that, under compulsory health insurance, more people would get more medical care.

So far, so good. But now let's show Jones the other side of the coin. Are there logical reasons why, from his viewpoint, the good features of the Wagner plan might be outweighed by the bad? Let's see:

It would raise the cost of medical care. Jones will probably agree that the Government is not exactly famous for its efficient use of funds. Recently a Hoover Commission task force found that it cost twice as much to build hospital beds under Federal, as against private auspices—and twice as much to treat the patients in them.

A second item that runs up the cost of tax-financed medicine is the number of administrative personnel required. A Wagner plan, everyone concedes, would need plenty—at least 250,000, says Senator ROBERT A. TAFT. No special business acumen is needed to see that the salaries of such employees would boost the cost of medical care appreciably. This increment would, of course, have to be paid for through higher pay-roll taxes, higher income taxes, higher general taxes.

It would lower the quality of medical care. Here, from Jones' point of view, is the crux of the matter. He'd get a poorer grade of service because of (a) less time spent per patient, and (b) Government red tape.

Why less time? Because compulsory health insurance would raise the volume of medical care far faster than the supply of doctors could be increased. Nor is there any assurance now that supply would ever catch up with demand.

Thus, under the Wagner plan, time spent per patient might easily be cut in half. Rushed as he is, the United States physician today spends an average of 23 minutes per patient. In England, under socialized medicine, that figure is reported to be closer to 10 minutes.

The more conscientious a doctor was, in fact, the less he'd feel justified in spending extra time on individual cases. He'd be on the Government pay roll; it would be the Government he'd have to please, not the individual patient. So he'd give the best care he could to his whole panel and try not to let individual patients hold him up.

At the same time, he'd have extra records and forms to fill out—for no Government can dole out the taxpayers' money without demanding an elaborate accounting. This would reduce still further the time he could spend with Jones.

Government red tape would also hamper patients more directly. Inherent in the Wagner bill are limitations on switching doctors and on calling in consultants. Before John Jones could see a specialist, for example, his visit would have to be certified as necessary by his panel G. P. or by what the bill calls "an administrative medical officer." Similar restrictions would apply to hospital, nursing, and auxiliary service. They could easily hinder Jones in getting good quality medical care.

What's more, these restrictions would be only samples of things to come: According to Senate bill 5, a five-man Federal board could issue any rules needed to operate the Wagner plan.

All of which raises some basic questions: Is it a good thing to have more medical care if the quality turns out to be bad? Is it a good thing to space medical costs in such a way as to double the total expenditure? These are questions that every Jones must decide.

"But," he may expostulate, "how can we make medical care easier to pay for and more readily available?"

The answer: Voluntary health insurance, with premiums paid by the subscriber if he can afford them, by government if he can't. Stacked up against this combination, compulsory health insurance offers Jones almost nothing. It's high time we told him why.

H. SHERIDAN BAKETEL, M. D.

Centenary of Panama Star and Herald

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. THOMPSON. Mr. Speaker, anything affecting the history of the Panama Canal or the Isthmus of Panama has a special appeal, I know, to our membership and the American people. Speaking for myself, I may say that I am greatly interested in anything on these subjects, as I have the honor to be a member of the House Merchant

Marine and Fisheries Committee, which has jurisdiction over Panama Canal legislation; and I am also a member of the subcommittee which deals with the Panama Canal.

On February 24, 1949, the Star and Herald, of Panama, celebrated the one hundredth anniversary of the birth of the Panama Star, with which publication the Panama Herald—founded April 14, 1851—became merged May 2, 1854, to form thenceforth the Star and Herald, the oldest English-language newspaper published throughout the length of the west coast of the two Americas.

The Star and Herald, together with its Spanish-language counterpart La Estrella de Panama—Star of Panama—located at the crossroads of the American nations, where east is linked with west—is one of the most influential sheets in the Western World. Its files teem with stories of stirring events of the American era; particularly with those which relate to the New World voyages of Columbus; the planting and maintenance of colonies on the Isthmus by the Spanish Crown; the trek of the Forty-niners to California during the days of the gold rush; the construction of the Panama Railroad; the attempt of the French to build the Panama Canal; the founding of the Republic of Panama; and the construction of the Canal by the United States, with its attendant, and all-important, sanitary achievements.

The editorial policy of the Star and Herald has always been ably and consistently exerted to foster better relations among the nations of this hemisphere; especially between our own country and Panama. It is a recognized authority, not only on pan-American subjects, but, as well, upon international affairs, in general. From time to time its editorial utterances have found lodgment in the CONGRESSIONAL RECORD, and have been quoted, with approval, by our membership.

To the end that something of the fine and interesting history of this outstanding Latin-American daily may become better known to the Congress and our people, under unanimous consent accorded, I am extending in the RECORD, as a part of these remarks, an editorial published in the Star and Herald in its issue of February 24, 1949.

I believe that our heartiest felicitations and congratulations should be extended to the owners, publishers, and staff of the Star and Herald—and its twin mate, La Estrella de Panama—upon this centenary occasion. Notwithstanding the advanced age of this publication, it is yet young in spirit and in deed, and stronger, perhaps, and more influential than ever before. Let us hope that during the new century of its journalistic career—which has just dawned—the splendid service it has rendered its country, the Panama Canal, pan-Americanism, and the cause of peace, progress, and international good will, may continue with unabated strength and vigor.

ONE HUNDRED YEARS AGO TODAY

Today marks a milestone in the history of American journalism. It rounds out a century of publication of the oldest English-language newspaper on the west coast of the Americas, the Panama Star, which later merged with the Panama Herald to become the Star and Herald. The date also initiates a quartet of centennials achieved by the Star and Herald and its Spanish-language twin, La Estrella de Panama, between today and May 2, 1954, on which this newspaper will celebrate the hundredth anniversary of the merger of the Panama Star and the Panama Herald.

One hundred years ago today the first issue of the Panama Star was printed by a trio of Forty-niners for the specific purpose of recording the celebration of Washington's Birthday by some 3,000 Americans then on the Isthmus awaiting transportation to California. Despite their impatience at the delay in their quest for gold, then luring hundreds of thousands across the United States, these three newspapermen could not but write their story of the gold rush which was to initiate a century of travel and development across North America as they saw it reflected on this, till then, scantly known Isthmus of Panama, later to become the crossroads of the world.

To them the publication was an incident of their pilgrimage to El Dorado. But today's centennial proves the virility of the seed they planted, even as it marks the hundredth anniversary of the birth of continuous news publication on the Isthmus and along the entire Pacific coast of the Americas.

Thus, although our hearts are proud today on the attainment of our first centennial, we are reserving the official celebration for the last. The following brief history will explain our reasons:

The Panama Star, oldest west coast English newspaper from Alaska to Tierra del Fuego, came first. It started as a weekly, increasing, in turn, from biweekly to triweekly, and ultimately daily publication.

The Panama Herald followed on April 14, 1851. It also has had an uninterrupted existence since its establishment 98 years ago. It started as a weekly, then became a biweekly and later a triweekly. It did not attain daily publication until after its merger with the Panama Star.

In third place comes La Estrella de Panama, the child of the Panama Star. It was created February 1, 1853, as the Spanish section of the Panama Star. It is today the third oldest Spanish language newspaper continuously published anywhere on the West coast of the Americas. It is exceeded in age only by El Comercio of Lima, and El Mercurio, of Valparaiso, Chile.

The fourth and last centennial will be that of the Star and Herald, representative of the merger of the two English language weeklies. This merger was decided between April 30 and May 1, 1854, when one-half interest in the Panama Star was sold to the owners of the Panama Herald. It was the suggestion of the departing half-owner of the Star that the Herald be suppressed entirely and that the combined effort of the staffs of the Herald and the Star be concentrated on the latter. However, the new owners decided that the same concentration of effort on one paper could be effected without loss of identity by either paper. Thus the Star and Herald made its bow on May 2, 1854.

The present owners of the Star and Herald have decided that it would be fairer to await the centennial of the Star and Herald in 1954 and in that way celebrate all four anniversaries at one time. This is the reason why there will be no official commemoration today.

Elsewhere in this issue we publish a brief sketch of the history of the four papers.

Today, as we view with pride and satisfaction the safe arrival of our paper at the century mark, our thoughts turn to those hardy men of the past to whose enterprise, devotion and industry its survival and success is due. We reverently invoke the memory of:

J. B. Bidleman, S. K. Henarie and J. F. Bachman, the three forty-niners who started the Panma Star on that far-away February 24, 100 years ago today.

Jose Angel Santos, in whose printing establishment both the Panama Star and the Panama Herald were born.

Peyton Middleton and Francis Rice, who rescued the Star from the state of orphancy into which it passed when its founders left for California.

Lewis A. Middleton, who joined his brother Peyton in launching the Panama Star as a regular newspaper of tabloid size and soon after endowed it with its own printing plant.

Archibald Boardman Boyd, who, as the successor of Peyton Middleton in the partnership, urged the publication of a Spanish section when the time came to make the paper a daily in 1853.

Col. Edmund Green and James H. Middleton (a brother of Peyton and Lewis) who founded the Panama Herald in April 1851, in competition with the Star.

Louis M. Booth and John Power, who successively joined James Middleton in the publication of the Herald upon the death of Col. Green.

Manuel Morro, Carlos Jorge Monsalve and Bartolome Calvo, who cooperated with Middleton and Boyd in launching La Estrella de Panama as the Spanish section of the Panama Star.

James Boyd, surviving brother of Archibald, who succeeded to the ownership and the editorial chair of the Star and Herald upon the death of Archibald B. Boyd in New York.

Samuel Boyd, who served as manager and editor of the Star and Herald after the death of James Boyd, when the publishing firm became the common property of his heirs.

Jose Gabriel Duque, who 56 years ago bought the effects of the publishing firm including the right to publish the two papers, and became the director of both.

Each of these men contributed his grain of sand to the firm and successful institutions the Star and Herald and La Estrella de Panama have become today. They labored so well that the fruits of their creation have endured despite the ups and downs of 100 years of existence.

Three of these men presided at the creation of the Star and Herald in 1854—Archibald Boardman Boyd, James H. Middleton and John Power—as owners and editors.

One Hundred and Fifty-eighth Anniversary of Polish Independence Day

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. McDONOUGH. Mr. Speaker, on May 3 people of Polish ancestry throughout the world will commemorate the one hundred and fifty-eighth anniversary of Polish Independence Day which was established by the adoption of Poland's liberal constitution on May 3, 1791, during the time of Kosciusko and Pulaski.

This year the celebration in Poland, if staged at all, can only represent a hollow mockery with a Communist regime in control of the country.

Recognizing the contribution which persons of Polish ancestry have made to our own great Nation since they came to our shores in great numbers since the

eighteenth century and their stanch adherence to the principles of liberty and independence, the board of supervisors of Los Angeles County, Calif., have proclaimed May 1 as the one hundred and fifty-eighth anniversary of Polish independence and will stage an appropriate ceremony in the Los Angeles Civic Center on that day to commemorate this memorable event.

The following is the resolution adopted by the Los Angeles County Board of Supervisors:

Whereas this Nation is composed of descendants from many lands who have contributed to our culture and economy; and

Whereas the people of one of those foreign lands, namely Poland, have come to our shores in great numbers from the eighteenth century to the present time to become an integral and integrated part of our Republic; and

Whereas among these Poles have been such stalwart patriots as Thaddeus Kosciusko and Casimir Pulaski, who helped in the winning of the Revolutionary War, thus starting the United States on the road to becoming the greatest bulwark of democracy in the world today; and

Whereas the adoption of Poland's liberal constitution on May 3, 1791, during the time of Kosciusko and Pulaski is celebrated by Poles everywhere as Polish Independence Day; and

Whereas such a celebration in Poland today, which is under the sinister domination of a Communist regime, taking its directives from the Politburo in Moscow, would be a hollow mockery if staged at all; and

Whereas the spark and flame of liberty and independence symbolized by the Polish Constitution is still a rallying cry for millions of Poles residing in the United States: Now, therefore, be it

Resolved, That the board of supervisors proclaim Sunday, May 1, as the one hundred and fifty-eighth anniversary of Polish Independence Day in Los Angeles County, and that the board assist the Friends of Poland and the Polish American Congress in staging an appropriate ceremony in Civic Center on that Sunday afternoon to commemorate this memorable event.

I hereby certify that the foregoing is a full, true, and correct copy of a resolution which was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on February 23, 1949, and entered in the minutes of said board.

[SEAL] W. G. SHARP,
County Clerk of the County of Los Angeles, State of California, and ex officio Clerk of the Board of Supervisors of said County.
By RAY E. LEE,
Deputy Clerk.

New York Bar Association Proposals for a Better Procedure in Congressional Committees

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. KLEIN. Mr. Speaker, there can be no reasonable doubt of the right of Congress, or of either House, or of a committee duly established by either or both Houses of Congress, to investigate any matter relevant to legislation; and that places no practical limitations on the scope of any investigation.

Neither can there be any doubt of the right of the two Houses of Congress to establish principles of procedure for investigations, or to delegate that authority to the chairmen or the membership of the committees.

There are many powers of Congress which have not been delimited by law or judicial decisions, and the constitutional privilege of free speech for Members has occasionally led to flagrant abuse of privileges which exist in the absence of any contrary ruling.

Debate has raged for many decades as to what limitations exist on the right of committee chairmen and members to interrogate witnesses. There are a few quite obvious constitutional safeguards. Beyond that the discretion and taste of the chairmen have usually dictated procedure.

It has seemed to many of us that certain rules of conduct could be adopted by Congress which would in no way impede the discovery of facts but which would satisfactorily protect witnesses against flagrant abuse.

The Committee on the Bill of Rights of the Association of the Bar of New York, an organization held in the highest esteem by every student and practitioner of the law, has made recommendations to this end which I am honored to introduce in the form of a bill to amend the Reorganization Act. The chairman of the committee is Mr. Lloyd Paul Stryker, an eminent attorney of unblemished reputation, and the members of the committee are equally distinguished.

I feel sure that Members of Congress will find their recommendations moderate and useful, and I hope that my bill will be studied and reported on in timely manner.

The essence of the bill is to protect witnesses and innocent bystanders against reckless exercise of the proper powers of the Congress by providing that the purpose of the investigation shall be clearly and publicly stated; that witnesses may be accompanied by counsel, may read the stenographic transcript of their testimony and may obtain copies, and may make an oral or written statement in their own behalf; and that any person feeling himself damaged by testimony or remarks may have an opportunity of answering the charges. It would also prohibit the circus atmosphere of moving picture and television or radio broadcasting during testimony.

Under leave to extend my remarks, and because of the value of the report, I include the report on which the bill was based:

COMMITTEE ON THE BILL OF RIGHTS—REPORT ON CONGRESSIONAL INVESTIGATIONS

There has no doubt arisen in many quarters a strong feeling of resentment at the manner in which certain investigations have been conducted by committees of Congress, the methods employed, and the treatment to which witnesses and other persons have been subjected as a result thereof. When one comes to analyze the complaints, we believe that they will be found to fall into two main categories.

First, it is charged that inquiring into a witness's personal affairs, his affiliations, political or otherwise, or his previous utterances, violates some right of the individual to immunity from official inquisition or some right in the nature of a right of privacy, and that such inquiry is not only improper but unlawful and in contravention of some American constitutional guaranty.

Secondly, it is charged that in many instances the investigation results unfairly in serious injury to individual reputation—either the reputation of the witness, or of someone whose name has been brought into the testimony by a witness, by the examiner or by a member of the committee. This is true for numerous reasons: The fact that the hearings receive wide publicity; that the mere mention of a person's name in connection with a subject that has widespread news value may create a distorted and unfair public impression; that a witness may make irresponsible statements, knowing that his testimony is privileged and that he will not be called to account; that unfair questioning is frequently indulged in and hearsay evidence freely admitted; and, perhaps the most important charge of all, that the person defamed is not given an adequate opportunity to reply or defend himself.

There can be no doubt that much of this criticism is justified. Some of it, however, we believe is due to a misunderstanding of the fundamental right of Congress to conduct investigations on the one hand and as to the rights of the individual to be immune from questioning on the other hand. Some of the imperfections, moreover, are unavoidable and are inherent in the conduct of the legislative process in a democratic government. Many of them are due to the shortcomings of the particular individuals concerned in the conduct of the investigation—the lack of a proper sense of fairness and decency, the temptation to seek notoriety for political motives, and the sometimes total disregard of the fact that witnesses and others dealt with in the investigation are in reality being summoned before the bar of public opinion and ought not to be prejudged before they are found guilty. No rules can be devised to cure individual faults of this nature. It would appear, however, that certain rules could be adopted which would insure to a much greater degree the observance of ordinary principles of fairness and justice.

At the outset it should be understood that there is no doubt of the power of Congress to appoint committees and endow them with powers of investigation, including the conduct of hearings, the summoning of witnesses, and compelling their testimony. This power has been clearly upheld by the Supreme Court.

It will hardly be disputed that Congress may conduct such an investigation where the purpose is to obtain facts which will assist it in the enactment of legislation. Another legitimate purpose of congressional investigation may be to inquire into the conduct of executive departments for the purpose of exposing executive misconduct or inefficiency or of ascertaining the manner in which legislation by Congress is being carried out. Although the Court holding with respect to this type of investigation are not as clear, it is a right which seems to be rather generally recognized by text writers and historians. Thus, Woodrow Wilson, in his book on Congressional Government, says:

"It is the proper duty of a representative body to look diligently into every affair of Government and to talk much about what it sees. * * * The informing function of Congress should be preferred even to its legislative function."

This type of investigation, as well as most other types, may so often be said to have as its purpose an inquiry as to what, if any, legislation is desirable that it can usually be also classified in the latter category.

We shall not attempt in this report to deal with the question of how far Congress may compel the disclosure by officials of the Government of what we may term "a State secret."

It has been recognized judicially that Congress may conduct investigations to decide upon the qualifications of its own Members. Others have asserted that there exists in Congress the power to conduct investigations merely for the purpose of disseminating information to the public, although we have not had called to our attention any judicial sanction of this view. It is clear, however, that we must start with the premise that Congress has, under our constitutional system of government, important powers of investigation, including the power to summon witnesses and require their testimony under penalty of contempt proceedings, and that these powers have been sanctioned by decisions of the highest court of the land.

So much for the power of Congress to conduct investigations. We now come to the question as to whether and to what extent a witness may be immune from being compelled to testify. One of the widespread complaints, as heretofore stated, which are being leveled at congressional investigations is that there is something illegal and improper in inquiring into the private affairs, beliefs, utterances, or affiliations of the private citizen. There seems to be prevalent a belief, although somewhat vague, that the individual American is endowed with some sort of a right of privacy which exempts him from inquiry into his private affairs. One hears it suggested that such an inquiry violates some protection afforded by the Bill of Rights. We know of no right of privacy or constitutional guaranty which makes a citizen immune to the giving of evidence where an inquiry is being made by a legally constituted congressional committee engaged in a legitimate investigation—any more than a citizen is immune from having to give relevant testimony in a trial before a court of law. The questions, of course, must be relevant to the subject under investigation, and the decisions of the Supreme Court already protect the individual from being required to answer questions which are not pertinent to the inquiry. But, assuming that the question is material and relevant to an inquiry in aid of a lawful purpose of Congress, we do not believe that the individual is immune from being required to answer merely because the question delves into his private affairs, his previous utterances or his affiliations, political or otherwise. It is not necessary for the purpose of this report to attempt to predict what the courts may hold with respect to the inquiry into an individual's privately entertained belief, except to say that at all events a court would probably insist that the relevancy of such an inquiry be clearly established and that this would be true only in rather exceptional circumstances.

Just as the courts will confine a committee's right to inquire into an individual's private affairs within the bounds of relevancy, so will the courts afford the protection of the fourth amendment in a committee's attempt to use the blanket subpena duces tecum.

Because the individual can only be required to answer questions which are pertinent to the inquiry, it would seem to be incumbent upon Congress or the committee to define with some precision and clarity the purpose of each investigation which is authorized. This criticism has particularly been leveled at the authority under which the Committee on Un-American Activities has been operating. In this connection it is to be noted that the usual method of calling to account a witness who has refused to answer a question before a congressional committee is to cause criminal proceedings to be instituted against him under the existing Federal penal statute which makes it a misdemeanor to willfully default or refuse to answer any question pertinent to the subject under inquiry (U. S. C. A., title 2, sec. 122). It has been argued that if the purpose of the inquiry is so vague and indefinite that it is impossible to tell whether a question is really pertinent or not, a conviction for failure to answer in such a case would violate the principle that a penal statute must be sufficiently explicit to inform the person who is charged with violation what conduct would render him guilty. It also appears that Congress itself has the power to punish for contempt without invoking the penal statute above-mentioned. Here again, through habeas corpus or otherwise, it might be urged that such a conviction should also be set aside if the resolution does not sufficiently apprise the witness as to the purposes of the inquiry so that the pertinency of the question may be readily determined.

It has been argued that the first amendment to the Constitution of the United States protects a witness from being interrogated with regard to any statements or other utterances that he may have made or any propaganda activities that he may have indulged in. Two theories have been advanced: First, that because Congress is prohibited under the first amendment from abridging the freedom of speech, it could not be pertinent to inquire as to what speech has been uttered; and secondly, that if a man knows that he may have to subject the words which he may speak or the views which he may expound to the cold white light of publicity resulting from a congressional inquiry, it will be an undue and unconstitutional restraint on his freedom of speech. One Federal judge, in a dissenting opinion in a recent case, has seemed to adopt both these views. It appears to your committee, however, that the majority of the court were right in rejecting these contentions and in holding that the constitutional guaranty of freedom to express one's views did not include the right to be immune from inquiry as to what one has said.

Of course, a witness always has the right to raise the privilege against self-incrimination. Under the existing Federal statute, his testimony could not be used against him in a subsequent criminal prosecution. It is also probable that under the decisions, he cannot be required to answer a question if he insists that the answer would tend to incriminate him.

So much for the alleged right of privacy. We now come to consider the protection of the individual, whether a witness or a person mentioned in the hearings, from unfair treatment or unfair and unjustified injury to his reputation. Of course, certain of the abuses of this character, such as the browbeating of a witness or unfair questioning by the examiner or the committee, are inherent in any investigation unless the tribunal or its members are imbued with a proper sense of judicial decorum, or a proper regard for fairness and decency. About the only remedy for this type of abuse is the development of a finer sense of the proprieties in the committee members themselves.

There are, however, certain measures by way of legislation or rule making which, it seems to your committee, could be adopted to insure greater protection to the individual. Numerous ones have been suggested.

First, it seems to be pretty generally the opinion that a witness should be permitted to have counsel present at any inquiry. The extent to which counsel should be permitted to participate is subject to differences of opinion. Certainly it would seem that counsel should have the right to advise the witness during the course of the inquiry of his rights.

One of the important abuses arises from the fact that neither the witness nor any person defamed during the hearing is given an adequate opportunity to protect himself by having his side of the story presented with equal prominence. To this end, several suggestions have been made: That he shall be given an opportunity to answer the charges by his own oral testimony; that he shall be given the opportunity to file a written answer to the charges; that he shall be given the opportunity to call witnesses to answer the charges; that he shall be given the right to cross-examine orally the witness who gave the testimony adverse to his reputation; that he shall be given the right to cross-examine by written interrogatories the witness who gave the adverse testimony; that a correct transcript be kept of the witness' testimony and that the witness be furnished with such a transcript.

In addition to the foregoing, various other suggestions have been made, such as that no committee report shall be filed until such report has been approved by a majority; that counsel for the committee must be a lawyer; that at least one other member of the committee must be present beside the interrogator; that questions of privilege raised on behalf of the witnesses must be decided by a majority of the committee; that a private person shall not be subpenaed except on vote of the majority of the committee; and that no photographs, motion pictures, television, or broadcasting be permitted while the witness is testifying, if the witness so requests.

Various bills have already been introduced into Congress embodying some of these suggestions. After giving careful consideration to the matter, your committee proposes that it be recommended that the association adopt the following resolution:

"*Resolved*, That this association recommends to the Congress of the United States the adoption, by concurrent resolution or otherwise, of the following principles to govern the conduct of investigations by committees of the Senate and the House of Representatives:

"1. The subject of any investigation in connection with which witnesses are summoned shall be clearly stated before the commencement of any hearings, and the evidence sought to be elicited shall be relevant and germane to the subject as so stated. In cases of special investigations authorized by congressional resolution, the subject of the investigation shall be so stated in the resolution, and in the case of investigations initiated by the committee, the subject shall be so stated by the committee and announced before the commencement of the hearings.

"2. Any witness summoned at a public hearing and, unless the committee by a majority vote determines otherwise, any witness before a private hearing shall have the right to be accompanied by counsel, who shall be permitted to advise the witness while on the witness stand of his rights.

"3. Every witness shall have an opportunity, at the conclusion of the examination by the committee, to supplement the testimony which he has given, by making a written or oral statement, which shall be made part of the record; but such testimony shall be confined to matters with regard to which he has previously been examined.

"4. An accurate stenographic record shall be kept of the testimony of each witness, whether in public or in executive session. In either case, the record of his testimony shall be made available for inspection by the witness or his counsel; and, if given in public session, he shall be furnished with a copy thereof if he so requests, and if given in executive session he shall be furnished with a copy thereof in case his testimony is subsequently used or referred to in a public session.

"5. No photographs, moving pictures, television or radio broadcasting of the proceedings shall be permitted while any witness is testifying.

"6. Any person whose name is mentioned or who is specifically identified and who be-

lieves that testimony or other evidence given in a public hearing before any committee or comment made by any member of the committee or its counsel tends to defame him or otherwise adversely affect his reputation, shall be afforded the following privileges:

"(a) To file with the committee a sworn statement concerning such testimony, evidence or comment, which shall be made a part of the record of such hearing.

"(b) To appear personally before the committee and testify in his own behalf.

"(c) To have the committee secure the appearance of witnesses whose testimony adversely affected him, and to cross-examine such witnesses, either personally or by counsel; but such cross-examination shall be limited to 1 hour as to any one witness unless the committee votes to lengthen the period.[1]

"(d) In the discretion of the committee, by a majority vote, to have the committee call a reasonable number of witnesses in his behalf. The extent to which this privilege may be availed of shall be left to the discretion of the committee.

"7. These principles shall apply to investigations by all committees of either House of Congress, including standing committees, select committees, or joint committees of the two Houses, and a duly authorized subcommittee of any of the foregoing."

Respectfully submitted.

The Committee on the Bill of Rights of the Association of the Bar: Lloyd Paul Stryker, Chairman; Jonathan B. Bingham; Robert T. Bushnell; James Lloyd Derby; Thomas B. Dyett; Kenneth William Greenawalt; Richard K. Hines; David Kelly; Allen T. Klots; Alexander M. Lewis; Ephraim S. London; William F. Martin; Edward S. Pinney; Oren Root, Jr.; Stuart N. Scott; Harold Shapero.

NOVEMBER 22, 1948.

[1] A minority of your committee herewith submit a report recommending the insertion of the phrase "Unless the committee by a majority vote shall determine otherwise" at the beginning of subdivision 6 (c).

German War-Crimes Trial a National Disgrace

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I have introduced House Resolution 143 which calls for an investigation and study of the facts and circumstances relating to the obtaining of evidence by American Army officers for the prosecution of Germans accused of crimes in the Dachau-concentration-camp affair. The resolution has been referred to the Armed Services Committee of the House. It is my earnest hope that the committee will consider the resolution favorably and proceed to a full and complete investigation.

Mr. Speaker, I have been informed through Government reports that the conduct of the prosecutors and investigators engaged in these trials has been brutal beyond description. Their actions are a national disgrace. Evidence has been obtained by beating and kicking the accused, by knocking out their teeth and breaking their jaws, by mock trials, solitary confinement, and many other bestial methods. Is this the spirit of American jurisprudence or the spirit of revenge by those who have an ax to grind?

We do not have to condone the acts of those who committed crimes at Dachau under Hitler, but we certainly should condemn American citizens who are today committing high crimes in the name of justice.

Mr. Speaker, the people of this country are on notice that justice has miscarried at Dachau. Lawyers and judges who have been to Germany will gladly testify about American atrocities in connection with war-crime trials. The Department of the Army is in possession of reports that have been made. Secretary Royall must know what is going on.

I have been informed, Mr. Speaker, that the United States Military Court at Dachau, set up by General Clay, tried 1,672 Germans and convicted 1,416 of them. Of those convicted 297 were sentenced to death. After a cursory review procedure, executions were ordered.

Mr. Speaker, I shall not take more time now, but will conclude with the statement that the Army seems to be above and beyond the reach of law in these cases. There is a body, however, to which it must answer in the name of justice and humanity and that is the Congress of the United States. Mr. Speaker, under leave to extend my remarks, I include as part of my remarks an article by Judge Edward L. van Roden, which appeared in the Progressive of February 1949 and an editorial from the Christian Century for February 2, 1949:

[From the Progressive of February 1949]

AMERICAN ATROCITIES IN GERMANY

(By Judge Edward L. van Roden)

Edward L. van Roden, a Pennsylvania judge, served in World Wars I and II, in the latter as Chief of the Military Justice Division for the European Theater where he saw service in Normandy, Belgium, the Rhineland, the Battle of the Bulge, and in the Ardennes. In 1946 he was reassigned to active duty and served on several important court-martial trials in Germany. In 1948 Secretary of the Army Royall appointed him to an extraordinary commission charged with investigating the Dachau war crimes program.

American investigators at the United States Court in Dachau, Germany, used the following methods to obtain confessions:

Beatings and brutal kicking.
Knocking out teeth and breaking jaws.
Mock trials.
Solitary confinement.
Posturing as priests.
Very limited rations.
Spiritual deprivation.
Promises of acquittal.

Complaints concerning these third-degree methods were received by Secretary of the Army Kenneth Royall last Spring. Royall appointed Justice Gordon Simpson of the Texas Supreme Court and me to go to Germany and check up on the reports. Accompanied by Lt. Col. Charles Lawrence, Jr., we went to Munich, Germany, set up offices there, and heard a stream of testimony about the way in which American atrocities were committed.

But first, a bit of the background:

Last Spring the Supreme Court refused the habeas corpus petition of Col. Willis N. Everett, Jr., of Atlanta, Ga., an American lawyer, who had served as defense counsel for the 74 Germans accused in the famous Malmedy case. Everett is a very able lawyer, a conscientious and sincere gentleman. He is not a fanatic.

In his petition, Everett charged that the Germans had not received a fair trial. Everett did not claim that all the German defendants were innocent, but since they did not have a fair trial, there was no way of telling the innocent from the guilty.

The tragedy is that so many of us Americans, having fought and won the war with so much sweat and blood, now say, "All Germans should be punished." We won the war, but some of us want to go on killing. That seems to me wicked.

If Everett's shocking charges were true, they would be a blot on the American conscience for eternity. The fact that there were atrocities by the Germans during the war against Americans, or by Americans against Germans, would not in the least lessen our disgrace if such peacetime atrocities were to go unchallenged.

Our specific assignment was not only to examine Colonel Everett's charges, but also to examine the cases of the 139 death sentences, which at that time remained unexecuted; 152 Germans had already been executed.

The 139 doomed men who were still alive fell into three groups. They were accused of involvement in the Dachau-concentration-camp crimes, in the killing of American fliers, or in the Malmedy massacres. Let me say that I believe the crimes for which these Germans were tried actually took place, and that some Germans were guilty of them.

But we should not let the indiscriminate hate of all Germans that was generated during and after the war, blind us to the necessity of punishing the guilty ones only.

After this investigation, and after talking to all sides, I do not believe that the German people knew what the German Government was doing. I am convinced the German populace had no idea what diabolical crimes that arch-fiend Himmler, was committing in the concentration camps. From the atrocities we learned about, he must have been the very prince of devils.

But as for the Germans at large, they fought the war as loyal citizens with a fatherland to support, and a fatherland to defend.

Some American fliers, shot down on bombing raids over Germany, were killed by German civilians. These Germans felt that the American fliers were the murderers of their defenseless wives, mothers, and children who were in the bombed cities—just as the English felt that German fliers were their murderers. That's war.

I felt deeply about these fliers. I had two sons in the Air Force. Jimmy made 35 missions over Germany and returned safe, thank God! Dick made 32 missions and was finally shot down over Italy. He spent 12 months in a German prisoner-of-war camp and was fairly well treated. He is now in a sanitarium in Arizona recovering from tuberculosis he contracted in the camp.

II

The Malmedy massacres, in which a group of American prisoners of war were mown down after being captured during the Battle of the Bulge, actually happened. But can't we distinguish between the assertion that these atrocities did happen, and the assertion that they were committed by these 74 Germans who had been in or near Malmedy at that time?

Because some wicked, sadistic German individuals did it, are we doing the right thing by saying any and all Germans we lay our hands on are guilty and should be destroyed? I personally don't believe that. That's not the way of thinking I learned in my church, or you learned in your church.

On Russian insistence, the Americans couldn't retry these men. The Russian philosophy in these matters is that the investigators determine the guilt or innocence of the accused, and the judge merely sets the sentence. We accepted the Russian formula of no-retrial, but we won out on the presumption of innocence before trial.

The American prohibition of hearsay evidence had been suspended. Second- and third-hand testimony was admitted, although the Judge Advocate General warned against the value of hearsay evidence, especially when it was obtained, as this was, 2 or 3 years after the act.

Lieutenant Colonel Ellis and Lieutenant Perl of the prosecution pleaded that it was difficult to obtain competent evidence. Perl told the court, "We had a tough case to crack and we had to use persuasive methods." He admitted to the court that the persuasive methods included various "expedients, including some violence and mock trials." He further told the court that the cases rested on statements obtained by such methods.

The statements which were admitted as evidence were obtained from men who had first been kept in solitary confinement for 3, 4, and 5 months. They were confined between four walls, with no windows, and no opportunity of exercise. Two meals a day were shoved in to them through a slot in the door. They were not allowed to talk to anyone. They had no communication with their families or any minister or priest during that time.

This solitary confinement proved sufficient in itself in some cases to persuade the Germans to sign prepared statements. These statements not only involved the signer, but often would involve other defendants.

III

Our investigators would put a black hood over the accused's head and then punch him in the face with brass knuckles, kick him, and beat him with rubber hose. Many of the German defendants had teeth knocked out. Some had their jaws broken.

All but two of the Germans, in the 139 cases we investigated, had been kicked in the testicles beyond repair. This was standard operating procedure with American investigators.

Perl admitted use of mock trials and persuasive methods including violence and said the court was free to decide the weight to be attached to evidence thus received. But it all went in.

One 18-year-old defendant, after a series of beatings, was writing a statement being dictated to him. When they reached the sixteenth page, the boy was locked up for the night. In the early morning, Germans in nearby cells heard him muttering, "I will not utter another lie." When the jailer came in later to get him to finish his false statement, he found the German hanging from a cell bar, dead. However, the statement that the German lad hanged himself to escape signing was offered and received in evidence in the trial of the others.

Sometimes a prisoner who refused to sign was led into a dimly lit room, where a group of civilian investigators, wearing United States Army uniforms, were seated around a black table with a crucifix in the center and two candles burning, one on each side. "You will now have your American trial," the defendant was told.

The sham court passed a sham sentence of death. Then the accused was told, "You will hang in a few days, as soon as the general approves this sentence; but in the meantime sign this confession and we can get you acquitted." Some still wouldn't sign.

We were shocked by the crucifix being used so mockingly.

In another case, a bogus Catholic priest (actually an investigator) entered the cell of one of the defendants, heard his confession, gave him absolution, and then gave him a little friendly tip: "Sign whatever the investigators ask you to sign. It will get you your freedom. Even though it's false, I can give you absolution now in advance for the lie you'd tell."

Our final report on these trials has been turned over to Secretary of the Army Royall. In spite of the many instances like those I have described, we found no general conspiracy to obtain evidence improperly. With the exception of 29 cases, we saw no reason why the executions should not be carried out. For the 110 others, there was sufficient competent evidence obtained from other sources to warrant the death penalty, exclusive of the evidence obtained by the third degree.

The 29 men whose sentences we recommended for commutation certainly did not have a fair trial by American standards. Twenty-seven of them were to have their terms reduced to life, one of them was to get 10 years, and one would get 2½ years, according to our recommendations. We also recommended a permanent program of clemency for reconsideration of the sentences of other prisoners convicted in war-crimes cases.

Secretary Royall has saved our national conscience. Could we as Americans ever have held our heads up, if he hadn't looked into it? He has saved our national prestige and our international reputation.

However, in spite of Secretary Royall's action in this matter, there is little real room for complacency on the part of Americans. Rather our report reveals, by implication, that we still have a serious situation in Germany to clear up. Moreover, five of the men for whom we recommended commutations have been hanged since we turned in our report. In all, 100 of the 139 we set out to investigate are now dead.

IV

The American investigators who committed the atrocities in the name of American justice and under the American flag are going scot-free

At this point there are two objectives which should be aimed for:

1. Those 39 prisoners whose death sentences have not been commuted and who have not yet been hanged should be saved, pending full judicial review.

2. American investigators who abused the powers of victory and prostituted justice to vengeance, should be exposed in a public process, preferably in the United States, and prosecuted.

Unless these crimes committed by Americans are exposed by us at home, the prestige of America and American justice will suffer permanent and irreparable damage. We can partially atone for our own misconduct if we first search it out and publicly condemn and disavow it. If we wait for our enemies to blazon our guilt abroad, we can only bow our heads in shamed admission.

RESUME HANGING OF GERMANS PROBABLY INNOCENT

After the January 5 issue of the Christian Century told how the National Council for Prevention of War had made public a speech by Judge E. LeRoy van Roden revealing the tortures, physical and mental, by which confessions were extorted from Germans tried by Army courts, indignation rapidly mounted. Individuals wrote to the Department of the Army demanding that there be no more hangings of men convicted by such malodorous methods. Some newspapers spoke out. Under this pressure, Secretary Royall told the press that Judge van Roden and his associate, Judge Gordon Simpson, of Texas, who had investigated the convictions at his request, had recommended that 29 of the 45 awaiting execution have their sentences commuted. Press and public took this to mean that the Army would follow the jurists' recommendation. It hasn't. A few days later the hangings were resumed, and in the first six who went to the gallows there were five whose convictions rested on evidence gained in ways that were a disgrace both to the Army and to American justice. The NCPW says that these five men were probably innocent. Certainly there was enough reason for doubting their guilt to cause Judge Simpson and Judge van Roden to advise against their execution. The Supreme Court has refused to intervene because it says it lacks jurisdiction. But Congress has jurisdiction over the United States Army, and it is the Army that is committing this legal murder. What have you done to stir Congress to action? If you have any doubt about the facts, write the National Council for Prevention of War, 1013 Eighteenth Street NW., Washington 6, D. C., for the supporting evidence.

Pledge of Allegiance to the Flag of the United States

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. DAVENPORT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include excerpts from minutes of a meeting of the Americanism committee of the American Legion posts of Allegheny County, Pa., at the William Penn Hotel, Pittsburgh, Pa., on Monday, January 31, 1949, at which meeting a certificate was presented to Congressman HERMAN P. EBERHARTER, of Pennsylvania, in recognition of his efforts toward having made official by United States statute the Pledge of Allegiance to the Flag of the United States of America.

Chairman FORSYTH. Comrades, it is a pleasure and a privilege to preside at this meeting of the Americanism committee, attended by so many distinguished Legionnaires of Allegheny County, to pay tribute to the distinguished Member of Congress from the Thirty-second District of Pennsylvania in recognition of the important part he has played in a historical accomplishment of one of the many phases of the Legion's Americanism program.

We of the Legion consider the presentation of today not only a pleasant duty but a special privilege; so great a privilege that I agreed with the committee, that the actual presentation should be made by a distinguished citizen, soldier, Legionnaire, legislator, author, and jurist, who served his country as a soldier on the field of battle in both World Wars I and II, and as President Judge of the International Court in the war crimes trials at Nuremberg.

However, before presenting the speaker of the day, I must pause to pay tribute to one of Allegheny County's foremost Legionnaires, the man whose alertness and foresight made possible this program that has its culmination in the meeting here today. The man who took the initial steps and carried through the plan which resulted in the Congress of the United States adopting the Pledge of Allegiance to the Flag as the official pronouncement of every man, woman, and child in the United States; that man is Col. John H. Shenkel, honored and respected soldier, Legionnaire, under whose auspices this luncheon is being held.

May I now present to you the Honorable Michael A. Musmanno, judge of the court of common pleas of Allegheny County, Pa.

ADDRESS BY JUDGE MICHAEL A. MUSMANNO

This meeting is historic. We are here to celebrate the official acceptance by Congress of the Pledge of Allegiance to the Flag of the United States.

It is amazing, indeed startling, that for decades the patriotically sacred words of the allegiance to our national emblem were without official recognition. So far as acceptance of the pledge was concerned the pledgor announced his words to the empty air. He pledged allegiance but no one noted or recorded his vow. The most beautiful pledge that a citizen could make was regarded simply as a declamatory utterance. But that inexplicable and deplorable situation no longer exists, and we are here today to rejoice.

It was on October 12, 1892, the four hundredth anniversary of the discovery of America, that the pledge to the flag of the United States in its present wording was first publicly spoken. Benjamin Harrison, the then President of the United States, declared that day a holiday, and at Boston, Mass., the school children en masse, standing before a large American flag, entoned the words which are now endeared to us.

But nothing further was done. Year followed year. The United States went to war in 1898, again in 1917, and still a third time in 1941, but the pledge to the flag, the flag for which so many Americans laid down their lives, had no official sanction.

Then in February 1945 the executive committee of the American Legion of Allegheny County, representing 125 posts and 30,000 members, passed a resolution calling upon Congress to invest the pledge to the flag with the same official reverence that attends the Star-Spangled Banner, our national anthem. Col. John H. Shenkel, chairman of the Americanism committee of the Legion, wrote Congressman HERMAN EBERHARTER informing him of the action of the local Legion. Mr. EBERHARTER at once introduced a bill to achieve the desired objective.

Congressman EBERHARTER'S bill became known as House Joint Resolution 180. With energy, skill, and perseverance Congressman EBERHARTER got the bill through the House and the Senate and then on December 28, 1945, it reached President Harry S. Truman, who approved the measure, and it became law. The objective had been achieved: the pledge of allegiance to our flag took its place next to the Star-Spangled Banner in respect, reverence, and official regard.

The celebration of that glorious event has been delayed until today, a delay which has benefited me because, had it taken place at a date more fittingly close to the event itself I would not have had the honor and privilege to participate in the celebration.

I saw HERMAN EBERHARTER in Nuremberg last summer and in his usual modest fashion he said nothing about this beautiful patriotic achievement of his. It was wonderful to see him there, and amid the ruins and rubble of the cradle of nazism, to talk about America, the citadel of democracy; about Pittsburgh, the arsenal of democracy; and about our friends here. His congenial and ever friendly companionship aroused a nostalgia in my soul for the hills of western Pennsylvania and all that they mean to both of us.

I was glad that he could see some of the work which was being done in Nuremberg in the cause of international peace and understanding. I am sure that he will agree with me that the day will come when every American will be as proud of Nuremberg as he is of Gettysburg. At Nuremberg the United States helped to lay the foundation for a system of jurisprudence which will assure universal man of justice, regardless of nation, race, or creed. We declared in Nuremberg, and I am proud to have had a part in declaring it, that no longer will any national tyrant be permitted to pour innocent blood into an international river with the excuse that he is reddening only the waters which flow between his own borders. The rivers of the world are the veins of mankind and they must and will be protected against the vampires of imperialism. Civilization has advanced at Nuremberg.

This flag of ours proclaimed at Nuremberg that it stands not only for the rights of Americans but for the rights of the common bond of humanity. In the last trial over which I presided at Nuremberg, known as the biggest murder trial in history, the defendants were charged with and convicted of the murder of 1,000,000 people. Not one of these victims was an American, but this did not detract from the responsibility of America to see that justice was done. The law of humanity had been violated, and when humanity weeps a responsibility devolves upon civilization itself to redress the wrong and succor the injured.

Yes, every American soldier and sailor who sacrificed for his country, every one of his children and children's children will have a better chance for the enjoyment of life, liberty, and the pursuit of happiness because of what happened at Nuremberg. With the determination of individual responsibility for universal wrongs, tyrants and international gangsters will not be so prompt to attack unoffending nations and peoples. Nuremberg has served notice on the world that he who starts a war will answer for it, he who offends against humanity will answer for it—not only in the next world but in the present one. To that extent we can look forward with more assurance to the realization of the ever-recurring dream of assured international peace.

I am proud to have been a representative of the United States on the international tribunal which announced these principles. I am proud to have served our flag in the halls of justice as well as on the field of action. As I look at it here today in all its lustrous beauty I am reminded of a war experience on the Italian front. One evening while out in no-man's land I became separated from my comrades and discovered that I had crossed the line and was on enemy territory. I crouched behind a log, expecting any moment capture or something worse. Anxiously I waited for daylight, hoping that with the dawn I might discover some landmark from which I could orient myself and get back to our own lines. Eons and ages seemed to roll down the hills of eternity as I waited. At last there was a slight cracking in the black ceiling above, and a few stars timidly revealed their presence.

I thought of the flag. This emblem, which, like a bird of brilliant plumage, had perched on the gunwale of the boat stealthily making its way through the jagged ice blocks of the Delaware; this flag, which had inspired Washington and all other defenders of liberty and freedom since, was scarcely ever seen by combat soldiers at the front in this war. In a type of fighting where concealment meant strategy and tactical superiority, the comforting and inspiring sight of our country's ensign had to give way to the iron and dirt demands of scientific battle. But now Old Glory was unfurling in the sky and an electric fever burned in my arteries. From the east, stripes of red light were undulating over the whiteness of the horizon. The night had melted into a deep blue and against this navy background the stars rippled, forming of the heavens a celestial flag which bathed my sleepless eyes in tears.

In the light of this dawn-spangled banner I presently picked out the landmarks of the previous day and bending low hurried along in the direction now made clear to me. At a point I deemed safe I straightened up and raced with singing heart toward the unseen flagpoles from which now waved a million stars and stripes.

The Star-Spangled Banner. It is a flag which flutters gorgeously from flagpoles throughout the country, it is a flag which unfurls beautifully from staffs on land and sea, it is a flag which even when physically absent may be found in the heavens above and in the abundance of our land as seen in the red harvests, the while clover, and the blue grass. But above all it is found in the heart of every American who understands its poetry, feels its heroism, and hears the symphony of its music, a music which nowhere is sweeter, nowhere is more melodious, nowhere is more comforting—"one Nation indivisible, with liberty and justice for all."

Mr. EBERHARTER, the American Legion of Allegheny County has struck off three beautiful certificates in commemoration of this event. One has been conferred upon the President of the United States, one will be presented to you, and I am the proud recipient of the third. I have been asked by the American Legion to present to you here today this most attractively engraved and framed document in recognition of your service in Congress in making official the pledge to the flag of the United States of America. Mr. EBERHARTER, I hand you the certificate and express to you in behalf of the American Legion, our eternal gratitude.

Mr. EBERHARTER. Comrade Commander, Judge Musmanno, and comrades of the American Legion, each of us here today to take part in this ceremony is indeed fortunate, not because of the witnessing of the bestowal upon me of an honor which I shall cherish and remember throughout the rest of my days. Rather, because we have had the privilege of hearing an address by our revered and beloved comrade, Judge Musmanno, such as we probably have never heard before and will likely never hear again.

His inspiring words—patriotic as all of us are and have been, nevertheless stimulate and fire us to a more intensified spirit of love of our country and a willingness to make any sacrifice to keep our country as we know it to be and, if possible, to make it better than our fondest dreams. We owe to Judge Musmanno heartfelt thanks.

I am most thankful to our Comrade Commander William D. Forsyth, to Col. John H. Shenkel, and to each and every member of the American Legion in Allegheny County. The small part I played in having official recognition sanctioned under the laws of the United States to the Pledge of Allegiance gives me a feeling of pride and satisfaction. But in fairness all credit must go to the Americanism committee of the American Legion posts of Allegheny County. It was they who conceived the idea of having the pledge made the law of the land, and it was they who initiated the action and gave the necessary impetus to the accomplishment.

When we think of the more than 1,000 counties in these United States, and reflect that it was our own Allegheny County of Pennsylvania that is responsible, we cannot but be grateful to the Americanism committee of our home county.

It is my fervent hope that the Pledge of Allegiance shall become deeply embedded in the mind of every man, woman, and child in the United States, and particularly in the minds of our youngsters, for it is upon them that the future of our country depends.

Twenty-nine words comprise the pledge, and practically each and every word has a significance which we do not comprehend unless we stop and think. Without going over the entire pledge, just let me illustrate briefly what I mean. The first two words, "I pledge"—the significance of those two words—we promise and stake our honor and our character; the next word "allegiance," indicating as it does, devotion and loyalty; and

the next phrase "to the flag of the United States of America," the beauty and symbolism of which you have just heard stirringly described by Judge Musmanno; the word "Republic," signifying our form of government, the leader in all righteous things of the world today; "one Nation indivisible," meaning united as one in just causes; what words bespeak more than "liberty and justice"; and finally, the last two words, "for all." Have you ever stopped to think of the significance of those last two words? Not liberty and justice for those who think and do as we, or as we would have them think and do; not for one; not for any group or class or creed or race, but for all, each and everyone.

Yes, those 29 words, the oftener repeated and the oftener pondered upon, the more beautiful they become. It is somewhat like the Lord's Prayer, the more we dwell upon it the more beautiful it becomes.

I am most grateful to you, my comrades of the American Legion, for the honor you today bestow upon me by the presentation of this certificate. I shall cherish it and keep fresh in my memory this occasion.

Fair Deal on the Columbia

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my own remarks made at a region-wide meeting of the League for CVA, Portland, Oreg., February 19, 1949:

FAIR DEAL ON THE COLUMBIA

The League for CVA meets today with a new sense of achievement. Our ideas for the welfare and progress of the Pacific Northwest have taken root and flourished. They have grown into a full-fledged objective of national policy. In a recent letter to me, President Truman wrote these simple but meaningful words "our end of the Avenue will do everything to push the Columbia Valley Authority along."

In the Nation's Capitol, the White House and the Congress are the two ends of Pennsylvania Avenue that count in Government policy. Before I relate some of the recent CVA developments back there, I want to emphasize that what counts most of all is the work we do here in the Pacific Northwest.

Across my desk each day come letters from citizens in the Pacific Northwest in support of CVA. I believe they reflect fairly the sentiment of most people who are concerned about the welfare of the region. Sometimes questions are raised about one or another detail in the CVA program—important questions that must be answered in the final legislation. But the broad objectives of CVA are recognized and accepted—a healthy sign of progress and a promise that CVA legislation will make rapid headway.

It is up to the League for CVA to translate local ideas into an effective educational program, and to channelize local efforts into a mighty outpouring of support for CVA. President Truman based his CVA recommendation on the firm belief that our people stood behind him. In the coming weeks and months, let us give him solid and substantial evidence of our stand.

POWER LOBBY FIGHTS CVA

Let us be sharply aware, too, that we have a fight on our hands. Unless we retain the initiative and move ahead, private power interests will consolidate the opposition to CVA and bear down with the heavy fire of propaganda. This is no idle remark. On January 25, just one day after the White House released the news of President Truman's CVA recommendation, the New York Times reported: "President Truman's proposal yesterday for the creation of a Columbia Valley Authority has aroused the private utility industry to a degree of opposition unequaled since passage of the Tennessee Valley Authority bill." P. L. Smith, the high-bracket lobbyist for the associated private utilities, trumpeted loudly that there was no need for a CVA, and he conjured up a familiar assortment of evils about a regional superstate.

Some of our local newspapers, sadly out of step with public thinking, shudder like the Seattle Times at the grasping tentacles of a valley authority. Not all our local papers, I am glad to say, fall into such an emotional state of blind opposition. A few are honestly debating the issues and contributing helpful ideas.

An important task of the League for CVA is to analyze and evaluate the opposition to CVA. Some weeks ago, the Spokane Spokesman-Review and possibly other papers carried a story that the Pacific Northwest Development Association had compiled a list of 75 organizations alleged to oppose CVA. A friend of mine in Spokane, who was acquainted with the manager of one of the business groups listed, called him on the telephone and found out this interesting fact: The listing of his organization as opposed to CVA had never been authorized. This manager, a responsible official of the organization, did not oppose CVA in principle, although he had some ideas of his own about the composition of the CVA board.

ASSURE LOCAL INITIATIVE

If we could sit down and talk around the table with other persons purported to be in opposition, I dare say we would actually find many CVA friends. There may be differences of opinion as to details. There may be doubts or reservations on particular points. These differences can be ironed out, and these doubts resolved by frank interchange of ideas and a mutual working out of problems.

A legitimate problem, for example, is how to insure the maximum of local initiative and enterprise in CVA administration, compatible with the obligations and responsibilities of the Federal Government. Honest concern for full local participation accords with our democratic tradition. This kind of concern must be carefully distinguished from narrow self-interest which plays up local opposition to obstruct or defeat Federal legislation beneficial to the whole region.

The administrative pattern for regional development which we seek through such legislation was first worked out in the Tennessee Valley Authority. Although the pattern must be reworked to fit the specific needs and problems of the Columbia Basin, the basic principle remains; namely, taking the river basin as a unit for development, and putting a single Federal agency in charge. The TVA put this principle into operation by going to work in the Tennessee Valley with a broad mandate to build up the resources of the region. Effective control of floods and abundant low-cost power were more potent arguments than private-utility propaganda in appraising the merit of TVA. Surviving the fierce assault of its enemies, TVA proved that it was soundly conceived and successful in operation. The great experiment is now a going concern.

Franklin D. Roosevelt had seen in TVA a laboratory for regional welfare and a model for the creation of other valley authorities. President Truman expressed the thoughts of his distinguished predecessor when he reported on the state of the Union to the newly assembled Eighty-first Congress: "We should apply the lessons of our Tennessee Valley experience to our other great river basins." The theme was repeated in the budget message and promptly followed by a Presidential directive to various Federal agencies, instructing them to submit legislative recommendations for a CVA.

DEMOCRATIC SUPPORT

Presidential Aide Charles S. Murphy has been assigned to coordinate CVA efforts on the White House end, with the expert assistance of men like C. Girard Davidson, Assistant Secretary of Interior. Davidson, a sound liberal thinker who gained his knowledge of water-resource problems at first hand in the Tennessee and Columbia Valleys, will be depended upon to translate the departmental proposals into legislative form.

On the congressional side the Democrats from the Pacific Northwest are working closely with the administration in a reexamination of the CVA bill which Congressman JACKSON and I sponsored in the Seventy-ninth Congress. These earlier bills never saw the light of day, being carefully buried by unfriendly committees. The Eightieth Congress, pressured by private-power lobbyists, pushed CVA legislation still deeper into the pigeonhole. The new Congress, fresh from victory at the polls, holds forth the promise of a new approach to the problems of the Columbia.

What are the problems in the Northwest that place CVA legislation high on the agenda? Two drastic events have made our people more sharply aware of the need for comprehensive and long-range river-basin planning. One was the disastrous flood of 1948, which took 50 lives and cost more than $100,000,000 in property damage. The raging floodwaters covered 582,000 acres of land, including several whole towns and parts of cities. The town of Vanport, a war-housing project with a population of 18,000 near Portland, Oreg., was completely destroyed. Approximately 120,000 persons were evacuated from their homes during the flood, and 33,000 lost their homes. Thousands of acres of farm lands were lost outright by stream-bank erosion or severely damaged by the removal of great quantities of irreplaceable topsoil. Considerable damage was done also to salmon spawning grounds, fish fry, and nesting areas for game birds.

These stark facts, reported by the Army engineers, compel attention to the flood problem on the Columbia and its tributaries. The 1948 flood was the third largest of record in the region. In earlier times the undeveloped state of the Northwest country made the damage less noticeable and serious. Under present conditions, if no additional flood-control improvements are made, the Army engineers anticipate annual flood damages of $26,000,000. This amount of damage will increase yearly as economic development goes forward, unless the waters of the Columbia are put under effective control.

EXTENDED POWER SHORTAGE

The second factor, less dramatic and devastating in its impact, but more significant to the region's future, is the shortage of electrical power. The whole Nation is confronted with a tight power situation, but the Pacific Northwest feels the pinch more severely because of its rapid growth. Population has increased 36 percent since 1940 as compared with 11 percent for the United States. New industries, born of the war, have continued in operation. With jobs and earnings at fairly high levels, all types of consumers have demanded more electricity.

At the present rate of dam building no substantial relief is in sight for the next 4 to 6 years. Industrial expansion is virtually at

a standstill. New industrial applicants are being turned away. The aluminum industry, vital to the national economy and security and the largest single user of Northwest power, is limping along with curtailed power supply. In farm, home, store, and factory of this highly electrified area, people are being advised to use less electricity.

The threat of chronic power famine in the Northwest has intensified the demand for speedier development of the enormous hydro potential in the Columbia. The waters that flow from the Rockies to the Pacific Ocean can produce 20,000,000 more kilowatts—the energy base for an industrial empire. Presently but 2,000,000 kilowatts are generated by private and public agencies in the Pacific Northwest. The two Federal dams on the Columbia, Bonneville and Grand Coulee, now straining their facilities to the breaking point, produce more than half of the power consumed in the four Northwest States of Oregon, Washington, Idaho, and Montana. A score of Federal dams proposed, authorized, or under construction, is expected to add another 4,000,000 kilowatts by 1957. Even then, only 20 percent of the Columbia power potential will have been tapped.

Flood danger and power shortage are immediate problems in the Pacific Northwest. Behind them lies a growing awareness of the need to tend and conserve our natural endowments more wisely—to prevent the erosion which now takes 100,000,000 tons of soil each year from the Columbia Basin; to restock and sustain the millions of forest acres now slashed or burned; to replenish fish and wildlife resources. Our people are coming to realize also that a river properly controlled for maximum use will create vast new economic wealth from the natural resources contained in the Columbia Valley. New farms and factories, new trades and occupations for the rapidly growing population, new outlets for local initiative and enterprise, depend upon the Columbia.

AIMS AT PERMANENT PROSPERITY

The economic base of the region must be broadened for permanent prosperity. Those who look ahead insist that more local industries must be built up to process or fabricate the raw produce of mine, field, forest, and river. The Pacific Northwest is not content to remain a colonial dependency confined to extractive operations. The average citizen looks to the CVA as the Fair Deal on the Columbia.

"What's the matter with the way we're doing it now?" asked the governor of Oregon when he heard of President Truman's CVA endorsement. The answer is plain to those who look about. So far as the Federal Government is involved, responsibility for the development of Columbia Basin resources is dispersed among numerous agencies, departments, and bureaus. Some functions are duplicative; others overlap. The lines of jurisdiction run from branch offices in the field to remote central offices in Washington, D. C., where decisions intimately affecting our welfare are now made.

Various committees of Congress receive budgetary requests for various parts of the Columbia Basin program. The separate statutory requirements under which agencies operate often give rise to conflicting policies. There is no single legislative charter, no coordinated budget, and no unified administration for the region. CVA is the instrument designed to meet those needs.

The Bureau of Reclamation in the Department of the Interior, and the Corps of Engineers in the Department of the Army, both dam builders on the Columbia, have each prepared a survey of the Columbia Basin and outlined a comprehensive construction program. Both reports recognize the logic and economy of unified river-basin planning, but they differ in detail and emphasis according to the primary interests of the two agencies. Since neither agency by itself has the requisite jurisdiction or responsibility to carry out a comprehensive, unified program, each assumes without warrant that all the separate departments, bureaus, etc., will cooperate towards this end.

COORDINATION STILL PROBLEM

The pressing need for coordination has inspired the establishment of an interagency committee for the Columbia Basin, which meets once a month to air conflicts and discuss policies of mutual interest. The Department of Interior, wrestling with its own unwieldy bureaus and divisions in the field (which include the General Land Office, Bureau of Reclamation, Geological Survey, Grazing Service, Bureau of Mines, Office of Indian Affairs, National Park Service, Fish and Wildlife Service, and the Bonneville Power Administration), has established its own coordinating committee for the Pacific Northwest, besides being represented on the interagency committee.

Conference groups like these, useful enough for some purposes, cannot effectively substitute for the administrative unity and direction to be gained by CVA.

Agency cooperation at best will leave large gaps in the program and at worst will perpetuate the present wasteful and inefficient arrangement. The Columbia Valley Authority is an urgent and practical necessity, not a dream of do-gooders or idealists. You hear much today about reorganization of sprawling Federal agencies in the Nation's Capital to promote efficiency and savings in tax dollars. The same logic applies to the job that must be done in the Columbia Basin. President Truman in his budget message made it a point to stress "careful surveillance * * * to prevent waste and assure sound development" when he urged application of the Tennessee Valley experience in resource development.

In conclusion let me say that I earnestly solicit your ideas and suggestions for improving the CVA legislative program which we have undertaken. No pride of authorship, no vested interest in a set way of doing things, should prevail against the best legislation that can be drafted for the permanent welfare of the Pacific northwest. Let us all join in a common endeavor to make CVA a working instrument for progress and prosperity.

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. SHAFER. Mr. Speaker, under leave granted me, I am inserting in the Appendix of the CONGRESSIONAL RECORD a telegram I have received from M. R. Biddle, of the Kalamazoo City Lines, Inc., which strongly recommends that we in Congress make every effort to continue the exemption of transit employees in any action we take on the Fair Labor Standards Act. I am happy to enclose this telegram, for it reflects my convictions on this subject.

The telegram follows:

KALAMAZOO, MICH., *March 9, 1949.*

PAUL W. SHAFER,
House Office Building:

Bill H. R. 3190 eliminates transit employees exemption in section 13 A9 of existing Fair Labor Standards Act. Passage of this bill would create an impossible burden on local transit companies and would require immediate and drastic increases in fares. Please make every effort at your command to continue the exemption of transit employees as presently contained in section 13 A9 of the existing Fair Labor Standards Act.

KALAMAZOO CITY LINES, INC.,
M. R. BIDDLE.

John Ericsson, Citizen of the World

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Thursday, March 10 (legislative day of Monday, February 21), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the program for a memorial service at the John Ericsson monument in Washington, D. C., on Wednesday, March 9, 1949, together with an address I delivered on that occasion.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

1:45 to 2 p. m.: Music by United States Navy Band.

2 p. m.: Invocation by United States Navy chaplain. Introduction of the Honorable EDWIN C. JOHNSON, United States Senator from Colorado, by the president of the John Ericsson Society. Address and wreath laying by Senator JOHNSON. Response by the Honorable Alexis de Aminoff, Minister of Sweden. Swedish National Anthem by United States Navy Band. United States National Anthem by United States Navy Band.

NOTE.—The John Ericsson memorial is located in West Potomac Park, Independence Avenue and Riverside Drive, about one block south of the Lincoln Memorial.

A United States Navy photographer will take appropriate photos, with copies to Swedish Embassy, Senator JOHNSON, and the John Ericsson Society.

A press release will be issued by the office of Senator JOHNSON.

JOHN ERICSSON, CITIZEN OF THE WORLD

(By ED. C. JOHNSON, United States Senator, Colorado)

On this the eighty-seventh anniversary of the crucial battle between the *Monitor* and the *Merrimac* in Hampton Roads, it is my great honor and privilege to pay homage to John Ericsson by placing a wreath of beautiful flowers at the foot of his statue.

We assemble here today at this statue which was erected in Washington by a grateful Nation as a tribute to a great son of Sweden. The life story of John Ericsson is a superb illustration of the contribution which European nationals have made to the success of America. This great man is a product of a great people. Born in the mountains of Sweden in humble circumstances July 31, 1803, he grew to sturdy manhood. At an early age there was a clear indication that he had unusual talent and brain power. He migrated to England in 1826 where he advanced ideas which led to the development of the wonders of his age. There he became an associate in a reputable and well-known engineering firm. He preferred to be known

as an engineer rather than an inventor although the creative instinct in him was very strong. The development of steam power intrigued him, and within a year of his arrival he had begun breathtaking improvements of boilers and engines. He designed and built the fire engine and developed the screw propeller for marine use. It was this latter invention which brought him to America in 1839. In his effort to interest the Federal Government in this method of navigation, he began constructing propeller boats on the Great Lakes and even started a fleet of boats between Baltimore and Philadelphia. Next he built a small steamboat named the *Princeton* which was the first man-of-war ever to be equipped with a screw propeller and the added innovation of having the machinery placed below the water line and out of reach of shot and shell. This vessel revolutionized naval vessels and became the foundation of the navies of the modern world.

I like to think of John Ericsson as a citizen of the world, for he was precisely that. Even so, never did he lag in his devotion to his native Sweden. It grieved him to have Swedish commentators criticize him for becoming a naturalized citizen of America. His love for Sweden was so passionate and so deep-rooted that he would not tolerate the slightest hint of such a charge. He stated: "I am so thoroughly a Swede that I could never turn away from Sweden if I would."

The question is often pondered as to why America has become great while other nations have barely held their own. Many other nations have great natural resources, too; many had a start of centuries on America; then why has this country made such phenomenal progress? John Ericsson and the tens of thousands of John Ericssons who migrated to America in the past 300 years from every nation in Europe is the only acceptable answer.

Proud America must never forget the debt she owes to the intrepid pioneers who underwent every sort of hardship and privation to reach these shores and who, after reaching them, fought the good fight to the end. I do not wish to speak of John Ericsson in generalities altogether. He was distinctly a unique personage of superior qualifications. His engineering genius and capacity to deal with difficult problems served this Nation in a vital way during the War Between the States. The South had developed an ironclad ram that would drive the North off the seas and even threatened to subject New York City to attack. The South was filled with high hope, and the North was filled with dismay and fearful apprehension due to this phenomenal naval development.

Into this frightful crisis stepped John Ericsson and his engineering skill and creative resourcefulness. He wrote to President Lincoln offering to construct a vessel in 100 days that would destroy the hostile fleet at Norfolk. More in desperation than in confidence, the Union accepted his offer and in due time a fantastic-looking cheesebox mounted on a raft steamed into Hampton Roads the very morning the Confederate ironclad *Virginia* (reconstructed from the *Merrimac*) began the destruction of 16 Federal warships stationed there. Four of these vessels were badly damaged and driven ashore, causing further consternation among the Federal authorities. Then the miracle happened.

On March 9 the ironclad *Merrimac* started out to complete the destruction of the northern fleet, but was challenged immediately by Ericsson's cheesebox, the *Monitor*. In a terrific battle of 4 hours' duration, the *Monitor* suffered no material damage, but the *Merrimac* was so used up that she never ventured to battle again. John Ericsson had doomed the conventional wooden navies of the world in one fell swoop by this new, radical-designed fighting craft, and the Union was saved.

As we place this wreath at the foot of the statue of John Ericsson, we see only a block away the magnificent marble memorial to Abraham Lincoln—the most beautiful and expressive edifice in Washington, standing there guarding all that is good in America. It is fitting these two monuments should be such close neighbors. Abraham Lincoln and John Ericsson were not only contemporaries, but they had very much in common. Neither had the opportunity of formal education, but each, through patient self-instruction, reached the educational heights.

John Ericsson was honest and true in every fiber of his rugged body. He hated sham and make-believe with all his soul. Stern, yes; unbending, yes; precise, yes; a great engineer, to be sure; but loyal and considerate and kind to the last degree—that is John Ericsson. All the world may pay tribute to him, for he was indeed a citizen of the world.

Opposition to H. R. 1247

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. SHAFER. Mr. Speaker, under permission granted me, I am placing in the Appendix of the CONGRESSIONAL RECORD a communication from Dr. Albert E. Heustis, commissioner of the Michigan Department of Health, relating to H. R. 1247, which would provide a large amount of Federal funds for a useless purpose.

As Dr. Heustis points out in his letter, 44 States already are providing for themselves what this new bill would make available through some more wild expenditure of Federal funds. Of course, the present proposal is touted as being an aid to the various State departments of labor, but those of us who know the Federal Government, through long observation, realize that this is just another camel getting his nose under the tent. Eventually, the hope is for the Federal Government to control these State labor departments, of course, thus further centralizing the power in this Nation and doing away with representative government.

The letter follows:

MICHIGAN DEPARTMENT OF HEALTH,
Lansing, Mich., March 2, 1949.

Hon. PAUL SHAFER,
House Office Building, Washington, D. C.

MY DEAR MR. SHAFER: I should like to submit my protests to House bill H. R. 1247 which would provide $5,000,000 through the Federal Department of Labor for grants to State labor departments to undertake industrial health activities.

In Michigan this service is now provided to both management and labor by the State health department; therefore, it is our contention that this legislation would merely provide for the establishment of a duplicating service in the various State departments of labor and also by the Division of Industrial Hygiene of the United States Public Health Service. At the present time, 44 of the 48 States provide this type of service through their State health departments. Two States, Massachusetts and New York, provide this service through their State labor departments. However, neither of these States provides a similar service through their State health departments and therefore no duplication of expense and effort exists. In addition, 11 city health departments and one county health department provide this service to industrial plants in local areas.

It appears to me that a portion of this money could be used to better advantage by strengthening the units now established in health departments rather than creating another agency for the same purpose. The establishment of two similar agencies in the various States can only result in confusion to both management and labor and to the official agencies concerned, and the cost of creating additional agencies in each State would be considerable.

There is a definite need for both agencies but we believe the labor departments should confine their activities to industrial accident prevention as they now do in most States. Industrial health work requires a highly skilled staff including physicians, nurses, engineers, physicists, and chemists. These are available to all employers and employees through State health departments. These should be strengthened rather than duplicated.

While it is true that the majority of the work of the industrial health bureaus is to prevent occupational diseases, we are also cognizant of the infectious diseases and the more chronic diseases of adult life, and to deal with these we have the full cooperation of the other bureaus in the State health departments in combating these types of illnesses. In other words, the State health department has at its command specialists in all types of public health work that sometimes is necessary in investigating the diseases that occur in the industrial employee groups. These other diseases include tuberculosis, venereal disease, water-borne diseases, food poisoning, and many others too numerous to mention.

It would seem just as logical for the United States Department of Agriculture to set up a public-health program for the farmers throughout the country, thereby bypassing all services now available through State and local health departments that have been established to conduct an over-all health program for all citizens of the State.

Your consideration in this matter will be greatly appreciated.

Very truly yours,
ALBERT E. HEUSTIS, M. D.,
Commissioner.

Civil Rights

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. YATES. Mr. Speaker, one of the most forthright champions of civil rights and civil liberties for all Americans is the outstanding labor statesman, Mr. Willard Townsend, the president of the United Transport Service Employees of America.

Mr. Townsend, who is also a member of the general executive board of the CIO, secretary of the national CIO committee to abolish segregation, and a member of the board of directors of the

National Urban League, has recently written a thought-provoking article on more fair play needed in American industry. The article appeared in the Chicago Defender, and I wish to bring it to your attention at this time.

MORE FAIR PLAY NEEDED IN AMERICAN INDUSTRY

(By Willard Townsend)

"Jim Crow and anti-Semitism are, of course, a fundamental denial of every pretension of democracy which surely emphasizes the individual worth of a human being and his rights to have a say about his life and his destiny. All men are created equal, with equal rights to life, liberty, and the pursuit of happiness.

"My mother and your mother have failed to do their job unless they have taught us to appreciate motherhood as something greater and larger than our own particular family, our own city, our own particular race and Nation. Patriotism should never be degraded into hatred of other countries and after all, it is completely irrational and completely unfair to judge a person on the basis of his race or national origin.

"As the Princetonian alumnus, Andrew J. Hatcher, wrote in the students' journal of his alma mater: 'If you discriminate against me because I am uncouth, I can become mannerly. If you ostracize me because I am unclean, I can cleanse myself. If you segregate me because I lack knowledge, I can become educated. But if you discriminate against me because of my color, I can do nothing. God gave me my color, I have no possible protection against race prejudice but to take refuge in cynicism, bitterness, and hatred.' That goes for Jews as well as Negroes.

"For every reason of decency, fair play, and democratic ideals with their basic respect for individual worth and integrity, racial discrimination should be banished. For economic reasons the Negro as a citizen should have equal job opportunities and of union membership. For the future well-being of industry Negro skill in industry and Negro purchasing power, as well as those of all their fellow citizens, are necessary and powerful factors and should be utilized.

"The work of the National Urban League shows what can be done. Organized labor and other sections of the community should help it go forward at a faster rate.

"Specifically to give the Negro and the white worker a stake in the future of American industry we should: (1) Organize more Negroes into unions and encourage their participation as members and representatives, as staff members and officers; (2) work more energetically for a Nation-wide FEPC and similar laws in the States. It is regrettable that legal compulsion is necessary and we must remember that while laws educate their enforcement depends upon the cooperation of the public; (3) cooperate to get adequate housing and medical care and improved minimum wage and hour standards for all our citizens to make the future of industry really prosperous; (4) anticipate the effects of current changes in the South and secure for the displaced Negro, through cooperation between intelligent labor and management, equal opportunities of work and work training.

"The future of American industry will see great changes and new political alinements. The administration of a mixed economy combining social planning with the Bill of Rights needs the cooperation of all American citizens."

Thanks, Willard, for this very analytical observation of a very unnecessary problem in America.

What a CVA Means to the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Assistant Secretary of the Interior C. Girard Davidson before the New York Herald Tribune Forum for High Schools, New York City, March 5, 1949:

OUR VALLEY RESOURCES

Throughout the world people are interested in the development of their natural resources. We all agree that effective use of our lands, waters, and minerals is essential to raising the world's standard of living and that this, in turn, is essential to peace. The vital question facing the world today is not so much whether resources shall be developed, but how they are to be developed and for whose benefit.

That is why President Truman's proposal for "a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas" of the world is not aimed merely at development for its own sake, but "to help the free peoples of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burden * * * and to help them realize their aspirations for a better life."

We in the United States have been slow to abandon the old practice of haphazard and wasteful development of our natural resources in favor of orderly resource development with its benefits widely shared by the people. Until recently our great natural wealth and relatively small population have led us to tolerate wasteful practices.

Our ever-opening frontier has obscured the necessity for the conservation of our natural resources—and conservation to me means not locking up our resources but rather using them wisely. Heretofore we have been able to afford underdevelopment of some parts of our country, and now only in these regions are we facing up to the problem, which is, as I see it, fundamentally akin to the problem that faces many underdeveloped countries in the world.

I am sure that our European friends in their brief tour have seen enough of the United States to realize that this country, though generally considered to be well developed, has its own underdeveloped portions. We have, of course, highly industrialized sections, but we also have areas where much needs to be done to bring about the type of balanced economy that the so-called underdeveloped countries are also seeking. Particularly in the West and in the South we have a job ahead of us, before we can achieve a more productive and stable economy throughout this broad land.

To point the way for action in these underdeveloped areas, we have the example of an experiment which has already proved itself in one region. I ned not recount to this audience the success story of the Tennessee Valley Authority in securing the cooperation of the people of the region, and its State and local governments, in developing that great river basin. In the 15 years since Congress established TVA, we have seen the creation of a navigation channel for the entire length of the Tennessee River; the river and its tributaries are now effectively controlled against previously destructive flood waters; power generated at the dams has attracted numerous job-producing industries, and the average income of the people of the Valley has been increased about twice as much as in the Nation as a whole for the same period. The TVA was charged with the responsibility of considering the needs of the valley as a whole and giving proper weight to all of its separate resources. Although it constructed multipurpose dams to prevent floods, provide navigation and generate electric power, TVA did not lose sight of its equally important responsibility for protecting the watershed from erosion and making it more productive. And because it carried out its functions from headquarters located in the valley itself and not hundreds of miles away in Washington, it was immediately responsive to the requirements of the people in the region it served.

This TVA principle of resources development by river valleys has been recommended for wider application. Recently the President asked for the creation of a valley authority to unify and hasten development in the Columbia River Basin. This potentially rich but underdeveloped area lies in the northwest corner of the United States and embraces the States of Washington, Oregon, Idaho, and Western Montana. Its population, which is, roughly, half that of the city of New York, is scattered over an area greater than that of Germany and Great Britain combined.

It is endowed with great natural resources, the most spectacular of which is the Columbia River and its tributaries. The potential economic significance of the river system is tremendous. It can be harnessed to produce twice the horsepower generated in all hydroelectric plants in the United States today; to irrigate an acreage greater than the great irrigated valley of the Nile; to carry cargo ships 500 miles inland from the sea, a distance almost equal to the navigable length of the Rhine.

The phenomenal migration of population into the Pacific Northwest in the last few years has underscored the fact that we can no longer afford underdevelopment or haphazard development of the resources there. Already the need is pressing for additional acreage in crop lands to feed these people. Therefore, we are planning to reclaim a desert wasteland now covered largely by sagebrush, which will be made productive with irrigation water from behind Grand Coulee Dam. Not only will this new land opening bring thousands of new farmers into the area but also, in the spirit of our historic homesteading laws, it will encourage development of family-sized farms worked by the people who own the land and it will prohibit speculators from monopolizing the land.

The pressure of population has made equally urgent the provision of new jobs in industry, which means that new electric power is required to turn the wheels of industry.

Given this new power, the region can reap the benefits of fabricating at home the raw materials which are there in abundance, instead of sending them elsewhere to be converted into finished goods. This development can also assure for the region continued abundance of these raw materials through the sustained-yield management of our forest and the wise use of our range and mineral resources.

We have learned, however, that floods cannot be controlled solely by building dikes and dams on the rivers; that the condition of the watershed is also of vital importance. Not only must we keep the water from running off the land, it is even more important

that we learn to keep our precious top soil on the land. It makes no sense to spend millions to create new farms if we continue to permit our present farms to go washing down the river. As an example, it is estimated that 160,000,000 tons of top soil went down the Columbia in last spring's flood—a loss equivalent to 1,320 farms of 80 acres each.

The Pacific Northwest also has a great resource in its fisheries but the salmon must find their way upstream in the Columbia and its tributaries to the place of their birth in order to spawn and reproduce. Dams, irrigation projects and water pollution interfere with the migration of the fish and a proper integration of this resource with the others is essential.

At the present time, more than 20 different Federal agencies are handling particular phases of the Government's resource-development program in the Pacific Northwest. This does not insure a well-rounded forward-looking program, and very often a particular resource is damaged by its failure to receive proper consideration from an agency not charged with its direct responsibility.

It is remarkable that things work as well as they do under present administration. Some time ago, a barge became lodged on the rocks of the John Jay Rapids in the Columbia River, and release of water from Grand Coulee was necessary to dislodge it. The barge company phoned the Army engineers, who traditionally handle navigation, and asked release of the water, but were informed that Grand Coulee was operated by the Reclamation Bureau of the Department of the Interior. When the bureau was telephoned, they indicated that they would be happy to release the water, but in doing so, it would cause a dam lower down the river and owned by the power company to lose a large amount of power. This company then indicated they would be happy to cooperate, and that since the Bonneville Power Administration was not using all the power it could generate, they felt satisfactory arrangements could be made. Bonneville indicated, however, that although it would be glad to help, if it supplied the power to the company, it would have to be paid for it, since its meter records were audited by the Comptroller General. A day later, and with the full cooperation of all parties, the water was released and the barge was lifted.

This story demonstrates that good people—no matter what their handicaps—can work out difficult situations. But what is needed in the Pacific Northwest in the administration of the Federal Government's responsibility is a technique which will facilitate—not frustrate—the good work of good people. We have developed such a technique in the TVA. The President has recommended that the principles learned in that region be utilized in the development of our other great river basins. On Wednesday of this week, legislation to establish a Missouri Valley Authority was introduced in the Senate. You can hear discussions advocating the use of the valley authority technique in the Central Valley of California, in New England, on the St. Lawrence River, and elsewhere.

I believe that the technical and managerial skills that we are developing in tackling the problems of our underdeveloped areas will be of use to people in other countries. But I hope that observers will look behind these technical and scientific achievements in evaluating our program.

Our regard for the individual even more than the expertness of our engineers has been the source of our national strength and well being. Preventing monopolization of resources by a favored few is the most vital contribution of our valley programs.

I have pointed out our desire to develop to the fullest the potential resources in each area of our country. Now I want to stress that in so doing we are seeking neither regional self-sufficiency in every valley nor the domination of one by another. Rather we are working toward fitting all parts of our Nation into a healthy and balanced and unified national economy. The same principle applies for the world as a whole; we are looking forward to a balanced unity of fully developed nations.

I am sure President Truman had this fact in mind when he said, "All countries, including our own, will greatly benefit from a constructive program for the better use of the world's human and natural resources. * * * Greater production is the key to prosperity and peace. And the key to greater production is a wider and more vigorous application of modern scientific and technical knowledge. Only by helping the least fortunate of its members to help themselves can the human family achieve the decent satisfying life that is the right of all people."

Keep Oleo Uncolored

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. SHAFER. Mr. Speaker, under leave previously granted me, I am inserting in the CONGRESSIONAL RECORD a copy of a resolution adopted by the members of the Flint Dairy Workers Independent Union, of Flint, Mich.

It seems to me that the bill which won acceptance from the House Committee on Agriculture the other day was a fair bill, in that it makes it mandatory for oleomargarine manufacturers to sell their product on its merits and not through attempting to disguise it as butter. Oleomargarine is a good product. None of us disputes that. But oleomargarine is not butter. Let us not forget that. Why should it be disguised to look like butter to fool the people?

The resolution is as follows:

RESOLUTION ADOPTED BY MEMBERS OF FLINT DAIRY WORKERS INDEPENDENT UNION

Whereas in response to a widespread demand of the people, the Congress of the United States is considering measures to repeal the so-called oleomargarine tax; and

Whereas such repeal will meet with the favor of American citizens in the low income brackets since it will bring this commodity down in price, thereby reducing the cost of living to persons who need it; and

Whereas there is danger that oleomargarine, if there be no regulatory legislation, could easily be sold as a butter substitute of the same color as butter; and

Whereas the dairy industry furnishes steady employment at good wages for many thousands of union employees throughout the Nation, engaged in the procuring, processing and distribution of butter, as well as the building of motor trucks, equipment and supplies used in the dairy industry; and

Whereas there are more than 3,500 local creameries and 40,000 dairy plants located in thousands of small communities in every State, both in the North and South, whose employees' welfare is involved in protecting butter against unfair competition; and

Whereas yellow oleomargarine resembles butter so closely that it cannot be distinguished from butter by consumers and therefore invites substitution and fraud, making it necessary that the consumers be protected by prohibiting oleomargarine to be colored yellow; and

Whereas any such substitution or fraud would benefit approximately twenty-eight (28) large corporations in the United States who manufacture oleomargarine and would so benefit at the expense of consumers, the millions of dairy farmers who produce butter, and thousands of families of union employees in the dairy industry: Now, therefore, be it

Resolved, That the Flint Dairy Workers Independent Union, whose members are directly engaged in manufacturing and distributing butter and other dairy products, in regular session assembled in Flint, respectfully urges upon the Congress, in its consideration of the repeal of existing oleomargarine taxes, that it enact at the same time regulatory measures to prevent the sale of oleomargarine colored as butter, so that the public may distinguish between these two products; and be it further

Resolved, That copies of this resolution be submitted to the President of the United States, the Secretary of Agriculture, the Michigan Representatives and Senators in Congress, and to such other persons and organizations as the officers may deem advisable.

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. SHAFER. Mr. Speaker, under permission granted me, I am inserting in the Appendix of the CONGRESSIONAL RECORD a letter from the National Council of Farmer Cooperatives, relating to section 7 (b) (3) exempting seasonal industries from maximum-hour provisions for a 14-week period; section 7 (c) exempting first processing of certain agricultural products from maximum-hour provisions and exempting first processing in the area of production of certain perishable farm products from maximum-hour provisions for a period of 14 weeks; and 13 (a) (6) and (10) exempting agricultural labor and labor employed in handling certain farm products in the area of production from both minimum-wage and maximum-hour provisions.

I feel keenly, Mr. Speaker, that every Congressman who does not want to legislate every movement of every farmer and every farm wife and every little business man in every little crossroads town ought to study this so-called Fair Labor Standards Act, soon to come before us, to see whether or not it is designed to help America or is designed to stultify enterprise and to kill every chance for entrepreneurs and small business men to progress.

The communication from the cooperatives' council is as follows:

NATIONAL COUNCIL OF
FARMER COOPERATIVES,
Washington, D. C., March 9, 1949.

Hon. PAUL W. SHAFER,
House Office Building,
Washington, D. C.

DEAR SIR: The National Council of Farmer Cooperatives is opposed to the elimination of the text of the Fair Labor Standards Act

in sections 7 (b) (3), exempting seasonal industries from maximum-hour provisions for a 14-week period; 7 (c) exempting first processing of certain agricultural products from maximum-hour provisions, and exempting first processing in the area of production of certain perishable farm products from maximum-hour provisions for a period of 14 weeks; and 13 (a) (6) and (10), exempting agricultural labor and labor employed in handling certain farm products in the area of production from both minimum-wage and maximum-hour provisions.

We also are opposed to including activities affecting commerce in the minimum-wage and maximum-hour provisions of the law unless the term is strictly defined by the Congress.

It is our firm belief that the economic results from the elimination of the provisions listed above will tend to further concentrate production, packing, and processing of perishable farm products into the hands of dominant corporations operating here and abroad, and will seriously disadvantage the family farm in this country and the small local business enterprises which are trying to pack and market such products.

Also, the elimination of the exemption will provide incentives for further concentration of food processing and packing in large urban industrial centers, and will seriously hinder the decentralization of industry into rural areas, which is so desirable.

Likewise, the elimination of the present farming, rural packing, and processing exemptions will curtail the production in this country of many perishable, protective foodstuffs, and transfer our source of supply to other countries whose production, packing, and processing labor has a much lower standard of living than exists in this country. That may well be fatal to our food supply in a national defense emergency.

The council urges that the present Fair Labor Standards Act be amended to provide precise, workable definitions for area of production, first processing of agricultural products and agricultural labor, for the direction of the administrators of the act.

Very truly yours,

JOHN H. DAVIS,
Executive Secretary.

Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an admirable statement on the extension of the Reciprocal Trade Agreements Act made by the Senator from Nevada [Mr. MALONE], before the Senate Finance Committee on February 24, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXTENSION OF RECIPROCAL TRADE AGREEMENTS ACT (ACTUALLY THE 1934 TRADE AGREEMENTS ACT)

(U. S. Senate, Committee on Finance, Washington, D. C., Thursday, February 24, 1949)

The committee met at 9:30 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator WALTER F. GEORGE (chairman) presiding.

Present: Senators GEORGE (chairman), BYRD, HOEY, MILLIKIN, TAFT, BREWSTER, MARTIN, and WILLIAMS.

The CHAIRMAN. The committee will be in order.

This hearing is on a continuation or the proposed extension of the Reciprocal Trade Agreements Act, H. R. 1211—(1934 Trade Agreements Act).

Senator MALONE, will you proceed?

STATEMENT OF HON. GEORGE W. MALONE, A UNITED STATES SENATOR FROM THE STATE OF NEVADA

Senator MALONE. Mr. Chairman, the people of this Nation do not realize the deadly serious long-range effect on the workers, farmers, merchants, manufacturers, and industrialists of the permanent free-trade plan of the economic one-worlders included in this three-phase program, of which the 1934 Trade Agreements Act is but one part.

1934 Trade Agreements Act not reciprocal

In the first place, there is not now and there never has been a reciprocal trade act. There is a 1934 Trade Agreements Act in which the words "reciprocal trade" do not occur. The act was never meant to be reciprocal, and certainly it does not operate that way. That is not the effect.

This three-phase free-trade program will be deadly in its effect on the employment and economy of this Nation if finally adopted—it is the only real issue facing the Congress today.

There is no question of high or low import fees or tariffs to be discussed here. The question is whether the differential of the cost of producing an article in this country under our high-wage standard of living and producing the same article in a country having a low-wage standard of living should be represented by an import fee in order to bring such imports in on our level of costs.

The difference in production costs is mostly due to the difference in wage or labor cost, since our up-to-date machinery and technical know-how, including the assembly-line methods, are immediately available to these low-wage countries.

The three-part program

The three-part program currently advocated by the State Department is designed to undermine the basic economic structure of this country, with the one objective of dividing our markets and leveling our living standard to the low-wage living standards of the Asiatic and European nations, and includes:

First: Appropriations to make up the "trade balance" deficits of the European nations in cash each year—currently labeled the Marshall plan—our chief export is cash.

Second: Extend the selective "free trade" principle adopted by the State Department through a 3-year extension of the 1934 Trade Agreements Act.

Third: Adoption of the International Trade Organization—58 nations with 58 votes—each with one vote will meet each year to distribute among themselves the remaining production and markets of the world.

I want to say at this point that I think it is impossible to discuss one of these three parts without including the other two, simply because one is dependent upon the other, and the ultimate objective of the State Department, the executive department of this Government, is to level our living standards with the rest of the world through this three-phase program. Of course, this is done with the announced objective of raising the standard of living of the remainder of the world by dividing our markets with them.

All this reminds me of someone trying to average the level of the water in a water glass and the city reservoir. You could empty your water glass into the reservoir without having very much effect on the height of the water in the reservoir.

Now to the adoption of this International Trade Organization, with 58 nations, each having one vote—the United States would have the same vote as Siam or Lithuania. They would meet each year with free trade the ultimate goal, and add up the remaining production and markets of the world and divide them eventually on the basis of population.

The first step of the three-part permanent program, that of making up the trade balance deficits of the European nations each year in cash—our chief export is cash—began rather modestly with scattered gift-loans to these nations, leading up to UNRRA, and later the gift-loan of $3,750,000,000 to England in 1946, and then to the $17,000,000,000 5-year program currently known as the Marshall plan, soon to be followed by the now-suggested global recovery program.

I mentioned in the debate last year on March 4 and 5 on the floor of the Senate exactly how this thing had developed to finally make up the trade balance deficits of the European nations, and it was admitted in the debate that that is what it was for. I mentioned at that time that soon there would be another suggestion which would not be the Marshall plan but would be simply a continuation of the program of which the Marshall plan was simply a part.

The second step was inaugurated through the 1934 Trade Agreements Act, under which the State Department has adopted the selective free-trade principle, and which is to be extended for 3 years at this session of Congress. The principle is later to be made permanent through the adoption of the International Trade Organization. Free trade has been sold to this country through the catch phrase "reciprocal trade." The phrase has no relation to the act, but it has never been possible to sell free trade direct to the workers of this Nation.

Catch phrase to sell "free trade"

The phrase "reciprocal trade" does not occur in the 1934 Trade Agreements Act—the act is not reciprocal—but is simply a catch phrase to sell free trade to the American people, cloaked in more involved and less understandable phraseology.

The third and final step of this very clever three-phase program to divide the markets and to distribute the wealth of this Nation throughout the world is the adoption of the presently proposed International Trade Organization, under which the selective free-trade principles, currently adopted by the State Department under the 1934 Trade Agreements Acts, will be made permanent and become the settled policies of this Nation.

Affect the workers first

This three-phase free-trade program will affect alike farming, manufacturing, mining, lumber, textiles, and labor, as such, most of all, since they are the first affected. All this must be considered together.

Group legislation versus economic foundation of this Nation

Group legislation is attracting the attention of the Senators and Congressmen while the economic rug is being pulled right out from under our feet through this three-phase free-trade program.

Capital is fluid. It can be invested in the competitive countries where the lowering of the import fee places the industry, but American labor does not want to follow capital to the low-wage countries and does not want such low-wage labor coming here.

The resulting unemployment

There are now nearly 4,000,000 full-time idle men in this country and more than nine and one-half million part-time unemployed, and it has just started. We may partially recover at the moment, but if this

three-phase free-trade program is adopted it will continue later in renewed force.

At this point I want to call attention to a dispatch appearing in the February 23 Daily Mirror. It says in that dispatch:

"Some estimates have 4,000,000 unemployed now. Census figures reveal 9,500,000 working part time from a day to 4 days a week."

This is a special writer, and he says:

"I have been inquiring about the country, and I find jobs slackening even in the hypertension steel industry."

I simply want to emphasize at this point that if this free-trade plan is to continue and the American worker is to be put in direct competition with the low-wage labor of the Asiatic and European nations and the South Seas, then there is nothing that can happen to us except a definite lowering of our high-wage standard of living.

It simply means that approximately 7 percent of the population of the world—140,000,000 people—is trying to raise the standards of living of the 93 percent—or more than 2,000,000,000 people—through a direct division of their jobs with them.

Only a very rich nation can stand up under a division of her markets.

I see no practical difference between importing goods produced by cheap labor and importing the cheap labor itself. As a matter of fact, unrestricted immigration is a part of the long-range plan of the economic one-world thinkers.

Free trade adds up to free immigration

No one can be for free trade, in my opinion, and vote against unrestricted immigration from the low-wage countries because the effect is exactly the same in the last analysis.

Since the economy and currency exchange rates of all the 58 nations are in a continual state of flux, no fixed tariff can successfully represent this differential of cost over a period of time.

The solution can be found in a flexible import fee which is subject to adjustment when the economic factors change.

A tariff is a fixed tariff whether fixed by the Congress, by the Tariff Commission, or by the State Department under the 1934 Trade Agreements Act, except that the tariff fixed by the State Department is even more rigid, because it is a treaty and cannot be changed for a definite length of time, regardless of the changes in the economic factors affecting the differential of cost, and this differential of cost of production is mostly due to the standards of living.

Senator BREWSTER. Did you say it was a treaty?

Senator MALONE. I understood it is a treaty.

Senator BREWSTER. If it were, it would have to be approved by the Senate.

Senator MALONE. Does it not have to be approved by the Senate?

Senator BREWSTER. They proceed under the agreement theory of a majority.

Senator MALONE. I am speaking about the ITO.

The CHAIRMAN. We are speaking of all three together, but this is with reference to the ITO.

Senator BREWSTER. We do not know yet whether it is a treaty or agreement.

Senator TAFT. If it is a treaty, it involves the moral obligation to keep going for 3 years.

Senator MALONE. That would be the 1934 Trade Agreements Act, but the ITO is a treaty, as I understand it.

Senator BREWSTER. They have not made up their minds what they are going to call it, nor have we.

Senator MILLIKIN. They refuse to say when they are going to submit it and they refuse to say how they are going to submit it.

International Trade Organization Treaty

Senator MALONE. I will make a prediction to you that it will be submitted following the approval of the second year of the Marshall plan and the $5,500,000,000 that we are again going to give the European nations, and following the extension of the 1934 Trade Agreements Act. Then the ITO will be brought up to make free trade the permanent and fixed policy of this Nation. In other words, it will not come in now because they hope that we will not connect the three.

But I maintain that you cannot consider any one of these programs without discussing all three, because each is an integral part of a long-range plan, carefully designed to level the high-wage living standard of this country with the low-wage living standards of the Asiatic, European, and South Seas countries.

Not first time free trade suggested

Gentlemen, this is not the first time that this suggestion has been made. Forty or fifty years ago the international bankers of Europe suggested this same thing, except they simply proposed a free-trade policy. They did not have the involved language and the three-phase part of it.

This proposal was made at the time that our Nation started to rise above the living standards of the world through the use of our import fees and protection. It was at that time that the international bankers began to try to divide our markets through the free-trade principle. It is simply a proposal to divide our markets.

The Trade Agreements Act was suggested by Mr. Hull, the then Secretary of State, after being worked out by his Department to supplant his direct suggestion of free trade. I have a high regard for the integrity of the former Secretary, but he made the mistake of asking for free trade directly, and the people of the United States understood it and would not take it.

Each part of three-part program considered emergency

Now we have it bundled up in three parts, a three-phase program that is just as plain as the suggested free trade when considered together. But, they have been considered one at a time up to this time—as an immediate emergency—and rushed through without a full understanding of their collective effect. I feel very strongly on this subject. On page 10 of a reprint of my 1948 debates on the United States Senate floor, I said, in answering Mr. LODGE:

"I thank the Senator from Massachusetts sincerely for his contribution. Now since he has raised the question, I refer him to the European recovery plan committee hearings held by the Senate Foreign Relations Committee, part 1, pages 116 and 117. There are two tables (and these can be easily checked), which are very interesting to me, since the Senator has brought up the fact that if we did take these minerals without pay it would further unbalance their trade balances.

"I want to point out to the distinguished Senator from Massachusetts that it just happens—no doubt it is a coincidence—that the money which has been asked for under the bill, $6,800,000,000 for 15 months, corresponding exactly to the $5,300,000,000 for 12 months, adds up to the unfavorable trade balances for that period of the 16 Marshall plan nations.

"In other words, the $6,800,000,000 asked for by the President for 15 months under the Marshall plan corresponds exactly in proportion to the $5,300,000,000 for 12 months so the trade-balance shortage of the 16 countries from all trade sources in the world for the 12 months exactly balances by the same coincidence the amount of the loan or gift—I hope that no one is so naive as to believe that any of it will ever be repaid."

I will skip some of the debate now.

"Senator LODGE. And the fact that the total amount requested by the Marshall plan is $6,800,000,000 is not a coincidence; it is deliberately arrived at. What we are trying to do is to bridge that gap in foreign exchange which has been caused in large part by the war. There is not any mystery about it. We have not uncovered any corpse here."

Trade-balance deficits and selective free trade

I simply want to point out that it was admitted in debate that what we were doing was making up the trade-balance deficits of the 16 Marshall-plan nations in cash.

Under the 1934 Trade Agreements Act, the State Department has adopted a selective free-trade policy simply designed to divide our markets with those nations and the countries of the world, on the theory that the greater the division of the markets, the less their trade-balance deficits will be.

They have adopted the free-trade principle, and let me say that you do not have to remove the tariff or import fee entirely to have free trade on that article. All you have to do is to cut it down below the critical point where it makes up the difference between the cost of manufacturing or producing the article here and the cost of producing it in a foreign country where our competition is located, and then you have effective free trade. Just as if you sawed 2 feet off the end of the Potomac River Bridge, you do not take much off the bridge, but you have no bridge left. That is exactly the way it works in the reduction of a tariff or import fee.

Senator MILLIKIN. I suggest to you that it is free trade only as far as we are concerned. We now have the equivalent of free trade, but no other country in the world has reduced its import restrictions to the point that we have. The others have made some concessions in the tariff part of the restriction, but the quotas and the import restrictions and the monetary restrictions are higher than ever, and it is a farce to talk about reciprocal trade. It is a farce to talk about free trade in the sense that that is reciprocal. It is free trade only so far as our market is concerned.

Senator MALONE. I thank the Senator very much for his contribution. It is a one-way street; that is exactly what it is. A higher-standard-of-living nation can do nothing but lose under a free-trade agreement. It is just like taking the partition out of a sink, the water will find its level. It must find its level; there is no place else for it to go.

Technical knowledge and efficient machinery available

Sometimes people will say, "With our great knowledge of manufacturing and production and our efficient machinery, we need not fear low-cost labor." I want to point out to this committee that at this moment every piece of machinery that we make in the United States and every bit of technical knowledge that we have is available to every other country in the world. In my conversations with Nehru in New Delhi, India, and General Smuts in South Africa, where they have 500,000 tons of chromite and tremendous quantities of manganese that we need desperately, I said, "If I were not in the Senate and were 20 years younger, I would be out in the Asiatic and African countries looking for opportunities to bring American machinery and develop a business."

President does not need to send technical knowledge

Then we have the proposal of the President to send technical knowledge all over the world. No government needs to send technical knowledge any place. Technical knowledge precedes investment; and if at any time technical men who know a particular business can find a place where the investments are safe, where they have integrity of investments, where all they take is the business risk, the technical men will go there. You cannot keep them away. If the business conditions are right they will go.

Establish integrity of investments

So if the United Nations and the Congress of the United States and the executive department would bend their efforts to estab-

lish this integrity of investment throughout the world, they need not fear but what the capital of this Nation and the technical knowledge will go there.

Senator BREWSTER. Would it not be very much more encouraging if we found one country in the world where they took that attitude, and we should give particular aid and facility to that country in order to set an example? Belgium, after the war, was one that most quickly reestablished itself, and created an atmosphere, apparently, somewhat congenial for private enterprise to succeed. Would that be within the purview of your view?

Nationalistic trend stops investment

Senator MALONE. I thank the Senator for his contribution; it would. I meant major nations. There have been no major nations which have established the integrity of the investments. Belgium did recover for the very reason that you could invest money there and get the profits out of the country. It is impossible to get anything out of England, even interest on this money, to say nothing of the profit on investment capital. As a result of the nationalistic trend and the socialization of industry in England, even the Englishmen will not invest their money at home.

I pointed out, in this debate on the Senate floor to which I have already referred, that more money than they were asking for under the Marshall plan had been run underground in the 16 nations requesting the aid.

Senator BREWSTER. You would favor operations under the Export-Import Bank of that character where you loaned to individual industries in countries where there was some guarantee of recuperation, I gather, instead of the Government loans which encourage the socialization?

Senator MALONE. I would, Senator, and in that connection I would like to read a few paragraphs on page 3 of this same reprint, that is available to the Senators if they would like to see it.

Senator MILLIKIN. Might I make an observation, please, Senator MALONE. Following up Senator BREWSTER'S suggestion, is it not perfectly obvious that if investment was guaranteed protection, you would not have to make a Government loan? Private capital would go there.

Senator MALONE. Senator, I would like to go a step further. It is not necessary to guarantee an investment, but to simply guarantee against nationalization of the investment.

Senator MILLIKIN. I am not talking about that. I am talking about a background of circumstances and of law and of treatment of foreign money, whereby they could get fair play and not be threatened with expropriation and all of the other things that have happened to our capital in foreign countries.

Senator MALONE. That is exactly my point. The Congress of the United States has never yet made any definite move to nationalize industry. The minute that they made such a move in the Congress of the United States, in my opinion, we would be dependent entirely upon appropriations from the United States Treasury for new capital investment, the same as they are in England and the 16 Marshall plan countries today. Then when these countries could no longer secure such capital from their own treasuries, they fell back on gift loans from ours.

Now, I want to read just briefly here, because the subject is very vital to me, and I think is the guts of the entire work of Congress today.

Marshall plan—1934 Trade Agreements Act—ITO

All of the group legislation—the farmers' legislation, the labor legislation, the manufacturers' legislation, and the veterans' legislation—is very important to these groups and very important to the United States. But any mistake you make in such legislation, you can correct in the following Congress. But you cannot change this free-trade policy once you have a definite treaty with 58 nations. We have the only markets in the world today that you can sell 10 cents' worth of chewing gum and get the money for it, unless we previously gift-loaned that government the money to buy it. It is our markets, then, that they are after. It is our markets that are going to be divided by these 58 nations with 58 votes, with Siam and Lithuania having 1 vote just the same as we do.

So they meet each year and divide the remaining production and the markets of the world, dividing them presumably on the basis of population. That is your ITO, and you cannot make anything else out of it.

They are holding the International Trade Treaty back now until you pass the Marshall plan again and extend the 1934 Trade Agreements Act for 3 years, and then we will face the treaty.

Senator MILLIKIN. If I may suggest, Senator, if you had the time, which you do not have, to stick around here, it will not be long until you are told that you have nothing to fear about those things; that if we do not like what is going on we can withdraw, and if the others do not like what they are doing they can excommunicate us. And now, watch, within 24 hours you will hear that.

Senator MALONE. It is very good conversation, and we have lived off it now for 15 years, and I think the end of the honeymoon is right close.

Senator MILLIKIN. Get ready, Mr. Brown.

The CHAIRMAN. Let us proceed with the immediate thing.

Senator MALONE. Thank you, Senator MILLIKIN, for the contribution.

I want to read a few paragraphs here, a condensation of the 2-day debate.

First, they said in the Marshall plan that we wanted to feed hungry people, to stop communism, and to rehabilitate industry. That is the reason that I made the trip through the Marshall plan countries late in 1947, and examined the coal mines and the steel mills of the Ruhr in Germany and other industries. I say it is impossible to consider the feeding of hungry people, the stopping of communism, and the rehabilitation of industry as one subject. We only confuse ourselves, and as a result we mix our emotions with the facts and become unwilling victims of the greatest propaganda machine ever established in Washington.

Feed hungry people—Monroe Doctrine—business loans

Let us take them one at a time. Feeding emergency hungry people of Europe, or any other area, is a matter of charity, and must be so considered apart from other considerations.

Then I go to the stopping of communism, where I mention the Monroe Doctrine as stopping the spread of their systems of government into the Western Hemisphere by the empire-minded nations. We have had the Monroe Doctrine for 125 years. It has been very successful, and in that connection when we operate through the Monroe Doctrine or open door to the nations we name as important to our peace and safety, we are the judge when we go to war. We do not sign a treaty where you go to war because someone else says they are attacked.

I just want to call your attention to one thing while we are on that subject, that there has never been a time—I think I am safe in making this statement—in 2,000 years but what there was some kind of a war going on in Europe.

Now, let us get down to rehabilitating industry. That is the third thing. The rehabilitation of the industries of the 16 Marshall-plan countries, European countries, is entirely separate from feeding hungry people. It can be accomplished purely as a business transaction in the same manner as such plants were financed in this country by the Reconstruction Finance Corporation during the depression and during World War II.

A reasonable amount of money, say $1,000,000,000, could be appropriated and made available to the RFC or to the World Bank, for that specific purpose, simply providing that the RFC rules and regulations be applied to any foreign business loan. That would be a semiprivate bank loaning to private industry. Their rules provide for an investigation of the feasibility of such an industry by an experienced investigator in the respective fields, with an estimate of cost, together with a list of the needed machinery and supplies. They further provide for a lien or mortgage to be taken on such equipment, the stock or shares of the existing organization to be hypothecated as additional security for such loan, and then the signature of the applicant is required.

In other words, you loan money to rehabilitate the steel industry in Europe; I went through these steel industries with that particular object in view, since I still believe we were going to try to rehabilitate industry on some business basis. You would loan the money on the same basis as to an industry in Maine or in Nevada or in Ohio or Georgia. There should be no difference, no harsher terms and no milder terms. You will be very agreeably surprised, I also go on to say how small an amount of money you would loan on that basis.

That is not the basis on which they want the loan. I had a talk with Mr. Cripps, Sir Stafford Cripps, on the occasion of my visit to England; he said that they needed the Marshall-plan money very badly. That was in November of 1947. I said, "I understand from my figures that you are 114 percent recovered on the industrial index at this time." He hesitated just a moment and said, "That is true." He said further, "We do not need the money in England so badly, but we need it to build new industries in Africa, in our possessions in Africa." And I said, "Mr. Cripps"—this is all in this debate, by the way—I said, "Mr. Cripps, do you mean for our Government to give your Government money to build industries and transportation, and so forth, in Africa, in your possessions there, and that they would be clear of debt and your Government would own them?" And he said, "Yes."

The integrity of investments

Then I mentioned to him exactly the subject that you brought up, Senator BREWSTER. I said, "Why don't you establish the integrity of investments in Africa so that anyone investing money is taking only a business risk? In other words, investors from your neighbor countries will take the business risk whenever the judgment of the technicians and the men who have the money indicate that they have a chance to profit by the investment." He said that would not do at all, he just brushed it aside, because that is not what they want. They want us to give them the money so that the Government can nationalize the industry and the Government will own the industry.

Senator BREWSTER. I hoped that you would be able to comply with Senator MILLIKIN'S suggestion and remain here a little while, to have your education on the utter fallacy of all that is proposed. I think that you will then be able to crusade much more effectively against what we believe to be unsound theories. We are going to have them expounded; just as soon as we dispense with the clothespins here, we are going into the upper realms.

The CHAIRMAN. May I suggest, Senator, that you may be a bit confusing to the committee by getting into the British loans and the British economy at this time, because we have this specific matter before us, and I would appreciate it if you would confine yourself to that. I understand your general

observation that you think all of these things tie together, but I would like you to be a bit more specific and not go too far afield with all of these other matters that will be upon the floor of the Senate, undoubtedly, but do not come before this committee.

Import fee does not prevent imports

Senator MALONE. I was simply following the lead of the questions of the committee. I would be happy to do that, but at the same time I would like to impress upon the chairman of this committee that you cannot separate the three-phase free trade program. They are absolutely inseparable, with one objective.

Now, the argument is sometimes made that there should not be a tariff or an import fee on an article when we do not produce enough of it for the domestic market.

An import fee does not prevent imports, but does bring the product in on our level of costs—and keeps us in the business while we are assisting the lower-wage standard of living countries to raise their own.

Many of the strategic and critical minerals and materials are in that category, including copper, zinc, and mercury. You have under consideration here a bill to extend the free trade on copper, and it is doing exactly the same thing to the small producer in this country, and it has driven the prospector out of the hills. There will be no more competition on copper if you are to continually extend the free-trade interval.

Flexible import fee

Congress recognized this undesirable feature of a fixed tariff in 1930 by enacting section 336 establishing the flexible import fee procedure. Because this provision for various reasons was not utilized, I introduced a foreign trade authority bill last year which would have changed the Tariff Commission into a foreign trade authority with full authority to reflect correctly this differential of cost in much the same manner as the Interstate Commerce Commission fixes freight rates after full investigation and hearings.

Sometimes you will hear these theorists ask, "What do you offer if you do not want the free-trade policy based on the 1934 Trade Agreements Act, miscalled reciprocal trade?" And I want to say again and emphasize that the phrase reciprocal trade has never occurred in any bill ever passed by the Congress of the United States. It is simply a catchword to sell free trade to the American people, and I think it has done a good job.

Under the proposal of the flexible import fee adjustment of rates, a definite market basis is established in the United States for the goods of all foreign nations, but they are the judges of their own living standards. However, under such a provision they would be encouraged to raise their wage living standards because they would immediately get credit for corresponding reduction in the tariff or import fee, and when their standards of living approximated our own, then the objective of free trade would be an automatic and immediate result. But in the meantime, our wage standard of living would be protected.

Leveling the living standards of the world

There is no argument against free trade when the living standards are approximately the same, but in the meantime our wage standard of living would be protected while we are assisting the lower-wage standard of living nations.

There can be no question of the objective of leveling the living standards of this country with the low-wage living standards of the world when the three-part free-trade program is considered together.

I can understand anyone who advocates an import fee lower than the differential of cost between producing an article in this country and in a foreign country where our competition is located, provided he sincerely believes that our wage standard of living is higher than it should be, and as a result should be leveled off, because that can be the only result when the goods produced by the lower-cost labor is imported into this country.

I want to call attention again to the stock answer that they have always had for this—that "Certainly with our methods of manufacture no low-cost labor can compete with us." But now everything we have, every bit of technical knowledge, and all of our machinery, is available to every country in the world, and you put them on the assembly line and in a week they will do as much or more work than an American workman.

However, I cannot understand anyone who advocates that we maintain our high-wage living standard and at the same time favors an import fee below such differential of cost, because the two simply are not compatible.

I will have more to say in debate on the Senate floor about our trade relations with the Asiatic, European, Middle East, South Seas, and Near East nations, including Africa. I have visited all of these nations and have discovered various ways utilized by them, including quotas, embargoes, currency manipulations, and other devices, to nullify any concessions that they may have made through such treaties, while we feel morally bound to live up to such commitments.

You cannot successfully criticize these nations, in my opinion, because in most cases it is from sheer necessity that they take such action; and if we continue along the road we have started, we will soon reach the point where, from sheer necessity, we will have to abrogate the treaties through the use of such subterfuges.

Free trade and employment

These questions are not new. President Woodrow Wilson said, following the passage of the Underwood Tariff Act in 1913, that we should have a tariff board set up to advise the Congress in setting up a tariff bill. Soon after that date the Tariff Commission was set up to so advise Congress.

It will also be remembered that the Underwood tariff bill lowering rates below that differential of cost basis allowed an influx of goods into this country following World War I, and that a special session of Congress had to be called to pass emergency rates preventing such importations, which were rendering idle thousands of workers in this country.

The conditions at this time are exactly the same as following World War I—the import fees are now below the critical point on many products and the dangerous unemployment cycle is under way as a direct result of the State Department's action through the three-phase program, as already pointed out.

The Daily Mirror yesterday carried a Washington story that "some estimates have 4,000,000 unemployed now" and that "census figures reveal 9,500,000 working part time, from 1 day to 4 days a week."

Free-trade suggestion not new

The three-phase free-trade program, including the long-range program of making up the trade-balance deficits of the world currently known as the Marshall plan, the division of the markets under the selective free-trade policy adopted by the State Department based on the 1934 Trade Agreements Act, and the International Trade Organization treaty which would make permanent the free-trade policy, is not new and will reestablish the unemployment conditions existing at the time it was necessary to overhaul the Underwood Tariff Act following World War I.

The same principle was advocated, using different language, 40 or 50 years ago by international European bankers about the time we started to rise perceptibly above the nations of the world in our living standards through the use of the import-fee method.

Later the "free trade" policy was advocated directly without subterfuge of any kind by Secretary of State Hull. Now the same policies are advocated through this three-phase program, in more complicated language, designed to confuse the issue, but it adds up simply to the same thing—"free trade."

The basic reason for recapturing control of our own import fees lies in the necessity for a high degree of flexibility, which is impossible if changes must be made through international agreement. The tariff structure of the United States has become rigid by reason of the many trade agreements executed by the State Department.

Until recently, this had not caused any particular embarrassment, because of the abnormal trade conditions of the past few years, war conditions, subsidies, and gift-loans to foreign nations which can be used to purchase our own products. However, it is inevitable that future conditions will change with considerable rapidity, and to an hitherto unexperienced extent.

Saving our own economy

In that connection, I want to call attention to a dispatch yesterday in the Wall Street Journal; it says:

"Mounting surpluses from United States farms and factories are putting pressure on Congress to see that more European-aid dollars come back here to help relieve overproduction headaches. Many lawmakers are giving serious consideration to pleas that American goods should get first claim for purchase with the dollars given away or loaned abroad."

In that connection, I want to say that when I was examining the mines in the Ruhr in Germany, Mr. Collins, an Englishman, was superintendent of the mines. After the work of the day we were discussing the projected Marshall plan. After he had exhausted the arguments that the Marshall plan money should be given directly to the English Government, he just grinned at me and said, "You know that you are going to give us this money to save your own economy." He knew it then and I did not. I also had not realized at that time that the so-called Marshall plan was only one part of a three-phase "free trade" program. That was the first time I had heard it, but it happened about 40 times on my trip through France, England, and the Middle East. In other words, they all believe now and they will tell you that we are going to continue to give this money to Europe in some guise, to save our own economy.

Flexibility of import fees necessary

My own idea of it is that if a man is going up a stepladder to jump off, he had better jump before he gets so high that it kills him, and a little leveling off before this time would not have hurt us any.

The basic reason, then, for recapturing control is the changing economic conditions in these countries—the economies of all of the countries are in a state of flux continually—and these conditions must be taken into account. They cannot be met by a treaty where, for 3 years, tariffs are fixed and then you have to serve certain notice, taking about 4 years altogether, and then probably be accused of bad faith.

We must be ready to meet such conditions. True flexibility of our import fees is essential to our national economic welfare.

Unless the Congress of the United States takes a firm hand in the game and reverses the trend of the three-phase program instituted by the State Department, under which they are directing both the domestic and international series of programs, the producers and workers of this country are headed for a dangerously low standard of living, and an unemployment condition definitely worse than anything experienced since the early 1930's.

Mr. Chairman, I thank you for the opportunity of making this statement.

The CHAIRMAN. Thank you, Senator MALONE.

Senator MALONE. I believe that you mentioned that this would be the point to mention the matter of the copper extension free trade.

Senator MARTIN. Mr. Chairman, before the Senator goes into that, may I ask a couple of questions?

You state there are about 4,000,000 unemployed in America. Do you know what type of work that is?

Senator MALONE. Senator, I do not have the exact figures, but in every paper you find notices that the automobile companies are laying off men, the railroads are laying off men, and the basic industries of the country are either cutting down the days of employment or laying off more men.

Senator MARTIN. I think you also stated that there are 9,000,000 partially unemployed. What do you mean by that?

Senator MALONE. I mean that their workweeks are cut down, where they normally would have a 5- or 5½-day week, they are cut down to as low as a 1-day week, or 1 to 4 days.

Senator MARTIN. In your survey, did you take into consideration the coal mines of the United States?

Senator MALONE. I believe they are included in the over-all figures, but the figures are growing so fast from day to day that it is impossible, almost, to keep in touch with them.

Now, then, mentioning one more thing in that connection that directly affects the coal mines, I want to call attention to another dispatch that the oil people are getting very worried, even as early as last fall the oil market was soft. The headline says, "Halloran wants crude oil imports cut—United States petroleum industry will be harmed unless this is done."

This indicates that there should be some authority given the State Department or some other department to determine when to cut the imports.

My whole point is, if there should be some kind of a flexible import fee arrangement so that the differential of cost could be met, it will take care of itself, without leaving the decision to the judgment of a bureau official.

This is what I mean and how it will affect the coal mines: I saw every oil well in the Middle East, in Iran and Iraq, down the Persian Gulf and through Saudi Arabia—the oil from that area under free trade, or if we should pass the Anglo-American oil treaty and throw the bars down, will come into this country at a cost that will cut the production of oil in this country and make it unprofitable to explore for further domestic sources of oil.

Coal and oil production affected

The coal industry and the oil industry have come along about equally, that is to say, both fuels are used in the production of steam power all over the country, both are living at a high-wage standard of living, and both are producing plenty of coal and plenty of oil.

But if the Middle East oil is made available on a free-trade basis to this country, it could come in for $1.50 or $1.75 instead of $2.50 or $3, and it could close every coal mine in West Virginia, Pennsylvania, Wyoming, and Utah that is furnishing coal for steam plants outside of their own States. That is one definite effect of this over-all free-trade policy.

Senator MARTIN. Senator MALONE, you are one of the very outstanding engineers of America. Do you have an estimate as to how long our present reserves of coal would maintain our economy?

Senator MALONE. Well, the least that I have ever heard estimated was over 1,000 years.

Synthetic fuels

Senator MARTIN. And do you think that the present plans of converting coal into gasoline and into oil and into commercial alcohol is practicable?

Senator MALONE. I have no doubt about it, Senator. Last year we had a National Resources Economic Committee, of which I was chairman, set up through the Committee on Interior and Insular Affairs. We made a very careful investigation and brought the data on synthetic fuels up to date. Research is in the pilot plant stage, but I am told by scientists and engineers who are working on this problem that they are in about the same status now in the production of synthetic petroleum fuels from coal, as they were in the production of synthetic rubber at the beginning of World War II. In other words, if it becomes necessary and you gave them the necessary funds, they could produce all of the synthetic fuels needed from coal. There is, according to all of the best estimates, more than 1,000 years' supply of such fuels available from oil shale and coal.

Senator MARTIN. Mr. Chairman, I apologize for taking the time, and I would not have gone into this, but I think that we are fortunate to have in the Senate a man of the knowledge of Senator MALONE; and yesterday I happened to be in my own State of Pennsylvania and I was alarmed when I learned that we have over 300,000 miners that are on part time. Some of them are down as low as 1 day, and a great number of them 2 days, and some fully unemployed. I apologize for taking the time of the committee.

The CHAIRMAN. Now, do you wish to address yourself to copper?

Senator FLANDERS. Might I interrupt for a moment, Senator MALONE and Mr. Chairman? I wonder if I might have 5 minutes between the general subject and copper, as I have some responsibilities elsewhere.

Senator MALONE. I will finish very quickly.

I feel very strongly on this subject which I have just outlined to you, Mr. Chairman, because I think that it is the one real basic subject faced by the Congress of the United States, that someone—I do not know how far back you have to go to find this someone—knows what the effect of this plan will be, and they do not all live in the United States, but part of them do.

Capital is fluid—workers cannot move

Capital is fluid and can be invested anywhere in the world at a moment's notice. When a certain import fee is going to be adjusted downward to a point below that critical point of protection, then the investments in that nation become profitable, and people who know about those things and have money to invest do so. They are behind this free-trade movement, and it is a much deeper long-range proposition than has ever been discussed on the floor of the Senate of the United States.

Senator BREWSTER. Mr. Chairman, I would like to examine this witness at somewhat more length on some of his comments on the oil situation. I hesitate, because Senator FLANDERS and Senator SMITH are here, who are going to talk about a somewhat smaller item of clothespins; and I would like to have that opportunity, if the Senator could give us the time, and permit Senator FLANDERS to speak for 5 minutes and then leave, if that will be agreeable.

Senator MALONE. I will come back.

Senator BREWSTER. I do not want you to get away before I talk with you about this oil, but I hesitate to do it because I have asked these other people here, and that is the difficulty.

The CHAIRMAN. Senator FLANDERS, you say that you have a statement?

STATEMENT OF HON. RALPH E. FLANDERS, A UNITED STATES SENATOR FROM THE STATE OF VERMONT

Free trade and clothespins

Senator FLANDERS. I thank you for the privilege of speaking briefly. I am going to speak about 2½ minutes on the general subject of the reciprocal trade treaties, and 2½ minutes on clothespins. That is the relative importance, at this particular minute, of those two subjects.

The reciprocal trade treaties idea is one which we have to face. For generations, I suppose since we have been a Nation, we have exported more than we have imported.

Now, that was a perfectly logical thing to do when we were a debtor Nation. We worked part time for ourselves and part time to service and pay our debts.

We are now a creditor Nation, and we still work part time for ourselves, and part of the time for the people we send goods to for which we do not get paid.

Now, that is just plain silly. What we have to do is to find some way of getting paid by imports or gold for the things we ship abroad, because otherwise it is a dead loss to the Nation to ship out more than we get back. That applies just the same to foreign investment. There you have only a delayed result of not getting paid for what you do. You do not notice it until later. But foreign investment for which we do not get paid—and the only way we can get paid is by imports or by gold—is again just plain silly.

So we have to find some way to get paid for the stuff we ship out of this country. The only way I can see is by a carefully organized and administered rearrangement of our tariffs at rates which shall permit or encourage the payment for our exports in ways which are to the best advantage of the country.

It can be done theoretically, and I believe practically, in a way which raises our standard of living, if we swap the things which we make best for the other things which other people make best.

Now, we are on our way to clothespins. There is a good deal of trouble, friction, discontent, in the case of most industries, I imagine, for which arrangements have been made in the reciprocal trade treaties for reducing the duties involved. That is inevitable in the process, and I think that we do not have to formally serve notice. But informally, I would like to serve notice on Mr. Brown, who I believe is here in the room somewhere, or anyone else connected with the State Department, that Senators and Representatives are going to police their own constituents the details of this essential job, whose essentialness I have just described, and that again brings us to clothespins.

I want to say that we have two clothespin factories in Vermont. They make nothing else. One of them cans peas and corn in the summer, but we do not ask them to make enough on their peas and corn so that they can make clothespins as a public service.

Their wage rates run from 75 to 80 cents for women and from 90 cents to $1 an hour for men; and the Department of Commerce informs me that the Swedish competition, which is the serious competition, pays 62½ cents.

These manufacturers in Vermont—I do not know so much about those in other parts of the country—tell me that they have now lost the chain-store business. The chain stores buy their clothespins from Sweden. They have not lost the business sold to miscellaneous outlets through jobbers. Apparently the miscellaneous outlets have not yet discovered Swedish clothespins.

The folks up in my State are very much afraid of a further reduction, as requested by Sweden, and feel that they are suffering hardship under the present reduction, and wish me to present the case, and I am glad to do it.

I may say that the most efficient manufacturing plant I ever saw, of any sort, was a wooden-clothespin factory of the old-fashioned clothespin type up in Stacyville, Maine, and if the Vermont clothespin factories are as well managed as that old wooden-clothespin factory was, I want to say that they are doing very well, indeed, so far as skill and management are concerned.

That is my story, Mr. Chairman, on the reciprocal trade agreements and on clothespins.

The CHAIRMAN. Thank you very much.

Senator MALONE. Is it permissible for a Senator to ask a question who is not a member of the committee?

The CHAIRMAN. We could allow it, Senator MALONE. We are working under a good deal of pressure this morning. Is it just one question?

Senator MALONE. I would like to ask just one question of the Senator, if that is not one shining example of what Sweden can do better?

Senator FLANDERS. That is a real problem. I plan to visit those two clothespin factories and see if they have any right to survive. I mentioned the Maine clothespin factory because I am sure that that thing could not be done better elsewhere, but it was the old-fashioned wooden clothespin without any spring in it.

Senator MILLIKIN. May I make a very brief observation, which will save a question.

Out in our country, Senator, we produce sugar, and we produce oil, and we produce all of the livestock products, and we produce minerals and many other things, and we are producers of primary products. There is not a thing that we produce out there that cannot be produced cheaper some place else. If we simply ran our tariff system on the basis of swapping that which the other fellow can do cheaper than we can do it, you have got about 17 States that will go back to the status of a howling wilderness.

Senator FLANDERS. May I, sir, make an observation, also, and not a question. That is that to my mind, sir, you live in a problem region, and you are completely dependent on the tariff out where you live. That is true to an extent that is not true in any other part of the country, and the State Department must recognize its responsibility for not depopulating the Rocky Mountain region.

Senator BREWSTER. I would like to ask the Senator this question: I appreciate what you say about the West, but up in Maine we have a few problems besides the clothespins, which we appreciate your solicitude for and we share it. But when we are sending 60 percent of the most modern textile machinery we manufacture to other parts of the world, do you have any doubt as to their capacity to use that intelligently and effectively in producing those things more advantageously and more cheaply than we do?

Senator FLANDERS. We had the experience of the Japanese textile industry up to prewar time.

Senator BREWSTER. It threatened us very severely.

Senator FLANDERS. Yes. And I could give General MacArthur some advice on that, so far as Japan is concerned, which is that they swap their textiles with the rice-growing countries of southern Indochina and work out a reciprocal trade arrangement there. But these arrangements that have to be made, have to be made slowly and with caution, and with all of the conditions in mind, and I think that it is perfectly proper for us to serve notice on the State Department—as I say, they probably recognize it already—that we are not going to allow any such serious maladjustments that we cannot digest them as we go.

The main problem remains that we must not make stuff and give it away. That is what we are doing now.

Senator BREWSTER. Do you share with Senator MALONE that we want to give our know-how and our technical developments to the rest of the world, if they will use those to put more cotton on the backs of Chinamen instead of inundating our markets here with their products? Is that not the theory?

Senator FLANDERS. I might say that Senator MALONE did not tell the whole story. I do not want to ship that know-how and equipment without getting paid for it, and at present we have no way of getting paid for it. We are just fooling ourselves.

Senator BREWSTER. We could get paid completely for the textile machinery and the know-how and everything else, and it is when we get into other situations that we get a very serious unbalance. If we simply exported modern machinery and know-how, that is another thing.

Senator FLANDERS. But the total of exports so far exceeds, under ordinary conditions, the total of imports, that we fool ourselves when we think that we are getting paid for them, and that is a major problem.

Senator BREWSTER. Well, we imported $7,000,000,000 worth this last year, and that is more than our exports ever were prior to the war.

Senator FLANDERS. Maybe the thing has begun to balance out. I hope so.

Senator BREWSTER. You indicate the tariff is rather a local problem, as was said many years ago.

Senator FLANDERS. It is as far as clothespins are concerned.

Senator MARTIN. Senator FLANDERS, you are an expert in manufacturing, and is not the main difference of the cost of production in our country and in foreign countries the one of labor?

Senator FLANDERS. The differences are brought about by labor, equipment, and management, which may or may not balance each other out.

Senator MARTIN. But is not the main difference in cost the wage-scale difference between our country and foreign countries?

Senator FLANDERS. For instance, in an automobile plant as it was before the war, their scale was lower, but we made them cheaper.

Senator MARTIN. We had the mass production. But you take a specialized thing like clothespins, and is not the big difference in cost the matter of so much per hour for labor?

Senator FLANDERS. That is the situation so far as I know it. I have not visited the Swedish clothespin factories, but I assume that that is the difference.

Senator MARTIN. I am for reciprocity; I was brought up on that as a boy. That is one of the first things that I learned in political economy, and it is sound. But we have got to take care of our living standards in America, and that means full employment and gainful wages of our working people.

It seems to me that the real difference is the wage scale per hour.

Senator FLANDERS. Mr. Chairman, I might suggest on the major problem, that it seems to me that the proper line to be taken in negotiating these treaties is to have them so designed and so administered that the normal growth of our industry is directed toward those things we do best, rather than having it work destructively on existing elements of industry.

The CHAIRMAN. Thank you very much.

Senator MALONE. I would like to add just one statement as long as it was questioned whether I had gone far enough or not. Could I do that?

The CHAIRMAN. Yes; but would you let Mrs. Smith go first?

Maintaining wage-living standards versus foreign levels

Senator MALONE. I will make this only a short statement and then I am through.

There is no question but what we are making up our minds whether we are going to try to maintain our wage standard of living while we help foreign nations, or whether we want to level our living standards with such foreign nations and start at the bottom again with them. All you need is to have free trade and you will level our living standards with the foreign nations, and you have free trade when that differential of costs is not correctly represented by the import fee.

There is no question but what Senator MARTIN put his finger right on the subject. Labor is the important factor. These people in Europe are like us; they can do just as much work and, for the most part, will work harder; since all of the machinery is now available to them, the difference in the labor cost will represent the difference in the cost of the product. As Senator BREWSTER has said, the know-how and the machinery will go to the low-cost labor.

In the case of automobiles and the heavy machinery, we have had little competition, but right now they are coming into this country in increasing quantities and depressing the automobile market, all due to using our technical know-how, machinery, and assembly-line methods, combined with the European cheaper labor.

The differential of cost is due mostly to labor, and it is not recognized under the three-part free-trade program. The fact that the assembly-line methods have been taken to Europe by Mr. Ford is not recognized in this plan. These men are smart, and they will go where their money investment will be profitable. It is not the same name as the Ford plant here but it is the same organization and the same money. Every company in Detroit will be in the nations of Europe very soon, if this three-phase free-trade plan of the economic one-worlders is adopted.

The CHAIRMAN. Thank you.

STATEMENT OF HON. MARGARET CHASE SMITH, A UNITED STATES SENATOR FROM THE STATE OF MAINE

Senator SMITH of Maine. I appreciate your courtesy in permitting me to come in here before your committee, and I will confine my remarks to the minimum.

I am not directing my statement generally to the legislation before the committee, but taking the subject that Senator FLANDERS used, clothespins, if I may.

Protection against low-cost labor

The clothespin industry of this country, as we have already heard, needs greater protection than it now has. Foreign producers manufacture clothespins at one-half to three-fourths of the American manufacturing costs. The differential is based particularly in labor costs. In other words, we cannot compete with the low labor wages of the foreign clothespin manufacturers.

The result is that foreign imports now constitute 20 percent of our American market, foreign imports of clothespins have multiplied 15 times since the prewar years. The American clothespin industry cannot stand this low-cost labor competition, and its existence is threatened in the near future simply because the American productive capacity alone exceeds the normal demand of the American market.

Because the great preponderance of clothespin manufacturing is in my own State of Maine, this problem is very close to me. If the American clothespin industry is wiped out because of inadequate protection against foreign competition, it means that many Americans will lose their only means of livelihood. The clothespin businesses are small, but clothespin workers and the small farmers especially in the State of Maine and the existence of several small communities will be threatened by economic obliteration. The issue is as simple as that.

The Navajo Program

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. FERNANDEZ. Mr. Speaker, I am delighted that the President has appointed a Commissioner of Indian Affairs in the person of Dr. John R. Nichols. Under that type of man we have a right to expect a practical, courageous and common-sense administration of the Office of Indian Affairs.

I am delighted also that the Secretary of the Interior and the President have now submitted to the Congress the long-range project for the rehabilitation of the Navajo and Hopi Indians which was the result of years of study and planning with the aid of impartial committees, and on which hearings were held a year ago by the Public Lands Committee of the House and Senate. The President and Secretary Krug acted very wisely, I believe, in waiting for the submission of this program to the Congress until they had a man as Indian Commissioner in whom we may have real confidence. Under those circumstances there is no reason why the membership on both sides of the aisle cannot work together to bring about prompt passage of the bill they recommend. As the President says in this letter, the United States, which would live on Christian principles with all the peoples of the world, cannot omit a fair deal for its own Indian citizens.

Under leave from the House, I include herewith the letter from Secretary Krug and the letter by the President to him on the Navajo program:

UNITED STATES DEPARTMENT
OF THE INTERIOR,
Washington, D. C.

HON. SAM RAYBURN,
Speaker of the House of Representatives.

MY DEAR MR. SPEAKER: Transmitted herewith is a draft of a proposed bill, "To promote the rehabilitation of the Navajo and Hopi Tribes of Indians and the better utilization of the resources of the Navajo and Hopi Indian Reservations, and for other purposes."

I request that this measure be referred to the appropriate committee for consideration, and I recommend that it be enacted.

The authorization of a long-range program for the Navajo and Hopi Indians has been advocated by the President on several occasions as an essential step in the national policy of affording a fair deal to our Indian citizens. I enclose a copy of a letter, dated March 4, 1949, in which the President asks that the needs of the Navajos and Hopis be again brought to the attention of the Congress. The draft of bill transmitted herewith is designed to provide appropriate authorization for a long-range program that will assist these long-depressed Indian groups in becoming healthy, self-supporting, and enlightened.

The situation of the Navajo Indians has been the subject of national attention since a year ago last fall. The President, on December 2, 1947, declared in a public statement that the problems of the Navajos would not be solved merely by providing emergency relief for them during the ensuing winter, and pointed out the need for a long-range program of rehabilitation. The Congress, by the act of December 19, 1947 (61 Stat. 940), gave statutory recognition to a like concern over the Navajo situation. That act authorized the appropriation of $2,000,000 for an emergency grant and work-relief program for the Navajo and Hopi Indians, and of this sum $1,500,000 has been appropriated. In addition, section 2 of that act authorized and directed the Secretary of the Interior "at the earliest practicable date to submit to the Congress his recommendations for necessary legislation for a long-range program dealing with the problems of the Navajo and Hopi Indians."

In conformity with the foregoing requirement of law, I submitted to the Congress on March 17, 1948, my recommendations for a long-range Navajo and Hopi program. These recommendations had previously been approved by the President. They embodied a plan whereby the Federal Government could fulfill its responsibilities to the Navajo and Hopi Tribes in furtherance of treaty provisions and in conformity with Federal policy, as defined in numerous statutes since the founding of the Nation. The recommended plan was cast in the form of a proposed bill which would have authorized capital expenditures of $90,000,000 for a 10-year rehabilitation and resource development program.

In support of the proposed legislation, I also submitted to the Congress a report entitled "The Navajo," which comprehensively explained the grounds for my recommendations. This report was based on data collected by the Indian Service, and on analyses of various specific aspects of the Navajo problem made by independent investigators. The proposed legislation was introduced in the Eightieth Congress as S. 2363 and H. R. 5932, but these bills were not enacted. Consequently, undertaking of the recommended plan has not been possible except for the initiation of an off-reservation employment program with funds made available under the act of December 17, 1947, mentioned above.

The need for a comprehensive long-range program for the Navajos and Hopis is even greater now than it was a year ago. The Navajo population is increasing at a rate of at least 1,200 persons each year. As a result, the education, health, and other social or economic aspects of the Navajo problem are becoming progressively more critical for each year that effective action toward solution of this problem is deferred. Both the Navajos and the Hopis are living today under precarious conditions far below the living standards enjoyed by most other citizens. The very existence of many of them is imperiled, for neither their physical resources nor their personal aptitudes have been developed to a point that will admit of self-support, even at a subsistence scale of living.

Physical development of the Navajo and Hopi Reservations, through such measures as range-land protection, irrigation, and road construction, is also acutely needed for the safeguarding of other national interests. Thus, the absence of a broad-scale soil- and moisture-conservation program, adequate to check the tremendous erosion now ocurring on these reservations, is causing the San Juan River and other streams to pour an ever-increasing accumulation of silt into Lake Mead. Each of the thousands of acre-feet of reservoir capacity displaced by this unnecessary accumulation means a corresponding loss of ultimate water storage for the great cities and rich agricultural areas whose security is dependent on the ability of Lake Mead to impound the floodwaters of the Colorado River.

To meet the situation squarely and effectively, I again propose initiation of a long-range program for the rehabilitation of the Navajo and Hopi Indians and the better utilization of their resources. As the program recommended is a comprehensive one, involving considerable costs, and is of vital importance both to the Government and to the Indians, special legislation which would authorize the Secretary of the Interior to proceed with this specific program, is believed to be the best way of providing for its undertaking.

The proposed bill submitted herewith for the purpose of initiating the necessary program is, for the most part, identical with the bill submitted in March of last year. It differs from that bill only in the following particulars: In section 1 the Hopi Indians have been made eligible for participation in all classes of projects by omitting the clauses which restricted the benefits of projects in classes 11, 12, and 13 to Navajo Indians, and a new class 14, with respect to housing, has been added. Section 4 has been amended so as to permit the making of loans for productive purposes to the Hopis as well as to the Navajos. A new section 5 has been inserted in order to make it possible for the Navajos and Hopis to grant long-term leases of lands needed for such purposes as public airports, churches, mission schools, recreational resorts, service stations, factories, warehouses, stockyards, and the like; and old sections 5, 6, and 7 have been renumbered 6, 7, and 8, respectively. The language in section 6 (sec. 5 of last year's bill) relating to a constitution for the Navajo Tribe has been revised in order to accord the Navajos the widest practicable choice in determining the framework of their tribal government. In accordance with the wishes of the Navajo tribal officials, a new section 9 has been added authorizing the submission by the Navajo and Hopi tribal councils of recommendations concerning the administration of the rehabilitation program.

Enclosed for your information are copies of the report, The Navajo, previously mentioned. This report explains the nature and causes of the Navajo problem, and gives detailed information on the constructive approach to the solution of that problem which the attached draft of bill would authorize. Representatives of this Department will be glad to supplement these materials in any way desired by the Congress or its committees.

The Bureau of the Budget has advised me that this proposed legislation is in accord with the program of the President.

Sincerely yours,

J. A. KRUG,
Secretary of the Interior.

THE WHITE HOUSE,
Washington, March 4, 1949.

The honorable the SECRETARY
OF THE INTERIOR,
Washington, D. C.

MY DEAR MR. SECRETARY: At my request, you prepared and presented to the Congress on March 15, 1948, a proposed 10-year program for the rehabilitation of the Navajo and Hopi Indians of Arizona and New Mexico. Except for one small segment of this program, the Eightieth Congress failed to enact the necessary legislative authority to place it in motion.

The needs of these Indians are as great today as they were a year ago. Indeed the severe winter storms have emphasized the serious economic conditions prevailing among these tribes. The authorization of this long-rang program is considered essential to enable these groups of Indians to become healthy, enlightened, and self-supporting. I hope you will continue to emphasize to the Congress the needs of the Navajos and Hopis.

The United States, which would live on Christian principles with all of the peoples of the world, cannot omit a fair deal for its own Indian citizens.

Very sincerely yours,

HARRY TRUMAN.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Montgomery, Ala., on October 7, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to feel beneath ones feet again the soil of his native State. Not far from here, I, like my ancestors before me, was born. To this State my forebears came in the long ago, seeking the fulfillment of the American dream. They planted, they toiled with their harvests, they reared their children, built churches and schoolhouses and their humble homes. And from Alabama's soil my grandfathers went off to wear the gray in a cause that was already lost 90 years ago.

Go back with me to 1860. The Democratic Party split because our forebears demanded Federal protection for the extension of human slavery into the new States growing up in the West. A position which the National Democratic Party would not and could not accept. In the election of 1860, northern Democrats who nominated Douglas and the southern Democrats who nominated Breckinridge got nearly one-half million votes more than the Republican nominee, Lincoln; but Lincoln, because of the Democratic split, won in the electoral college and became the President. Those who risked all upon extending slavery into the new territory wound up by losing the slaves they had even in the South, which assuredly they could have saved for decades if not generations, and have been paid for in the end.

Today speaking to you with the candor which the situation demands, history was against human slavery just as history today is on the side of the Government of the United States, which is the champion of human liberty and freedom in this world, practicing at home the democracy it preaches to mankind. Anything other or less than the Government of the United States, giving fair and just constitutional rights to every segment of our citizenship, holds us up to ridicule and scorn before the totalitarians of the world as hypocrites, as preaching one thing and practicing another. If the South throws its weight and strength against the Constitution of the United States and the basic principles of Americanism then it will and should lose.

But there is a clear and distinct sphere for the application of the Federal Constitution with utter fairness and impartiality and the operation of State laws, traditions, and customs, without one doing violence to the other. The President of the United States has been flagrantly if not designedly misrepresented in his recommendations on the so-called civil-rights measures to the Congress. He has not recommended one thing relative to segregation in the States, in the public schools, in restaurants, in hotels, in theaters, swimming pools, and the like—and, of course, he has made no recommendation concerning churches, lodges, clubs, and associations of local and personal nature. He has recommended the abolition of the poll tax as a condition precedent to any citizen, white, black, yellow or brown, voting for President, Vice President, Senator, or Congressman, as the United States Congress has the power, and in my opinion the duty to do, if the States will not strike it down themselves. He has recommended Federal jurisdiction to prosecute lynchers of any citizen whatever his color or wherever he may be, if the sheriff or his deputy or the United States marshal or his deputy willfully conspire in the lynching but only in such cases. He has advocated that in respect to commerce crossing State lines, Congress has the right to require that race, religion, color, or national origin should not be the sole basis of either hiring or firing. He has advocated that private companies have no authority to segregate passengers crossing State lines in public conveyances. And he has advocated equality of treatment and opportunity in the armed forces. But, of course, he has not recommended, and of course, Congress has no power to interfere with or to abolish local laws, traditions, customs, and practices, respecting the wise separation of the races in certain local places and institutions in the several States.

Time, education, and wise experience will determine when, whether, or to what extent the local practices requiring certain race separations should be changed. And whatever the decision is in these matters, mind you, it must be made by the people in the several States under the Constitution of the United States.

The State of New York has abolished segregation between different races. All races are assured equal access to any kind of public place. But that was not done by the Federal Government but by Governor Dewey and the Republican Legislature of New York.

What I plead for is that we not be deceived over a misunderstanding or by misrepresentation of this issue and fall into the crushing embraces of the Republican Party, which is the historical, political, and economic enemy of the South.

You know how the South has grown under 16 years of Democratic administration. You know what Franklin D. Roosevelt did for southern industry, agriculture, labor, for the aged, for welfare, for women, for children, for the physically handicapped, for public power—for the whole South. You know how things were in the South—before Roosevelt came in—under the Hoover administration. I don't need to remind you of those sad days—of a South as prostrate almost as when the Lancelot of the Confederacy sheathed his shining sword at Appomattox. I don't need to remind southern businessmen and farmers that when they fought for lower freight rates to northern markets it was Gov. Thomas E. Dewey, of New York, who led the fight against them. I don't need to remind you how Republican administrations tried to strangle your Tennessee Valley and the TVA. I don't need to tell Alabama farmers of how Republican agriculture legislation in the last Congress cut down parity and the support prices for cotton, corn, and peanuts and tobacco and rice, and that this legislation alone will take hundreds of millions of dollars away from southern farmers. I don't need to remind southern labor that, if the Republicans gain full national power, they will drive the Taft-Hartley dagger all the way into labor's heart. They will strangle social security; turn over the TVA again to the private power companies.

Republican rule meant depression under Hoover. It will mean a worse depression under Dewey. Republicanism will mean pushing the South back down the hill. Following off after either the third or the fourth parties means Dewey and depression—nothing less, nothing more. Don't be deceived by those who cry wolf against Truman but who also just as loudly cried "Wolf, wolf, wolf" against Roosevelt once or twice, or maybet even three times, and strangely, the very men who clamor States' rights and their brand of democracy will not let you vote in Alabama for the President of the United States if you want to vote for the nominee of the Democratic Party.

You know that in those Roosevelt elections many men with a lot of corporation clients and big business support in the South voted against Roosevelt behind the false facade of States' rights. They did not want the Federal Government to give the public cheap public power. They did not want the Federal Government to help southern workers get fair wages. They did not want the Federal Government to protect the little investor or the farmer against northern speculators with whom they were tied in. So they used the sword of States' rights against the shield of the public welfare. The South needs more, not less, of what it has been getting of Federal aid. Our South demands a government that will fight against monopoly, not a government which will make it more dominant. Let us beware, my fellow southerners, of false prophets and false leaders. Remember the words of the Scriptures, "Where your interest is, there is your heart also." And when you hear these voices clamor against the old Democratic faith and party ask, "Where are their interests?" Then you will know why their hearts and their utterances are where they are.

Remember, "He whose bread I eat, his servant am I." When you hear these voices raised against the old Democratic principles ask whose bread they eat. Then you will know whose servants they are.

Hence I do speak to you of and for the South which I love. I call not only upon all southerners who have voted in the ranks of democracy but all liberals as well—even the erring ones—to come back into the party which is the home of the liberal—the party of Jefferson, and Jackson, and Woodrow Wilson, and Franklin D. Roosevelt, and yes, President Harry Truman, who follows in their footsteps with a courage which they would have commended.

Yes; I have been a Democrat, I am a Democrat, and I shall be a Democrat. Toward my party I would proudly express the sentiment of him who said:

"Woodman, spare that tree. Touch not a single bough; for in my youth it sheltered me, and I will protect it now."

My fellow southerners, for a century and a half the Democratic Party has sheltered you. I know the quality of your loyalty and that you will protect it now.

Dr. Peter Marshall

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. WHERRY. Mr. President, Dr. Peter Marshall, the late Senate Chaplain, being taken desperately ill on January 20, prepared a prayer to be delivered at the session of January 24. To our sorrow, he passed away on the 25th and at the funeral services on the 27th many of his associates in the ministry in Washington, among whom he was much beloved, as well as old school friends and ministers from the South, spoke feelingly of his great spirituality and fine life.

Senators will recall that the prayers delivered by Dr. Marshall in the Senate

during the Eightieth Congress were printed in a small volume for distribution, and the demand has been so great that the supply is practically exhausted. The prayers he delivered in the Eighty-first Congress of course were not included, and I ask unanimous consent that these prayers be printed in the Appendix of the RECORD, following the addresses at the funeral services to which I have just referred. The compilation has been made by Mr. John D. Rhodes, Official Reporter of the Senate.

I am informed by the Public Printer that the manuscript will make three pages in the RECORD, at a cost of $213.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

SERVICES AT THE FUNERAL OF DR. PETER MARSHALL, D. D., MINISTER, NEW YORK AVENUE PRESBYTERIAN CHURCH, WASHINGTON, D. C., AND CHAPLAIN OF THE UNITED STATES SENATE

The service was presided over by Rev. Robert T. Bridge, assistant minister, New York Avenue Presbyterian Church.

The congregation rose at the sound of the chimes at 11 o'clock a. m.

Mr. BRIDGE. "I am the Resurrection and the Life, saith the Lord. He that believeth on Me, though he were dead, yet shall he live. And whosoever liveth and believeth in Me shall never die.

"Thou wilt keep him in perfect peace, whose mind is stayed on Thee: because he trusteth in Thee."

Let us pray:

O God, our Father, from whom we come and to whom we return, and in whom while we tarry here we live and move and have our being, we praise Thee for Thy good gift of life, for its wonder and mystery, its interests and joys, its friendships and fellowships. We thank Thee for the ties that bind us one to another. We bless Thee for Thy loving and patient dealings with us, whereby Thou dost ever teach us Thy truth and Thy way by the varied experiences through which we pass. We thank Thee for the meanings that lie hidden even in the very heart of sorrow, pain, disappointment, loss, and grief. And we bless Thee for Thy guiding hand along the way of our pilgrimage. Through Jesus Christ, our Lord, Amen.

This is to be a funeral service that will be, in many respects, different from the usual form of service. To begin with, we will join together in singing. I will ask the entire congregation please to unite in the singing of hymn No. 213, and as the strains of music presently die away, let us keep in our minds as the service continues, the thought of this hymn, which is a prayer.

The congregation joined in singing the following hymn:

"Breathe on me, Breath of God,
Fill me with life anew,
That I may love what Thou dost love,
And do what Thou wouldst do.

"Breathe on me, Breath of God,
Until my heart is pure,
Until with Thee I will one will,
To do and to endure.

"Breathe on me, Breath of God,
Till I am wholly Thine,
Until this earthly part of me
Glows with Thy fire divine.

"Breath on me, Breath of God,
So shall I never die,
But live with Thee the perfect life
Of Thine eternity. Amen."

Mr. BRIDGE. As I suggested just now, this is a funeral service which is to be different from the usual funeral service. For example, there is no group of mourners here at the front of the church. Mrs. Marshall, with her family, is seated in the minister's pew where she worships Sunday by Sunday.

Underlying all that we say or do, there is, of course, a very deep emotion, but this is not the time nor the place to express that emotion or to give way to it. While we should not suppress our emotions, we should now just lay them aside for a while, for unless we do so, the very purpose for which we are gathered will be frustrated. If our eyes are moist, why, let them be shining, too. We are gathered in a service of rejoicing. Let me in a few words, and in very simple words, try to express what we are trying to do this morning. We are endeavoring to establish a new relationship. We have known Peter Marshall in the flesh. From now on, we are to endeavor to know him in the spirit, and to know him in the spirit just as really as we have known him in the flesh.

That which we do has two parts. We have before us the body which was given to him by God as the earthly tabernacle for his spirit. And that body we will lay aside with loving and reverent care. The other thing that we do is to enter into fellowship with him. Peter Marshall is still and will continue to be one of the ministers of this church, though no longer visible to us. The fellowship we have had with him will remain unbroken, and may God give us vision, grace, and strength to join hands with him. We will tarry here on earth until the Lord calls us, but he is set free in the presence of his Lord, and we are one together.

So that you may know to some degree the ministers who are taking part in this service, may I name them briefly. They are seated in the order in which their names will be given. On my extreme right is Clarence W. Cranford, minister of the Calvary Baptist Church, of this city, a very dear friend of Dr. Marshall's. Dr. Cranford will have to leave us in a few minutes. As Dr. Marshall lay ill Tuesday morning, realizing that he could not expect to be at the Senate today, he suggested that Dr. Cranford might take his place. And Dr. Cranford will carry with him the prayer which Dr. Marshall had already prepared for the Senate today.

Seated next to Dr. Cranford is James D. Bryden, our own director of Christian education. The others are Harry H. Bryan, from Bessemer, Ala., a very dear friend of Dr. Marshall's from college days, seminary days, and onward. John S. Land, who is the minister of the St. Charles Avenue Presbyterian Church in New Orleans, in whose church Dr. Marshall had conducted services every spring for many years, and who became a very dear friend. Ralph K. Merker, representing the Presbytery of Washington City, a fellow Presbyter, highly regarded and loved. John W. Rustin, minister of Mount Vernon Place Methodist Chruch, another very dear friend and intimate of our departed leader. Edward H. Pruden, minister of the First Baptist Church of this city, also a close intimate of Dr. Marshall. One other name should be mentioned, that of Rev. John A. Wood, the father of Mrs. Marshall, who is seated with his daughter. We have with us also a special commission from the Washington City Presbytery appointed to attend this service: Mr. James Sherier, the moderator; Dr. Earl F. Fowler, Dr. J. Hillman Holister, Dr. John B. Kelley, Dr. Edward L. R. Elson, Dr. R. Paul Schearrer, Rev. Walter F. Wolf, and Mr. Wilbur LaRoe, Jr.

Mr. MERKER. I read from the Old Testiment:

"Behold, a King shall reign in righteousness, and princes shall rule in judgment.

"And a man shall be as a hiding place from the wind, and a covert from the tempest; as rivers of water in a dry place, as the shadow of a great rock in a weary land.

"And the eyes of them that see shall not be dim, and the ears of them that hear shall hearken.

* * * * *

"The deer is panting for the stream, and, O God, I pant for thee. I am athirst for God, the living God; when shall I reach God's presence? Day and night I have lived on my tears, taunted all day with, 'Where is your God?'

"Why are thou downcast, O my soul? Why so despairing? Wait, wait for God; I shall again be praising him, my saving help, my God.

* * * * *

"Many a trial sore hast Thou made us suffer, but Thou wilt revive us once more and raise us from the depths; Thou wilt add to our honour, and comfort us once more.

* * * * *

"Though I must pass through the thick of trouble, Thou wilt preserve me; Thy hand shall fall upon my angry foes, Thy right hand rescues me. The Eternal intervenes on my behalf: Eternal One, Thy kindness never fails, Thou wilt not drop the work Thou hast begun.

* * * * *

"All the days of my life were foreseen by Thee, set down within Thy book; ere ever they took shape, they were assigned me, ere ever one of them was mine. O God, what mysteries I find in Thee! How vast the number of Thy purposes!

* * * * *

"As a father pities his children, so the Eternal pities His worshipers; He knows what we are made of, He remembers we are dust.

* * * * *

"The Eternal is gracious and pitiful, slow to be angry, very kind; the Eternal is good to all who look to Him, and his compassion covers all that He has made."

May these words of Holy Scriptures abide in all our hearts.

Mr. BRIDGE. Dr. Cranford will at this time lead us in prayer.

Dr. CLARENCE W. CRANFORD. Let us pray together:

Our heavenly Father, we do not find it easy to put our thoughts into words, or even to speak at a time like this. We do not pretend to know why one who seems to have been needed so much here should have been taken so soon. Our temptation is to rebel and to ask of Thee why. But then we remember Thy love and Thy goodness, as they were revealed to us in Jesus Christ Thy Son. We remember Thy compassion as it was revealed in His tears at the grave of Lazarus. We remember Thy power over death as it was revealed in His glorious resurrection. And we hear again His words, "I go to prepare a place for you." We know that in Thy providence even this shall work to Thy glory and to the furtherance of Thy kingdom.

We thank Thee for what Peter Marshall taught us. In his face, we saw something of the look of Jesus. In his passion for the kingdom, we felt something of the passion of the Saviour. In his manliness and yet in his gentleness, we felt something of the Master's touch. We know he is in heaven, because heaven was in him as he lived amongst us. Grant, our Father, that we may live nobler lives and dedicate ourselves anew to Thee and to our fellowmen, because we have known and loved Peter Marshall and because we know and love Peter's Christ, in whose name we pray. Amen.

The Choir sang:

"O rest in the Lord, Wait patiently for Him,
And He shall give Thee Thy heart's desire.
O rest in the Lord, Wait patiently for Him
Commit thy way unto Him and trust in Him
And fret not Thyself because of evildoers,
O rest in the Lord, Wait patiently for Him."

Dr. EDWARD H. PRUDEN. In the New Testament we find this Scripture:

"Let not your heart be troubled: ye believe in God, believe also in Me.

"In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you.

"And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also * * *

"I will not leave you comfortless: I will come to you.

"Yet a little while, and the world seeth Me no more; but ye see Me: because I live, ye shall live also * * *

"Peace I leave with you, My peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid.

"Ye have heard how I said unto you, I go away, and come again unto you. If ye loved Me, ye would rejoice, because I said, I go unto the Father: for My Father is greater than I."

Dr. JOHN W. RUSTIN. Hear these words from the New Testament:

"For the sons of God are those who are guided by the Spirit of God. You have received no slavish spirit that would make you relapse into fear; you have received the Spirit of sonship. And when we cry, Abba! Father! it is this Spirit testifying along with our own spirit that we are children of God; and if children, heirs as well, heirs of God, heirs along with Christ—for we share his sufferings in order to share his glory.

"Present suffering, I hold, is a mere nothing compared to the glory that we are to have revealed. Even the creation waits with eager longing for the sons of God to be revealed. For creation was not rendered futile by its own choice, but by the will of Him who thus made it subject, the hope being that creation as well as man would one day be freed from its thraldom to decay and gain the glorious freedom of God's children. To this day, we know, the entire creation sighs and throbs with pain; and not only so, but even we ourselves, who have the Spirit as a foretaste of the future, even we sigh deeply to ourselves as we wait for the redemption of the body that means our full sonship. We were saved with this hope ahead. Now when an object of hope is seen, there is no further need to hope. Who ever hopes for what he sees already? But if we hope for something that we do not see, we wait for it patiently.

"So too the Spirit assists us in our weakness; for we do not know how to pray aright, but the Spirit pleads for us with sighs that are beyond words, and He who searches the human heart knows what is in the mind of the Spirit, since the Spirit pleads before God for the saints.

"We know also that those who love God, those who have been called in terms of his purpose, have his aid and interest in everything. For he decreed of old that those whom we predestined should share the likeness of his Son—that he might be the first born of a great brotherhood. Then he calls those whom he has thus decreed; then he justifies those whom he has called; then he glorifies those whom he has justified.

"Now what follows from all this? 'If God is for us, who can be against us?' The God who did not spare his own Son but gave him up for us all, surely He will give us everything besides! Who is to accuse the elect of God?"

The Choir sang:

"God is ever beside me, When I greet the sun.
God is ever beside me, Tho' my task be done.
Wand'ring down the road of life, Tho' I sometimes stray,
God is ever beside me, showing the way.

"Give me the courage to carry on!
Give me the strength I need!
Let not my footsteps falter or lag,
May I be kind in word and deed.
"In my heart I hear His Voice,
'Share thy bread with others.'
In my heart I hear His Voice,
'Call all men brothers.'

"God is ever beside me, His hand doth me sustain,
Ever brighter seems the road Thru His Glory and Love Divine,
For God is ever beside me
Peace now is mine."

REV. HARRY H. BRYAN. On the day after Peter Marshall made his surrender to God, and decided that at all costs he would obey the strong Voice he had known for a long time, and prepare himself for the gospel ministry, he traveled in my father's car to begin his first year in the theological seminary. I was driving the car, going for my last year in the seminary. My father was to make the opening lecture. Peter was fresh in his conviction of absolute surrender to what God wanted him to do, no matter what the cost. He was going with faith that God had prepared a way for the first steps to be taken. Bubbling over with that confidence, he made a worthy counterpart to my father's steady faith of many years serving God. And that half-day ride 20 years ago started a deep and abiding friendship which I can treasure throughout all eternity. We studied and played and sang and preached together. God used my friend, and gave to him a joy in studying that proved that he outstudied us all; a joy in singing because he outsang us, for he sang from his heart; and a joy in playing, because he abandoned everything when he could play. The truth is he outprayed and outpreached us all. Why? Because he had sought and found delight in the doing of God's will. He believed that righteousness should be preached. And he knew God honored his unrestrained lips. God held not back His tender mercies from him.

The state of his life, as of this day, is far different from the state of his life when he first surrendered. But that is always the case when in the center of God's will we find ourselves so close to Him, so close to the Christ whom we know that we can never be far away. God's loving kindness did preserve him for life and service. I have believed so surely that your friend and mine has had the hand of God upon him that I could never think that that hand was withdrawn now, as we realize that his service is no longer here. All that he learned and then taught us about God by his vital, fresh approach to all of the questions of life is not a dream. He has inspired us too deeply and pushed us to new frontiers of sacrifice and courageous living. We can never call it something uncertain. Too much has come out of us in faithless sin and unbelief. Too much has gone into us in victory over sin and steadfast assurance for us ever to be the same. It is that our friend, this prince of God, has received a new and wider sphere of life and service. He is free for such activity as will delight his soul.

It would be untrue for anyone to question God at this hour, to question the fitness of a will that taught Peter through those days to follow it when he knew not what the day might bring forth—a Sunday-school class here, a sermon there, a friend yonder. It would be untrue to all of the witness in song that he gave with his seminary mates, as in the buoyancy of Christian testimony he told to great audiences the things that led him into the doing of God's will. It would be untrue to all of those who prayed for him and with him, from his youth upward, that they, too, might know the will of God. It would be untrue to the very church he served, for that church or any of the other places who have known him as a minister to say that what he said was not for us. For it was, and it will ever be for those who know that God's will must be triumphant in all of life, because God used the things that Peter Marshall committed unto Him against that day.

How grateful we can be, whether we be family, whether we be of the friendly circle of this group or that, how grateful we can be that the triumph of our faith and life in our God can be so strong that we cannot doubt God's tender mercy who through life has been his guide and our guide. May it constantly be in the hearts of those who leave here that this is not a time for questioning. Rather let us resolve that Peter's God be our God, even unto death.

Dr. JOHN S. LAND. As I sat in the train on the way to Washington, one verse of Scripture has been in my heart as being an expression of our friend's faith and life, and one upon which I should like to begin my remarks: "This is the victory which overcomes the world, even our faith." During these years when I have lived close to the one you loved, I have been impressed, and his friends in my part of the country have been impressed, that his faith was a radiant faith. Yea, I should say it was a robust faith.

Peter Marshall was sincerely the follower of the gleam. And I believe he is calling us to follow that same gleam. He was a man who, while sailing under sealed orders, knew the Captain and the Pilot, and was glad to entrust to His nail-pierced and loving hands the guidance of his life. So he has crowded into what might be called a brief ministry a richness, a fullness, a power, and a blessing of God which can thrill us and glorify his God and ours.

What I should like to say to myself again and to you is that in this world, being finite, being human, we can never answer and should never answer all life's questions. There are what Peter called the reticences of God. Within this hour of our inevitable wonderment, and yet not questioning or rebellion, we shall realize that he knew that the God who called him from his native land, prepared the way, brought him to this good land, so marvelously raised up friends to him, and led him forward, that God, who gave him all these evidences of grace and guidance, has not deserted him.

So we come, dear Christian friends, to the place where it is faith and not sight, absolute, unconditional surrender to the Christ of the Cross, who at 33, we believe, held out His hands in infinite love to embrace the world. That Saviour Peter loved. That Saviour Peter followed, and that Saviour he has gloriously proclaimed. The challenge of this hour—because this is a challenge—is that we consecrate ourselves and dedicate ourselves to the Saviour he followed and loved and served. He who was so courageous, outspoken, undiscouraged, he who used his marvelous gifts, his wizardry of words, his passion of deep conviction, calls us now to take the torch of truth from his hands and the word of life from his lips, in our own way, and multiply him by the grace of God through our faith and our service, shall I say hundreds of thousands, yea, millions of times and places, in this Nation and in our world. I say it reverently and humbly, but sincerely, perhaps no man has been known in these recent years for his insight and his courage and his ability to bring God to us and us to God, by his prayers in the Senate, by his ministry over the air, by his visiting all parts of our country, as this man of God. So let us today form a covenant, and let us enter into a new compact with him and with his God, that we shall carry on and prove by our faith that we, too, have the victory, and that we, too, are following in the train.

I cherish the privilege now of concluding these simple remarks, to challenge you and comfort you into a new dedication, with two extracts from his little book which many of you have, Behind the Curtain. As I read it coming up here, I felt a new meaning, a new power, and a new nearness to things spiritual:

"I stated some of my own personal convictions as to what we shall do when the clock strikes and we depart from this life. I find comfort in the belief that in the glorious life beyond we shall have the joy and the thrill"—such characteristic words of his—"of fulfilling deferred ambitions, and to the glory of God, doing the things that we had the urge to do and were never able to accomplish here. The gifts that God gave to us for cultivation here will surely be used there. Man's chief end, as the Shorter Catechism states, 'is to glorify God and to enjoy Him forever.' That will be our chief occupation there—praising and serving and glorifying God. Hence, the need for us to learn how to worship and to become familiar with the things of the Spirit."

And these final words:

"That proof is private, personal, intimate, spiritual, beyond the compass of speech, too sacred, too vast, too fragile to be poured into the cold, unsympathetic molds of human language. It is an intuitive thing that causes us to burst forth in the rapture of faith"—remember those words—"and say, 'I know that my Redeemer liveth.' And even as we say it, we thrill to hear His whisper to us, to our poor, bruised, and broken hearts, 'Because I live, ye shall live also.' "

"I know not how that Bethlehem's Babe
Could in the God-head be
I only know the Manger Child
Has brought God's life to me.

"I know not how that Calvary's Cross
A world from sin could free
I only know its matchless love
Has brought God's love to me.

"I know not how that Joseph's tomb
Could solve death's mystery
I only know a living Christ
Of immortality."

Now reverently and for a moment in silence, let us pray:

O God, we adore Thee as our Creator who hast made us in Thine own image, and breathed into our bodies the spirit of life. We adore Thee as our Redeemer, the "God who so loved the world that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life." We adore Thee, O God, as our Preserver, as the One whose fatherly love and heavenly wisdom we can trust all of life's way. May we know as never before that Thou art eternal, unchangeable in Thy being, wisdom, power, holiness, justice, goodness, truth, and love. May we come like little children today, and say in our Gethsemane with our Master, in dynamic dedication to the Father's eternal will, "Father, not our wills, but Thy will be done."

In this commitment of ourselves to Thee may the angels of God come to us, as to him, and give us spiritual strength and victory. May we gather, O God, in deep devotion and high hopes, at the foot of the cross, and learn again the ultimate meaning of life and the final victory of grace. May we know that Christ suffered with us and for us; that He has borne our sins and carried our sorrows; that He has taken away, yea, abolished death. And now standing by the open tomb, may we hear his words of encouragement and victory: "I am the resurrection and the life. He that believeth in me, though he were dead, yet shall he live. And whosoever liveth and believeth in me shall never die."

Our Father, we thank Thee for the faith and the consecration of those nearest and dearest to Thy servant. Grant them continued grace to dedicate their sorrow to Thee, and may Thy work of comfort and blessing be poured out richly in them and upon them. May all those, O Lord, who knew and loved Thy servant be challenged and inspired as never before to live life richly and deeply, to walk worthy of the vocation wherewith each is called. Take charge of us now and for all the days ahead, enabling us like him so to live, so to trust, so to serve that when our summons comes to join the innumerable caravan we may receive from God, our Father, our King, and our Judge, this welcome, "Well done, good and faithful servant, enter thou into the joy of thy Lord." Amen.

The choir sang:

"The Lord's my Shepherd, I'll not want;
He makes me down to lie
In pastures green; He leadeth me
The quiet waters by.

"My soul He doth restore again;
And me to walk doth make
Within the paths of righteousness,
E'en for His own name's sake.

"Yea, though I walk in death's dark vale,
Yet will I fear no ill;
For Thou art with me; and Thy rod
And staff me comfort still.

"My table Thou hast furnished
In presence of my foes;
My head Thou dost with oil anoint,
And my cup overflows.

"Goodness and mercy all my life
Shall surely follow me;
And in God's house forevermore
My dwelling place shall be. Amen."

Mr. JAMES D. BRYDEN. The congregation will please rise and remain standing.

May the God of peace that brought again from the dead our Lord Jesus, that Great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do His will, working in you that which is pleasing in His sight, through Jesus Christ, to whom be glory forever and ever. Amen.

The choir sang:

"How lovely is Thy dwelling place,
O Lord of Hosts, Thy dwelling place,
O Lord of Hosts.
For my soul, it longeth, yea, fainteth,
For the courts of the Lord;
My soul and body crieth out, yea, for the Living God.

"Blest are they that dwell within Thy house;
They praise Thy name evermore, they praise Thee.
How lovely is Thy dwelling place."

PRAYERS BY THE CHAPLAIN OF THE SENATE, REV. PETER MARSHALL, D. D., DURING THE EIGHTY-FIRST CONGRESS

Monday, January 3, 1949

The Chaplain, Rev. Peter Marshall, D. D., of Washington, D. C., offered the following prayer:

O Lord our God, look with favor upon the Members of the Senate, and bless each one of them according to his needs. May they be aware of a mandate higher than that of the ballot box, a mandate from Thee, to legislate wisely and well. We believe that Thou wilt accept these men as representatives of the people, and art willing to work in them and through them that they may become instruments of Thy will. Grant that they be willing to have it so, through Jesus Christ our Lord, who taught us to pray together:

"Our Father which art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done in earth as it is in heaven. Give us this day our daily bread. And forgive us our debts as we forgive our debtors. And lead us not into temptation, but deliver us from evil: for Thine is the kingdom, and the power, and the glory, for ever."

Amen.

Wednesday, January 5, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Our Father in Heaven, give us the long view of our work and our world.

Help us to see that it is better to fail in a cause that will ultimately succeed than to succeed in a cause that will ultimately fail.

Guide us how to work and then teach us how to wait. O Lord, we pray in the name of Jesus, who was never in a hurry. Amen.

Thursday, January 6, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

In this prayer, O God, we come to Thee as children to a loving father. We pray that Thou wilt help our Senators to face the problems that confront them, not alone by giving them wisdom greater than their own, but also by relieving their minds of all other anxieties. May they now turn over to Thee loved ones who need the healing touch of the Great Physician, with every confidence that Thou wilt hear our prayers of intercession, and as we do the work that is before us, Thou wilt do Thy work of healing in those whom we love. May Thy help be so plain and practical in our family affairs that we shall come to believe strongly in the help Thou dost offer in our national affairs.

Deliver Thy servants from personal worries, that they may be able to give themselves wholly to the challenges of this hour. In Jesus' name we ask it. Amen.

Monday, January 10, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Our Father, since we cannot always do what we like, grant that we may like what we must do, knowing that truth will one day be vindicated and right in the end must prevail.

Bless Thy servants this day and keep them all in Thy peace. Amen.

Thursday, January 13, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Stop us, O God, for a minute of prayer.

Stop our anxious minds from wandering, and our hearts from desiring anything but to know Thy will.

Let us stand at attention before Thee and hear what Thou hast to say to us.

We believe that Thou canst tell us not only what to do, but also how to do it.

If it needs making up our minds, Thou who didst make our minds canst show us how to make them up.

If it needs changing our minds, Thou canst work that miracle, too.

Speak, O Lord, and make us hear, for Jesus' sake. Amen.

Monday, January 17, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Help us, O God, to treat every human heart as if it were breaking, and to consider the feeling of others as we do our own.

Help us to be gentle, and to control our tempers that we may learn to love one another.

Give us the grace so to live this day, in the name of Jesus, who loves us all. Amen.

Tuesday, January 18, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Our Father in heaven, once again we offer unto Thee our grateful thanks for Thy mercy that cared for us during the night and brought us safely to this hour.

Today is the tomorrow we worried about yesterday, and we see how foolish our anxiety was.

Teach us to trust Thee more completely and to seek Thy help in all that we have to do, through Jesus Christ, our Lord. Amen.

Thursday, January 20, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

God of our fathers, in whom we trust, and by whose guidance and grace this Nation was born, bless the Senators of these United

States at this important time in history and give them all things needful to the faithful discharge of their responsibilities.

We pray especially today for our President, and also for him who will preside over this Chamber.

Give to them good health for the physical strains of their office, good judgment for the decisions they must make, wisdom beyond their own, and clear understanding for the problems of this difficult hour.

We thank Thee for their humble reliance upon Thee. May they go often to the throne of grace, as we commend them both to Thy loving care and Thy guiding hand. Through Jesus Christ our Saviour. Amen.

Monday, January 24, 1949

The Chaplain, Rev. Peter Marshall, D. D., offered the following prayer:

Today, O Lord, as the Members of the Senate pause in this moment of prayer, we unite our petitions for Thy blessing upon Thy servant who, in his new capacity, presides over this body. We thank Thee for his long years of devoted public service, for the testimony of his life and the inspiration of his example.

May he never feel lonely in this chair, but always be aware of Thy hand upon him and Thy spirit with him.

When differences arise, as they will, may Thy servants be not disturbed at being misunderstood, but rather be disturbed at not understanding.

May Thy will be done here, and may Thy program be carried out, above party and personality, beyond time and circumstance, for the good of America and the peace of the world. Through Jesus Christ our Lord. Amen.

Thursday, January 27, 1949

The VICE PRESIDENT. Prayer will be offered by Dr. Clarence W. Cranford, minister, Calvary Baptist Church, of Washington, D. C.

Dr. CRANFORD. The prayer I shall offer this morning was written for this session by Dr. Peter Marshall, as one of the last things he did before he died.

PRAYER

Deliver us, our Father, from futile hopes and from clinging to lost causes, that we may move into ever-growing calm and ever-widening horizons.

Where we cannot convince, let us be willing to persuade, for small deeds done are better than great deeds planned.

We know that we cannot do everything. But help us to do something. For Jesus' sake. Amen.

The Need for Stronger Rent Control

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "The Need for Stronger Rent Control," which I made yesterday in behalf of Senate bill 888 before the subcommittee on housing and rents of the Senate Banking and Currency Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE NEED FOR STRONGER RENT CONTROL

There is not a Senator on this committee, whether he favors my bill or some other bill on rent control, or whether he thinks rent control should be allowed to die on March 31 of this year, who has not publicly conceded the existence—the continued existence—of an acute housing shortage in America. When we look at the housing situation, we know we are not dealing with a theory, we are dealing with an alarming actuality.

The housing shortage is not something resulting just from the war. It preceded the war by many years. As long as our level of national income remained low, the housing shortage which we know existed was not necessarily visible before the war because those people who could afford decent places in which to live could find them. But many of our people lived in slums, in chicken coops, even, in some cases with which I am familiar in my own State, in abandoned coke ovens and in caves.

The level of national income and the level of personal income have each risen substantially in the years since the depression. The first desire of those whose incomes began to rise was for a decent place in which to live and to raise their families in what we term the American way.

We can end the housing shortage and thus end the need for rent control today by having a good rip-roaring depression and sending the people back to the coke ovens and the caves and the chicken coops, doubling the number of families living in the slums, foreclosing on the veterans who bought new homes with high mortgages and kicking them out, and letting those who have the money have their pick of accommodations in America. That's one solution.

That is not the solution the United States of America is going to follow. It is a solution which is no longer considered a practical solution in America. We are not going back to those days—ever—if the people of the United States have anything to say about it, and they have a lot to say about it.

Since it isn't a practical solution, let's forget that one.

There's another solution, and it is the one which this administration and those of us who support this administration, and also the majority of the American people regardless of their political affiliation, favor and are seeking to accomplish. That is the launching of a simply gigantic home-building program in this country which will assure adequate shelter for every American at a price he can afford. This committee has already done something about that. This committee has already sent out to the floor of the Senate a great, new housing bill which has bipartisan support and which I am sure will pass. It provides for nearly a million new public housing units over the next 6 years. This committee will soon, I am sure, be reporting out further legislation to take care of the vast segment of the population whose incomes make them ineligible for public housing but unable to afford new housing at present prices and present financing methods.

This administration is going to do everything it possibly can do—and that's a solemn pledge which nearly all of us in our party in the Congress are committed to by conviction—to end this housing shortage in America as rapidly, as efficiently as possible under private enterprise. We are going to get housing legislation through in this Eighty-first Congress.

That legislation is going to help to solve the housing shortage and end the need for rent control.

But where does that leave us now? We don't have enough housing because most Americans can afford to pay a decent rent for a decent home and the homes aren't available. That's why we have rent control in time of peace.

Rent control brings no new housing on the market. That's conceded. Rent control, in the absence of any other machinery for increasing the housing supply, tends to be self-defeating. Let's admit that, too. Much that was said in the Eightieth Congress about the unfairness of rent control, in keeping the landlord under control while many other segments of the economy were given what amounted to a license to charge whatever the traffic will bear, was also true.

It was true because the last Congress refused to take any steps whatsoever to curb inflation in any direction whatsoever, except in regard to rents, and the net result of its efforts there was discriminatory in the extreme because it kept most of the landlords under control, but gave the same license to practice inflationary gouging to certain groups of property owners who were removed from controls and allowed to charge what the traffic will bear.

Furthermore, the last Congress gave us no effective legislation to meet the housing shortage, and so the pressure for housing made it possible for the decontrolled owners to push their rents up and up and up, making even more glaring the spread between controlled rents and uncontrolled rents, the discrimination against the law-abiding landlord kept under controls.

This matter of rent control constitutes one of the tests of the Eighty-first Congress and its sincerity in carrying out campaign pledges.

If we do not pass a good rent-control bill, one which ends the glaring inequities of the two bills passed in 1947 and 1948, one which treats all owners of rental property in housing-short areas the same way by the same rules, and with the same rights, then we will have failed in that test.

My bill, S. 888, is designed to fulfill our pledges for good legislation. It has been described as a tough rent-control bill. In Tulsa, full-page newspaper advertisements denounced it as the slavery bill and distorted and misleading descriptions of it and of its provisions were widely circulated in an attempt to launch a psychological war against any and all rent control.

Before I get into the provisions of S. 888, I want to point out right here and now the group upon which such a bill would be tough:

It would be tough on the black marketers and the gray marketers in vacant rental property by applying to them the same laws which are applied to all the decent, law-abiding landlords.

It would be tough on the gangster landlord who holds up his tenant for side payments and bonuses and other blackmail, using the threat of eviction as ruthlessly and as cruelly and as criminally as a gangster uses a gun.

It would be tough on them only to the extent of making them comply with the law or suffer penalties for violating the law. At present just about the only penalty such a gangster would face is the penalty of having to restore the amount which he stole from his tenant, make restitution, that is. The present act treats the gangster landlord the way any other gangster would be treated if all that was required of him was to pay back the money he had stolen. The present act is an invitation to steal, hoping you won't get caught, but knowing that if you are caught, you lose nothing except what you had stolen.

My bill would be tough on owners who have managed to have their property decontrolled for one reason or another in the sense that it would eliminate their possibilities of making a killing out of their property and restrict them to a reasonable rental and a reasonable profit. Is that so tough?

My bill would be tough on landlords who seek to evict tenants capriciously or vengefully, in either event, enabling them to seek to rerent the property at any rental they can obtain in a housing-scarce market. It would not be tough on the great mass of landlords who do not seek to evict tenants just for the fun of it and who are able and would con-

tinue to be able to repossess their properties for legitimate purposes.

It is the present rent-control law which is a tough law. It is tough on the veteran who finds a vacant house or apartment for rent only to discover that it is decontrolled and that the rent on it is double or treble, in some cases, what a controlled rent would be for the same accommodation.

It is tough on the tenant who has a gangster landlord and finds that he must either pay a side payment or a bonus or suffer loss of services or be kicked around otherwise, with the alternative only of getting out or getting evicted.

It is exceedingly tough on the fair-minded, patriotic, decent landlord, particularly the small landlord, who sees what bonanza rents other property owners are obtaining from their tenants because they are uncontrolled through one technicality or another of the decontrol laws passed by the Eightieth Congress. The controlled landlord, particularly the small landlord, has a right to feel that he was discriminated against when so many other property owners were decontrolled and he was kept under control. He has a right to feel resentful, he has a right to feel that he, alone, has been required to bear the burden of combating inflation, as that burden was distributed—or, let us say, concentrated—by the present Rent Control Act.

The last Congress had every intention, I know, of ending rent control; first in June of 1947 and then again in February of 1948. In 1947 the Congress was proceeding ruthlessly to kill off every possible Government control over inflation which it could. But when it came to rents, the majority party, after doing a lot of threatening, finally had to agree with us to continue rent control and did so for 8 months. It did it grudgingly, and it was stated definitely on the floor of the Senate when the matter was up by the then chairman of the Banking and Currency Subcommittee, in response to a question from me, that the Housing and Rent Act of 1947 extending rent control for only 8 months would be the last rent-control extension. This prophecy, of course, turned out to be most optimistic.

Although it did a lot of damage in that bill to effective rent control, the Congress in 1947 didn't have the nerve, didn't have the guts, to kill rent control. It recognized, however reluctantly, that the end of rent control at that time would cause turmoil and chaos and would unloose such hardship and suffering on the American people at a time of rising living costs as to be catastrophic.

Again last February many Members of the then congressional leadership were again threatening an end to rent control, citing the hardship of the small landlord (for whom they did nothing and cared less). In February of 1948 there was a sudden momentary drop in the commodity markets. The then chairman of the House Banking and Currency Committee announced that this drop in the commodity markets heralded a depression which, he indicated, was probably under way, and thus, he said, rent control would no longer be necessary in 30 days or so. Of course, that was superoptimistic, for the Congress discovered again in 1948, particularly with an election coming up, that an end to rent control was wishful thinking of the most fantastic variety. So controls were extended over most landlords.

I recount this history because I think it urgent that we recognize that the last Congress, with all of its crocodile tears for the small landlords, with all of its loud protestations against any kind of anti-inflation controls, any kind of Government interference or regimentation, found it impossible to end rent control or to authorize any blanket increase in rents or to provide for any slick formula for fair return, or to decontrol each month 5 percent of all the housing under control, or to decontrol areas where there was a vacancy ratio of houses for sale as well as those for rent of 1 percent or any percent. All of these proposals were put forward at one time or another by Members of the leadership in the last Congress handling rent-control legislation or taking a hand in it.

Now, the Eightieth Congress, as I say, refused to do these things.

What in the world makes anyone think that the Eighty-first Congress, elected to serve the interests of all the people, elected to halt this still continuing inflation in housing in America, elected to bring sanity back to the American economy, elected to look out for the little fellow, what in the world, I repeat, makes anyone think that such a Congress should proceed to wreck rent control?

Doesn't the real-estate lobby know what hit them on November 2, 1948? Doesn't the real-estate lobby recognize that rent control was one of the big issues of this campaign, and so was housing? Doesn't the real-estate lobby know that they have so damaged their prestige in the public eye in America by their selfish, vicious attacks on decent housing legislation and recent rent-control legislation that their opposition to any measure at this point is considered prima facie evidence among the great mass of the American people that it is a good measure?

The real-estate lobby started even during the war to try to murder rent control and since then it has bent relentlessly on that same determination. Not once in all that time has the real-estate lobby come forward with any reasonable proposal for improving the administration of rent control, for making for better enforcement so that those who have evaded the act can be punished as a further protection for those who have conformed to it.

And why hasn't the real estate lobby come forward with any such proposals? The answer to that is simple. The real estate lobby wants to kill the patient and make a corpse out of him. They have no desire to see rent control work fairly. Their support for certain proposals made here in the last Congress in connection with rent was based on a desire to make it so unfair and so unworkable and so discriminatory as to hasten the day when people might rise up in disgust and say this thing is worse than no rent control act.

I sometimes believe that in its tactics on rent control, the real estate lobby has adopted the techniques of the Communist Party. Cause confusion, cause turmoil, throw gimmicks in the works, sabotage every worth-while proposal, and let's have dog eat dog. The Communist Party works that way. Every worth-while thing that the Communist Party supposedly stands for it has inevitably tried to undermine and sabotage in order to show that free, democratic, representative government can't work and can't serve the people. The people, then, are supposed to turn to communism in despair. The real estate lobby has used that tactic and that technique in trying to prove that rent control can't work and won't work in the hopes that we will then turn to them for a solution of this grievous housing shortage.

The real estate lobby solution for the shortage is a form of rationing. They would abandon all rent controls and force people who are now taking up too much of the rental housing space available to give up this excess space or to move into smaller accommodations or to double up with other families. Testimony will no doubt be given here by real estate representatives that there is more housing space available today per person than there was before the war. I have seen such statements before. The real estate lobby says, just redistribute the space, and all our worries are over.

This is a very interesting suggestion. How is it suggested that we carry it out? Is the Government to ration space? Oh, no.

The space would be rationed by price. Just raise the rents on the families which are taking up too much space and force them out and make that space available for others.

I think it's pretty generally recognized that families in the higher income levels are usually smaller than families in the lower income levels. It is also generally recognized that many landlords prefer to rent to families without children or without small children.

So what we would have here under this proposal for rationing living space by price, by ability to pay, is that the medium or low-income families would be priced back into the slums or from the slums into the chicken coops and the higher income families would be able to spread out at will—to the extent that their incomes would permit it.

I certainly will join in no attempt to destroy the standard of living of the American people at a time of acute shortage in housing by forcing people into the slums, forcing families already doubled up to double up some more. Census Bureau figures show that from April of 1940 to April of 1948, despite an increase in our housing supply, there are now 35 percent more doubled up married couples than there were 8 years ago.

I think we can all assume that very few of these families are living doubled up out of choice. Families like privacy. They like their own home for their very own. Few people will practice thrift in preference to privacy. Privacy is primary in family life. So we can assume that most of the doubled up couples are living that way out of sheer economic necessity as related to the housing shortage.

There are new apartment houses going up all around us and new homes. At present building prices and at the present prevailing theories of fair return, the new homes and the new apartments are beyond the reach of most of our people. Until we can bring down building costs we should have control over the prices charged for rental accommodations in shortage areas.

I have talked here about the discriminations against the small landlord, particularly through letting so many other property owners out from under control while keeping him under control. I have told how the last Congress expressed all kinds of sympathy for the small landlord, but ended up admitting abjectly that most landlords would have to be held under continued control. I am getting a great deal of mail from small landlords and I know other Senators are, too. The small landlord has been enlisted by the real estate lobby in a crusade against rent control. From the mail I get and from the attempts I have made to answer it, and from the responses I get to those replies, I have come to the conclusion that there is absolutely no way that we can satisfy the complaints of the small landlord against rent control except by ending rent control as of this month.

I have written to many of these small landlords explaining to them their rights under the present law for obtaining rent increases for a variety of causes and cost factors and hardship factors. I have told them how to go about applying for these increases if they are entitled to them. I have encouraged them to file for rent increases in those cases where the facts as they report them to me would indicate they are entitled to them.

In instance after instance the small landlord who had written me originally protesting against the unfairness of rent control and to whom I had sent a reply outlining his rights, sent me a further letter saying in effect that the increase wasn't worth bothering with and that all he wanted was an end

to rent control, get him out from under, get him free, give him back his traditional rights to manage his property as he sees fit. He further pointed out in case after case that even if he got every rent increase he might be entitled to, he still wouldn't be making as much as he could under a free economy, he wouldn't be making as much as his neighbor who was decontrolled, he wouldn't be making as much as other landlords who were evading rent control and violating it and getting away with it.

The small landlord has about as great a stake as anyone could have in a sane American economy where there is full employment and full opportunity for our citizens to raise their standards of living. The small landlord wants his tenant to be able to pay his rent. The small landlord knows that during the depression he had to carry his tenants for months and perhaps years because the tenant could not afford the rent. We do the small landlord no favor by telling him to join now in the impoverishment of the American people by great increases in rent when we know that just that sort of inflation could speed us into a depression. We are just now beginning to get some stabilization in some items, a decline in some others such as food, and, although inflationary pressures are still present in the economy, I think we can work out of it without the sort of collapse which used to follow a boom. However, a sudden spurt in the price of so basic a commodity as housing, which takes up such a large part of the average family budget, would be disastrous and would certainly lead to unstoppable pressures for fourth and fifth round wage increases.

The gains of the landlord under those circumstances would be transitory indeed; the damage to his future level of living could be extremely severe. The damage to America could be almost fatal to our hopes of achieving a decent world.

In connection with the economic status of property owners under rent control, and particularly the small property holder, there are two diamterically opposed schools of thought as to what has actually happened to them. Most of the property owners, of course, tell us that they have been squeezed against the wall by rent control. Representatives of tenant interests assert that many property owners are better off today than they were before or during the war, as far as net return is concerned.

The Housing Expediter has reported figures showing that, on an average, net incomes of property owners have risen. Unfortunately, however, the figures are based largely on investigations made up to 1946.

When you come down to it, the facts appear to be that no one really knows the facts. The Census Bureau and the Bureau of Labor Statistics do some sampling in this field, the Housing Expediter does a little and the property owners do their own sampling, and the net result is a lot of figures which are not conclusive.

That brings me to a proposal which I would like to make to this committee. I suggest that instead of waiting a year or 2 years or 15 months of 8 months or whatever the case may be from one extension of the rent control law to the next to try to find out in a few brief hearings what has been happening under rent control during the preceding period, and receiving mostly conflicting testimony from a limited number of spokesmen for each of the several points of view concerned in this legislation, that this committee, perhaps in conjunction with the House committee, set up a staff for a continuing investigation into all phases of this complex problem, a staff qualified to advise the committee on what is actually happening in rent control, a staff supplied with investigators who can go into the various trouble spots and make an independent survey of the situation, and arm this committee with all of the facts as they exist.

This staff study should not necessarily be designed merely to criticize and find fault with the administration of the act, which is what many special investigating groups of the Congress consider their main function to be, but rather to provide this committee of the Senate with such factual information as it needs throughout the year to know whether the rent-control laws we enact are adequate to inadequate, too severe or too lax, effective or ineffective; to know whether they require strengthening and in what particulars.

My bill, S. 888, provides, incidentally, for the creation of a 15-man advisory committee, representing tenants, landlords, and the public, to work with the Housing Expediter or Rent Administrator and advise him on administration and on policy and enforcement. I highly recommend the creation of such a group for somewhat similar reasons to those I have already cited for the creation of a Senate staff group on this problem.

These two groups, in their activities, could, I believe, suffice to answer any of the criticisms leveled against the proposal in my bill to extend rent control for 27 months instead of the customary 1 year, or in the case of the bill reported out of the House Banking and Currency Committee the other day, 15 months. The recommendation for a comparatively short extension is based on a desire to give Congress an opportunity for another look at rent control in the near future in case there should be bad features in the bill we enact or in case it should be determined that rent control might not be necessary 15 months from now.

I call the attention of the committee to the fact that although my bill extends rent control for 27 months, it provides that it can be ended at any time prior to that by action of the Congress or by action of the President, each independent of the other.

Obviously, the right of the Congress to modify the law at any time in that 27-month period is also present. This custom of extending the law for 1 year has given rise to a condition under which defects in the law which may become immediately apparent are seldom corrected until the deadline has arrived for the enactment of a new act to take the place of the one which is expiring. By extending the law for 27 months, we remove automatically any reason the Congress may have to procrastinate in meeting a specific problem on rent control. The so-called cooperatives racket in the District of Columbia would probably have been met head-on some time before this if the Congress had not felt that there would be plenty of time to take care of this matter when the bill came up extending rent control beyond this March 31.

To recapitulate briefly, I think this committee in tackling the problem of rent control, must bear in mind these things:

1. Inflationary tendencies are still strong in the economy.

2. An end to rent control at this time would be disastrous to our hopes of bringing sanity back to the economy before we are thrown into recession or depression by an evaporation of purchasing power among the mass of our people.

3. Rent control cannot and must not be regarded, as it was in the Eightieth Congress, as the only practical means of keeping a brake on inflation. Rent control must be regarded as one part of an over-all anti-inflation program which this Congress must enact, if, that is, this Congress is going to keep faith with the American people.

4. The present Rent Control Act is unfair and discriminatory to those landlords who are kept under control and must be broadened once again to include all types of scarce rental housing accommodations on which there is severe inflationary pressure.

5. In addition to being unfair and discriminatory, the present Rent Control Act defies proper enforcement in that it lacks any effective penalties to combat violations.

6. These violations are of such scope and volume as to have made a mockery of rent control, as to have caused widespread distress and hardship to tenants, and as to have further discriminated against those property owners who are law-abiding citizens and comply with the act even while they recognize that other landlords are violating it with impunity.

PROVISIONS OF S. 888

Now I want to discuss specifically my bill, S. 888, and why I think that bill, rather than some other rent-control bill, should be approved by this committee and enacted by the Congress.

First, and of great importance to all who have to deal with this legislation, it sets forth for the first time since 1947 all of the provisions of law dealing with rent control in one bill. It does not, as other bills before you would do, amend the Housing and Rent Act of 1948, which in turn, had amended the Housing and Rent Act of 1947. The original bill I introduced in this session on rent control, S. 434, would have been as an amendment to those previous acts.

S. 888 is virtually identical with S. 434, except that, as I said, it rewrites all of the rent control laws in one bill and, further, it changes the title of the Housing Expediter to Rent Administrator, removing from his jurisdiction the responsibility for enforcing veteran preference on new housing construction and for prosecuting violations of the Veterans' Emergency Housing Act. My purpose in making that change was to make the Rent Administrator responsible exclusively for administration of the rent control act and to transfer these other functions which have to do with housing matters to the agencies of the Government now dealing with housing.

Since the committee has reported out a housing bill which does not contain such provisions, I would suggest that the present arrangement be continued, and with the committee's permission, I will submit language later for an amendment to my bill to continue the present arrangement, at least until the Banking and Currency Committee has had a full opportunity to decide what it thinks should be done. Since passage of a rent-control bill now without this provision would leave a vacuum after March 31, this is probably the most practical way of meeting the situation.

Also, as a change from S. 434, which was widely publicized at the time it was introduced, S. 888 permits the Rent Administrator to recontrol permanent quarters in motor courts and trailer courts, including trailer space. The bill does not require him to recontrol these units, but permits him to do so. I made that change because I understand from Congresswoman DOUGLAS, of California, who has cosponsored this bill in the House, that this is a serious problem in her State and in several other States.

Otherwise, S. 888 and S. 434 have identical provisions. The main ones are as follows:

Extension: Rent control would be extended until June 30, 1951, with, as I said, the right of the President and of the Congress to terminate it at any time in the interim.

Recontrol: All types of housing accommodations which were under rent control prior to the enactment of the Housing and Rent Act of 1947 would be subject to recontrol. The bill provides that the only types of rental housing in defense rental areas which would be free from control by statute would be housing accommodations rented or offered for rent exclusively for transient occupancy (temporary occupancy on a daily or weekly basis) in hotels or any housing accommo-

dations in any motor court, tourist home, or trailer camp (including trailer space) when such accommodation is occupied by a transient guest.

This means that new construction, which was exempted from control beginning with the Housing and Rent Act of 1947, conversions in the same category, permanent rooms in hotels, accommodations not rented for any successive 24-month period since February 1, 1945, and other types of housing decontrolled by the acts of 1947 and 1948, would all be subject to recontrol.

I underscore the word subject to recontrol because there is nothing in this bill to require the Rent Administrator to keep under control any class of housing in any area which he considers in sufficient supply to make its control unnecessary.

There is a vast amount of discretion here for the Administrator. But, as I shall explain later, there is adequate protection in this bill for the tenant and for the landlord who can appeal from any decision of the Administrator and carry his case to the Supreme Court if necessary.

The Congress cannot possibly write a rent-control law which could provide by statute for every type of problem which an administrator must face. Therefore, the broad discretion in this bill in contrast to the attempts in both of the two preceding acts to spell out in detail what course of action he should take in a wide variety of circumstances.

There has been a great deal of misapprehension and misinformation about the effects of recontrolling new construction or of placing it subject to recontrol. Spokesmen for the real-estate industry and for the home-builders have cried out in horror that placing new rental construction in the status of being subject to rent control would strangle the rental-construction program.

I am afraid I will have to say that that is nonsense.

First of all, a great deal of the new rental construction we have obtained in the last few years was begun at a time when such construction was still subject to rent control. The figures are available from the Federal Housing Administration to show this to be true. Applications for mortgage loans on new rental construction rose rapidly after the war up to July 1947 when such construction was removed from controls, and then, believe it or not, there was a drop in applications. That was because building construction materials, also out from control, were shooting up astronomically in price.

Furthermore, and this is extremely important, every large-scale rental-housing project financed by an FHA insured loan of $200,000 or more is now and has been right along, subject to a form of rent control enforced by FHA. FHA has the controlling voice in setting rent policies in these projects, and they are set in order to provide a very fair return on investment, a 6½-percent return, I think, on actual investment.

Recontrol of such units would not, I am sure, bring down their rentals, because these rentals are based on fairness as required by FHA.

On rental housing in which FHA did not participate, or on which its participation was less than $200,000 insurance, there is absolutely no check on rents. Everyone realizes that it costs much more to build today than it did a few years ago. The rentals in such projects, or in such housing, would be subject to review under this bill, and if they were found to be exorbitant, they could be reduced.

I hesitate to believe that spokesmen for the organized real-estate and housing industries maintain that the housing shortage cannot be licked unless those who build rental housing are allowed to charge exorbitant rents, yet that is the only conclusion one is justified in taking from their opposition to this provision.

No one who attempts to look at this problem fairly thinks that new housing construction can be built to rent at prices anything near the prewar or wartime rents of similar accommodations. It just is not possible under present cost factors. No one suggests enforcing a $50-a-month rental ceiling on new construction for which a fair rent based on construction at current costs might be $80 or $90. That is certainly not the intention of this provision of my bill.

Before this type of housing and also conversions and also owner-occupied property which had not been rented previously were decontrolled, rental ceilings were, in a great many cases, based on what the owner thought was a fair rent. These rentals were subject to review, and if they were found to be exorbitant, they were reduced.

With proper administration, there is no reason in the world why a similar policy would not be followed on recontrolled accommodations. Further, as I pointed out several times, all rulings of the Administrator would be, under this bill, subject to attack and to appeal with legal rights granted to both tenant and landlord which were missing from the rent-control statutes in previous years.

The present Housing Expediter has asked for power to pass on the validity of conversions prior to their decontrol. I say, place these conversions subject to recontrol along with all other types of housing accommodations, and the problem of enforcement would be solved. There would be no sense in an owner seeking loopholes in the rent-control statutes by phony conversions, as so many apparently now are doing.

As long as some property owners are held under control by accident of circumstance and others are allowed to get out from under control by other accidents of circumstance or by design, we are going to find it increasingly hard to justify any form of rent control. Most of the complaints I receive from property owners cite the fact that new construction, conversions, previously owner-occupied quarters, so-called apartment hotels and other accommodations similar to the ones they rent, are bringing their owners exorbitant returns because they are decontrolled. The controlled property owner, I think, is justifiably incensed over this discrimination. It should be ended.

There is one category of accommodations which is ostensibly under control but which, under the provisions of the Housing and Rent Act of 1948, is virtually uncontrolled, and that includes those dwellings on which 15 percent rent increase leases had been negotiated during 1947 to continue throughout 1948, but which became vacant between January 1 of 1948 and March 31. Under the 1947 act they were immediately decontrolled. Under the 1948 act, they were placed back under control, but at whatever lease rent the landlord and new tenant had agreed upon during the period from January 1 to March 31. The Senate provided in the bill which we passed here last year that the rents on those properties should revert to the original lease rent negotiated between the landlord and the original tenant during 1947. The Senator from Washington, Mr. CAIN, submitted an amendment on the Senate floor to legalize any rent which the landlord and the new tenant had decided upon prior to March 31. His amendment was defeated in the Senate. However, the House wrote in a similar provision and it was contained in the conference bill and was enacted into law.

One would think that not very many people were affected by that. However, I have heard from numerous tenants who rented such decontrolled accommodations between January and March of 1948 at rents 100 percent and more over the 15-percent lease which had been negotiated by the previous tenant. This is certainly a very necessary category of housing in which to enforce a roll-back in rents, and that would be possible under my bill. As I said, ostensibly this type of accommodation is under control, but actually the control is meaningless and the protection accorded the tenant is useless.

As a final word on recontrol provisions of this bill, I want to point out what has happened under the present act which permits property owners who have been in continuous possession of their own accommodations for a period of 2 years to rent them free from any control over ceiling rents. In instance after instance the landlord has moved out of one unit which he occupied in an apartment house into another unit for the accomplishment of two purposes: (1) To get an unlimited rent for the quarters he previously occupied, and (2) to evict the tenant whose quarters he has taken over. The absence of adequate eviction protections plus this provision of the present law decontrolling owner-occupied quarters have been used to visit hardship on two families at the same time—the family which is forced to move from a controlled unit and the family which moves into the decontrolled unit and must pay whatever rent is demanded of him.

Recontrol of various types of accommodations will be helpful, but it must be coupled with adequate eviction safeguards if we are really to have fair and effective legislation.

Under the heading of recontrol, I point to the fact that this bill provides the authority for the Administrator to recontrol any areas in the country which have been decontrolled and to control new areas, if necessary. I understand that the Housing Expediter has testified that, if he had this power, he would feel free to decontrol some areas where the housing shortage may not be overly severe. His fear is that, once such an area is decontrolled, nothing short of an act of Congress can bring it back under control, regardless of what situation may arise from defense activity or other causes.

Evictions: Throughout the period of rent control, up to 1947, the question of evictions was handled on a national basis under uniform standards. These standards caused an occasional inconvenience or even hardship to a purchaser of a tenant-occupied home who had to wait unusually long, perhaps, to obtain possession. That was because the tenant, in most cases, was finding it extremely difficult to find other quarters. Tenants, in turn, bought houses and evicted their tenants, and perhaps they, too, had to wait for possession.

Since 1947 numerous efforts have been made to write into legislation specific provisions for obtaining occupancy of a dwelling under all types of circumstances. They haven't worked in many of the areas where the housing shortage is most critical for the simple reason that local authorities immediately rushed into the breach to set up iron-clad restrictions on evictions. Meanwhile, numerous landlords in no urgent need for quarters occupied by tenants, took advantage of the provisions in the 1947 act to evict tenants right and left for a variety of excuses and often flimsy pretexts.

Quarters were ostensibly removed from the market, and lo and behold, shortly thereafter, they were discovered to have been rented to someone else. Some owner, as I noted before, evicted tenants so that the landlord could move from one apartment into another and thus decontrol one of them and reap a financial windfall.

The 1948 act sought to remedy some of the difficulties created by the 1947 act, but it has not succeeded. Owners are still evicting tenants in order to change from one apartment to another and thus decontrol one of them. The good faith provisions of the present act in respect to landlords recovering possession for their own immediate and personal use have not been observed and are hard to enforce. The 60-day notice provision of the act is defective.

Above all, by seeking to define by statute those instances under which eviction can be had, the present act allows for no discretion, allows for no flexibility in meeting changing circumstances or conditions, and is bad law. With a multitude of courts acting on this matter, each of them acting independently and with no coordination, we find the same provisions of the act dealing with evictions being interpreted in widely different manner throughout the country.

My bill restores to the Federal agency dealing with rent control the authority to devise standards for eviction and to change them when necessary in the light of new circumstances and conditions. It makes the Rent Administrator a friend of the court on the background in individual cases.

We know of numerous instances in which tenants, seeking to take advantage of the admittedly weak protections of this act, have complained to the Housing Expediter of violations, only to be slapped in the face immediately by a notice from the landlord to move. If the landlord can devise a pretext on which to evict under the act, he proceeds to do so, and the court, in many instances, has no knowledge of the background of the case and the revenge motive involved in the eviction effort.

As a matter of fact, the lack of adequate eviction safeguards has probably done more than any other one thing to break down effective rent-control enforcement in the last 2 years. Tenants know that they can be evicted easily and often capriciously. They, therefore, hesitate to complain to the authorities against any overcharge in rent or decrease in services. I recently received a letter from a man in San Francisco who has been making a side payment of $20 a month to his landlord. He had no hesitation in telling me about it, but he said that he would not dare report it to the authorities. If he did, he said, "I'd be in the street hunting for a place to sleep."

I have received similar letters from all over the country. We are dealing here with a fact and not a theory. We are dealing with the frailties of human nature. When one is desperate for shelter and can obtain that shelter only by joining in a conspiracy with the landlord—and that's what it is—to pay a higher rent than the legal rent, he will pay that rent and join in the evasion of the law and keep silent about it.

Our whole black market in rents is based primarily on the ease with which tenants can be evicted. Another factor, of course, is the complete lack of any effective enforcement machinery.

Enforcement: The present Rent Control Act is about the only Federal statute I can think of which provides absolutely no penalties for violation of its important provisions. It is the only Federal law I know which encourages the people affected by it to violate it, because it provides that in case of violation, and in case the violator is caught in his violation, the worst thing that can happen to him, in the case of an overcharge in rents, whether inadvertent or deliberate, whether casual or continuous, is to be forced to make restitution of the amount which he may have stolen.

My bill provides for criminal sanctions and for civil actions by the Rent Administrator—and we know that his is the only effective agency for enforcement in view of tenant reluctance to sue the landlord. This provision is similar to the provision which we had in effect under OPA.

Now anyone who says that this provision would be used to throw into jail for a year and to fine $5,000 any landlord guilty of some minor violation of the act is uttering pure nonsense. I do not know exactly how many people went to jail for violation of OPA during the war—at the height of the intense patriotic drive to have black marketing regarded almost as a traitorous thing—but I am sure the number was very small. I think it is generally conceded that fines, in those days, for violations of OPA statutes were, on the whole, modest—perhaps too modest.

Federal judges do not sentence reputable citizens to jail for minor infractions of the law. At the same time, however, our Federal courts should be fortified and our Federal agencies should be fortified with the right to proceed vigorously against any citizen who defiantly and continually violates the law and thumbs his nose at the sanctity of the law. I warrant that there are very few landlords so lacking in ordinary decency as to commit such continual violations of the law as to become threatened with jail terms under my bill. But, unfortunately, there are some such landlords, and the last 2 years have been for them a veritable holiday in extortion.

Let us, therefore, have the machinery and the power to deal with them as they must be dealt with if we are to have any moral ground for requiring a decent and law-abiding landlord to bear the restraints of rent control.

But any law, regardless of how strict it might be, how stern the attempts at enforcement might be, cannot succeed unless it has public support, and above all, public understanding. That brings me to the place of the local boards.

Local advisory boards: The 1947 act for the first time established the principle of local advisory boards in connection with rent control. The idea by itself was a good idea and my bill, I might say, provides for the continuation of local advisory boards.

However, the present Control Act clothes these boards with powers which amount to administrative powers and psychologically gives them a function of looking out primarily for the landlord interests. The methods by which many of these boards were established underscored that idea, for in many cases they were heavily loaded with real-estate representatives. The original act setting up these boards in 1947 provided only that they should consist of representative citizens of the community, but did not say whom they should be representative of. The landlords look upon these committees or boards as their defenders, and in many cases they had a right to do so from the complexion of the boards themselves. The 1948 act sought to correct this situation by stating that the local boards should be representative of the affected interests in the area. This has meant, in many cases, reorganizing the boards that had been operating, but even so, the status of the local board has remained psychologically that of a defender of the landlord interest.

Part of the blame here rests in the fact that these boards have wide powers in obtaining rent increases for all the landlords in a given area. If a local board, even an unrepresentative one loaded in the landlords' favor, has recommended an area-wide rent increase, and even if the housing expediter finds it unsubstantiated, the recommendation has an automatic green light to the emergency court of appeals for a prompt hearing on this matter. The courts, therefore, can grant the increases, as they should, of course, have the right to do, but the instrument for obtaining this increase is the local board. Obviously, then, the landlords in any area are going to do their utmost to influence the local board at every opportunity.

My bill, besides requiring that the boards be fully representative, places them in an exclusively advisory status. They do not have the power by themselves to guarantee a rent increase. Their recommendations can be accepted or rejected by the rent administrator, but in every instance, the rent administrator must give his reasons in writing and document them with all economic facts which he has taken into consideration in reaching a decision for accepting or rejecting a recommendation of a local board. Any person or group affected—except the local board, which alone has the power now—can appeal the rent administrator's decision and can, if necessary, carry it to the emergency court and even to the Supreme Court. I might say parenthetically that in this bill the opportunities for judicial review and for appeal in connection with any decision of the rent administrator are extended to all parties of interest, tenant or landlord, and this, I think, is of vital importance to a fair administration of a law which affects so many of our people so intimately.

The local boards, under my bill, are given a new responsibility—the responsibility for interpreting to the local community the laws regarding rent control, the need for them, the purpose of them. Thus, their functions run in two directions. They would be expected to keep the Rent Administrator fully informed of developments in their own communities as they involve rent control. They would be expected, in case they determined an area rent increase was warranted, to press the recommendation vigorously, as many of them now do. If they became convinced after thorough study of the local situation that rent control was no longer necessary in their communities, they would not only be permitted to, but they would be expected to press vigorously for decontrol.

However, if the boards take seriously their further responsibilities under this bill to exercise such functions for educational, administrative, and compliance purposes as are delegated to them by the national Administrator, they will also be active and vigorous in supporting the enforcement of the act, in exposing abuses, and in keeping their communities informed on the "why" of rent control and of the regulations.

Such boards, I believe, would be much more effective in obtaining a fair break for the landlord, when the landlord is entitled to an area increase, than would a local board which regards its function to be primarily an agency of landlord interests.

In other words, any community group which is not only supposed to be representative of the community interests as a whole but actively tries to be, will have standing not only in the community itself but in the national office as an objective group trying to serve the community and all the interests in the community. Its recommendations, I am sure, would therefore be accorded the most serious consideration.

My bill removes from the local boards the present power they have to review individual cases. It is my understanding that very few boards have taken advantage of that power. It is easy to see how a board which attempted to review every individual case on which there was a complaint could easily get bogged down hopelessly. Since there are very broad appeal rights granted under my bill, I think all interests are fully protected.

I spoke earlier of my proposal for a 15-man National Advisory Committee and I have also suggested the creation of a staff by the Senate Banking and Currency Committee or by both the House and Senate committee jointly to make continuing studies of rent control and with the local boards given a broader scope, including educational functions, I think we would have adequate machinery for guaranteeing the fairest kind of administration of rent control and prompt revision either of the law or of the regulations whenever that is found to be necessary.

District of Columbia: My bill proposes the inclusion of the District of Columbia, for the first time, in the Federal rent-control bill. During most of the life of rent control, the District has had a more effective rent-control statute than the rest of the country in holding down rents. It had rent control before the rest of the country did.

There never was a 15-percent-rent-increase feature in the District bill. On the other hand, the District law has provided, in recent years, for almost automatic increases in rent for every increase in operating costs, regardless, as I understand it, of net return. In addition, there has been no provision in the District Act up to now for protecting the tenants of an apartment house which the owner seeks to convert into a cooperative.

My bill would permit the establishment by the Rent Administrator of the same standards for the District of Columbia as for the rest of the country, and in this respect I think would be most desirable.

On the other hand, since the committees of Congress having jurisdiction over District affairs may want to retain a separate District bill, I think this is a matter which your committee and the Senate District Committee might well want to discuss before a decision is made.

Conclusion: S. 888 represents in essential form the restoration of the rent-control laws to the effectiveness which they had prior to the passage of the Housing and Rent Act of 1947. The President on June 30, 1947, signed that act because he had no recourse except to let rent control die the next day. In a message to Congress on that date, however, he denounced the act which had been presented to him and prophesied correctly that it would encourage a great inflationary spiral in housing and in rents. He said that this bill in 1947 represented the abandonment of a system which had been both fair and effective.

In July of 1947 I introduced S. 1741 of the Eightieth Congress to repair the damages done to effective rent control by the Housing and Rent Act of 1947. The Housing and Rent Act of 1948 which was enacted corrected only a few of the many unfair provisions of the previous act. The Senate last year voted for a much stronger act than the one which was eventually agreed upon in conference and enacted.

We have now the opportunity, however late, to go back and correct the deficiencies of the last two rent-control acts. I am assuming, of course, that this Congress recognizes the continued need for rent control. I am assuming that in the recognition of that need, this Congress—and particularly this committee which has already acted so forthrightly in respect to good housing legislation—will insist that rent control be fair and be applied in the same manner to all owners of rental property in areas of scarce housing supply.

Controls in peacetime, in normal times, are repugnant to all of us; it is not necessary, however, for me to point out to this Congress that times are far from normal, that the world situation is most delicate, that a great share of our national budget is being spent in defense against possible war, and that under the circumstances, inflation is not just a matter of concern to us in the United States, but to all that part of the civilized world which depends upon America for the assistance and the encouragement needed to achieve peace and international security against military aggression and against the stealthy aggression, but aggression, nevertheless, of a world movement which seeks to establish totalitarianism throughout the world.

It may appear farfetched for me to say that rent control in America, effective rent control, is an important weapon for democracy in the cold war with communism, but it is not farfetched. Communism fears a strong, healthy American economy more than anything else, and this is one of our instruments toward maintaining that kind of an economy in these critical times.

Address by Ralph E. Becker Before the Ohio Young Republican State Convention

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Ralph E. Becker, chairman of the Young Republican National Federation, before the Ohio Young Republican State Convention, at Columbus, Ohio, on February 26, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Republican Party has many problems today, but the most important problem is how to bridge the gap between victory and defeat. In order to build this bridge, it becomes immediately apparent that there is a strong and urgent need for new ideas and more leadership.

The question immediately presents itself as to where this new leadership and ideas are coming from. My experience in traveling throughout the country to the extent of over 150,000 miles during the past 2½ years has convinced me that the Young Republican movement is one real source which can supply this need. I am confident that if given the proper tools, we can build the bridge that will close this gap.

We Young Republicans must not picture ourselves as starting off at the top or the major general level of politics. The vast and most important work to be done is to dig the foundations at the precinct level, and we young people are the logical choice to do this kind of work. This is a challenge to all of us, and it is only through experience of this kind that we will be able to develop the leadership which is needed. We must do more than merely pass resolutions and discuss things abstractly. We must participate in the very fullest and most practical sense.

Therefore, I would like to suggest tonight two ways in which we Young Republicans can meet this challenge if we really mean business:

1. Every Young Republican in the land, if his personal situation permits, should run for every available office from dog catcher up or give his active and real support to some worthy Republican candidate. The local municipal elections coming up this year and elections for office in your loal political organizations, such as precinct committeemen, afford an immediate opportunity.

Moreover, this will provide excellent preparation for the all-important congressional elections of 1950. The success that must be ours will be ours if we begin now.

2. Each club should begin at once to strengthen its own campaign organization on a year-round basis. It is imperative that you start immediately to organize and coordinate the activities and members of each club in your State league in an aggressive campaign against the bungling administration and fraudulent promises of the Democrats.

Now a moment ago, you heard me refer to the fraudulent promises of the Democrats. When I said "fraudulent," I really meant fraudulent, and I am going to tell you why.

Let us go back to the last campaign, and recall again just what Truman and his cohorts said they would do. Let me detail a few of their phony promises, one by one:

First, there was a great hub-bub made over the so-called slave labor law, more commonly known as the Taft-Hartley Act. The union bosses and their spokesmen, the Democratic Party, all during the campaign made an emotional appeal to the voters and distorted the facts. They went up and down the land urging outright repeal up until election day. To hear them talk, one would think the workers in our country suffered under conditions worse than those in Russia.

As we Republicans know, the workers are far better off under the Taft-Hartley Act than ever before, and the membership in unions since 1947, when the law was put into effect, has expanded to unprecedented heights.

What is the Democrat position now? We find that the Congress has spent fifty-odd days and fifty-odd nights in the midst of bickering and confusion among its own members. They are now even willing to admit that the American people would not stand for its repeal. We know that every law may be subject to improvement. The complete truth is that this attack by the Democrats was a downright misrepresentation of a fraudulent nature. It was made because they needed the support of the labor bosses in order to win the election. They bought this support sacrificing all principle in order to achieve their end.

This, ladies and gentlemen, is not only a discredit to the Democrats themselves and their leadership, but it is a real tribute to the Republican Party, and your distinguished and able Senator TAFT. The American people, and Ohioans in particular, can well be proud of the fact that men of such great intelligence, the highest integrity, and clarity of purpose are fighting their battles in Washington. Yes, people all over the land are coming to a realization that the highest qualities like those possessed by BOB TAFT pay off in politics every young Republican and every American considering entry into public life should take heed of this wonderful example. Send him back to us in Washington in 1950. The country needs him there.

Referring back again to the fall of 1948, the Democratic Party promised immediate and effective legislation dealing with the high cost of living. They proposed that there be a reimposition of controls—another peacetime OPA or planned economy.

We all are concerned about the seriousness of this problem. But what has the Eighty-first Democratic dilly-dally Congress does toward solving this problem? Have they taken any affirmative action to establish another program of price control? The answer is simply "No" in large capital letters. The dilly-dally Congress has spent fifty-odd days and fifty-odd nights, and in all this time not a single step has been taken to meet this emergency.

Why is all this? The answer lies in the fact that even the Democrats have not forgotten the terrifying situation which existed back in 1946. The economy of our country was paralyzed by the peacetime OPA. There was no meat in the butcher shops. The black markets were rampant all because of the economic strangulation of the peacetime OPA and controlled economy. Therefore, I say to you now that the Democratic Party never intended to enact price controls. They were merely appealing to the emotions of the people. They knew that many people had forgotten the evils of price control and there was political hay to be made as a result

of these fraudulent misrepresentations of fact. If they really believed in OPA as a proper solution to the problem the present Democratic administration would already have a statute on the books.

While it is generally known today that there are certain basic materials in short supply, such as steel, and while I carry no brief for steel or any other particular industry, I do want to take issue with the President's recent proposal that the Government should go into the steel business. Certain political circles will undoubtedly crown him a hero for such preposterous action.

The Democratic administration may believe in the nationalization of industry, but they know full well that this cannot be forced down the throats of the American people. However, they had to continue this lip service to please those few people who are rabid about the nationalization of industry. The entire proposal was something they never intended to carry out. It is just another example of the fraud with which they have been deluding the American people.

Without digressing too far from the subject at hand, I do want to say here that too few of our leaders today choose to defend our great free enterprise system. Instead we find that a large number, and in many cases people who are the most articulate, joining the opposition. It is high time that we Young Republicans roll up our sleeves, go to work, and defend a system which last year resulted in almost total employment, of almost no industrial disputes, and an expansion of wealth and productive capacity to unprecedented heights. We Young Republicans and all young people are more vitally concerned about the outcome of this struggle than anyone else.

And now let us briefly consider another promise of the Democratic Party. They told us last summer when the Congress was called into extraordinary special session, that it would take no longer than 10 or 15 days to enact a long-range comprehensive housing program. What has the present Democratic Congress in 50-odd days and 50-odd nights done for the American people in the way of solving this critical problem? We find that this matter like most of the program has bogged down in a welter of confusion and cross purposes in the Congressional Committees with no hope of any affirmative action being taken for a long time. The only tangible things we can point to are conflicting statements issued to the press from time to time by various spokesmen. This again is more evidence of a concerted effort to deceive the public on the basis of an emotional appeal, and they know as well as we do that the answer isn't to be found in the mere passage of a law. If they believed in this solution, the present dilly-dally Congress would already have a statute on the books, and they would have done it in 10 days as they charged we could have done.

As we review the bubble of lies about the Taft-Hartley Act, the unfulfilled promises in regard to the high cost of living, the vicious threat to nationalize the steel industry with the ultimate objective of undermining the free enterprise system, the astounding lack of action in regard to solving the housing problem, it is obvious that the Democratic Party has no objective but to perpetuate itself in office by making empty fraudulent promises.

We Republicans have the job of selling the principles of the Republican Party. We young Republicans can build our bridge to victory. It takes salesmanship and honesty. But remember this—we have the greatest system of government in the world to sell. We believe in it. We would not destroy it with statism—with governmentalized industry. We would build on it.

Here then is where we will build our bridge—over the deception—the fraud—and the lack of American principle that I have outlined to you. Let us take it from here—for we are the engineers—the stone masons—the riveters, the welders, and the riggers. We are young Republicans and we—together—are going to build our bridge and sell our ideas. This is the greatest job in the world today.

Proclamation of March 7 as Czechoslovak Day in the State of New York

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proclamation issued by Gov. Thomas E. Dewey of the State of New York, proclaiming March 7, which is the anniversary of the birthday of former President Masaryk, whose name goes down in history as one of the great patriots of all time, as Czechoslovak Day in the State of New York.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION—STATE OF NEW YORK, EXECUTIVE CHAMBER, ALBANY

The virtual enslavement of the once free people of Czechoslovakia was a particular shock to us. Americans were justly proud of the United States in the establishment of the independence of that country. Its actual foundation stone was the historic Lansing declaration of May 1918.

Under the brilliant leadership of Thomas Garrigue Masaryk and Eduard Benes, Czechoslovakia became one of the most enlightened, progressive, and prosperous nations of the earth within an amazingly brief period. Its well-being was cut short after 20 years by Adolf Hitler. Throughout the dark and bloody days of Nazi oppression the people of Czechoslovakia were sustained by their confidence that the forces of freedom must triumph eventually and restore their just rights.

Their hopes were destroyed by the Communist seizure of February 1948. After all their sufferings from Brown fascism, after a pathetically short interlude, they now find themselves in thrall to Red fascism. The lifework of the great Thomas G. Masaryk lies in the dust of a police state.

The destruction of Czechoslovak freedom was quickly followed by the death of Eduard Benes from sheer grief; likewise of Jan Masaryk, who perished, directly or indirectly, by the action of the ruthless oppressors of his country.

The people of America feel the utmost indignation and the utmost sympathy with the tragic plight of the people of Czechoslovakia. Many men and women of Czechoslovak's origin are our friends and good neighbors, true American citizens. At present one of the few methods we have of showing our sympathy is to commemorate the brief happy period of Czechoslovakia's history and the achievements and sacrifices of her unforgettable leaders, also to express our hope that eventually her people may again realize their just rights and aspirations.

Now, therefore, I, Thomas E. Dewey, Governor of the State of New York, do hereby proclaim March 7 as Czechoslovak Day in the State of New York, that being the anniversary of the birthday of former President Masaryk, whose name goes down in history as one of the great patriots of all time.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 3d day of March in the year of our Lord nineteen hundred and forty-nine.

THOMAS E. DEWEY.

By the Governor:

PAUL E. LOCKWOOD,
Secretary to the Governor.

Soviet "Immigration" Increases

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Soviet 'Immigration' Increases," written by Herbert C. Watts and published in a recent issue of the Havre (Mont.) Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOVIET "IMMIGRATION" INCREASES

In increasing numbers Russian airmen and soldiers are deserting their country and attempting to reach a haven in the United States. This is welcome news in a time when we have been assuming that there is no such person as a Russian deserter.

Certain international complications are developing because of the propensity for wanderlust as exhibited by some people in Soviet uniform. Evidently those who have chosen to shake the dust of the U. S. S. R. off their shoes and take French leave are treated like dignitaries here. It's all a part of our educational process to satisfy the curiosity of the Russian who has been given an inkling through rumor of what a generous land this is.

Russia wants to know what we are going to do with unofficial visitors from the U. S. S. R. We had better have a good answer ready before long because one bright day a cattle boat loaded with eager-beaver Russians will come steaming up to the Battery and an announcement will be made that they left the U. S. S. R. with nothing but a phooey to you, Joe Stalin. An immigration problem is certainly posed.

Then there is the problem of culling those who are sincerely against communism from those who may be spies posing as individuals who are crazy about this democracy business we have enjoyed for over 100 years. Americans are inwardly tickled that Russians, military personnel in particular, are getting more gumption as time goes along. These Russians, with no passports, few worldly effects and a lot of courage are supplying valuable information as to what is going on behind the iron curtain. The service is free. All we have to do is furnish them board, room, and protection.

Undoubtedly there are some Russians who have made their escape from the U. S. S. R. and are special guests of this country. Their identities perhaps are a secret because they have families in Russia or the nature of their work is such that they can give invaluable military or commercial information to our government.

The fact that Russians are traveling more than ever endeavoring to reach the United

States appears to be proof that our own propaganda campaign is fairly successful. Some of the "guests" have pointed out that they have heard this or that on U. S. programs beamed at that country. Their curiosity is tremendous. Believe it or not, millions of Russians have heard that Mr. Truman was elected President last year. They know that the Democratic and Republican Parties are firmly united on the furtherance of democratic ideals. The defeat of Henry A. Wallace, Vladimir Barashkov, a Russian flier who fled into American territory, said, left a strong impression on his people.

So, the Russian escapists are coming over thick and fast. They face death if ever turned over to Russian authorities and apparently our Government is willing to take chances. Communists can note that some Americans have sold out and joined forces with the Russians but we think that a comparison of characters and objectives of persons who are deserting from Russia are different in quality from those of Americans who have decided that communism with its contradictory ideologies holds some kind of salvation for their twisted lives. Basic checkups of those Russians who have deserted the U. S. S. R. disclose that they are in the main well educated and with talents that this Nation can well use. More important, they bring us the information.

The Displaced Persons Act of 1948 Should Be Amended

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. HELLER. Mr. Speaker, I am happy to have the opportunity to express my views on the Displaced Persons Act of 1948. A careful study of its provisions clearly convinces me that it is not only cruelly discriminatory, but unworkable. It requires immediate change. Some wise man once said "Change is the only certain thing in this world." The question therefore is, In changing the displaced persons law by H. R. 1344, are we prepared to change enough of it to meet the needs of today?

If we are not prepared to make such a change, we shall fail to heed the courageous words of President Truman who, on July 27, 1948, in his message to the special session of Congress, in urging that the displaced persons law be amended, stated:

> The Displaced Persons Act in its present form discriminates unfairly against some displaced persons because of their religion, land of origin, or occupation. These provisions are contrary to all American ideals. This act should be promptly amended to wipe out these discriminations. Furthermore, the present act permits the entry of only 200,000 persons, and charges them against future immigration quotas. I believe strongly that the act should provide for the entry of 400,000 persons over a 4-year period, and they should be outside the normal immigration quotas. The act can and should be amended promptly.

For nearly a century and a half our country has enjoyed an enviable reputation as a haven of refuge for victims of religious persecution and as an asylum for those who suffered political oppression and economic misery. Throughout its history the United States has been enriched in many ways by the persecuted of other lands.

The termination of World War II brought freedom to several million Europeans who had been forced into German servitude during the war. Most of these former Nazi slaves were quickly repatriated to their countries of origin, to their homes and their families. Approximately one million men, women, and children of various nationalities and creeds remained in the displaced persons camps of Germany, Austria, and Italy still waiting for their day of liberation. Many of these individuals have lost their entire family and all their earthly possessions and do not wish to return to their former homes; others advance religious or political reasons for not desiring to return to eastern European countries which are now in the Soviet Russian orbit. They cannot remain indefinitely in the displaced persons camps. Consequently, the only satisfactory solution would be to resettle them permanently elsewhere, preferably outside of Europe and preferably also in the less populated countries, including the United States, Canada, Australia, South Africa, Latin America, and so forth.

The world at large has turned to the United States for moral leadership in settling this tragic problem by becoming the first country to admit a substantial number and thereby encouraging other countries to take a proportionate number.

The original Stratton bill was based mainly on the principle of humanitarianism, on this country's tradition as a haven of refuge for the homeless and the oppressed, on our moral obligation to care for the displaced in the American occupation zones, and on the need for a permanent solution of the problem by admitting a fair share of the displaced persons into the United States and setting an example for other countries.

But the dilemma of the displaced persons has not been solved because the United States has not shown leadership and taken its fair share of the victims of old and new European tyrannies. Our country can be redeemed in the esteem of the world if the Congress of the United States would liberalize the Displaced Persons Act in amending Public Law 774 of 1948 for the following good and substantial reasons:

First. The cut-off date of eligibility in the present act is December 22, 1945. This is inequitable because it bars 135,000 Jews and other persons who are displaced persons under the classification of the International Refugee Organization. A new cut-off date such as January 1, 1949, would be more equitable and would take care of persons fleeing from the Communist tyranny in Czechoslovakia during the last year.

Second. The present coverage of the law, which calls for the admission of a maximum of 205,000 persons, should be broadened to a maximum of 400,000 persons in order to be adequate to meet the needs involved. This change has been recommended by representatives of all religious groups.

Third. One clause of the act provides that 40 percent of the visas issued pursuant to the act shall be available exclusively to persons whose countries have been annexed by a foreign power—Baltic States, East Prussia, and so forth. Since a very small proportion of the displaced persons from this area are Jews and Catholics, the result is that undue preference is given to non-Jews and non-Catholics among the displaced persons.

Fourth. Perhaps the most shameful adaptation of Nazi racist theories contained in the act is the clause which provides that 50 percent of the German and Austrian quotas shall be made available exclusively to persons of German ethnic origin, sometimes referred to as Volksdeutsche. This provision extending preference to these antidemocratic people, who were the vanguard of Hitler in central and eastern Europe, should be eliminated.

Fifth. The provision in the act which makes it necessary for 30 percent of the displaced persons admitted to be farmers, discriminates against Jews, who are mostly nonagricultural.

Sixth. The provision whereby certain conditions must be satisfied, such as a job and housing arrangements, before a visa is granted is unworkable. The task of fulfilling these requirements should be left up to the various religious groups operating in this country, after admission.

Seventh. The clause which mortgages the future quotas of countries whose present quotas are being filled by displaced persons should be removed. Under this proviso, Poland, for example, cannot for 30 years send its full quota to the United States.

Eighth. The immigration status of displaced persons now in the country is not clarified in this act and this should be done by amendment.

Ninth. There is no effective screening procedure to make ineligible those who advocated or joined in persecutions of racial, religious, or ethnic minorities.

Tenth. Little if any eligibility is given to displaced persons living outside of camps (those firmly resettled) by this act, whereas in matter of fact many of these are presumably as eligible as those in the camps. The present act penalizes those who went out and got jobs instead of remaining in the camps.

Eleventh. The time span for the operation of this act should be doubled to 4 years.

Twelfth. A revolving fund should be established for loans to cover transportation from the port of entry to the place of resettlement.

Thirteenth. Some provision should be made for political refugees from countries recently imprisoned behind the iron curtain.

In conclusion, it is my considered opinion that the Displaced Persons Act in its present form is contrary to all American ideals and traditions. These terrified and stateless humans were the victims of the Nazis, and now they fear the Communist. They are material for

democracy; they are the people who resisted totalitarianism from its inception, and who were tough enough to survive all its efforts to extinguish them. They are people who prize freedom, prize it enough to have suffered for it deeply. They are the kind of people in whose behalf the American tradition of asylum was established and whose immigration to these shores has enriched our society from its earliest days forward. They are the wounded in a great battle for liberty.

We must change them from displaced into placed persons. Maybe then, as we work and pray for peace, for a better world, the Great Architect will listen, for we cannot expect to receive the blessings of life if we do not give of ourselves in service to others.

Public Law 774, of the Eightieth Congress, in view of the foregoing, should be promptly amended.

Broadcast by George E. Sokolsky on Lincoln and Edison

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES

Thursday, March 10 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the RECORD a broadcast by George E. Sokolsky on February 13, 1949, over the American Broadcasting Co. stations. The broadcast is entitled "Lincoln and Edison."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

LINCOLN AND EDISON

Two birthdays are being celebrated this week end. Yesterday was the birthday of Abraham Lincoln; on Friday was the one hundred and second anniversary of the birth of Thomas A. Edison.

In these days of universal fear and Government control of the individual, these two figures stand as peaks of human liberty.

I speak of liberty not in general terms but specifically as the right of the individual to think, to plan, to dream, to experiment, to create, to build, according to his own judgment, assuming his own responsibilities and obligations without fear of any man, any government, any majority or minority, anyone upon this earth. That is liberty.

We all know the personality and character of Abraham Lincoln, but few realize how lonely he was; how he walked alone in this sad world where man so often hates man, where man's inhumanity to man brings in its wake wars, destruction, chaos.

I once visited the little village of Salem in Illinois. It still stands, much as it used to be, in a State park. Every American should make a pilgrimage to that village to see the lowly origin, the humble beginnings of one of the greatest figures in our history.

Lincoln read by candlelight in the attic of an inn. There all alone, without the aid of teachers, of high school, of college, he mastered the English language until he could speak with a beauty of words altogether unknown in our day of slang, of double talk, of cheap vulgarities. Here, in the log building, in a village remote from big cities and great centers of learning, among farmers, lumbermen, and small storekeepers, he made of himself a competent scholar, a lawyer, a great thinker and debater, eventually President of the United States.

We always think of Lincoln as the emancipator of the Negro slaves, as the author of the Emancipation Proclamation and the Gettysburg Address. But there is one thing that Lincoln wrote that I love for the grandeur of its thought and language. It was only a Presidential proclamation announcing a day of thanksgiving. Every President writes several of those and nobody bothers to read them. But each year, on Lincoln's birthday, I like to read out loud parts of that proclamation. I like to read it because it belongs to these days as it did to his day. It belongs to all time.

Let me read you some of it:

"Whereas it is the duty of nations as well as of men to own their dependence upon the overruling power of God, to confess their sins and transgressions in humble sorrow, yet with assured hope that genuine repentance will lead to mercy and pardon, and to recognize the sublime truth, announced in the Holy Scriptures and proven by all history, that those nations only are blessed whose God is the Lord:

"And, insomuch as we know that by His divine law nations, like individuals, are subjected to punishments and chastisements in this world, may we not justly fear that the awful calamity of civil war which now desolates the land may be but a punishment inflicted upon us for our presumptuous sins, to the needful end of our national reformation as a whole people? We have been the recipients of the choicest bounties of heaven; we have been preserved these many years in peace and prosperity; we have grown in numbers, wealth, and power as no other nation has ever grown. But we have forgotten God. We have forgotten the gracious hand which preserved us in peace and multiplied and enriched and strengthened us, and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior wisdom and virtue of our own. Intoxicated with unbroken success, we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to the God that made us.

"It behooves us, then, to humble ourselves before the offended power, to confess our national sins, and to pray for clemency and forgiveness."

Let us pause a moment to look at this tall, homely man, walking the world alone and sadly, foreseeing the future with great uncertainty.

Abraham Lincoln never forgot humility; never hated any man; always dreamed of a world of justice, of the brotherhood of man in the fatherhood of God.

Thomas A. Edison also walked alone. He also was unable to have much schooling. No professor in a college taught him physics. No university gave him a Ph. D. or a Phi Beta Kappa key. He wrote no learned thesis nor did anyone laud him for his brilliance.

Whatever he achieved was his own doing—the product of one man—of the genius, the perseverance, the diligence of one man. The disappointments were his; the achievements were his.

No government subsidized him. No bureau or commission directed him. No RFC made loans to him. He passed no civil-service examinations, nor did he ask the consent of any Presidential commission to pursue his experiments. Thomas Edison was a free man. Untutored, unschooled, the master of his personality, he went his way, and before he died he had 1,097 United States patents issued to him—more than to any other individual.

I stand here tonight and talk to all of you through a microphone and over electric wires. You are far away, but, were I on television, you would see me in all my fullness. You are sitting in your well-lighted homes, comfortable perhaps with a cold drink out of an electric refrigerator. You take all this in your stride. Many of you have never known when such wonders were not possible. You press a button and a dark room is illuminated. You are bored and go to a movie to spend an amusing evening or you sit at home and see a performance on your television set. The room can be light or dark at your wish and convenience.

I remember when I was a small boy on the East Side of New York. The only light we had was an open gaslight. Then came the Welsbach mantle and we were all excited by the great improvement. Then, one day, we saw electric lights all about us. We were amazed at this wonder. But soon we took that in our stride. We even complained that the streets were still lighted by gaslight. We demanded streets lighted by electricity.

In the many years I lived in China I saw literally millions of men and women who had never seen an electric light. The only artificial lighting they had—as a matter of fact, still have—is an oil lamp or a candle; most of them go to bed with the dark and rise at dawn. They are limited in their reading, their learning, their leisure by the darkness, and what I say of peasant and village life in China was equally true of Siberia in very recent years. It is true of much of this world. They live in darkness.

Thomas Edison's lamp, which we, in our generation, take in our stride, is the product of the unending labor of a free man—financially poor, uneducated, insecure—who dared to dream. He often failed, and after each failure he had to borrow the money to take another risk.

He had to find a container for his light. The sealed glass bulb that would not collapse when it warmed up was no small matter to work out. Then the problem of finding a filament that would produce light but not burn itself out or overheat the container—that problem faced the inventor with many failures. He tried every known fiber. He even tried hair out of a beard. Everything went wrong, except his great soul, which shouted, "There shall be light."

And finally, he found the exact carbonized cardboard which was suitable. But he still faced problems. He had to generate the electricity and to carry it from the generator to the light. This he had in 1879, but it was not until September 1882 that a service for the public was started in New York City.

Altogether, Thomas Edison had to obtain 356 patents, involving original inventions in an altogether untried field, before he could call his work in power generation and distribution a success.

Had he only done this, he would have been one of the greatest minds of all time. But Thomas Edison invented the phonograph, the motion-picture camera, and he laid the foundation for electronics which makes possible radio and television.

No government, no committee, no majority, no minority could ever produce the genius of Abraham Lincoln or Thomas Edison. No group ever wrote a poem or painted a picture. Nor need a man be rich in money or have the advantages of formal education or the assurance of security from the cradle to the grave to achieve greatness. What were the advantages of Beethoven or what the security of Mozart? Were they greater than those of Lincoln in the log house in Salem or Edison when he peddled newspapers on a railroad train?

The gods among men walk alone. They dream and create and nothing can hold them back. They do not fear failure any more than they fear insecurity. They are driven by their personalities to high accomplishment and when they have completed their work, the world is a better place to live in because they have been of it.

And this happens in every age, in every country, among all peoples, great and small. Perhaps someone who is listening to these words has in his soul some task to do. He may fear the consequences of his dream and courage.

Go forth, as Lincoln and Edison did, for your start today could not be more lowly than theirs; your disadvantages today could not be as great as theirs. They hurdled every handicap, alone, unaided. They reached their goals alone—by will and choice and daring.

And America remembers them everlastingly and celebrates their births.

Thank you. This is George Sokolsky.

The Netherlands Policy in Indonesia

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by A. M. Rosenthal and two news items from The Hague, published in the New York Times of March 11, 1949, and an article by Daniel L. Schorr, published in the Christian Science Monitor of March 8, 1949, dealing with the Netherlands policy in the East Indies.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the New York Times of March 11, 1949]

UNITED STATES DEMANDS DUTCH PERMIT INDONESIA TO REVIVE REGIME—AUSTIN ALSO CALLS FOR RETURN OF REPUBLICAN GOVERNMENT TO JOGJAKARTA FOR TALKS—VAN ROYEN FEARS CHAOS—NETHERLANDS DELEGATE SAYS SECURITY COUNCIL PLAN WOULD PRECIPITATE BLOODSHED

(By A. M. Rosenthal)

LAKE SUCCESS, March 10.—The United States hit out today at Netherlands policy in the East Indies and insisted that The Hague allow the Republic of Indonesia to set itself up again as a working government.

Less than an hour after the Netherlands had again told the United Nations Security Council that she was unable to abide by all its recommendations on the Indonesian situation, the United States delegation went out of its way to make it clear that this country stood firmly behind the Council's resolution.

Warren R. Austin, United States representative, strongly urged the Dutch to allow Republican leaders to return to the city of Jogjakarta and make it their administrative headquarters. The Jogjakarta issue has moved to the center of the complex Indonesian picture and the Netherlands reaffirmed her position that return of the city to the Republicans would bring chaos and bloodshed.

COUNCIL RESOLUTION BACKED

Mr. Austin's statement to the Council was designed to squelch reports that the United States was backing down in its support of the Council's Indonesian resolution—a resolution that asked for the return of Jogjakarta. Unofficially, the attitude here is that if the United States sticks to its guns on the restoration of the Republican government in the city, the Netherlands may decide to make concessions.

The 11 members of the Council met for 3 hours on Indonesia and decided to hold another session tomorrow. Before each delegate was a copy of the report of the United Nations Commission for Indonesia warning that the situation was becoming gloomier in the islands of Java, Sumatra, and Madura.

After the meeting it became clear that the delegates still had come to no agreement on what action, if any, the Council should take now. Most of the delegations seemed reluctant to come forward with any sort of resolution.

For the last few days there have been reports that the Dutch were getting ready to give diplomatic ground, but Dr. Jan H. van Royen, Netherlands delegate, said again today that to accept the Council's plan for Indonesian independence would bring disaster to the islands.

The Netherlands representative told the Council that imprisoned Republican leaders had been freed, but that his country feared that if they were allowed to return to Jogjakarta, Republican armed forces would carry out reprisals against native supporters of the Dutch.

The Netherlands plan for a round-table discussion in The Hague, he went on, represented a way of bringing Indonesia to sovereignty even before the Council had planned. He urged the Council to give its support to the round-table conference.

ROMULO HITS ROUND-TABLE PLAN

Dr. van Royen was followed by two speakers who condemned Dutch action in Indonesia—Brig. Gen. Carlos Romulo, of the Philippines, and Dr. L. N. Palar, of the Republic. General Romulo attacked the round-table idea as a substitute for the Council's resolution.

"The decisions and recommendations of the Security Council," he said "are being circumvented, ignored, or violated by smooth double talk, outright defiance, or the all-too-familiar tactic of the fait accompli."

Dr. Palar, for his part, said the Republic no longer put any stock in Dutch promises and Dutch plans and for that reason were unable to accept the round-table scheme. The Republican leader also accused the Netherlands Indies Army of using Nazi torture methods on captured guerrillas.

Mr. Austin's speech was delivered in mild tones, but had some strong phrases about Dutch policy. He said that the extensive guerrilla warfare was a direct result of the Netherlands decision to abandon talks in favor of military action. As far as the round table was concerned, he repeated Washington's position that restoration of the Republic was a prime condition for any discussion.

MARSHALL AID HELD DIVERTED

The Netherlands diverted Marshall plan funds earmarked for reconstruction in Indonesia and used them "as a political weapon to reestablish their colonial empire," Dr. Djojohadikusumo Sumitro, the Indonesian Republic's financial and trade representative plenipotentiary here, charged yesterday.

Denying Dutch allegations that the collapse of the Republic's economy had resulted from the subsequent withholding of European-recovery-program aid on the part of the United States, Dr. Sumitro declared that the Indonesian people had never benefited from the ERP funds allocated for their assistance.

BENELUX DISCUSSES FULL ECONOMIC UNION

THE HAGUE, March 10.—An important meeting of 22 Cabinet ministers from Belgium, the Netherlands, and Luxemburg (Benelux), supported by their financial and economic experts, opened here this morning to begin the 3-day series of conferences on the future of Benelux.

Deliberations will determine when and how or even if full economic union of the three countries can be achieved.

Benelux has a workable customs union. Complete integration of economies has been tentatively scheduled for the end of this year. There unquestionably will be some delay.

The Netherlands Premier Willem Drees told the delegates:

"We know the basic issue is the monetary problem and linked to it is the question of how far a common economic policy will have to be pursued, and in what respect each country can remain free to determine its own economic and social policies."

The key to success or failure of Benelux lies in the convertibility of the Dutch florin which is weak, whereas the Belgian franc is strong. Economies of these countries cannot be integrated so long as their currencies remain so far apart.

Six committees will cover consumption rationing and subsidies, investment policy, social affairs, agriculture, fiscal and monetary policies.

THE HAGUE, NETHERLANDS, March 10.—Reliable sources said tonight that the Netherlands, Belgium, and Luxemburg have agreed to pool all available capital in the three countries for joint investment.

[From the Christian Science Monitor of March 8, 1949]

DUTCH IGNORE BOYCOTT OF JAVA PARLEY PLAN

(By Daniel L. Schorr)

THE HAGUE.—Dutch officials are preparing for an Indonesian round-table conference March 12, although very few persons expect the meeting to be held on that date.

About 100 rooms in the best Hague hotels have been reserved beginning March 11 for Indonesian leaders and members of the United Nations Commisison on Indonesia.

The historic Hall of Knights is being prepared as a conference room. Press facilities and radio booths are being installed nearby. Piles of documents are being prepared.

An official said, "We stick to the March 12 date as a symbol of our eagerness to hold the conference as soon as possible."

DEADLOCK LOOMS

The Dutch Cabinet faces a deadlock arising from Indonesian President Soekarno's refusal to come to The Hague unless his Republican government is reinstated in Jogjakarta.

And the situation is made more serious for the Dutch by the fact that the Republican viewpoint has some support among Indonesian Federalists.

According to private advices from Batavia, the Federalists adopted a resolution backing up the Republican position. This resolution was termed unacceptable by High Commissioner Louis Beel, and the Federalists are divided over what to do next.

DUTCH STAND

Dutch authorities have refused to permit reinstatement of the Republican government or even the return of Republican leaders to Jogjakarta. They base their stand on the conviction that such action would give impetus to guerrilla activities.

A week ago, a high Dutch official said that restoring the Republican government was as impossible as reconstructing an egg from an omelet.

There are signs that the Dutch will not be able to maintain their stand without Federalist support. In addition, there has been some diplomatic pressure.

British Ambassador Sir Philip Nichols saw Premier Willem Drees on March 6 to convey a message from Foreign Secretary Ernest Bevin, and according to informed sources the burden of this message was advice to the

Dutch to take a broader viewpoint of the matter.

PRESS URGES CONCESSIONS

Some Roman Catholic papers in the Netherlands have pleaded with the Government to make whatever concessions are necessary to hold the conference. One of them referred to the present situation as the last chance to achieve a settlement.

But the Volkskrant, organ of Prof. Carl Romme, parliamentary leader of the Roman Catholic Party, continues to hold out against reinstatement of the Republicans in Jogjakarta.

Previously, the Dutch had planned to hold a conference with the Federalists alone if the Republicans refused to come. On March 5 the parliamentary leader of the Labor Party, Jonkheer van der Goes van Naters, wrote in the party organ Vrije Volk that absence of the Republicans would leave a severe gap at the table, but the meeting should be held anyway.

FEDERALISTS HINT BALK

However, it has become clear that many Federalists are not inclined to come unless the Republicans are induced to attend. Hence the Dutch may be obliged—however reluctantly—to make further concessions to the Republic.

It is not believed, however, that any such decision will be made before this week's discussion of the question in the Security Council. There are indications that Batavia also is awaiting the results of the Security Council meeting.

The Dutch Government had asked the Council for help in furthering its round-table conference plan. One has the impression on talking to Dutch officials that they are gravely concerned over the way the problem has developed.

Nomination of Mon C. Wallgren

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several newspaper comments, telegrams, and letters relating to the nomination of Mon C. Wallgren as Chairman of the National Security Resources Board.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of February 22, 1949]

AS WE SEE IT—TOO MUCH FOR WALLGREN

Monrad C. Wallgren, the lame-duck Washington Governor, is unquestionably an amiable gentleman, a good fishing companion, graduate of an optometry school, a skillful golfer, and a champion billiard player.

Those qualifications, plus membership on the Senate War Investigating Committee when President Truman, then Senator, was chairman, are his recommendations for the chairmanship of the National Security Resources Board, to which Mr. Truman has appointed him.

It is an assignment of staggering importance. It was given after Mr. Truman had scanned the field for a place for his chum which would be neither beneath his dignity nor beyond his capacity.

Senator CAIN, of Washington, is fighting bitterly against confirmation of Mr. Wallgren. The hearings produced some acrid exchanges, such as that Senator CAIN has been divorced, and that Mr. Wallgren douses himself with cologne.

This petty nonsense aside, we think Mr. CAIN has the better of the argument. In the post to which he was named, Mr. Wallgren would be the President's chief adviser on the mobilization of industry and civilians in the event of war. This calls for an overall plan of strategic relocation of industries, a stock-piling program, and integration of Government activities with all other facets of our economic life.

It is a job that should have superlative performance, since false confidence in our preparedness could be worse than total neglect. Many of the President's appointments have revealed his craving for personal loyalty; certainly any man in his position prefers to have around him men whom he knows he can trust. This has resulted in an uncomfortable level of mediocrity in high administration posts, which will not be raised by Mr. Wallgren's confirmation.

[Excerpt from column The Daybook, by Tris Coffin, Washington Times-Herald of March 9, 1949]

Wings clipped—Republican policy chiefs in the Senate have a great surprise for Mon Wallgren, the President's good friend.

They will not oppose Mon's confirmation as Chairman of the National Security Resources Board. But they will toss in an amendment cutting his job down more to the size of the likable, poker-playing ex-governor of Washington.

A good many Senators on the other side of the aisle will support this move. They get dizzy-headed when they think of happy-go-lucky Mon presiding over the almost unlimited power of the NSRB.

If playing a good hand of poker is any help, Wallgren ought to go great guns. He was one of the top money winners on the Hill when he was in Congress. He boasted once of making more "dough-ray-me" with cards than he did on his salary as a lawmaker.

SEATTLE, WASH., *February 28, 1949.*
Hon. HARRY P. CAIN,
Senate Office Building,
Washington, D. C.:

Congratulations on your stand against Wallgren's appointment. Firmly believe him unqualified for the position for which he is appointed by President. This is far more important for the national welfare than the governorship of any one State for which he was rejected by the voters in recent election. I suggest constitutional amendment prohibiting Presidential appointment of defeated candidates to more important positions than the one for which they were rejected by the voters and for which the New Deal has been conspicuous.

LLOYD M. WOLFE, *Bellevue, Wash.*

TACOMA, WASH., *March 5, 1949.*
Senator HARRY CAIN,
Senate Office Building,
Washington, D. C.:

We hope you will be able to indicate clearly to your fellow Senators that the issue over Wallgren is a moral one and that he was defeated in Washington because of that reason.

LOYAL H. VICKERS.

SEATTLE, WASH., *February 24, 1949.*
Senator HARRY P. CAIN,
Senate Office Building,
Washington, D. C.:

My associates at Seattle Hardware Co. as well as the vast majority of our business friends feel you should be assured of our appreciation of your efforts in opposing the appointment of our former Governor. It is indeed heartening to feel that we have in Washington a representative willing to fight for his convictions.

C. H. BLACK,
President, Seattle Hardware Co.

SEATTLE, WASH., *February 21, 1949.*

MY DEAR SENATOR CAIN: In the King County treasurer's office where I work, several coworkers have known Mon. C. Wallgren's life from boyhood, and knew his father and their business at Everett, Wash., before Wallgren broke his father financially, and my friends cannot for their lives see or understand where the money came from to build Wallgren's new home at Palm Desert, Calif.

Until within the last very few years, both Mon C. Wallgren and Lt. Gov. Vic Meyers, have been consistently considered very modestly financed.

No wonder there is an investigation under way into the bridge deal, and other manipulations out here, the last few years.

I cannot learn where or when Mon Wallgren ever was considered much of a business success. How, then, can he build a $60,000 home, in times like the present?

The writer and thousands of others in Washington State hope you can find the answer.

Believe me, as ever
Sincerely yours,

JERRY MILLER.

SEATTLE, WASH., *February 23, 1949.*
Hon. Senator HARRY CAIN,
United States Senate,
Washington, D. C.

DEAR SENATOR CAIN: Let me take this opportunity of thanking you for your excellent work in showing the Nation that the man we didn't want for the office of Governor is also the man we do not want as Chairman of the National Security Resources Board.

Please do not forget that patriotic gesture of Mr. Wallgren's in 1945 when he stated that no Republican veteran would get a State position and also that insipid statement of his that he doubted if there were many Republican war veterans.

As you well know there were no bullets, shells, or pieces of shrapnel, as well as any draft board that bothered to tell the difference between a Republican and a Democrat.

Please accept my best personal wishes during your term in office and for the years to come.

Respectfully yours,
GILBERT M. HOUGHTON.

[From the New York Mirror of March 9, 1949]

WALLGREN AND MEYER NIGHT-CLUB CRONIES

(By Lee Mortimer)

Mon Wallgren and Johnny Meyer, high-powered page-1 press agent and tab-signer, were a pair of gay birds in the late spots during 1946 and 1947, according to cafe society habitues.

While Wallgren was Governor of the State of Washington he was frequently seen in the company of Meyer at bars and cafes here. It was a running gag in the supper clubs that the capital of Washington had been moved from Olympia to El Morocco.

Meyer, the perfect host, always picked up the tab. Frequently the rotund publicity man enlisted visiting Hollywood beauties and New York party girls to lend the feminine touch to these late gatherings.

Night clubbers said Johnny's interest in Wallgren was not purely social, but was centered on Wallgren's direct pipe line to the White House.

TWA air lines, which lacked a trans-Pacific link to complete its dream of circling the globe, held an option to purchase North-

west Airlines. Wallgren, who hails from the Northwest was instrumental in obtaining for that line the franchise which TWA was unable to get for itself.

However, it turned out that Meyer's work was wasted. Before TWA could pick up its option, the stock market picture changed considerably and TWA lost interest in Northwest.

SAN FRANCISCO, CALIF., *February 25, 1949.*
Re Mon C. Wallgren.
Senator MILLARD E. TYDINGS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR TYDINGS: The enclosed clipping from today's San Francisco Examiner prompts me to write to you.

At the time of the political campaign of 1944, I was living in Washington State. On one occasion I was handed, on the streets of Seattle, a copy of a paper called the New World, Terry Pettus, editor, 231 Lyon Building, Seattle. I understand this paper was more or less an organ of local Communists. One of the contributors to the issue I received was State Representative William Pennock, who later, I believe, held an administrative position in the department of finance, budget, and business under Governor Wallgren's administration.

Although my observations of State politics were more or less incidental, I think investigation would bring out that Mr. Pennock, Representative Hugh DeLacy, and State Senator Thomas C. Rabbit were actively identified with Communists at the time of the 1944 campaign, although nominally they were Democrats. These men, as well as Mr. Pettus, were leaders of a group who were most aggressive on two or three occasions in attempting to break up meetings to which they were opposed by shouting, heckling, seizing of the microphone, and more or less strong-arm methods. I think Seattle dailies of June 1944 would have accounts of some of these incidents.

Mr. Carl Reeve, secretary of the Communist Political Association (of Washington State) appeared on the platform along with Mr. DeLacy and Mr. Pettus at a rally of the Washington Pension Union, of which Mr. Pennock was executive secretary and later president. This was in June 1944.

The New World strongly supported the campaigns of Governor Wallgren, Representative Pennock, and Representative DeLacy.

I do not know what relations existed among Governor Wallgren, Mr. Pennock, and these other men. However, as stated above, Mr. Pennock did serve, as I recall, in Governor Wallgren's administration where he must have been appointed, directly or indirectly, by the Governor.

The above information may or may not be helpful to you. It is respectfully submitted.

Sincerely yours,

LLOYD A. HALL.

INDIO, CALIF., *February 25, 1947.*
HARRY CAIN.

DEAR SIR: Have watched and appreciated your conduct in our behalf and specially appreciate your efforts to protect us from having such men as Mon C. Wallgren as our officials. I know him well. Even his kid days in Everett. Too bad Senator BYRD, of Virginia, doesn't, for BYRD is one Democrat who usually seems to be right.

Did you know that Wallgren is building a $60,000 house between here and Palm Springs. Not so bad. Can't be ferry money, but where did he get it?

Believe me, this comes from the grass roots; been content to let our elected officials run it to suit their own judgment, but its getting too rotten for me. Was on the faculty of the University of Washington for many years, now retired. My friends think as I do in this matter. Hope you win and glad you are getting credit for leading the fight.

J. G. FLETCHER.

NORGARD-LATTA INSURANCE AGENCY, INC.,
Yakima, Wash., February 22, 1949.
Senator HARRY CAIN,
United States Congress,
Washington, D. C.

DEAR SENATOR: If former Gov. Mon C. Wallgren has been able to acquire sufficient funds from his senatorship and governorship salaries to build such a winter-resort home, he certainly ought to be able to literally put aside millions from such a position as friend Harry Truman is offering him now.

As a citizen of the State of Washington and with the rumors that have been current relative to the Wallgren administration it would seem to me this warrants investigation.

Sincerely,

MEADE G. ELLIOTT.

SCARSDALE, N. Y., *March 6, 1949.*
Hon. HARRY P. CAIN,
United States Senate,
Washington, D. C.:

Have reason to believe Wallgren not qualified for position as Chairman of the National Security Resources Board. Strongly urge you resist appointment.

L. B. DAVIS.

SEATTLE, WASH., *February 27, 1949.*
Senator HARRY CAIN,
Senate Office Building,
Washington, D. C.:

We appreciate your efforts to prevent the Senate approval of the Mon Wallgren appointment.

Alice B. Crummett, Alice J. Bronson, Albert H. Crosetti, Virginia M. Crosetti, William De Hollander, Helen De Hollander, Vincent H. Nelson, A. Marion Nelson, Mary Stensby, Lydia Anderson.

SPOKANE, WASH., *February 23, 1949.*
HON. HARRY P. CAIN,
United States Senate, Washington, D. C.

HONORABLE AND DEAR SIR: The enclosed clipping is from the Spokane Daily Chronicle of February 21st and to my mind indicates that ex-Gov. Mon Wallgren accumulated a remarkable amount of money on a $500 a month salary. Perhaps he would like to tell you how he accomplished this and at the same time purchased a substantial interest in a broadcasting station in Seattle.

Trusting that this may aid you in keeping this menace to the public welfare from getting his hands on any of the country's funds, I am

Yours very truly,

FRED M. ACKLEY.

SEATTLE, WASH., *February 27, 1949.*
Senator HARRY P. CAIN,
Senate Office Building, Washington, D. C.:

Some of us folks in Washington State are wondering if and when ex-Governor Wallgren is made Chairman of the National Security Resources Board will he install slot machines in his department and will there be 100-percent Blue Springs on tap for all Washington State visitors. This may be essential to the welfare of our country.

From another S. O. B.

A. D. PATTEN.

SEATTLE.

DEAR SENATOR CAIN: Rather a nice house this chap is able to build on a $6,000 salary.

If the Senate knew him as we do out here in the State of Washington they would not confirm him as a page boy. He is absolutely lacking in basic integrity.

We are all for you in your fight against him.

Sincerely,

TOWNSEND COALE.

Tribute by Rabbi William F. Rosenblum to Thomas A. Edison

EXTENSION OF REMARKS
OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, March 10 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the RECORD a sermon entitled "And There Was Light," preached at Temple Israel, New York, by Rabbi William F. Rosenblum in commemoration of Thomas Alva Edison on February 11, 1949.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

AND THERE WAS LIGHT

(By Rabbi William F. Rosenblum)

Lives of great men do remind us of the footprints they have left on the sands of time. They also quicken our heartbeats as in review of their achievements we realize how much of life's purpose and life's enjoyments is due to their genius and their work.

Especially significant in this regard is this month of February when the birth of some of America's immortals is celebrated. Washington and Lincoln, Longfellow and Lowell—all are February's children, and this year we add another illustrious name to the roster of our Nation's glorious and great as we formally observe the anniversary of birth of a man whose career has few parallels in history, whose genius none has surpassed, whose inventions have left not only our generation but all the generations of the future in his debt. That name is Thomas Alva Edison, the wizard of Menlo Park.

Edison was born February 11, 1847, a little over a century ago this day. He was interred in October 1931. The moment his body returned to the earth his spirit became part of the soul of America and of the world. It is, indeed, fitting that we here, in our synagogues, pay tribute to this one of February's immortals—an American who benefited all mankind.

There are many sermons in the life of Edison but his major discoveries illustrate graphically one of the attributes that our rabbis exalt in man. The psalmist sings of him:

I

"Thou hast made him little lower than the angels.
Thou gavest him dominion over the works of Thy hands,
Thou hast put all things under his feet."

Man is no mere pawn on a cosmic chessboard. He is, as our sages put it, "a partner of God" in creation and in the scheme of the universe. When God created the world and brought order out of the chaos and the void he said "Let there be light." He placed the sun in the heavens to give us the day; the moon and the stars to relieve the darkness of the night. Man soon discovered that the sun was often eclipsed by clouds and the night skies oft without a single star. Therefore, from the first he sought for the means with which to penetrate the darkness. And as he grew in mastery over nature he wanted something less flickering than the candle, something more dependable than his oil lamp. It was Edison who invented the incandescent lamps which have turned night into day, who started us on the way to defy the whims of fog and cloud.

Edison had little formal schooling. He educated himself. He needed little sleep,

because his mind was so everlastingly awake. One can fancy him pondering upon the words "Let there be light" and hearing a still small voice assure him that in God's unfolding plan there was place for man-made lamps as well as nature's lights. Today we speak glibly of our great white ways, but only because to Thomas Edison came the flash of revelation which enables us today to say "there is light."

II

There are three things on earth which have always engendered fear in the heart of man and which, from the very beginning, he knew he had to overcome in order to find happiness and peace of mind. Next to utter darkness that which affrights man so much is silence. While quietude sometimes has its magic and its charm, man is lonely and miserable in a silent world. Edison has helped the world to find its voice. Today we take for granted the eloquence of the life about us. We need but turn a switch or press a button or lift a receiver and words and music are ours to command. The songs of yesterday are ours today, the speech that is made at the other end of the globe finds all humanity in the radio audience. And even more miraculous is the fact that in the centuries to come posterity will be able to listen to the playing of a Heifetz, or the oratory of a Franklin D. Roosevelt, or the sermons of our modern preachers and hear them as clearly as if they were in the concert hall, or the East Room, or the sanctuary today.

How marvelous it would be if we, in our time, could hear the voice of Moses as he thundered forth the words of the Decalog at Sinai. How helpful and how quickly unfounded hatreds and bigotries could be resolved if we had a recording today of the Jew of Galilee pleading with his generation, as the loyal member of the synagogue he was, to walk in the ways of the Torah and not change a jot or tittle of the heritage he held so precious. Then no one could distort his gospel of love and his love for his people into tides of prejudice and hate.

There are great spiritual leaders in church and synagogue today whose voices reach around the world to millions of men. These men will die but their sermons will be reproduced faithfully for the unborn millions because Edison, after creating the automatic telegraph, while watching the progress of a perforated piece of paper, suddenly decided that if the paper could give out a humming sound as the dots and dashes blended together, why could he not reproduce the human voice. Edison, who went from invention to invention, whose mind never stopped thinking until his heart stopped beating, thus created the phonograph—and gave humanity eternal speech.

III

The third fear which man has nursed is that of utter stillness. Have you ever been in a place where nothing moved, where all around you seemed one total paralysis? The motors and devices Edison brought into being are too many to catalog here but his facile mind drew upon nature's powerhouse to make it possible for men to travel more speedily and to manufacture things more quickly. He helped to bring continents nearer and it was his hope that thus countries would be brought closer. His motion-picture inventions have turned all the world not only into a stage but into a meeting house. The impact of the cinema on the human mind is only now beginning to be discerned and we shall yet go from mere entertainment to enlightenment by way of the screen. Yes, it is a far cry from the nickelodeons of the turn of the century to the films and the picture palaces of today, but tomorrow's history will be more faithful and true than the record of our past because the generations of the future will be able to have the events of our era pass in accurate review before them in their times. And because they will not have to dig the knowledge of their predecessors out of layers of sand nor decipher it out of shards and clay tablets, the peace which is so hard for us to establish may be the lasting peace which they will enjoy. All because of a man like Edison who seemed to be little lower than the angels, who performed miracles with the work of his hands and who put so many things under the feet of mankind.

IV

A nation grows great not only through its generals and its political leaders, not only through its bards and its authors nor through its merchants and its preachers, but through those men in every field who, in their own quest for success, have added to the happiness of their fellow men; who, in their search for fame have added to the glory of living; who, in their time of greatness, did not lose the common touch; who, above all else, despite their own moments of doubt nonetheless strengthened people in their faith.

Washington is best remembered as the Father of our Country and in that one word "father" is expressed the major import he will always have for our people. Lincoln is the Great Emancipator, the man to whom freedom and union had to be more than words in a document. The faith of Washington in our Republic started us on our career; the faith of Lincoln assured our existence. But there have been and there will be moments when some of our leaders and some of our people will falter in their faith in our democracy and became apprehensive of our future, when they may listen to voices of allurement foreign to our traditions and inimical to our liberties. The words of Edison, shortly before he died, should then be recited as a litany of faith in this America, our native land, made more beautiful and infinitely more rich by Thomas Alva Edison's long labors and many inventions, words which echo those of Moses when he laid his charge upon Joshua, "Chazak Veamatz," words which our generation needs today: "Be courageous. I have lived a long time. I have seen history repeat itself again and again * * * always America has come out stronger and more prosperous. Be as brave as your fathers before you. Have faith. Go forward."

Edison, February's child, now belongs to the ages. Edison, the wizard of Menlo Park, is now one of the world's immortals. Edison, tireless worker with mind and hands, has left a challenge which reflects the very spirit of our people, a call not alone to our Nation but to our world which the synagogue can echo and reecho:

"Be as brave as your fathers. Have faith. Go forward."

History of the Word "Filibuster"

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Malcolm W. Bingay, dealing with the history of the word "filibuster," published in the Detroit Free Press of March 9, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD MORNING

(By Malcolm W. Bingay)

FULL O' BUSTER

Who said that?

No, this is not a radio quiz hour. This is me talking to myself. The other night I was awakened from a sound sleep by a guy on the phone who wanted me to settle a bet. I do not know why they always have to settle bets around 2 o'clock in the morning. He wanted to know who coined the word "filibuster" in connection with legislative skulduggery.

I had to confess I did not know.

The Dictionary of American English says that in 1853 a Member of Congress termed the tactics of his opponents filibustering against the United States. That is no help at all. What we want to know is what Congressman?

In the Dictionary of American Language we are told that it was first quoted in The Congressional Globe on May 21, 1858—or 5 years after the date given by the Dictionary of American English. Furthermore, a Congressman John McQueen from South Carolina is credited with having coined it.

Was he the unsung hero who gave us the word to denote such rascality?

Up to that historic moment the word "filibuster" just meant an all-around dirty criminal. The word was adopted into English from the Spanish filibustero. The Spanish got it from the French flibustier, while the French got it from the Dutch vrijbuiter, which the Dutch took from the English word freebooter, which means one who goes around plundering—or freely stealing his booty. That is sure going all around the mulberry bush.

In the United States the word was used in its original sense in the years before and during the war of the States. Bands of adventurers launched military and naval expeditions to invade Central and South American Republics.

The trick was to seize power by faked revolutions then loot the country.

But the daddy of them all was William Walker. Walker was both a lawyer and an editor which, anyone will agree, is a very bad combination.

Walker sailed out of San Francisco with a small force and seized Lower California which he proclaimed as an independent republic. A little later he helped himself to Sonora. The United States moved in and stopped shipments of supplies and that ended his first venture. But he escaped.

In 1855 he entered into a conspiracy with a gang in Nicaragua to organize a revolution. This was easy with his army behind him and with the hearty cooperation of the Accessory Transit Co.

With this backing Walker captured the capital, Granada. The enemy surrendered and Walker became dictator. He was living the life of Riley as the man who would be king when the United States solemnly recognized his government in 1856.

But Walker did not figure on Cornelius Vanderbilt, who was just as tough a pirate as Walker ever was and who had a lot more money.

Cornelius wanted control of the Accessory Transit Line to complete a monopoly and Walker opposed him. That was the end of Walker almost immediately. Vanderbilt organized his own filibusters and shipped them to Central America to form a coalition against this intruder. Van blocked isthmian transit almost as high-handedly as Theodore Roosevelt grabbed land for the Panama Canal.

Walker could not get any supplies as the blockade was complete. He surrendered to an American naval captain who had been sent by the United States to offer his good services.

He was finally nailed in 1860 by Captain Salmon, of the British Navy, when we were all busy at home with a real war.

He captured Walker on the coast of Honduras as he was seeking to get back into Nicaragua. Salmon turned him over to the government of Honduras and there he got his come-uppance.

The close of the Civil War ended filibustering of that type. Ever since it has been confined strictly to the United States Senate. Senator ELLENDER holds the record for talking six straight days against the antilynching bill in 1938. Huey Long read recipes on how to make "pot likker," the star clown of them all.

The boys are allowed to talk about anything or nothing and most of them do; working in relays like 6-day bicycle racers or marathon dancers. They contend there is no way of stopping it as that might hurt the dignity of the Senate.

Subsidy Payments in the Merchant Marine

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Legislative Overhaul Asked for Nonsubsidized Lines," written by Mr. George W. Morgan, president of the Association of American Shipowners, and published in the Journal of Commerce of February 17, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEGISLATIVE OVERHAUL ASKED FOR NONSUBSIDIZED LINES—SEEK BROADER BASIS FOR MARITIME AIDS—IN WHICH GEORGE MORGAN ARGUES THAT IF BASIC TENETS OF EXISTING LAW ARE GOOD, THEY SHOULD BE EXTENDED TO MORE OF INDUSTRY

(By George W. Morgan, president, Association of American Ship Owners)

Return to the Treasury recently of the full amount of operating subsidy payments by some of the most important subsidized companies was a signficant event since it may indicate the possibility in some of the foreign-trade routes of successful operation without the aid of subsidy payments.

The fact that subsidized operators who were paid sixteen million dollars by the Government during the period of their subsidy contracts were able to repay that amount in full at the conclusion of the contract period, suggests that the subsidy payments may have been unnecessary and that use of private capital in an amount equal to the subsidy payments would have made payment of Government funds unnecessary.

QUESTION HELD "PROVOCATIVE"

In any event, the fact that several subsidized companies have been able to repay the amounts they received as subsidies is provocative. Is the success of the subsidized companies due to advantages, other than subsidy payments, that they enjoy? If so, would it not strengthen the merchant marine as a whole if such advantages were extended to those who do not have subsidy aid?

There are, of course, various advantages and financial benefits that are available to the subsidized companies. If one of the ultimate objectives of our maritime policy is successful operation in the world trades without subsidy assistance, it would seem to follow that unsubsidized operation should be encouraged wherever possible. Assuming this premise to be sound, the conclusion seems inescapable that ample opportunity should be afforded the unsubsidized owner to operate without subsidized competition and that subsidized operations, accordingly, should be strictly confined to routes and services where Government assistance is necessary.

A shipowner who is furnishing adequate service without subsidy assistance should not have to face the competition of another American operator who is subsidized. To permit subsidized owners who enjoy special privileges and advantages to compete freely with unsubsidized American shipowners to whom such privileges and advantages are denied can scarcely be said to encourage unsubsidized operation.

Oddly enough, the subsidy contracts provide:

"Competition: The operator agrees that, without the express written approval of the Commission, neither the operator nor any affiliate, subsidiary or holding company will operate or cause or permit any unsubsidized vessels owned or controlled by any of them to be operated in the subsidized service of the operator or in the foreign commerce of the United States in competition with any other service, route, or line receiving financial aid pursuant to the provisions of the Merchant Marine Act, 1936."

PROBLEMS OF OTHER LINES

Thus while a subsidized shipowner must obtain commission approval if his proposed operation would be in competition with another subsidized owner, he is free at all times to compete with an unsubsidized owner (unless such unsubsidized owner is already in competition with some other subsidized owner). It seems clear that the unsubsidized owners should have at least as much protection from the competition of subsidized owners as the subsidized owners themselves enjoy.

Important advantages enjoyed by the subsidized companies and not by unsubsidized shipowners are the ability to purchase new ships at world market prices and the right to establish special tax-free or tax-deferred funds. By making deposits of earnings in these funds, the subsidized companies are able, in effect, to amortize the capital invested in their ships very rapidly and also to accumulate reserves that can later be withdrawn to pay the losses that experience has shown must be expected in a cyclical industry such as shipping. Without having had such advantages it is problematical whether the subsidized companies could have returned their subsidy payments to the Government.

EXTENDING ITS BENEFITS

If the financial privilege enjoyed by the subsidized companies have in fact been a major contributing factor in their success, it would seem that the interests of the nation in its merchant marine could be furthered by extending those benefits to all American-flag shipping. Furthermore, it seems only fair that unsubsidized companies should be permitted to operate in as favorable an economic environment as that which the Government has provided for the subsidized section of the industry.

Under existing statutes, a favorable economic environment for the investment of capital in new, unsubsidized American-built ships does not exist because world-market prices for such ships are available only to those who qualify for construction subsidies. If anyone else builds a new ship in this country, he is obliged to pay a premium for it of at least 70 percent above its actual value as measured by the cost of building a similar ship abroad.

When any owner, subsidized or not, sells a ship, he will be paid for it not more than it is worth in the world market. If the shipowner must take his chance on the world market when he sells, it is easy to understand why he is hesitant to pay substantially more than market value when he buys. Circumstances would have to be unusual indeed for any investor to be willing to pay a large premium above market for any item of property.

FAVORABLE ENVIRONMENT

A favorable economic environment for unsubsidized American shipping also requires that the shipowner be able to amortize his capital investment so that he can replace his ships when they become obsolete or inefficient. When he is unable to do so, the merchant marine will simply deteriorate because adequate new capital will not be invested in ships if their earnings are insufficient to cover their costs during the period of their useful economic lives.

It seems clear that any reasonable amortization or depreciation procedure should conform with the earnings pattern of the industry to which it is applied.

In an industry of irregular earnings, such as shipping, a prudent businessman would accelerate his depreciation in years of high earnings. In years when he has losses he would accrue his unearned depreciation against the time when his earnings will be sufficient to enable him to charge suitable amortization payments against them.

Whether we like it or not, the record shows that high shipping earnings have been limited to brief periods of wartime unsettlement and actual war. Very small earnings or operating deficits have been the general rule in the intervening years.

PREWAR EARNINGS

For example, the composite earnings record of three large companies (representing approximately 15 percent of the industry before the war) shows that while the record of an individual company may have been somewhat better, the result of their combined operations was in the black in only 4 years during the 18-year period between 1921 and 1940.

The four profitable years, moreover, coincided with the peak of the general business cycle. While we may hope for a better record in the future, we must accept the probability that depreciation charges in the future may not be fully earned over extended periods. And if depreciation is not fully earned, then the shipowner cannot amortize his capital investment and replace his ships from earnings.

Opportunity to amortize invested capital for vessel replacement purposes is now afforded to the subsidized companies in section 607 of the Merchant Marine Act, 1936. Such owners may make tax-exempt earnings deposits in reserve funds. Thus heavy tax deferment is possible in years of good earnings and since they may be withdrawn to pay losses, the subsidized owner may in effect accelerate his depreciation.

TAX-FREE FUNDS

But the ability to pay losses from accumulated tax-free earnings is much more valuable than the right to accelerate depreciation, and under section 607 it is possible for the subsidized companies to set aside additional tax-free funds against periods when the shipowner will incurr losses.

A similar opportunity should be afforded to the unsubsidized owners because the use of such funds to offset operating deficits would promote greater stability, and the result of greater stability would not only be to encourage capital investment but to provide greater employment opportunities for maritime labor.

The present law offers special inducements only for the investment of capital in subsidized shipping. It is certainly not unreasonable to ask whether it is not of equal

if not greater importance that encouragement be extended to the unsubsidized companies by affording them protection against subsidized competition and by permitting them to have financial advantages, other than subsidy payments, equal to those enjoyed by the subsidized owners.

The extent to which payment of operating subsidies is in fact necessary can perhaps best be determined by permitting the unsubsidized segment of the American merchant marine to operate in as favorable an economic environment as that afforded for the subsidized companies.

The fact that it has been possible to return substantial portions of the subsidy payments to the Government suggests strongly that the more favorable economic environment of the subsidized companies is more important than actual subsidy receipts.

If this is so, the Nation's interests in its merchant marine would be admirably served by extending to all the financial benefits now enjoyed by the subsidized companies.

Operation Snowbound

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. GURNEY. Mr. President, Operation Snowbound has from the first day of operations paid untold dividends in saving human lives, rescuing livestock, and opening roads to restore communications in the blizzard-stricken States of the West. Our country can ill afford to be without an agency like the Army engineers, which has functioned so ably in this humanitarian effort. The Corps of Engineers of the United States Army with the facilities of its well known civil works organization have again performed in their customary manner in emergencies. I ask unanimous consent to have the editorial entitled "Operation Snowbound" from the Memphis Commercial Appeal of February 14, 1949, placed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OPERATION SNOWBOUND

Two weeks ago the West's blizzard disaster had reached such catastrophic proportions that President Truman directed use of the Armed Services' resources for relief purposes. Army Secretary Royall was designated to coordinate the activity, and the tough job of field command was given to Maj. Gen. Lewis Pick, then Missouri Valley division engineer and now Chief of Army Engineers. The President further authorized use of such flood control and rivers and harbors funds and such facilities of the Corps of Engineers' civil functions division as was necessary. In short, the job was given to those ready to tackle it on an immediate basis.

While General Pick and his men have been fighting the blizzards, the Corps, which earlier has assigned him to building the Ledo road, has been fighting at Washington for continuance of its civil functions and against the threat of removal which the pending reorganization bill contains. In that undertaking the brunt has been borne by its civilian friends and notably those who live behind the main line levees of the Lower Mississippi Valley. One champion of the Corps of Engineers who testified before the Senate Expenditures Committee, however, was Senator CHAN GURNEY, of blizzard-cursed South Dakota. He was unstinting in his praise of what they are doing for the stricken people of his State.

Strangely enough, and for reasons we do not attempt to explain, there has been no mention of Army engineer direction of the vast blizzard relief operation. Because of that we asked some questions at Omaha headquarters of Operation Snowbound and got answers that tell of a magnificent civil-functions undertaking of the Army engineers.

During the 12-day period from January 29 to February 10, 67,054 persons were released from snowbound farms and ranches by road-opening operations.

The total head of isolated livestock reached and given ground access to feed was 1,887,381.

The total number of miles of road opened in the disaster areas of Nebraska, South Dakota, and Wyoming was 32,780.

Directing this activity, in which 5,400 persons are engaged, are 55 Army engineer officers, 19 from the Missouri Valley division, 30 from the Engineer Center at Fort Belvoir, Va., and 6 from other stations.

Holding key posts in Operation Snowbound are 540 civilian employees from the engineer district and division offices of the Missouri River Division. Working with them in the field are 450 contractor employees and contractor-hired labor diverted from Army civil functions projects. There are 1,000 contractor items of equipment being used, including 80 bulldozers, graders, and plows. From their military stores Army engineers have supplied 180 dozers, graders, and snow plows. In some instances, civil functions and military equipment have been moved into the area from tremendous distances. Operation Snowbound covers a disaster area of 138,000 square miles.

The point of this is that Army engineers are putting into a gallant fight to save humans and stock from a blizzard catastrophe the same know-how and determination that they have put into many a flood fight in this valley. They are winning there as they have won here, and if it wasn't for their civil functions organization, its equipment and skill, the job just couldn't be done.

It will take some doing to convince the people of a three-State blizzard area that a political agency of Government could or would do a better job than the Army engineers.

National Defense

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, under permission granted, there is printed herewith a copy of the talk given by me on January 29, 1949, before the Women's Patriotic Conference on National Defense, held at the Statler Hotel here in Washington, D. C.:

NATIONAL DEFENSE

When we speak of national defense, the average individual's thoughts naturally turn to soldiers and sailors; to armies with their implements of war; to navies with their battleships, cruisers, destroyers, submarines; to the air force with its bombers and its fighting planes.

Going a step farther, when considering national defense, one thinks of mines and mills and factories, of production machinery, of assembly lines, of the Nation's ability to produce, transport, and make available at the point of danger all those things useful in defeating an enemy.

Still farther down the line, but as the real foundation of it all, one thinks of the man who tills the soil, who is first in the production line, in the production not only of the things which are necessary for munitions of war but of the food and clothing, which are the first necessities which the armed forces must have if they are to be successful.

Despite the fact that the United States of America is not first in natural resources, it is first in its ability to produce and make available the most efficient weapons of war—those things which enable the Nation to win a war.

Nor has the courage, the endurance, the know-how of the rank and file of our fighting men ever been successfully challenged.

Perhaps the most competent witness in all the world testified to our rightful position in the family of nations when Winston Churchill, speaking on the first Thanksgiving Day after the war, said:

"The United States has, in sober fact, become the greatest military, naval, and air power in the world."

While all the things which have been mentioned are essential in a worth-while national defense program, none is, nor do all together, make a complete, safe defense program that will preserve us a nation, safeguard the liberty and the well-being of our citizens.

If the only threat to the citizen's liberty and the Nation's security was the armed force of our enemy or enemies, we might well rest secure in the thought that, in the future as in the past, our national strength, the resourcefulness of our citizens, might safely be relied upon to protect us.

Unfortunately, today, as in the years long past, our danger comes from within. True today as on the day when Abraham Lincoln gave voice to it on the field at Gettysburg is the statement—

"At what point is the danger to be expected? If it ever reaches us, it must spring up among us. If destruction be our lot, we must ourselves be its author and finisher. As a Nation of freemen, we must live through all time or die by suicide."

Even the framers of our Constitution realized the danger of a change in its principles. When Benjamin Franklin stepped out of old Independence Hall, in Philadelphia, on a day in September 1787, the day on which he signed the new Constitution which he helped to formulate, a friend asked him, "What kind of government have you given us?" He promptly replied, "A republic, if we can keep it."

Today, the real threat to our individual and national security comes from two sources.

Overlong, we have given sanctuary and encouragement to Communists, to Fascists, and to those with ideologies which have in other countries demonstrated their lack of soundness.

We have taken to our hearts, opened our pocketbooks to, and placed in positions of trust in the Federal Government, members of a party which has openly declared that it would overthrow this Government by force. The utter folly of our policy in this respect has been and is past understanding.

Again, under the fiction that we were serving a humanitarian purpose; that we were carrying the "four freedoms" throughout the world; that we were dispensing a needed charity, we have blindly and foolishly depleted our national resources as well as almost completely destroyed our independent thinking, by a program designed, it has been

said, to bring peace and freedom from want throughout the world.

Today, after the policy has been in operation for some years, we find the world engaged in four separate and distinct wars, and other peoples, who should be independent and self-sustaining, more and more dependent, having less freedom in their own governmental affairs.

During the last few years, the Congress gradually, but nevertheless surely and ever progressively, has been enacting legislation which, in almost every instance, took from the people and from their local governments the power reserved to the people by the Constitution.

To my mind, the greatest danger to the Republic lies in the complacence with which the Congress grants to the executive branch the power to legislate, undermines the integrity of State governments.

The most fruitful and beneficial plan for national defense must include a determination on the part of the Congress to cease delegating power to the Executive, to cease abdicating its constitutional duty to enact legislation; then, to see that it is enforced.

Any effective national defense program must have back of it skilled and competent, loyal workers.

Precision instruments are essential if any effective war is to be waged. Let me cite just one instance where we have been extremely foolish along industrial lines.

To my desk yesterday came a series of editorials, published January 17 to 21, inclusive, from the Waltham Watch Co. and the American jeweled-watch industries. These editorials call attention to the fact that wartime legislation and regulations threaten a $5,600,000 annual pay roll; that 2,300 workers, skilled in making watches, will be out of jobs—this because the watch market during the war was given to Switzerland.

If this meant only that those people would be out of jobs and must seek others, the matter would not be at all serious, but what it really means is that, unless the policy is changed, thousands of skilled workers will seek different jobs and that, in the end, in the event of war, the precision instruments needed by the Army, the Navy, the Air Corps, will not be obtainable here at home.

More along the same line—during the war, while other nations permitted their medical students, their chemists, their scientists, to continue their education, we drafted them into the ranks. Result? Today, when we need doctors in every community; when there is a scarcity of dentists—in fact, of all professional men, except perhaps, the law—none is available.

In our anxiety to rehabilitate Europe, the Army and the Navy are taking practically all of certain types of fertilizer, so that the American farmer and the American fruit grower are unable to produce as they otherwise might.

Only recently have a few of our international statesmen conceded the obvious fact that, in our program of giving, we might at least take an inventory, ascertain what we had left, how much more we could give away without endangering ourselves.

A man may give away his shirt and still prosper. But, if he gives away the tools of his trade or his capital resources which he cannot replace, he is soon not only unable to help others, but to save himself.

On one occasion, the Congress not only gave to a President a billion dollars to be used, without any accounting, in any manner he saw fit, but it has on more than one occasion, issued a blank check of power to the Executive.

Either because the Congress considers our form of Government indestructible or because it is too careless or too indolent to know what it is about, it has time and time again unnecessarily granted power to the Executive.

But why continue the story? The facts are available to all. Let me quote from the testimony of Lindsay Warren, a Democrat who served the State of North Carolina in the House of Representatives for many years. He was appointed Comptroller General of the United States for a term of 15 years and has served as such approximately half of that term. He is the agent of the Congress—not the agent of the Executive.

Appearing before the House Committee on Expenditures in the Executive Departments on Tuesday, January 25, 1949, Mr. Warren testified, and I quote:

"That is why I said, and still, on the whole, reiterate, that the present set-up is a hodgepodge and crazy quilt of duplications, overlappings, inefficiencies, and inconsistencies with their attendant extravagance. It is probably an ideal system for the tax-eaters and those who wish to keep themselves perpetually attached to the public teat, but it is bad for those who have to pay the bill. That is why I say the Government should put its own house in order."

We must have reorganization, but it is not necessary to surrender our constitutional processes to get it. Delegations of authority and the misuse thereof may destroy our ability to maintain an adequate defense program.

"Most thinking, informed Americans will agree with the proposition that the United States of America is today, as Churchill said, the most powerful nation in the world. That is because, and only because, our people, in years gone by, have at least made an effort to, in a constitutional manner, follow the principles laid down in that immortal document.

Yet the Congress has on several occasions disregarded the Constitution and enabled the Executive to reverse the constitutional procedure for the enactment of legislation.

It is true that section 3 of article II of the Constitution provides that the President "shall from time to time give to the Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and expedient."

But nowhere is there a word which gives the President power, acting alone or with one House of Congress, to enact legislation.

Section 1 of article I of the Constitution provides that—

"All legislative powers herein granted shall be vested in a Congress of the United States which shall consist of a Senate and House of Representatives."

Section 7 states that—

"Every bill which shall have passed the House of Representatives and the Senate shall before it becomes a law be presented to the President of the United States."

Nevertheless, in the reorganization bill now pending before the House Committee on Expenditures in the Executive Departments, and soon to be submitted to the Congress, there is carried, in section 6 of title I of that bill, an express relinquishment of the constitutional power of the Congress to legislate; a transfer of that power to the President of the United States.

Section 6 of that bill states in substance that the President may send to Congress a reorganization plan affecting the executive departments and that, unless each House of the Congress, within 60 legislative days, expressly repudiates or vetoes that plan, it shall become and be the law of the land.

We all know that, under the Constitution, to become effective as a law, a bill must receive a majority vote of each House and that, then, and only then, as provided in section 7 of article I of the Constitution, it goes to the President for his approval or disapproval.

This present reorganization bill provides, as have other reorganization plans, that the President may propose or recommend to the Congress and that, unless both Senate and House veto that plan within the prescribed time, it becomes the law of the land.

Comptroller General Warren attempted to justify the legislation with the argument that it was necessary because only in that manner could legislation establishing greater efficiency and needed economy be enacted.

But the issue still is: Do our economic demands justify a scrapping of a portion of the Constitution, and that, to my mind, the most important part of the Constitution—the power of the people's elected Representatives to enact legislation needed to protect the public health, safety, and welfare?

It is true that we need more efficiency and more economy in the Federal Government; otherwise, ultimately, we will be destroyed as a nation by a nation of taxeaters.

Fortunately, the thing sought to be accomplished by executive reorganization of the departments can be accomplished in a lawful, legal manner, and very simply and easily. All we need to do in this particular instance is to strike out section 6 of the present bill and insert, in lieu thereof, a provision that the reorganization plans which the President may desire to offer to the Congress may be submitted by him and that the Congress shall, within a 60-day period, act upon each of those plans, either approving or disapproving.

If you study the question of national defense in connection with the doings of your legislative and executive departments, you will soon discover that, while this Nation needs munitions of war and fighting men, strategic plans for war and production, the real, the threatening danger to this Republic lies in the lack of vigilance on the part of its citizens—a lack of knowledge of what, or indifference to what, their Executive and their Congress are doing.

Let us direct our thought, not only toward the weapons of war, but to those insidious things against which Abraham Lincoln warned us—the enemy within, not only the Communists and the Fascists, but the careless, thoughtless American, who permits a frittering away of his liberty, of the national security, through legislative enactment.

Oleo Bill

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. RIVERS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 11, 1949:

OLEO BILL

The approval by the House Agriculture Committee of a bill to remove all Federal taxes on oleo, while imposing a ban on interstate shipments of colored oleo, is a victory for the dairy interests. For while unconditional abolishment of the oleo taxes would increase sales of the colored product in States permitting such sales, a ban on interstate shipments would cut off all sales of colored oleo in 18 of the 30 States that permit such sales, since they have no factories within their borders from which local shipments could be made. Furthermore, in three other States with oleo factories (Ohio, Illinois, and California) State laws prohibit the sale of

colored oleo. Hence the net result of enactment of the miscalled compromise measure approved by the House Agriculture Committee would be a tightening of present restrictions.

The dairy interests have engineered this scheme for increasing the competitive advantages that butter producers now enjoy under the guise of a tax-repeal measure originally designed to remove discrimination at the Federal level and encourage the repeal of numerous State taxes and prohibitions on sales of colored oleo. If the dairy spokesmen succeed in carrying out their program, it will be a retrograde step that will testify to the power of pressure groups to thwart legislative action in the public interest.

The dairy organizations claim that tax-free sales of colored oleo would result in its fraudulent substitution for butter. The Washington Post takes no stock in such arguments. If, as claimed, there is now widespread evasion of regulatory laws designed to prevent fraudulent sales of oleo for butter, the remedy, obviously, lies in stricter law enforcement. Certainly there is no reason to suppose that fraudulent substitution would be checked by banning sales of colored oleo, since it would be possible to obtain coloring matter.

The expansion of the oleo industry is primarily attributable to price differentials that have led a rapidly increasing body of consumers to turn from butter to a much cheaper and equally nutritious substitute. The trend may be slowed somewhat, but it will not be arrested by banning sales of colored oleo, for housewives will continue, as at present, to "color their own," if denied the right to buy colored oleo. The real question at issue is whether the oleo industry is to be permitted to sell its product in competition with a rival industry without being handicapped in the competitive race by Federal and State taxes that impose unnecessary burdens on consumers and by a network of discriminatory prohibitions having no place in an economy of free enterprise and serving no purpose except to provide indirect subsidies for the dairy industry.

Rent Control

EXTENSION OF REMARKS
OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. DAVENPORT. Mr. Speaker, I believe that rent control must be continued in this country. Our housing shortage is so great that if rent controls were lifted now, exorbitant rent increases and mass evictions would follow; millions of families would be forced to cut down on necessary expenditures for food, clothing, medical care, and other basic living needs; and irresistible pressures for further wage increases followed by further price increases would inevitably lead to a new inflationary spiral. The facts on the housing shortage were developed by our own Joint Committee on Housing in the Eightieth Congress.

For those individuals and families who are living in cramped quarters or doubled up with other families, and who have been trying for months and even years to rent suitable housing accommodations at a figure within their reach, no statistics need be cited to prove that there is still a tremendous housing shortage. However, for those fortunate ones who have not been forced to go into the rental market to seek adequate shelter, some basic facts and figures may be cited.

The Office of Housing Expediter recently secured local estimates of the need for rental housing in 91 of our cities having a population of 100,000 or more. These estimates were made by city officials, housing authorities, real estate boards, and other responsible groups and individuals. These estimates show that at the end of 1948 there was an immediate unfilled need in these 91 cities for more than 1,000,000 rental dwelling units.

In order to appreciate how large this deficit of 1,000,000 dwelling units really is, it is useful to discuss it in relation to the volume of new construction of housing, and of rental housing in particular. For example, in those same 91 cities, it is estimated that not more than 97,000 newly constructed units were offered for rent during the first 10 months of 1948. The outlook for new permanent nonfarm dwelling units to be started in 1949 is about 875,000, according to the Bureau of Labor Statistics. This total figure for the country as a whole is less than the one million deficit which is estimated to exist in only 91 cities. Moreover, only a small proportion of these 875,000 units will be offered for rent. During 1948 only about 17 percent of such newly constructed units were rental-type units. If 17 percent of the 875,000 units which are estimated for 1949 are offered for rent, the total number of rental units started in 1949 will be less than 150,000. This 150,000 total for the entire United States would not be enough to satisfy the need in even three or four of our larger cities.

Even these figures, extreme as they are, do not give a full measure of the acuteness of the housing shortage. This is because the newly constructed units which are coming on the rental market are too costly for the average American family. For example, most of the new rental units which were built in 1948 in the 91 cities were in the $75 to $100 per month class, while the predominant demand was for units renting for $40 to $50 per month. The Housing Expediter made a survey of rents on newly constructed units in over 700 cities in all 48 States. This survey showed that the average rent for such newly constructed rental units was $109.38 per month.

A few examples of the situation in some of our cities may also be cited. A survey made by the Housing Expediter in New Haven, Conn., showed that, according to local responsible estimates, from 1,500 to 5,000 families were seeking rental housing. Employers reported that they were having difficulty in hiring and keeping employees because of the lack of rental accommodations. Yale University had a list of 750 GI students who were looking for places to rent. Yet to meet all this unfilled demand, the survey found only one rental vacancy.

In Louisville, Ky., a similar survey revealed that an estimated 18,000 families were living doubled up, that approximately 3,000 families were on the active waiting list kept by a temporary war housing project, and that during the previous 12 months 8,000 families had contacted the Mayor's Emergency Housing Committee requesting rental housing accommodations.

In Dallas, Tex., a similar survey showed the vacancy rate for habitable rental units was only eight-tenths of 1 percent, and almost 90 percent of these were newly constructed units for which the median rent was $95 per month. The vacancy rate for habitable units offered for sale was one-half of 1 percent, and more than 70 percent of these were newly constructed with a median sales price of $11,500. The Dallas Housing Authority had 16,000 applications of tenants seeking units renting from $30 to $50 per month.

These are some of the facts which explain why, notwithstanding the amount of new construction since VJ-day, the number of married couples who are living doubled up with other families has been increasing instead of decreasing. According to the Bureau of Census, two and one-half million married couples were living doubled up in April 1948—35 percent more than the number of married couples living doubled up in April 1940.

This general picture also ties in with certain other significant facts. Under the present rent-control law, 767 local rent advisory boards are set up throughout the country with authority, among other things, to recommend decontrol of all or part of a defense rental area whenever they find that the demand for rental housing accommodations has been reasonably met. Since April 1, 1948, such rent advisory boards submitted on their own initiative decontrol recommendations for only 17 areas or portions of areas, and only 5 of these recommendations contained sufficient evidence to permit decontrol. At the same time that these local boards were functioning, the Housing Expediter was making decontrol surveys on his own initiative. Within the past 9 months, his staff made surveys in 986 counties throughout the United States. The facts produced by these surveys enabled the Expediter to decontrol only 31 areas or portions thereof.

I have said that the lifting of rent controls at this time would result in exorbitant rent increases. This statement is not only proved by the facts and figures concerning the housing shortage, but also by actual experience in connection with housing units that have already been decontrolled. Under the present rent law, there are no rent ceilings on newly constructed or converted housing, on permanent units in hotels, and certain other dwelling units. In the last 3 months, the Housing Expediter has investigated more than 62,000 of these decontrolled housing units located in over 1,000 cities and towns in all 48 States. The average rent for all 62,000 units is

60 percent higher than the last rent under rent control or comparable controlled rent; and for more than 14,000 of these units the present rent is more than double.

Although we must have a continuation of Federal rent control, I believe that rent ceilings should be fair to both landlords and tenants. So much has been said by opponents and critics of rent control concerning hardships on landlords, and landlords being forced to operate at a loss, that I think some of the facts on the other side should also be cited. For example, under the present regulations, a landlord is entitled to obtain an adjustment if his current net operating income falls below the net operating income which he had in any two consecutive years since 1939. The landlord may select for this purpose his best 2-year period since 1939, and if his current net income is below the net income for his best 2 years, he receives a rent adjustment to bring him up to that 2-year level.

There is also a provision for adjustment in any case where a landlord is currently operating at a loss. This provision was written into the rent regulations in July 1948. The Housing Expediter's records show that since that time only 1,524 petitions were filed by landlords under this provision, that 1,221 of these have been processed, and that in only 124 of these cases was the landlord actually operating at a loss.

Moreover, the local rent advisory boards have authority to recommend general rent increases whenever the facts show that landlords generally need relief. A number of such recommendations have been made by local advisory boards and many have been approved and put into effect.

Some comment on the operating position of landlords generally should also be made. Before the acute housing shortage developed landlords ordinarily counted on a substanial loss from vacancies and nonpayment of rents. They were also forced to spend considerable sums for painting and decorating and minor repairs. Under present conditions, the situation is reversed; loss from vacancies and nonpayments have virtually disappeared, the need for competitive expenditures has vanished and most tenants have been forced to assume the cost of minor repairs. Landlords' incomes have also been greatly increased by almost 1,800,000 individual adjustments, by general area rent increases affecting about 430,000 housing units, and by 15 percent leases signed for more than 2,000,000 dwelling units since July 1947. As a result, all indications point to the conclusion that the net operating income of landlords generally is substantially higher today than it was before the war. If, however, there is still a hardship situation in the case of any area or in the case of any individual landlord, the provisions of the rent law continue to be available for the relief of such situations.

Constitutional Government

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Winchester (Va.) Evening Star of March 9, 1949, commenting on Senator FULBRIGHT'S discussion of the proposed change in the rules of the Senate.

It is my understanding that this editorial was written by Mr. Harry F. Byrd, Jr., editor of the Winchester newspaper.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

SENATOR FULBRIGHT GIVES A LESSON IN CONSTITUTIONAL GOVERNMENT

The CONGRESSIONAL RECORD, which records the debates and votes of the Congress, usually is rather dull reading. But to one who has an interest in government, in history, and in constitutional law, the issues of March 4 and March 5, we believe, will prove fascinating.

The hero of the debate, to our mind, was the able young Senator from Arkansas, J. WILLIAM FULBRIGHT. Senator FULBRIGHT, 43, who had served as president of the University of Arkansas prior to his election to the Congress, discussed in detail the importance of preserving freedom of debate within the Senate of the United States. He spoke for the better part of 2 days and tangled with the experienced Senator LUCAS, of Illinois, the blunt Senator MORSE, of Oregon, and the demagogic Senator PEPPER, of Florida. But in each case, it seems to us, the scholarly Arkansan used his opponent's argument to effectively buttress his own.

For instance, to Senator MORSE's contention that a majority should be able to do as it wished, Senator FULBRIGHT pointed out that only that morning the Oregon Senator had experienced, and bitterly condemned, the arbitrary and tyrannical rule of a majority of the Labor Committee which refused to permit the minority members of the committee even to propose amendments to a bill which the majority wanted. The committee not only would not permit the discussion of the merits of the prospective amendments, but would not even permit the amendments to be presented. Senator FULBRIGHT concluded that the Senate as a whole could expect similar treatment if freedom of debate is abolished. The present rule which the administration would change permits limitation of debate by a two-thirds vote.

Mr. FULBRIGHT traced the history of the British Parliament and of the Italian and Polish systems to show the importance—indeed the necessity—of safeguarding the rights of a minority by free debate if a democratic government is to long endure. Freedom of debate, he emphasized, is not a parliamentary procedure that permits a minority to control a majority. "What the minority has the right to do is to exercise the power of resistance to arbitrary actions by the majority." Actually, he continued, the experience in the Senate under the present rule (which the Administration would discard) "is that very few measures for which there was real support, I am almost tempted to say that no measures which a great and strong majority of the American people have favored, have been defeated. Some have been delayed." But, he stated, "It is the power of delay which forces explanations, consideration. * * *" As an example he mentioned the now completely discredited proposal of the late President Roosevelt to pack the Supreme Court, which in the words of veteran Senator GEORGE, of Georgia, was "the most important and far-reaching proposal placed before the American people and the American Congress in my day and time * * * and which would have changed the whole character of the American government, in my opinion." It was freedom of debate in the Senate, Senator FULBRIGHT pointed out, freedom to bring out the disastrous possibilities of such a plan that caused the American people to turn against it, although it was advocated by a strong and popular President.

In discussing the importance of preserving the integrity of the Senate, Senator FULBRIGHT stated: "There is no question about the fact that the President of the United States is the most powerful person in the world today. There is no king, no potentate, who has the power that the head of our country has with its tremendous wealth and the distribution of $40,000,000,000 throughout the world * * * he has the power to appoint members of the Supreme Court; but the Senate is the only remaining branch of our Government which the President has not been able to dominate." But if the President gains what he advocates, the right of 25 Senators to shut off debate, the entire color of our constitutional Government will be changed.

"Did anyone ever hear of a legislative body which ever enslaved the people in any country?" he asked. "The people begin usually by the establishment of the kind of government they really want * * * but it always ends," he said, "by the executive department * * * swallowing up the legislature." And history shows it always has. Senator FULBRIGHT continued: "In my opinion the power of the legislature in the United States to check the Executive is the reason why we have not been completely enveloped."

Senator FULBRIGHT quoted liberally from Woodrow Wilson, generally recognized as not only a great President, but a famous historian and a foremost authority on constitutional government. Mr. Wilson stressed the necessity of preserving the Senate as a forum where measures can be considered realistically and temperately, less susceptible to the passions of the day. "What gives the Senate its real character and significance as an organ of constitutional government," said Woodrow Wilson, "is the fact that it does not represent population but regions of the country. * * * the Senate represents the variety of the Nation as the House does not. It does not draw its membership chiefly from those parts of the country where the population is much denser, but draws it in equal parts from every State and section."

We are convinced of the accuracy of Senator FULBRIGHT'S statement "that the right of free debate is the only real protection of the rights of minorities." It is difficult to believe that President Truman could have been serious when he urged that 25 Senators be given the power to silence the remaining. But, as Senator FULBRIGHT points out, "an executive always thinks the legislature is thwarting him."

Going back to Roman times, Senator FULBRIGHT asked, "What was the principal quarrel at the beginning of the decline of the

Roman Republic?" It was a quarrel between the senate which was the guardian of the constitution and the proconsuls who were the executives. The proconsuls won and they became the first emperors. In such circumstances, it is the usual thing, he declared, for legislative bodies to be wiped out. We, of course, do not mean to imply that President Truman would wipe out the Legislature, but we do believe that if what he advocates comes to pass that a foremost safeguard to constitutional government will cease to exist.

We reiterate today what we wrote last week, that every minority and indeed those who are not now in a minority, should fight against President Truman's proposal to eliminate free debate. Times change and those in the majority today may well be in the minority tomorrow.

In 1925, a Republican Vice President, Mr. Dawes, undertook to reform the Senate rules in much the same way, although less radically, than is proposed today. This was vigorously opposed at the time by the American Federation of Labor because the Senate was regarded as the only protection against the threats of the Republican majority. Now the situation is somewhat reversed and, as Senator FULBRIGHT states, "Labor, feeling that it has a majority, wants to destroy the same thing that in 1925 labor thought was its whole salvation."

How unwise and how short-sighted. A majority today can easily become a minority tomorrow. That's why it is vital that we have a government of laws and not of men; laws that will endure where the frailties of human nature fail. Senator FULBRIGHT'S concluding words are important:

"Unlimited debate in the Senate is essentially a device for protection from a transient majority, protection against the imposition of arbitrary power."

Amendment of United Nations Charter

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation of the Governor of Connecticut:

PROCLAMATION

Whereas the General Assembly of the State of Connecticut, duly convened in special session at Hartford in August 1948, did enact the following act which was duly approved by the governor on August 26, 1948:

"An act concerning question concerning Charter of United Nations: Section 1871 of the 1947 supplement to the general statutes is repealed and the following is substituted in lieu thereof: 'The following question shall be voted upon at the general election to be held on November 2, 1948, and the designation thereof hereinbelow provided may be placed on the same ballot or voting machine as the names of the candidates to be voted for at such general election: "Do you, as a sovereign citizen of Connecticut and the United States of America, direct our Representatives in the National Congress to urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war?" The designation of said question which shall be used on ballots and voting machine ballot labels shall be "Question re recommendation providing for strengthening of United Nations to prevent war, Yes" and "Question re recommendation providing for strengthening of United Nations to prevent war, No," and, in voting machine towns, shall be provided for use in accordance with the provisions of section 722 of the general statutes; and, in towns which do not use voting machines, the vote shall be taken in the manner provided by section 106f of the 1941 supplement to the general statutes. Said question shall be voted upon in accordance with the applicable provisions of law concerning voting upon the acceptance of amendments to the constitution of this state' "; and

Whereas a copy of said question was, in pursuance of said act, transmitted by the secretary of the state to the town clerk in each town in the State, and said question was presented to the inhabitants thereof for their consideration, at a town meeting in each town, legally warned and held for that purpose on the second day in November 1948; and

Whereas pursuant to said act, the secretary, the treasurer, and the comptroller, as the board of canvassers, did, as provided by law, duly canvass said votes and did then transmit to the Governor their certificate under their hand in the words and figures following, to wit:

"To His Excellency, JAMES C. SHANNON, Governor:

"We, the undersigned, having been designated by law to canvass the votes cast in favor of and against the proposed world-government referendum by the electors of this State at town meetings warned and held for the purpose of submitting said referendum to said electors, as specified by law, do hereby certify that we have duly canvassed said votes which were received from all the towns in this State as by law provided.

"The whole number of votes received and counted relative to said proposed world-government referendum was 155,757, of which number 141,625 were in favor of the adoption of said referendum and 14,132 were against the adoption of said referendum.

"FRANCES BURKE REDICK,
"Secretary.
"JOSEPH A. ADORNO, *Treasurer.*
"FRED R. ZELLER, *Comptroller."*

And whereas it appears from said certificate that a majority of said votes are in favor of directing our Representatives in the National Congress to urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war;

I do, therefore, herein so declare, and I do herein declare that a majority of the electors present at the town meetings aforesaid have indicated their intention that our representatives in the National Congress urge the President and the Congress to take the lead in calling for amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war.

In testimony whereof, I have caused the seal of the State to be hereunto affixed and have hereunto set my hand at Hartford on this 24th day of February in the year of our Lord, 1949, and of the independence of the United States, the one hundred and seventy-fourth.

[SEAL] CHESTER BOWLES, *Governor.*

By His Excellency's command:

WINIFRED MCDONALD,
Secretary of the State.

Resolutions of Westmoreland County, Pa., Federation of Women's Clubs

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. KELLEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include therein two resolutions adopted by the Westmoreland County, Pa., Federation of Women's Clubs at its spring meeting on March 3, 1949. One resolution condemns the persecution of Cardinal Mindszenty and the 15 Protestant ministers under indictment in Hungary; the other protests the attitude of the Soviet government in Hungary toward the United States and particularly the American military attaché, Col. Peter Kopcsak, whose home is in my congressional district of Westmoreland County.

It is with a great deal of pride that I am able to place in the RECORD these two resolutions, coming from a highly intelligent and educated group. It is time that the State Department takes cognizance of conditions in Hungary and uses its full influence toward bettering them.

RESOLUTIONS

Whereas the high-handed seizure, persecution, indictment, and sentencing of Cardinal Mindszenty, a last bulwark of militant justice and national honor, has revolted all just and free people; and

Whereas the cardinal has been pilloried with audacious and unscrupulous zeal; and

Whereas this overt act of violence and injustice serves notice on all free peoples; and

Whereas the so-called trial is the culmination of a full program of persecution of justice, honor, and freedom: Therefore be it

Resolved, That the Westmoreland County Federation of Women's Clubs deplore and condemn this whole condition of affairs and the misuse of governmental function in Hungary; and be it also

Resolved, That the said federation see, in the evil progress of the ideology that provokes such action, an immediate threat to other enslaved peoples, including the 15 Protestant ministers in Hungary now under indictment, and a threat to all free peoples; and be it likewise

Resolved, That this resolution be sent to the Pennsylvania Federation of Women's Clubs, and the Secretary of State, and to the Attorney General of the United States of America in Washington, D. C.; and be it further

Resolved, That all federated clubwomen take counsel as to intelligent action aimed at preventing even the shadow of these evils from falling on the United States of America.

Proposed by Mrs. Eula Menoher, of Jeannette.

Seconded by Mrs. French Cason, of Greensburg.

Unanimously adopted by the Westmoreland County Federation of Women's Clubs on March 3, 1949.

Whereas the news issuing day-to-day from the Soviet puppet state of Hungary is increasingly obnoxious to citizens of a democratic republic; and

Whereas the news of the recall of Lt. Col. Peter Kopcsak, American military attaché is a typical example; and

Whereas Lieutenant Colonel Kopcsak is a native of Westmoreland County, and therefore this news brings home to the citizens in a special way the unspeakably deadly program of the Soviet states against all free peoples; Therefore be it

Resolved, That the Westmoreland County Federation of Women's Clubs protest this diabolical program; and be it also

Resolved, That they protest the incident of Lieutenant Colonel Kopcsak; and be it likewise

Resolved, That this protest be made public at the annual spring meeting of the Westmoreland County Federation of Women's Clubs; and be it further

Resolved, That a copy of this resolution be sent to the family of Lieutenant Colonel Kopcsak residing in Westmoreland County; to the newspapers in Westmoreland County; to His Excellency James H. Duff, Governor of the Commonwealth of Pennsylvania, in Harrisburg; and to the Attorney General and the Secretary of State of the United States of America in Washington, D. C.

Proposed by Mrs. W. G. Hoehle, of Trafford.

Seconded by Mrs. W. O. Linhart, of Jeannette.

Unanimously adopted by the Westmoreland County Federation of Women's Clubs on March 3, 1949.

Address of Hon. Petras Dauzvardis, Lithuanian Consul at Chicago

EXTENSION OF REMARKS

OF

HON. MARTIN GORSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. GORSKI of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Petras Dauzvardis, consul of Lithuania at Chicago, before the Rotary Club of Waukegan, Ill., February 23, 1949:

The fundamental thought for my address is the Fourth of July of Lithuania—February 16—the thirty-first anniversary of the independence of the Republic of Lithuania. Thinking about Lithuania and bearing in mind George Washington's birthday I turn back in memory to the eighteenth century: to the years of 1776 and 1795. In those years America's independence was declared, Lithuania's 600-year-old independence was suppressed: Lithuania and Poland were partitioned by and among Austria, Germany, and Russia. Their heroes and symbols of freedom: Kosciusko, Pulaski and many others came to America to work for the cause of freedom so that eventually freedom would be restored to their homelands: to Lithuania and Poland. Their ideas and objectives did not fall on barren soil, for the roots they set in the fertile land of free America, nourished by the everlasting national spirit of freedom and the principles of self-determination proclaimed by United States President Woodrow Wilson, came to fruition in their homelands in 1918.

Russian-occupied and oppressed Lithuania gave America more than a million sons and daughters of the best stock of the nation; they helped to build America's industrial might and a country of the people and for the people. America, in return, helped Lithuania and other freedom-loving nations to restore their freedom and to become ever-grateful sisters of America. The relations of these sister nations were and are of the utmost sincerity and friendliness. All freedom-loving peoples, be they free or enslaved, are looking to their ideal—to America—for liberation and security.

My country, Lithuania, is among the unfortunate countries behind the iron curtain, occupied and dominated by the police state of Soviet Russia, without lawful authority and without the recognition of other states. The American-like people of Lithuania have been converted into chattels of the Soviet state. They are deprived of the right to own property, of human rights and of every vestige of fundamental freedoms. They have nothing that they can call their own. Even their lives are at the mercy of the totalitarian state.

To illustrate the above I shall state a few essential facts which will give you a brief sketch depicting the Soviet policies (not their pronouncements) and the plight of Lithuania, which, together with Poland and the other two Baltic states, were the first victims of Soviet aggression and injustice.

As a result of the conspirative Soviet-Nazi agreement of August 23 and September 28, 1939, to divide eastern and central Europe between them, Lithuania was invaded and occupied by the Soviet Union in 1940. The seizure was an act of unprovoked aggression, and is a flagrant violation of international law and of the treaties signed by Lithuania and Soviet Russia. There are four pertinent treaties: (1) The Peace Treaty of 1920, (2) the Nonaggression Pact of 1926, (3) the Convention for the Definition of Aggression of 1933, and (4) the Mutual Assistance Pact of 1939. Each of these solemn instruments provided for the respect of national independence, territorial integrity, and noninterference in one another's states. Lithuania discharged these obligations implicitly. Russia, on the contrary, explicitly violated her pledges. Soviet leaders had planned the seizure of Lithuania and of the other Baltic states, despite all their agreements, pledges, and the assertions of Stalin and Molotov. Stalin has stated, before the war, that: "The Soviet Union will not surrender an inch of its own territory and will not covet a foot of foreign territory."

Shortly after this statement and Molotov's declaration of October 31, 1939, that "all nonsense about sovietizing the Baltic countries is only to the interests of our common enemies and of all anti-Soviet provocateurs," the Soviet Union occupied Lithuania and usurped the sovereign rights of the Lithuanian people, deposed the lawful government, and replaced it with an unlawful puppet regime. This illegal puppet government, controlled and directed by Soviet Deputy Commissar of Foreign Affairs Dekanozov and the notorious Soviet gestapo, the NKVD, arrested cultural, political, and religious leaders of the country, disbanded all non-Communist organizations, closed non-Communist newspapers, nationalized (confiscated) real estate and all private enterprises, imposed confiscatory taxation, and introduced terrorism and spying everywhere, from public offices to kindergartens. This was followed by mass arrests, executions, and deportations. During the first occupation, from June 1940 to June 1941, over 10,000 people were slain and more than 40,000 banished to Siberia. More than half of these exiles have already perished from exposure, malnutrition, and slave labor. Among the victims are former President of Lithuania Aleksandras Stulginskis, Minister of Justice Stasys Silingas, Deputy Prime Minister Kazys Bizauskas, and many other prominent leaders.

The present occupation, dating from midsummer of 1944, has already cost Lithuania over 300,000 people. In the last months of 1944, about 37,000 Lithuanians were either slain or banished to remote parts of Russia. During the years of 1945 to 1948, more than 30,000 Lithuanian partisans have perished in the struggle against the special Soviet gestapo—the "istrebiteli" (exterminators). In 1938 alone, approximately 200,000 Lithuanians were deported to Soviet slave camps. The Soviet and Nazi occupation deprived Lithuania of approximately 700,000 people.

Annihilation of the population continues. Some 2,000 to 3,000 Lithuanians disappear from Lithuania every month. According to the Soviet plan of 1941, one-fourth of the Lithuanian people were to have been deported from Lithuania. This plan still is in operation. An order signed by Moscow Commissar Abakumov in July, 1948, orders the arrest and deportation of all political prisoners; former Lithuanian army officers; former government officials; teachers and university professors; priests (what is left of them—one bishop and just half of the clergymen) and members of religious organizations; all persons suspected of espionage, rumor-mongering (this refers mainly to farmers), escaping from deportation convoys, and of the members of their families. According to reliable reports, the Moscow regime has already imported more than one-half million Russians and Mongolians into Lithuania. This number includes the Soviet troops, police, agents, and various officials. They are the masters in Lithuania. Lithuanians are their slaves, without property, without rights, without liberty, and without even any assurance of security of life. Privation and starvation are their lot. The Four Freedoms, human rights and fundamental freedoms enunciated in the United Nations Charter are nonexistent in Lithuania. Terror and genocide are substituted for the inalienable rights and cherished liberty of the Lithuanian people and their country.

Attention to the plight of Lithuania is very aptly called by Prof. W. Elmer Ekblaw of Clark University in his article published in the Worcester Telegram of February 14, 1949. The article is entitled: "Look to Lithuania," and it reads:

"Look to Lithuania for an example of Russia's treaties of non-aggression such as that Russia has just offered Norway. Look to Lithuania for an example of Russia's treatment of minorities! Look to Lithuania for an example of Russia's communist improvement of economic standards! Look to Lithuania for an example of Russia's regards for the rights of man, for his freedom, for his social security! Look to Lithuania for an example of Russia's ruthless imperialism, both in territory and sovereignty! Look at Lithuania, and recognize once and for all the gruesome travesty upon democracy and liberal government that Russia's sovereignty represents."

Having focused attention on Lithuania and its suffering people, Professor Ekblaw expands his article into the international field and concludes by warning and exhorting the free people of the world that—

"The time has come * * * when Americans and the rest of the democratic peoples of the world must doff their present tolerance and passive acceptance of Russian territorial and political aggression and imperialistic expansion of virtual sovereignty, and don the definite, unequivocal and undeniable role of leader not only in militant opposition to further Russian encroachment upon the rights, and sovereignties, and territories of autonomous peoples still free, but also in militant leadership of restoration of rights, sovereignties, and territories to once free and autonomous peoples whom Russia has conquered. It is just as important that Lithuania should be free of the enslavement and bondage, as it is that Finland and Greece, Turkey and all the Near East, should be spared the dread and horror of further Russian expansion and debasement of economy and culture. * * * Complacently and appeasingly * * * the democratic and righteous folk of the world, have permitted the cruel devastation of a proud, free, enterprising Christian people and state, like Lithuania and her people, without even effective

protest. Only the Lithuanians themselves, and their emigrant relatives, have dared to oppose and challenge Russia's ruthless might. It is time that we and our democratic allies bestirred ourselves."

What are the Lithuanians doing and what do they demand? The Lithuanians in Lithuania have a strong underground force and they fight the ruthless occupant of Lithuania with everything at their command. The Lithuanians in western Europe have their liberation committee with cultural, economic, and political departments which are working and preparing the ground for the liberation and restoration of Lithuania. The Lithuanians in America and in other free countries have their organized bodies for the cause of freedom and for the defense of the nation from extermination by the Soviets. Together with the official representatives of free Lithuania, they all demand in unison: (1) That genocide by murder and deportation of innocent people be halted at once in Lithuania and other occupied countries; (2) that the deportees be immediately returned from the slave labor camps in Siberia and other parts of Russia; (3) that Soviet armies, police, and agents be removed from Lithuania and the other two Baltic countries; and (4) that freedom, sovereign rights, and self-government be restored to the peoples of Lithuania, Latvia, and Estonia, who have been forcibly deprived of them by the Soviet Union.

Now, gentlemen, in view of the above word picture and the fact that the United States of America does not recognize the annexation of Lithuania by the Soviet Union, I appeal to you to help Lithuania to become free again by raising your voice in its behalf and in behalf of liberty and human rights against slavery and enemy No. 1 of the free world.

Steel Production

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the United States Steel Quarterly:

PRODUCTION IS MEANS OF MEETING NEEDS OF STEEL CONSUMER

In a statement before the Subcommittee on Profits of the Joint Congressional Committee on the Economic Report in Washington, on December 21, Benjamin F. Fairless, president of United States Steel Corp., said that production, not capacity, is the means of meeting the needs of the steel consumer.

"Much has been written concerning the steel industry's capacity to produce in relation to current demand and estimated future requirements," Mr. Fairless declared. "The terms 'capacity' and 'production' have been used as if they were interchangeable—as if they were in fact the same. But no statement could be more fallacious.

"Capacity is the theoretical amount which can be produced if raw materials of proper quality and required quantities are made available to run the equipment. Production is the amount of product available for shipment as a result of the operation of the equipment. Production, not capacity, is the means of meeting the needs of the steel consumer.

"Demands have been made for increased capacity while too little has been said about increased production. There has been so much discussion concerning theoretical capacity, current demand, and future requirements, that confusion continues to exist. To me it seems essential that we examine the matter from a practical standpoint in order that we may see where we are and where we are headed.

"During 1948, the steel industry will produce and ship to consumers, 65,000,000 tons of finished steel products, more than in any previous year, peacetime or wartime, in our Nation's history.

"In my judgment, the industry is capable of producing in 1949 a much greater tonnage. My guess is that it can produce 68,000,000 tons of finished steel products, and I am not speaking of theoretical capacity. The steel industry, if not interfered with by labor difficulties, will be capable of producing and shipping during 1949 approximately 5,000,000 tons of finished steel products more than it shipped during the year 1947, and nearly 7,500,000 tons more than the average shipments during the 4 war years of 1942–45.

"World War II was fought and won with an annual average production of 60,600,000 tons of finished steel. Because of strikes and reconversion problems, the year 1946 was a year of relatively low production—48,800,000 tons. In 1947, the industry had a good operating year, and production rose to 63,000,000 tons, almost equaling the best war year.

"In the postwar period, large sums of money have been spent to increase and improve the availability of raw material and steel facilities. Some of our critics have indicated that they think too little is going into basic steel-making capacity because of certain ideas currently held with respect to inadequate capacity. This question of capacity is a serious one and one to which we in United States Steel have devoted and continue to devote a great deal of attention—now, more than ever before. But when the several members of the steel industry went to work in their own individual way to cure the shortage of steel, a job was done, and is being done. Some members increased ingot capacity; some worked primarily on raw materials; some devoted their time and money to more adequate finishing facilities. All worked under the pressure of the greatest pent-up demand for steel in the Nation's history, where each pound of steel used to construct steel facilities meant a pound less for the needs of some customer.

"Moreover, new construction is still going on. For example, we will add, and by that, I mean actually get into operation, during 1949, about 600,000 tons of additional ingot capacity. We expect to spend over $250,000,000 for plant and equipment in 1949.

"The best test of what the industry has done and can do, in my opinion, is to be judged by the products shipped. If we in United States Steel choose to spend many millions of dollars to get better coal so that our coke quality improves and our pig-iron supply is increased, we may not change our rated ingot capacity one ton, but the resulting increased production will permit us to ship more tons to our customers. The shipments in 1948 prove that postwar expenditures have meant more steel for our customers.

"The steel industry will continue to improve and increase its production. Inability to meet simultaneously all the extraordinary demands, does not mean that the industry is not progressive or that it will not increase its capacity, nor is there any proof that the demand will continue indefinitely at the present pace. Whatever develops, I am satisfied the steel industry will continue to accept full responsibility for steel production in the United States."

An Excellent Appointment

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 9, 1949

Mr. BROOKS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times:

AN EXCELLENT APPOINTMENT

In nominating Louis A. Johnson as Secretary of Defense, President Truman has made an excellent choice—one that should bring satisfaction to the public generally in view of the fact that the defense post unquestionably is the most important in the Nation except for the Presidency itself.

Mr. Johnson's background is such as to give him especial qualifications for the post of Secretary of Defense. He is a former Assistant Secretary of War—under the late Franklin D. Roosevelt—a former Member of Congress, a past national commander of the American Legion, a captain in World War I. He knows the national security problems of both war and peace from first-hand experience both in uniform and in an administrative capacity; plus his legislative experience.

Actually, Mr. Johnson's ability to handle such an important job already has been proven. It is not too much to say that if his defense recommendations in the late 1930s had been carried out there still might have been a Pearl Harbor but there never would have been the terrible period of helpless aftermath for this Nation's fighting forces. As Assistant Secretary of War at that time, Mr. Johnson urged the launching of a billion-dollar program of construction of long range land-based bombers. Failing to get the needed backing from either the War Department or the Budget Bureau, he appealed to President Roosevelt, but the latter took no action and the construction program died as a result. It was this Nation's lack of long-range land-based bombers that largely enabled Japan to sweep the Pacific immediately after Pearl Harbor. The war itself proved Mr. Johnson to be right. Now, the Navy, the Army, and all others of the armed forces agree that the long-range land-based bomber is the foundation of strategic warfare. All of our security against war, and all of our preparations for war if it should become inevitable, now find the big land-based bomber as the keystone of the foundation.

In addition to the appointment of Mr. Johnson, which is certain to go breezing through the Senate with enthusiastic confirmation from all factions, there is also the restoration of General Marshall to active service and the recall of General Eisenhower to active advisory work in the national defense set-up. Mr. Johnson is the type of man who can get along with the generals and with the department secretaries under him—as well as with Congress and with the President; this latter is testified to by his intimate association with, and valuable support of, Mr. Truman during the presidential campaign. All of this indicates a smooth-running defense set-up in the Washington administration, something that is essential to national security against aggression.

The resignation of Secretary of Defense Forrestal has been expected for some time. The only question involved in it for the past half year or so has been the date. He has wanted to get out to attend to his many private financial interests. In addition, he has at times become somewhat of a bone of contention; that was unavoidable in a period

where unification of the armed forces was being attempted. Mr. Forrestal has been a conscientious Secretary of Defense, at times compelled by circumstances to travel paths not of his own choosing. Aside from his wartime service as Secretary of the Navy, and his prewar service as Under Secretary perhaps one of his best contributions is his recent first annual report of the Department of Defense, pointing out the need for strengthening and clarifying the unification law.

In fairness to Mr. Johnson, Congress should delve deeply into these recommendations by Mr. Forrestal—with full hearing of Mr. Johnson's views, of course—to determine just what should be done legislatively. This is especially true in phases of the law which Mr. Forrestal said place heavy responsibilities on the shoulders of the Secretary of Defense without giving him the authority necessary to meet them.

Fair Trade Practices

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, March 11 (legislative day of Monday, February 21), 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Apothecary, a magazine published in Boston, Mass., the article being entitled "Consistency, Thou Art a Jewel," to be followed by another page from the same magazine entitled "Time—Life—Fortune Are Fair Traded."

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

"CONSISTENCY, THOU ART A JEWEL"

Long ago the Romans had a god called Janus. All the other gods but Janus could be relied upon for what they said. Janus had two faces and he told two different stories for every occasion. The decadent Romans looked up to Janus as the distilled essence of hypocrisy.

Now the Janus theory didn't go out of business when Janus lost his seat in the Eighty-first Congress of Roman dieties. Janus still has some disciples left and quite a following among the unthinking proletariat—not to speak of a few sycophantic idolaters among the intellectual parlor-pinks. However, ordinary Americans—particularly druggists—are not supposed to peek behind the curtain and see what these modern Januses really think. But, alert Sam Silverman of the MSPA has punched a hole in that opaque fabric that we know as mental inertia, and in a full-page ad accompanying his Massachusetts News has exposed to public gaze a piece of inconsistency so blatantly brazen it sounds silly coming from a group of well-trained grown-up boys that ought to know better; for they run a big Forty-eighth Street publishing house which boasts the confidence of over 25,000,000 readers. Read what Sam says about Time and Life and fair trade on page 36.

To me this is too serious for a joke. It is the kind of hypocrisy that is breaking down our national morale because, like some comics it appears to prove that a great material reward can be directly associated with intellectual dishonesty. I criticize it also as a stupid piece of top-management strategy. Today business needs more confidence, not less. For those in honest business, it is not necessary to play the hypocrite. The reward in respect that comes from courageously thumbing your nose at the two-faced Janus is very important to our country now. It guards against the breaking down of faith and confidence that always springs from publicly practicing his hypocritical teachings.

Think of the embarrassment ahead for those innocent front-line salesmen for the publishers. What reception will they now get when they ask the druggist for a little extra space to put up a card advertising an advertiser who uses the kind of magazine that makes itself a hypocrite, working to belittle the very fair-trade price-maintenance principle it uses itself, and on which the independent retailers' solvency so largely depends. Consistency is only one form of honesty; and, we can never regain our national moral fiber if we find those we look to for leadership, themselves practicing cheap deceits. Who can a man believe?

TIME—LIFE—FORTUNE ARE FAIR TRADED

What can a man believe?

Here's what the business end of Time thinks of fair trade:

"Price maintenance: We have been granted authority from publishers to accept subscriptions only from those people who are engaged in selling subscriptions at the retail prices set forth in this trade price list. The publishers are not willing to have any agents pass on to any of their subscribers any part of the agent's commission in the form of a discount from the retail price, nor are they willing to have individuals (other than bona fide agents), or organizations order their own subscription on a reduced price basis." Reproduced from an official subscription price book of Time, Fortune, and Life agents.)

But, the editorial ends, with modern ideas preaches differently.

And Fortune too, preaches that fair trade is unfair—yet insists that it's own line must be fair traded.

Now, druggists, why not accept a few cut-price subscriptions and see what happens when you send them in. Write us how Time explains its silly two-faced position.

The management of Time knows the principles of fair trade are too fundamentally sound to be ignored by any serious-minded magazine agency.

Let's be honest. Why kid trusting readers? Why kid the druggists who sell these magazines, and of whom Time asks free displays?

Massachusetts State Pharmaceutical Association, fair trade commission, Boston, Mass.

Health Insurance

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. BIEMILLER. Mr. Speaker, on February 21, 1949, I had the pleasure of participating in a broadcast on the American Forum of the Air program on the subject What Kind of Health Insurance Do You Want? The other speaker was Dr. Louis Bauer, chairman of the executive committee and vice chairman of the board of trustees of the American Medical Association.

This outstanding radio forum has been in existence for more than two decades under the able leadership of Mr. Theodore Granik. He has presented stimulating discussions of most of the controversial issues of our time. Many Members of the Congress and leaders from all segments of our society have appeared on this program and had an opportunity of presenting their views to the public. Mr. Granik is to be commended for his fine work in presenting these issues to the public.

Mr. Speaker, under leave to extend my remarks, I am including the text of the health-insurance discussion:

Mr. GRANIK. Good evening, ladies and gentlemen: What kind of health insurance do you want? Which plan do you favor? Should Congress pass the administration's health insurance bill, or should we accept the recommendations of the American Medical Association?

Here to discuss both plans are Congressman ANDREW J. BIEMILLER, Democrat, of Wisconsin, member of the House Interstate Commerce Committee which will shortly conduct hearings on this vital problem; and Dr. Louis H. Bauer, chairman of the executive committee and vice chairman of the board of trustees of the American Medical Association.

And now gentlemen, you both agree there is no question of the need for more medical care, and that this need must be met. My question to you, both of you, is: How? Congressman BIEMILLER?

Congressman BIEMILLER. I stand squarely behind the President's proposal for national health insurance, and which I might add, has in principle been endorsed by Governor Warren of California. In this modern day and age, we are beset by four problems that the individual cannot handle for himself—old age, unemployment, industrial accidents, and the cost of sickness. We have met three of these by one form or another of social insurance—through social security, unemployment compensation, and workmen's compensation.

I now propose that the fourth, the cost of sickness, be met by the logical extension of social insurance into the field of costs of medical care.

Mr. GRANIK. I direct the same question to you, Dr. Bauer: How?

Dr. BAUER. I disagree with Congressman BIEMILLER because I think the program can be carried out on a voluntary basis and not a compulsory one. We have many deficiencies in our medical care which can be corrected by other means than compulsory insurance. We have deficiencies in public health facilities and in diagnostic centers and in hospitals, all of which would lessen the need for medical care and also would render that care available to the people at a lower cost and near at hand.

The voluntary insurance program is growing at the most tremendous rate in history.

Mr. GRANIK. Is it possible, Congressman, to dovetail sound voluntary health insurance plans with the national program about which you speak?

Congressman BIEMILLER. Most of the voluntary health insurance plans which are in existence can be brought in under a national health insurance plan without any difficulty whatsoever, but I do not share Dr. Bauer's optimism by any voluntary procedure we will ever cover the entire Nation and the problems we have. Exactly the same argument was advanced on the questions of old-age pensions and unemployment compensation and workmen's compensation.

Mr. GRANIK. How about that, Doctor?

Dr. BAUER. I cannot agree on that. What was the first part of the question?

Mr. GRANIK. I asked whether you can dovetail voluntary insurance with the national program.

Dr. BAUER. The members of the Social Security Board themselves testified before the congressional committees that the voluntary insurance would be put out of business if the compulsory insurance program was put through.

Congressman BIEMILLER. I think we have an important point that ought to be made, that the AMA has shifted its own position in this field considerably in the last few years. At one time the AMA decried voluntary insurance as "socialism, communism, incitement to revolution."

Dr. BAUER. Congressman BIEMILLER, the AMA was quite correct in what it said about voluntary insurance at that time, because the only experience we had was in foreign countries, and there was no such program in this country; and if the AMA had backed a voluntary insurance program at that time, it would have been deluding the people. But we did approve investigating the subject, and investigating and experimenting with it in small areas and in a small degree, and that has resulted in their developing three types of voluntary plans.

Congressman BIEMILLER. Of course, a lot of the AMA experimentation in those days took the form of suppressing voluntary health insurance, such as group health right here in Washington.

Dr. BAUER. The AMA was always against any plan that did not deliver good medical care and which interfered with free choice of physician—and still is.

Congressman BIEMILLER. I think we have to recognize the fact that the AMA shift has been of a rather peculiar nature. I remember debating this subject with Dr. Echols, a past president of the Milwaukee County Medical Society, and he said the only reason the doctors are now for voluntary health insurance is because they are trying to head off a compulsory health-insurance plan; that they never would have started any voluntary insurance plans had it not been for the threat of a compulsory plan.

Dr. BAUER. That might be Dr. Echols' opinion, but it is not the opinion of most doctors.

Mr. GRANIK. Congressman, Senator TAFT has recently said if we are going to give medical care free to all people, why not provide them with free transportation, free food, free housing, and clothing, all at the expense of the taxpayer?

Congressman BIEMILLER. In the first place, this bill does not call for providing free medical and health service at the expense of the taxpayer. It is based exactly on the form of unemployment compensation and other forms of social insurance. It is a pay-roll tax proposal that we are making in this respect.

In the second place, Senator TAFT himself, of course, has proposed a lot of free housing for some people that has got him some strictures from some of his own people. But, by and large, Senator TAFT knows as well as I do that he is raising a bogey issue when he raises that question. This is a matter of social insurance. It is not a matter of free medical care.

Dr. BAUER. I most thoroughly agree it is not free medical care—it is anything but—but I cannot agree it is not taxation. Of course it is taxation. How are they going to collect the money otherwise? Even its advocates admit there is going to be at least a 3-percent pay-roll tax—and, if they would tell the truth, it would be probably nearer an 8-percent tax. In fact, some members of the Social Security Board admitted it would probably be that.

Congressman BIEMILLER. I would quarrel with you about the percentage of the tax. The taxpayer is interested in trying to meet the cost of medical care; he doesn't care whether you call it insurance or taxation. What he wants is a way of making small periodic payments that will insure him good medical care when he needs it.

Dr. BAUER. Yes; and you are going to load another tax on him so he will be less able to pay for it than ever before.

Mr. GRANIK. Bernard Baruch said some time ago that in time these deductions from pay rolls and deductions from employers and workers will become absorbed in general costs of production. How about that, Dr. Bauer?

Dr. BAUER. I do not see how they will because in every country that has adopted the scheme the tax has gone up and up and up.

Congressman BIEMILLER. I cannot agree about its going up and up and up. More important to note is that every country that ever adopted the scheme has never gone back on it, and, contrary to the impression given out by the American Medical Association, organized medicine in other countries, although sometimes reluctantly opposing the proposal in the first place, has, as the plan developed, come out foursquare for it and asked for the extension of compulsory health insurance.

Dr. BAUER. I agree no country has been able to get rid of it, once it was started, because such a tremendous bureaucracy is built up that they cannot get rid of it. I would like to ask you a question right there. In every country which has compulsory health insurance they have at least two employees for every doctor. In this country that would mean we would have 300,000 new people on the Federal pay roll. Can you see its being done for less?

Congressman BIEMILLER. Yes, it certainly can be done for less. In the first place, the only thing that is compulsory about health insurance is the inclusion of the tax feature on the pay roll tax plan. Outside of that, there is nothing compulsory in the bill that is now pending before the Congress of the United States, and those taxes would be collected through the existing agency of social security. It would not be necessary to add one single person to the Federal bureaucracy to collect the pay roll taxes for health insurance.

Dr. BAUER. How about the administration and all the regulations that have to be set up for the administration of the act, and the local area committees and the local professional committees, and so forth and so on, all over the country?

Congressman BIEMILLER. Doctor, let's get that straight right here and now. In the first place, let's remember—and I am glad you stress the fact that these are going to be local people who are going to be running this show, because a lot of your friends do not admit that. But over and above that, let's see what the question is as compared to the kind of bureaucracy, if you want to call it that, that you now have running the existing voluntary plans. You are now having costs of somewhere between 12 and 14 percent in your voluntary plans, for administration, and no national health insurance plan with which I am familiar has ever come near that figure.

Dr. BAUER. Voluntary plans do run approximately 13 percent, which is probably as low as any insurance can be run if you actually assess the cost against it.

Mr. GRANIK. Gentlemen, what do you think of the plan suggested a few days ago by Dr. Paul Magnuson, the Veterans' Administration medical director, to attack the weakest link in medical care by setting up public diagnostic centers throughout the Nation? I understand the plan is based entirely on community and State control. Do you want to comment on that, Congressman?

Congressman BIEMILLER. I would be glad to comment on it. I have no objection to that plan as far as it goes, at all. It is part of the President's national health insurance plan. My own belief is that it does not go far enough and will not meet the answer, that we still have to have all costs of medical care met upon the principle of social insurance.

Dr. BAUER. I agree that the plan is not very different from the one suggested by the AMA. One of the great lacks in our present system of medical care is that we do not have sufficient diagnostic facilities available, and that results in the people in those areas not getting good medical care, having to go distances for it or else go without it, making it more expensive; and, furthermore, doctors are not attracted to areas where they cannot practice good medicine and it is an exceedingly important link in the chain.

Mr. GRANIK. Do I understand, Doctor, the AMA is now agreeable to a form of socialized medicine which would in part or in full subsidize doctors in areas where there is not sufficient economic demand for a doctor to exist under the present system?

Dr. BAUER. The AMA has come out for a program of increased hospital and diagnostic facilities to attract doctors to those areas. There may possibly be some areas in which it will not be possible to attract a doctor there because there are insufficient people to support him and some form of subsidization may have to be made. What that subsidization will be, I do not know, and nobody else does.

Congressman BIEMILLER. That gets dangerously close to the old bugaboo of the AMA, of socialized medicine.

Dr. BAUER. I do not think it does. The subsidization does not necessarily have to come from the Federal Government.

Congressman BIEMILLER. It will have to come from the State government. You have a bill in the Wisconsin Legislature now trying to do that thing, but it still is socialized medicine in the terms of Dr. Fishbein and yourself and other spokesmen of the AMA. I want to go on record here and now that I want to stop socialized medicine if it can be done in this country; I want to go for a principle of compulsory health insurance.

Dr. BAUER. You are approving the greatest socialized program there is in compulsory health insurance. This business of saying compulsory health insurance is not socialized medicine is sheer bunk. When the Government collects the money by taxes and pays it out under its own regulations, and prescribes the regulations under which patients may take part in it, and the manner in which doctors and dentists and nurses may take part in the plan, and the hospitals also, and prescribes the rate at which they may be paid, that is certainly socialization and nothing else.

Congressman BIEMILLER. Let me quarrel with your description of the bill, because the bill doe not say any such thing as you say it does. The Federal Government does not lay down the rules and regulations. As you well know, the doctors themselves will choose the form of payment which they desire; under the bill now pending, the hospitals will have full voice in the administration of that side of the bill and so will other professional groups.

Dr. BAUER. The regulations are to be set up by the board that is administering the act.

Congressman BIEMILLER. But on recommendation of the advisory boards composed of doctors and other interested groups.

Dr. BAUER. Recommendations, maybe, but they do not have to take their advice if they do not want to, and not a word in the bill says they have to.

Mr. GRANIK. Congressman, won't doctors, in effect, become employees of the Federal Government?

Congressman BIEMILLER. Most certainly not, and that is the point I am making. They would not be employees of the Government. They could still accept or reject patients, just as they do today, and patients can choose their doctors just as they do today.

Dr. BAUER. But what it will really amount to is that the doctors do not choose the patients.

Congressman BIEMILLER. Certainly they do.

Dr. BAUER. There is definitely a third party between the doctor and his patient. The doctor is responsible to the Government if it pays him and not to the patient. We had an example during the depression when the Federal Emergency Relief Administration told doctors how many visits they could make to a patient. If there was a complication, he had to get further authority to treat that patient, and he was told what he could prescribe and what he could not prescribe. That has been the history in every country that has adopted the scheme: The prescribing has increased and the Government has stepped in and said,„"You cannot prescribe so much; you will have to cut down on it."

Congressman BIEMILLER. You have to recognize the old FERA was run on an out-and-out socialized medicine basis, which, I repeat, is what I am trying to prevent; but I would like to draw for a moment the analogy of workmen's compensation. I think it is worth noting in the first place for the record that the medical societies fought workmen's compensation when it first came into existence. So did employers. Secondly, there are many States where there are panels that force, within certain limitation, the patient under workmen's compensation to accept a certain doctor. I have yet to find a State where the medical societies fight that system.

Dr. BAUER. The medical societies approved workmen's compensation as soon as workmen's compensation was put on a basis where there was no interference with free choice of doctors. Many of the early schemes did interfere with that free choice.

Congressman BIEMILLER. Come, come, doctor, you know many States still have a panel on this matter, and I have not seen the AMA fight those panels in those States.

Dr. BAUER. There are no panels in most of the States.

Mr. GRANIK. Congressman, yesterday's press announced that Republican Senators are expected to introduce in a few days a bill calling for Federal aid to State-controlled health programs.

Congressman BIEMILLER. I would have a good hunch that this pronouncement of Senator TAFT and some of his associates is simply a revival of S. 545 of the Eightieth Congress. Senate 545 was a scheme for socialized medicine for what Senator TAFT calls the lowest economic 20 percent.

Mr. GRANIK. How about it, Dr. Bauer; what do you say about the Republican proposal?

Dr. BAUER. The Taft bill was approved, in principle, by the American Medical Association. We felt there were some things about it that could be improved, and I think Senator TAFT felt that way himself. It places it on a State level, and it does take into consideration the voluntary plans, and it takes care of the people not only who are indigent, but those who are medically indigent—those who cannot pay the whole bill but can pay part of it. Incidentally, the provisions of the administration bill for the indigent are pretty sketchy.

Congressman BIEMILLER. I cannot agree with you there at all, Doctor. It makes it very clear any local unit of government that wants to run under the health-insurance system instead of under a direct socialized system as proposed by Senator TAFT, can simply pay the amount needed into the fund for the indigent.

Dr. BAUER. More pay and more taxes.

Mr. GRANIK. Gentlemen, let us pause now to give our studio audience a chance to ask questions. These questions, selected at random, are completely unrehearsed.

Let's take the first question from our audience. I see a lot of doctors, a lot of Congressmen. Here is Congressman ARTHUR KLEIN, from New York.

Question. I am Congressman KLEIN, from New York. My question is directed at Dr. Bauer. You speak here this evening, Dr. Bauer, for the AMA. Isn't it a fact that there is a difference of opinion among your own people, your own doctors? Recently a number of outstanding doctors, members of the AMA, have come out with a plan different from your own. Would you care to comment on that?

Dr. BAUER. Yes; I would be glad to. The American Medical Association consists of about one hundred thirty-five to one hundred thirty-seven thousand doctors. Naturally, in any organization of that size there are bound to be differences of opinion. It would not be healthy if there were not. But I may say this—and I think I could prove it if it became necessary to do so—that 90 percent of the doctors are against compulsory health insurance.

Mr. GRANIK. How about the Congressman?

Congressman BIEMILLER. I would be amazed if it is only 90 percent, considering the fact that most doctors get their information from the American Medical Association Journal and Dr. Fishbein, the editor, has thrown an iron curtain around that Journal and you cannot find out that there is any case for compulsory health insurance by reading the AMA Journal.

Mr. GRANIK. How about that iron curtain, Doctor?

Dr. BAUER. No iron curtain exists there at all. As far as that is concerned, there is plenty in the public press coming out of Washington from the Federal administration on the other side of the fence which can be read equally well.

Congressman BIEMILLER. But you know most of the doctors get most of their views on this subject from the AMA Journal, and if you would like to have a couple of articles, I can get them for you.

Dr. BAUER. I can show you a few articles coming out of Washington, too.

Mr. GRANIK. Let's take another question from the audience. Go ahead.

Question. After health insurance, do we then go into life insurance and everything else that goes with socialism?

Congressman BIEMILLER. I am not sure I catch the question but if I interpret it correctly, may I point out we already have social insurance in the field of what you can call life insurance, if you want—the old-age and survivors' benefits under Federal Security. We do have job insurance and we do have workmen's compensation, and I reiterate I am simply trying to extend that field logically to the costs of medical care.

Dr. BAUER. When you come right down to it, Congressman BIEMILLER, there is no government on record that has medical insurance where it is paying the physician, that wants to continue. You recall the scandals in the Medical Department of the Veterans' Administration, until they were cleared up by General Bradley and General Hawley, and I can think of the medical care of the Indians in this country who have been wards of the Government for a great many years.

Congressman BIEMILLER. Again, may I remind you, you are talking about direct employment of physicians. I am delighted that General Hawley cleaned up the Veterans' Administration situation as well as he has. I think there is still room for improvement. With the Indians, as you know, the problem has been direct employment of physicians, such as Senator Taft and others still favor.

Mr. GRANIK. May I take another question. Go ahead, sir.

Question. This is to Dr. Bauer. Is it not a fact the British Medical Society is cooperating now with the British Government in the socialized medical program, according to Lester Velie, contributor to Collier's Magazine, published in a recent issue of Collier's magazine?

Dr. BAUER. The British Medical Association hasn't any choice in the matter. It is the law of the land and they have to cooperate, and they are trying to make it work to the best of their ability. I do not think anyone yet can make any statement about the British system because it has not been in effect long enough. We hear many reports on both sides of the question and can argue either way. But there is one thing we know: It is three times as expensive as they thought it was going to be.

Mr. GRANIK. How about it, Congressman?

Congressman BIEMILLER. I would like to add, first of all, the British Medical Association wanted to expand the program of compulsory health insurance in England, and that on two separate occasions with which I am familiar, the secretary of the British Medical Association has forced the AMA Journal to publish statements from the British physicians in which they decried the attacks made on the British medical plan by the AMA, and, in fact, called them gross libel. I do not know any words that could be stronger.

Dr. BAUER. Yes; and those attacks which were published in the AMA Journal were taken directly from the British Medical Association journal, the Lancet, themselves.

Congressman BIEMILLER. But you inferred it was the position of organized medicine in Britain, which it was not at all.

Dr. BAUER. It did not infer that. It spoke of the attitude of some of the doctors, and you can pick up any number of the Lancet and find any number of letters of the same order in there.

Congressman BIEMILLER. And I can find you doctors in America who disagree with the AMA's position on compulsory health insurance.

Dr. BAUER. Of course you can, but I am saying 90 percent of them favor it.

Mr. GRANIK. May I take another question.

Question. This question is directed to Congressman Biemiller. It is obvious President Truman does not like the term "socialized medicine," but what is the significant difference between socialized medicine and his proposals concerning health insurance?

Congressman BIEMILLER. Socialized medicine means that you are putting doctors directly on the Federal pay roll, that they will be employees of the Government. Compulsory health insurance means that you raise a health insurance fund through pay roll taxes; the doctors continue to practice medicine exactly as they do today, rejecting or accepting patients; patients choosing their own doctors and the doctors choosing the method of payment, whether it be on a fee basis, a capitation basis, or salary basis.

Dr. BAUER. What you are describing is state medicine and not socialized medicine. State medicine is socialized medicine but there is more than one knd, and the doctors do not have entirely free choice—or the patient doesn't, rather. The patient has free choice of his physician if the doctors take part in the plan. He has free choice of his physician if he takes part in the plan and if his panel is not already filled—and that is not free choice.

Congressman BIEMILLER. There is nothing about panels in this bill, as you well know.

Dr. BAUER. It says in the bill that doctors will be limited as to the number of patients they may have. It does not specify.

Congressman BIEMILLER. Only by action of doctors themselves; and may I point out there the AMA likes to boast we have more doctors per population than any other country in the world—which is true—but you cannot have your cake and eat it, too. If that is true, you know the panels are not going to be overloaded because the doctors themselves will make certain they are not.

Mr. GRANIK. Do you think compulsory health insurance will effect a better distribution of doctors than we now have, Congressman?

Congressman BIEMILLER. I think the overall health plan of the President will certainly provide for more doctors; and secondly, I think once doctors are assured their bills will be paid, which will be a delightful novelty to some doctors I know, we will have better care all round.

Dr. BAUER. Compulsory health insurance never improved the distribution of doctors. Countries that have it have exactly the same difficulties we have in this country, and even here our distribution, as Congressman BIEMILLER has already admitted, is better than it is in any other country in the world. Doctors are not worried about the financial end of this at all. That is not a factor. The factor is that the people are going to get a pretty poor type of medical care. In every country which has had it, the medical care has deteriorated. It is the great leveler; it does not bring the poor physician up to the level of the good one; it brings the good one down to the level of the poor one.

Congressman BIEMILLER. I want here and now to say I do not agree with the statement that the quality of medical care has deteriorated in the countries that have had health insurance. Doctors in those countries and sociologists say just the reverse; and I think it is also worth noting the first country to adopt compulsory health insurance was Germany in 1883, and Austria in 1888, and in the years immediately following the adoption of health insurance in those countries American doctors flocked to those countries for their advanced medical training.

Dr. BAUER. And as soon as the thing was made fully effective over there the cost increased 600 percent and medical care fell out of the bottom.

Mr. GRANIK. Can we squeeze in one more question from the audience? Here is one:

Question. Congressman BIEMILLER, under socialized medicine, will the States be interested in exerting as great an effort in research and treatment of noncontagious diseases?

Congressman BIEMILLER. I am not sure I follow the question.

Question. I am interested in whether, under socialized medicine, the States will be interested in exerting as great an effort in research and treatment of noncontagious diseases as they are at the present time?

Congressman BIEMILLER. I think there has been a great expansion of interest in research in all forms of diseases, and certainly that is a program that I will foster to the utmost of my ability. I do not think your question affects the question of compulsory health insurance. I frankly do not see a connection.

Mr. GRANIK. I know we have many more questions, but we just have time for brief summaries. First, Congressman BIEMILLER.

Congressman BIEMILLER. I would like to say the best brief summary I can make is to read a statement published by the American Medical Association originally in 1934, and stated again in 1938, by the AMA Bureau of Medical Economics. They said, "Without some form of compulsion, voluntary insurance fails of its objective of distributing the cost of sickness among large classes of the population with even approximate fairness. The young and healthy will not join and the aged and sickly, if accepted, will raise the cost to a prohibitive point, and if rejected, remove protection from those most in need. Sickness insurance cannot distribute the burden of sickness among the low-income classes unless it is compulsory."

I agree with that statement, and I wish the AMA would stick to it. I think, as a modern-day concept in the field of the costs of medical care, of a famous statement of Abraham Lincoln when he said, "The legitimate object of government is to do for the people what needs to be done, but which they cannot by individual effort do at all or do so well for themselves." That is my philosophy in this field.

Mr. GRANIK. Thank you, Congressman BIEMILLER. And now, Dr. Bauer, your summary.

Dr. BAUER. Compulsory health insurance will not give the people what it is supposed to. It is infinitely more expensive. Costs have increased tremendously wherever it has been adopted. The standards of medical care deteriorate, free choice is limited, a large bureaucracy is developed. Furthermore, it is unnecessary. The voluntary program is growing at the fastest rate of any insurance program in history. Other factors are equally important, such as development of further public health facilities, with preventive medicine making a lot of medical care unnecessary by preventing it at the source, and developing further hospitals and diagnostic facilities.

We also need a program for the care of the aged, and chronic diseases. We talk about people having their lives saved, and so forth, by medicine. Doctors do not prevent death; they merely postpone it, and the longer we postpone it, the more people there are of chronic and middle age and old age to have diseases of the degenerative type, and that number is going to increase and we must have provision for them.

Mr. GRANIK. I am sorry, Dr. Bauer and Congressman BIEMILLER, but our time is up. Thank you for being with us tonight and helping us better to understand this important subject.

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. CANFIELD. Mr. Speaker, I have today presented to the House a resolution adopted by the City Council of Clifton, N. J., urging the establishment of a memorial day in honor of Gen. Casimir Pulaski, the Polish soldier who became an American hero in the Revolutionary war.

I hope that such a day will be established, and under leave to extend my remarks I want to pay tribute to another group of Polish soldiers—the 30,000 Polish war veterans who fought on the Allied side during the last world war, after the Nazis overran their country, so many of whom I saw in my journeys abroad. Because of the iron curtain these men cannot and will not return to their native land. I am pleased to have the opportunity of helping these men through supporting the bill introduced by the able gentleman from Connecticut [Mr. LODGE], to give them preferential treatment under our immigration laws. They deserve it. I concur in the sentiments of the following editorial from the New York World Telegram of March 10:

PREFERENCE FOR POLISH VETERANS

Representative JOHN DAVIS LODGE, of Connecticut, proposes preferential treatment under the Displaced Persons Act for 30,000 Polish war veterans who fought on the Allied side after the Nazis overran their own country.

We believe these men have earned the right to such priority.

They fought for the common good of mankind when their own cause was lost, and today are stateless because they refuse to return to a Communist Poland. Good soldiers, they should be good material for American citizenship. We are in their debt. We should give them a break.

Rent Controls

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

FORT WORTH, TEX., *February 28, 1949.*

WINGATE LUCAS,
House of Representatives,
Washington, D. C.

DEAR SIR: I am writing to you in regard to the letter I wrote to you on February 22 about my opposition to rent controls.

Today, your letter of February 25 was received, in which you asked permission to have my letter printed in the CONGRESSIONAL RECORD.

Certainly. It would make me very happy to have it printed, and I feel it would be a privilege and an honor on my part.

Thank you very much.

Yours truly,

Mrs. SIDNEY L. HARDAWAY,
(Housewife and mother of two children.)

FORT WORTH, TEX., *February 22, 1949.*

Subject: Opposing rent controls.

Congressman WINGATE LUCAS,
House of Representatives,
Washington, D. C.

DEAR SIR: I am a tenant but—

This is still supposed to be the land of the free and the home of the brave.

Even I can see the unfairness of rent control. The bill, No. 434, introduced by Senator MYERS, of Pennsylvania, if passed, will undoubtedly take away all rights, ambition, and freedom to do as they wish with what they own from the rental property owners of America.

Either everything, down to toothpicks, should be controlled in price, or nothing should be. And if everything is controlled we would have nothing short of a dictatorship.

Rent control discourages a tenant from buying a home which would ease the apartment shortage.

Rent control destroys a property owner's ambition or desire to spend any money to repair or redecorate their own apartments. Therefore if the tenants of America want to continue to live in nicely kept apartments they had better hope that rent controls are abolished.

It is a fact that hundreds of apartments and houses are standing empty—vacant—because under rent control the property owner has to bow to every wish and whim of the tenant—or else. If he acquires an undesirable tenant, and there are many, since there are all kinds of people in this old world; and one can't always judge desirable tenants by looking at them—I know because my parents have had experience—it is just his hard luck, for to evict someone is almost impossible.

Only the minority of all landlords are large-scale operators, while approximately

80 percent are retired small-business men, widows, elderly couples, and veterans. These last named, who depend partially or solely on rent for their income are the only people in this country who haven't had a raise or a chance at one. True, there was a slight percentage raise on rents last year, but it was like pulling out teeth to put it in effect. A tenant is free to change his occupation if his wages are so low that he can't live on them. That is not true with some who rent apartments for a living.

Where is our freedom slipping to?

We had no rent controls before the war and it worked out—because there was ambition and competition, and you could rent to whom you wished and oust them if they became undesirable.

If rent control should be abolished, it is undoubtedly true there would be a great shuffling of tenants on the property owners' part—but why not?

My views coincide with the majority of people I've discussed this with.

Sincerely yours,

Mrs. SIDNEY L. HARDAWAY
(Housewife and mother).

Way of a Fighter

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include an editorial from the Christian Herald, edited by Rev. Daniel A. Poling. It evaluates the recent startling report by General Chennault of events in China during and since the war—and America's role, both good and bad, in the developments there so tragic for everybody save the Kremlin and its devotees, in China and here in America.

WAY OF A FIGHTER, BY CLAIRE LEE CHENNAULT

To the American people this is the most important book since VJ-day. Chennault makes the Chinese people speak English without an accent. He does something more. For this reviewer at least he fastens on our Government responsibility for Chiang's defeat, which may become the triumph of communism throughout Asia. These pages flame until they blister. The man who made his "Tigers" the scourge of the Japanese spares no words and is impartial in naming those whom he holds responsible for what he believes to be the major debacle of the Allies in World War II. But he documents his material. The foreword written in January of this year in itself is a complete statement of what General Marshall's trip to China meant to President Chiang who was then at the moment of complete victory. But the author calls attention to the fact that Marshall as a good soldier was carrying out orders for which he was not responsible. Chennault also raises that painful unanswered question: Why has General Wedemeyer's report been suppressed? It is not denied that this report supports Chiang. The betrayal of the man whom I believe history will write down as one of the four preeminent figures of World War II and of his generation (nor is he last among the four) will be a lasting shame upon this country.

Sport in the Everglades

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks I include in the Appendix of the RECORD an article by that great and world-renowned sports writer, Grantland Rice, who just recently has been through the Everglades National Park which is located in my district in South Florida. He has written a most interesting and illuminating article about that park.

We in Florida have long maintained that this park would be the only one of its kind in the world; would, over the course of the next few years attract more people than any other park in the United States; and would more than justify any expense the Federal Government has made or will make toward its establishment. His article is as follows:

SPORT IN THE EVERGLADES

Shark River flows through the heart of the Everglades and it is here you can find the tops in sport. Especially fishing.

We have had no desire to kill a panther or a puma, but they are still around. The only thrill such hunting offers is the dead gameness of the Florida hound that will attack a 160-pound puma or a 400-pound bear. Unfortunately, he will also attack a 6-foot rattlesnake.

I've seen hounds hit by bear or puma, badly jolted, and knocked yards away, only to rebound and come back to the attack.

It has been said the pit bulldog is the gamest animal on earth. But I believe the Florida hound can match him. They would tackle either a grizzly or a lion or tiger—even when outweighed 30 to 1—with joy and abandon. I've seen them charge back on three legs, with the fourth dangling and broken.

The Florida hound dog deserves a better break than he has gotten. Two of them will tackle a 400-pound bear. I believe one would. You can kill one of these hounds, but you can't make him quit. After all, the pit bulldog doesn't tackle a puma or a big bear.

Bird life in the Everglades is something beyond belief. I've seen landscapes blotted out by thousands of egrets, clouds of snow-white, moving beauty.

I recall a moving picture Paul Waner made south of Key West. Waner happened to harpoon a rare action shot of a sawfish, 20 feet in length. The sawfish was taking them out to sea when a Florida kid grabbed the harpoon line and climbed upon the back of the fish, standing up and saluting.

Waner had one of the best sporting pictures I ever saw. Unfortunately, his photography was not as good as his batting eye. For he was a fellow who could hit. His invasion of Key West and the Everglades with a camera deserved a better fate.

Paul and Lloyd Waner were two of the best. Paul was a great ball player. He was also a 72 or 74 golfer. He was one of the best fishermen I've seen in many years. And, with Max Carey, he was one of the four Ring Lardner insisted on having with his quartet. The four were Lardner, Carey, Waner, and Reinald Werrenrath, who happened to be a grand-opera star. Ring Lardner always insisted on perfection.

Federal Grants to States

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of January 27, 1949:

TIME FOR CURTAILMENT

The steady increase in the extension of Federal subsidies to State governments has been unhealthy for democracy.

It has helped to swell the budget of a Central Government that is now paying interest of more than $5,000,000,000 on its debt.

It has formed a tentacle through which social planners in the Central Government have been able to exert pressures in the shaping of State-government operation and policies.

It has become a barrier to the imperatively needed reordering of the scrambled system of Federal-State-local taxation in the United States.

It has imbued a large part of the population with the false notion that, through Federal subsidies, State governments can give the people services and benefits without the people paying for them.

The expansion of Federal grants-in-aid to the States, amounting last year to $1,120,000,000 and representing about 15 percent of all State operating expenditures, should be halted.

A strong case for this has been presented in the newly released study by the Tax Foundation of New York, an authoritative agency for research in taxes and public expenditures, of State-government finances between 1942 and 1947.

In an illuminating analysis of State-government expenditures during that period the foundation points out that, while the Federal debt was mounting from $72,000,000,000 to $258,000,000,000, the States amassed an aggregate surplus of almost $1,000,000,000 in excess of their gross long-term debt.

The foundation's study reveals that strong gains by the Southern States—many of them the so-called poor States for which, it was long contended, Federal subsidies were especially necessary—"have contributed greatly to lessening regional discrepancies in the level of State-government expenditures. With careful planning of future fiscal programs," the study goes on to say, "there is no reason why this sound State financial position cannot be maintained."

Yet in the face of this situation, Federal grants to the States are still on the rise. They rose 40 percent between 1942 and 1947 and 52 percent between 1945 and 1947.

The Tax Foundation report pointed out that under the Federal Highway Act of 1944, a 3-year appropriation of $500,000,000 a year for aid to the States in road construction was authorized. Yet at the end of fiscal 1947, only $136,000,000 of the $15,000,000,000 postwar highway aid fund had been spent.

The report further cited increases in Federal aid to the States for welfare purposes, for airports and for hospitals and added:

"Demands are being made for increasing Federal aid for other purposes. Educators are championing the plea for a program of Federal aid for elementary and secondary schools. Bills introduced in the second session of the Eightieth Congress called for Federal aid for such varied purposes as teachers' salaries, public works, a labor extension

service program, public health services, nursing homes for the aged, recreation facilities and water-pollution programs."

The curtailment of Federal aid to the States, the Tax Foundation holds, "would appear to be both a desirable and a practical measure." We believe that conclusion is unassailable.

What is needed far more than bigger and better Federal subsidies to the States is a thorough overhauling of our whole system of taxation to eliminate duplicating, overlapping imposts and to set up, to the fullest possible extent, separate areas of taxation for each of the three major levels of government—Federal, State, and local.

National Theater

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. JAVITS. Mr. Speaker, appended hereto is an interesting article from the George Washington University alumni publication, Confidential—From Washington. 'Certainly the university theaters throughout the country must be an integral part of the effort for a truly national theater. This is, and must be, based on bringing theater to the people everywhere rather than just in the few big cities which now have a regular opportunity to see the living theater. The fact that the university-theater movement is making so much progress shows rather that there are great prospects for a national theater in the immediate future.

The article follows:

TOWARD A LIVING THEATER

(By Edward Mangum, A. M., assistant professor of speech, George Washington University)

There has been a great deal of talk of late about establishing an American national theater, taking as precedent, among others, the state-owned theaters of France, Sweden, and Germany, and the work of organizations like the Arts Council of Great Britain, and the United Nations Educational, Scientific, and Cultural Organization to which the United States is a contributor. Some people feel that the time is ripe for establishing a Department of Cultural Affairs within the Cabinet, and rumors are heard of a "lobby" in Washington to promote an endowed theater.

The reason for all this talk is apparent to any man who loves the teater and tries to buy a ticket to one of its show places: There are very few legitimate playhouses outside of New York. Yet when he saves his money for that occasional trip to the city, theater tickets are not to be had. This is something of a paradox: There are no theaters, yet there is a great demand on the part of the public for theatrical fare. In any other commercial field, producers would work night and day on the supply line to meet this demand. In the field of theater, however, commercialism itself has been one of the prime causes of our cultural desert.

Those who work in the noncommercial theater are not the only ones who believe this. Some of the best actors, designers, directors, and producers in New York are in agreement. Perhaps their thoughts are best summed up by Mr. Brooks Atkinson, drama critic for the New York Times, in an article in his paper on November 17, 1946. "A real theater," he says, "is not a piece of real estate, nor a manager in an office risking other people's money on actors hired on a piecework basis. It is, or should be, an institution in which a group of actors work under inspiring management. The entire organization of the American theater is absurd—economically as well as artistically; and its treatment of the individual who works in the theater is medieval in its lack of social attitudes. It will be difficult to find any other modern enterprise in which the people who do the work are treated so badly."

There has never been a time when someone didn't think something was wrong with the theater. Even in idyllic Greek times, when the great dramatic festivals meant so much to so many, men like the statesman Solon fought the theater, calling it lying and falsifying. Even the immortal Shakespeare, in his sonnet beginning "when, in disgrace with fortune and men's eyes," wrote with a feeling of humiliation because of his connections with the stage. And 200 years later we read from Carlyle, "Nay, do not we English hear daily for the last 20 years, that the drama is dead, or in a state of suspended animation; and are not medical men sitting on the case, and propounding their remedial appliances, weekly, monthly, quarterly, to no manner of purpose?"

To these cries and hundreds of others, why add one more? The theater has enough troubles already, someone says, and unconsciously he has joined the chorus of discontent. The theater does have troubles, and troubles are solved only by exposing them and suggesting solutions.

Would a government-endowed national theater be the solution to these problems? Possibly. Is it likely that such a theater is in prospect for the immediate future? Hardly. Is there some other way to foster great drama and at the same time further the cause of a truly national theater? Definitely.

Across the Nation, in cities large and small, an institution exists which dates from the 12th and 13th centuries. This institution is the repository of much that is great in the culture of the past. It is also the laboratory for much of the social and scientific progress of today. It could become the home for the greatest theater the world has ever known. That institution is the university.

Since its founding, the university has been the body responsible for the conservation, dissemination, and advancement of learning. Through the dark ages of man's progress for the past 800 years, the university has maintained its position as a leader in man's struggle for perfection. What better place, then, to view the great plays of the past, present, and future? Here could be established the theater where the people might be spiritually uplifted by viewing, night after night, great plays produced in the highest artistic manner by trained, intelligent people laboring through an intense love for their work. Such a theater would be a stimulating and inspiring factor in our national life and culture.

How could such a theater be established in the university? The answer is as simple as putting the plan into operation. Briefly, the plan is this:

1. Enlarge the curriculum to include advanced courses in all fields of drama, offering thorough training in practical theory and craftsmanship.

2. Maintain on the teaching staff resident professional directors, playwrights, designers, technicians, and actors as instructors in regular drama classes.

3. Establish a small but permanent producing company on a salary basis, this company to be composed of qualified students, who would aid in the production of a full schedule of major plays for paying audiences. These students would also act as laboratory assistants in regular drama classes.

4. Bring in, from time to time, professional guest actors and directors to participate in the production of particular plays.

5. Create a laboratory theater primarily for student actors, directors, designers, etc., with a full schedule of plays for paying audiences.

6. Establish touring companies of qualified students to make plays available to communities unable to finance theaters of their own.

Such a plan as this would not be substituting a commercial theater within the university for the commercial theater without. It would, instead, contribute to the culture of the community it serves by making good theater available to all. It would contribute to the training of the student who, under present methods, gets classroom lectures and projects but meager laboratory work. It would contribute to the curricula of university departments other than speech and drama by making available in live form many of the world's classics now studied only from the printed page.

There is nothing new in this plan. Most of it is already in operation, but generally on a small scale, and not all of it within any one university. Outstanding among the schools making definite progress in such an endeavor is Stanford University. The drama staff includes several professionals. In the summer of 1944 three professional actors were engaged to supplement students and faculty in their productions. Equity salaries were paid the guest actors and production expenses were high, yet the shows paid for themselves and there was money left over. During the following years the plan was expanded to include several theatrical fellowships, granted annually to outstanding young actors and technicians throughout the United States. These students made up the nucleus of an acting and producing company. Last summer was, with additional professional actors on the campus, the most ambitious and successful season, artistically and financially.

The University of Utah has been operating a similar plan for the past 2 years. As a result of the tremendous interest evidenced in the Salt Lake City area, construction has started on a new $1,500,000 building on the campus to house their new theater, and a member of their staff has been sent to New York for 2 years to study theater management in preparation for a big job when he returns. The University of Virginia Theater last summer invited in two guest actors, and as a result the summer's business increased 40 percent.

What has been done at these and other universities indicates that the ventures in every instance have been financially successful. There is no reason why this should not be the case since a theater-going folk, who might be reluctant to buy a ticket to a nonprofessional performance by a university group, subscribe heavily for the opportunity to see shows in which qualified professionals are playing. Later, they are anxious to see other plays by the same group whether supplemented by professionals or not. University theaters should take heart at the tremendous response from the public toward such projects already under way.

Box-office receipts, in nearly every instance, have been the sole source of revenue, and these have been more than enough, as has been indicated, to pay all production expenses. For universities located in large cities there is, therefore, virtually no problem with regard to financing a program such as is envisioned, except for an initial outlay which could certainly be recouped after two seasons, if not after one. For universities in smaller towns, where students make up the bulk of the audience, activity fees could

be slightly enlarged to provide additional income. There is no reason, of course, why the city university could not do likewise.

Such a venture would meet the immediate approval of the press, which could be counted upon to give support where it is most needed. Boards of trade, chambers of commerce, and other business and civic organizations would no doubt go all out to back a plan which would add to the prestige of the community. Cultural, educational, and religious bodies would welcome the advent of good theater designed to raise the standards of the society in which they work. Such a plan should find immediate support from alumni organizations which are ordinarily most anxious to see their university move forward in all pursuits.

The American National Theater and Academy, chartered by Congress in 1935, is in happy accord with such a plan as advocated here. ANTA was organized "for the purpose of stimulating interest in the drama and bringing to all Americans their heritage of the past, the best of the present, and to aid the development of better drama in the future." It could be counted upon to assist with its expert advice in the setting up of any program of promise and to help obtain the best professional talent available.

A project of this kind, administered by people who know theater from both the artistic and business angles, could within a few short years be the major American theater. Twenty-five or thirty pioneering universities, with a vision for the future, would be the start of a great movement to bring drama back to the respected place it occupied 2,000 years ago.

Under this plan, classics and new works would be playing in universities every night in the year. In the end it would not only pay for itself through increased box-office receipts and student enrollment but would also make available great plays to the millions who get only superficial movie and radio fare, and all-important jobs to thousands of young men and women who yearn to share with others their artistic talents.

Universities have often been accused, and many times with justification, of pedantry, conservatism, and indifference to contemporary activities. They played an important part, however, in public affairs of the Middle Ages, even to joining in the great church councils of the fifteenth century. In the twentieth century, when men like Gen. Omar Bradley can say that we are living in "a world of nuclear giants and ethical infants" surely the great universities must be looked to for cultural leadership. A truly national theater, fostered with pride and devotion by these universities, might be the means whereby, in part at least, will be caught the conscience of the people.

4–H Club Work

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. DENTON. Mr. Speaker, I have had the privilege of recently attending a preview of a motion picture called The Green Promise at the Jefferson Auditorium of the Agriculture Department here in Washington. It deals with one of the most important activities in which the Department of Agriculture and the land-grant colleges are engaged, that of 4–H Club work.

I was invited to the premiere because the star of the picture was a member of a 4–H Club from my own district in southern Indiana, little Jeanne LaDuke of Mt. Vernon, Ind., who was picked for the part from 12,000 candidates. I think Jeanne almost stole the show. It is my understanding that this picture will have a premiere at Houston, Tex., March 18 before it is released to other theaters in the country.

I was impressed with the picture, not only because of Jeanne's part and excellent performance in the play, but because in an entertaining and educational way it explains the work the 4–H Clubs are doing. It is truly a good picture.

The Green Promise has been recommended by several national women's organizations representing a membership of more than 10,000,000 and including the Daughters of the American Revolution; the General Federation of Women's Clubs; the Girl Scouts; the American Legion Auxiliary; the American Association of University Women; the Federation of Business and Professional Women's Clubs; the Southern California Council of Church Women; and the Parent-Teachers Association.

More Revenues to Counties From National Forest Lands

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. BLATNIK. Mr. Speaker, yesterday I introduced a bill (H. R. 3357) to establish a new procedure governing contributions to the cost of local government with respect to Federal-owned forest lands. This bill proposes that the Federal Government shall make annual payments to States, Territories, and insular governments for distribution to their respective county governments in proportion to the acreage and value of the national forest lands situated in said counties. The bill fixes the amount of such annual payments as equaling 2 percent of the appraised value of the national forest lands within each county.

I should mention that this is not the first proposal of its kind. During the Eightieth Congress, the Senator from Oregon [Mr. CORDON] introduced Senate bill 582, and this bill passed the other body in an amended form. Other similar measures have been introduced in this and previous Congresses specifying differing amounts of annual payments.

I will speak briefly on the rationale of this bill—the fiscal problems of county governments arising from Federal ownership of vast sections of untaxable forest land has not been generally understood, and some elaboration of the scope and nature of this problem is necessary.

In the first place, let me point out that the effect of Federal ownership is felt by many more county governments than most people realize—the millions of acres of land in the national forests embrace substantial portions of over 20 percent of all counties in the United States. To illustrate this point, I quote briefly from the Agriculture Department's report on S. 582, which was submitted on May 21, 1947, and reads as follows:

> Parts of 706 counties, situated in 40 of the States, are now within the exterior boundaries of the national forests or of the national forest purchase units established under the Weeks law with the approval of the National Forest Reservation Commission. Of these counties, 38 now contain no national forests, while 15 others each contain less than 100 acres of national forest land. At this time 653 counties are actively participating in returns from national forest lands. In other words, more than one-fifth of all the counties or parishes in the United States are immediately concerned.

These large property holdings of the Federal Government are not taxable by either State or local government. Thus, Federal ownership of large tracts of forest land in any county automatically reduces the amount of taxable property in the county, and thus reduces the county's volume of revenue to meet its operating expenses. This leads to serious fiscal problems in such counties, and especially serious problems in those counties where Federal ownership exceeds one-third of the total acreage of the county.

The counties are vital elements in our governmental structure and necessary units in functioning of local self-government—the public interest requires that they shall be full functioning and financially solvent. It has long been recognized that some form of in-lieu-of-tax payments must be forthcoming from the Federal Government to the counties to offset the loss of taxable property and subsequent revenues resulting from Federal ownership.

The Federal Government and Congress has recognized this financial responsibility to the counties by enacted legislation—acts of May 23, 1908, and March 1, 1911, as amended—which give the counties 25 percent of all national-forest receipts to help meet the costs of local government.

However, experience proves that the 25-percent-of-total-receipts formula, as a means of granting in-lieu-of-tax payments to the counties, is far from satisfactory, and that it is subject to a number of serious objections.

First, the revenue received by the counties tends to fluctuate widely, depending upon the size of the timber sales. In prosperous times the payments may be substantial, but they may be drastically reduced at other times. Secondly, the distribution of revenues among the counties is inequitable—if a national forest is in more than one county the counties share in proportion to the acreage in each county, which is an unfair arrangement when the productive proportion of the area may be centered chiefly in one county. Third, payments in general have not been adequate to protect local taxpayers from undue tax burdens. Finally, the purposes for which contributions may be used are now confined to schools and roads, and often prevents the best use of this money.

In other words, the 25-percent formula is inequitable, inadequate, and subject to wide fluctuations, and its effect is to contribute to fiscal insolvency in county government.

The bill which I have offered for consideration by the House would establish a new principle governing Federal contributions to county government. It would increase the amount of revenue to be forthcoming to the counties, and would provide a greater measure of stability and equity of contribution. It would guarantee a fixed amount to the counties year after year, and enable local governments to formulate their financial programs on the basis of a fairly stable income from the Federal Government. I am convinced that this bill would provide a more workable program of Federal contributions, and that it will more adequately meet the fiscal needs of county governments by increasing Federal contributions from the present annual total of less than $4,000,000 to between twelve and fifteen million dollars. On this basis, I offer this measure for consideration by the House, and urge its enactment into law.

Asks Relaxation of Taxes on Admission to School Events

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a letter from Lee M. Thurston, superintendent of the Department of Public Instruction for the State of Michigan, who asks Congress to consider the relaxation of Federal taxes on admissions to events held in public, parochial, or private schools. I believe his reasons for asking this consideration are well taken. Mr. Thurston's letter follows:

STATE OF MICHIGAN,
DEPARTMENT OF PUBLIC INSTRUCTION,
Lansing, March 8, 1949.

Hon. PAUL W. SHAFER,
House of Representatives,
Washington, D. C.

DEAR MR. SHAFER: Recent information from Washington indicates that there is a possibility of some relaxation on certain tax laws. I should like to suggest that in any changes in excise-tax laws, first consideration be given the matter of Federal taxes on admissions to public-, parochial-, or private-school events.

A Federal tax on admission to any type of public-school event virtually is a tax upon a tax, since all such schools are supported by State and local taxes. School events involve the use of a school building with heat, light, and other services whose cost is borne by the taxpayer. There usually are several teachers, also paid by State and local taxes, who participate in these programs. None of these events produces a profit to any individual.

Funds from school events, whether they are school plays, dances, athletic events, or other activities, are all operated for the benefit of students, and funds realized are used to buy equipment or materials. For instance, in football and basketball games, receipts are used to purchase uniforms and protective equipment of various types for the boys, and these funds also are used to subsidize sports, such as track, baseball, and the other sports where admission fees are negligible.

There are few schools in the State of Michigan where the revenue equals the expense of these various events. It could follow that football players are or might be out on the playing field with unsafe protective equipment because there are not sufficient funds in the schools' athletic accounts.

The amounts of Federal taxes collected on school events are not available to this office. We have but one example to offer which concerns the taxes on the State high school basketball tournaments in Michigan. Last year this tax alone amounted to $31,925.75. It would probably be safe to estimate that as much as one million dollars are collected in Michigan alone on school events. This sum of money which is collected for Federal taxes, if they were eliminated, could be used for the welfare of youth, not only in Michigan but throughout the Nation.

It is significant to note that in most instances the admissions tax on school events actually is absorbed by the schools themselves rather than passing it on to students and school patrons. Most school people feel that the admission price to school activities should be kept to a minimum in order that as many students, parents, and school-tax payers as possible can attend them.

This communication is being sent to all Members of the Congress from Michigan. You may be assured that any action taken will be appreciated by parents and children of the State.

Sincerely,

LEE M. THURSTON.

Seek United States Aid for Red China in Name of People

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily Tribune of March 7, 1949:

SEEK UNITED STATES AID FOR RED CHINA IN NAME OF PEOPLE—AMERICAN BUSINESS LEADS DRIVE

(By Walter Simmons)

SHANGHAI, March 6.—A drive for continued economic aid to the Chinese people—meaning the population in China's growing Communist-controlled area—is expected to be opened soon, with American businessmen as its leaders.

The campaign is already under way in the United States, led by such "Chinese experts" as Harold Ickes, Owen Lattimore, and prominent figures in the Communist-dominated institute of Pacific relations. American aid for Chinese economic rehabilitation is strongly favored by many American businessmen here. Some admit privately they are not particularly interested in the political aspects of helping the new Communist government to succeed. Their interest is in doing business profitably under any regime.

LEFTIST OPINION

American leftist opinion in Shanghai has been expressed in the China Weekly Review, edited by John W. Powell, which has recently advocated an end of ECA (Economic Cooperation Administration) help to Nationalist China, and the inauguration of a new aid program for Communist areas.

The China Economist, an economic supplement to the Review, which frequently prints Communist propaganda without identifying it as such, recently denounced aid to Nationalist China as "partiality," and, while belittling the $400,000,000 program which terminates in April, proposed that continued aid be given the Chinese people. This phrase is consistently used by those who urge American aid for the Communist areas.

Although unanimously anti-Communist, businessmen fear that a discontinuance of ECA aid will be interpreted as a slap in the face by the new Red government. British commercial firms have no such problem, it is pointed out, since Britain has given no recent aid to China.

A CONFUSED GROUP

Observers here have found the American business community a confused and irresolute group. Except in a few cases, individual competence seems amazingly lacking. Scores of these Americans have lived in Shanghai for a dozen years or more without bothering to learn the language. Visitors who question them are amazed at their ignorance of Chinese history and customs. Except for essential business contacts, most Americans insulate themselves against the Chinese at home and in clubs which Chinese enter only as servants. At parties where Chinese guests are invited, the two races usually sort themselves quickly into separate groups.

Some observers feel these businessmen are misguided, and are unwittingly serving as stooges for Communist leaders who currently profess disinterest in American economic help, but who would like to have it pressed on them, to be administered without any strings.

Increase in Federal Expenditures

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Drovers Journal of February 25, 1949:

THE EASY ALTERNATIVE

There doesn't appear to be any serious effort to prune operating expenses, either in the Federal Government or the lesser units of Government. The easy alternative is finding new sources of tax money, and that is going on right now all over the country. Not only the Federal Government but nearly every State, it seems, has under consideration new and raised levies. Why this should be so when it is so clearly in violation of good business judgment is hard to understand. Is there no longer such a thing as statesmanship?

When it comes to the Federal Government, the following comment from a business review issued by the Cleveland Trust Co. seems pertinent: "Those who are little concerned with efficiency in government often point to the 76 percent of the total budget which

covers national defense, foreign aid, veterans, and interest on the national debt, and ask, 'Where would you cut?' This apparently implies that it is hardly worth while bothering about the remaining 24 percent (which amounts to $9,935,000,000). Actually there is plenty of room for substantial savings through more efficient operation of functions included in both the 76 percent and the 24 percent. This is clearly evident from information already released by the Commission on the Organization of the Executive Branch of the Government. The Commission has pointed out that the Nation is paying heavily because the Federal Government, now the biggest business in the world, is not running smoothly; and it supports this conclusion with detailed facts and figures."

Referred to are the so-called Hoover Commission reports. The people, who foot the bills, should scrutinize these reports intensively and demand of their representatives in Congess that corrective action be taken. It is well known that Mr. Hoover was reluctant to undertake this vast project, but once convinced that it was his duty he, to quote the magazine Newsweek, "plunged into his job with an energy that eventually was to exhaust the younger men working under him. He first set up 22 task forces, each to study a particular branch of the Government. Never before had so many top figures in American business and the professions been collected so quickly for any governmental project. They streamed in from the Ford Motor Co., the Prudential Life Insurance Co., Young & Rubicam, the Curtis Publishing Co., Montgomery Ward, General Motors, and the Reynolds Tobacco Co.; from the Brookings Institution, and the University of Minnesota. They brought in nearly 300 experts to work for them."

Cost of Government

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George S. Benson, president of Harding College:

LOOKING AHEAD

(By George S. Benson, president, Harding College, Searcy, Ark.)

YOU AND YOUR SHARE

If ever this Nation needed an economy-minded Congress, it is now. The cost of Government has shot up all out of sight. Current high costs of government represent more than just dollar inflation. What we have had, without clearly realizing it, is a boom in government. This boom has flourished until there is danger of collapse from the very size of the super-structure itself. Our ship of state is indeed topheavy.

Lumping all government together—Federal, State, local—tax collections for the 1948 fiscal year came to 26 percent of the national income. Perhaps you can see it better if we should divide up that $55,200,000,000 of tax collections, to find what was your part. It amounts to $377 for each man, woman, and child in the Nation. You didn't pay that much? Brother, your share was tucked away in the price of everything you spent your money for.

Fuel for bureaucracy

You can see how much taxes have grown, if you compare the above figures with those for 1940. Then tax collections were $14,400,000,000, or 18.9 percent of national income. The amount for each person in 1940 was only $109. In 8 years, therefore, we have more than tripled our taxes. A lot of it results from the war. We're spending a lot in Europe, certainly. But let us not use that as an excuse for lack of vigilance about the rest of it. We ought to find a place to stop this mushrooming of government.

The biggest collector and spender is the Federal Government, of course. A government can spend only what it receives from the people. The fuel on which bureaucracy feeds is public money. For this reason, Americans ought to be more conscious of taxation and its purposes. Tax bills should interest us even more than budgets. It may be impossible to educate Federal bureaus to lower their budgets. But lower taxes will turn the trick.

Government unlimited

We are inclined to justify boom government and resulting high taxes in a number of strange ways. In depression times, we call for more and more spending. That means taxes, but we put them off until later. Then in time of plenty, we think up more things that government can do better for us, feeling sure that we can afford it. At the same time, we make little or no effort to catch up and get out of the red. Today, we ignore wartime debt, and forget that we ever did any deficit spending.

Must we dedicate ourselves to unlimited government? Since the founding of America, we have looked to Congress to control taxes. Knowing that "power to tax is power to destroy," the founding fathers placed tax power upon Congress. This power was not meant to be abused. Citizens then were aware that government was meant to serve them, not they to serve the Government. That viewpoint still means good citizenship. It is the viewpoint of taxpayers.

Voters are taxpayers

But times have changed. Nowadays American voters (though they be taxpayers to the tune of billions) look upon themselves first as receivers of Government benefits, last as payers of tax. Our Federal Government is now making payments direct to 15,830,889 persons. Some of these are necessary. But too many of us, far too many for the good of the Nation, have a personal interest in seeing Government expenditures continue. Will any of these 16,000,000 bite the hand that feeds them?

You see, this is the way we ourselves can undermine the cornerstone of freedom. Almost without knowing it, we have created a huge central government, then given it power to perpetuate itself. If big government can minimize the dangers of entrenched bureaucracy, keep public waste and extravagance out of sight, and go on taxing, then this thing will continue regardless of the party in power. When big government sells people on the idea of lavish hand-outs which they themselves pay for by high taxes, you can call this bribing people with their own money.

A DANGEROUS TAX

There's talk in Washington of a $4,000,000,000 tax increase. If Congress permits this new siphoning of income and savings from the people into the Federal Treasury, the results can be dangerous for the whole Nation. This is fact, regardless of whether or not the President and his administration would be cramped in spending a proposed $42,000,000,000 budget. Of course, like our Senator MCCLELLAN told home folks recently, Mr. Truman's program means that taxes can go only one way—up, up, up.

Senator FULBRIGHT, our other distinguished Senator, tried to ease the misgivings of the economy-minded by pointing out that saving Federal money and reducing taxes is a question of "what you are willing to give up." That is a problem, all right. And it takes courage and unselfishness from each citizen, to get the answer to it. One reason that economy is not the rule, is that courage and unselfishness are so little known.

Spending is easy

Too many of us have the attitude of the well-known politician, who said that he had never voted for a tax bill nor against an appropriations bill. If we manage to fool ourselves into thinking the other fellow is going to have to pay for the hand-outs, we then show no enthusiasm about economy. Citizens and Congressmen alike too often see economy as a fine thing when it's not close to home, but work like mad for all the Government aid they can get—for themselves.

One thing is wrong with the question our Senator asked, about what we would give up. It puts the burden of proof on the citizen who would economize. That proof belongs elsewhere. Every bureaucrat who demands funds should explain and justify the expenditure of every dollar. Spending is the easiest thing in the world to do. Whether some buréaucrat spends wastefully and needlessly out of tax funds—that's something he should have an answer for.

A present danger

Wherein lies the danger to the Nation in heavier taxes at this time? It is proposed that the burden of a $4,000,000,000 tax increase be placed upon corporations and businesses. This might look to some like an easy way to shift the tax load onto somebody else. Actually, a tax that is shouldered by business is still borne by the people—because people buy the products of corporations that are owned by people.

At present the Nation's business corporations pay a 38 percent tax on income. Earnings distributed to owners may get taxed up to 92 percent. (Other taxes, also, are levied upon corporations.) Tremendous sums, therefore, are handed to Uncle Sam by industry. But right now, the Nation's economists are agreed that America's industry must have huge amounts of additional capital for growth and for expansion. There's danger, if instead these billions must be poured into Washington.

Don't kill incentive

Any industrial plant that is not able to spend money continually for expansion or for newer, better equipment is a corporation moving toward failure. An amount roughly equal to the President's proposed budget of $42,000,000,000 is the least we ought to put this year into our industrial plant. If America is to have the industrial strength it should have, if jobs are to remain plentiful, and if wages are to be high—then we had better have a care about penalizing our industry. America can lose out, by exacting too much "take" from business.

If we permit taxes that take away nearly all profits, we're heading for bankruptcy and depression. Our socialist-minded politicos say a lot about the need for this give-away and that hand-out. But unless industry is allowed to expand, modernize, and meet today's needs, there'll be nothing at all to tax one of these days. When taxes take what would be invested, and when incentive to invest is killed—the country will go into reverse. Another $4,000,000,000 in taxes on corporations would be most unwise.

SOCIALISM AND TAXES

Can high taxes take us down the road to socialism? Yes, a whole lot farther than most people think. Already, the blighting effect of high taxes is visible, despite today's good times and high over-all output. Top economists are pointing right now to danger signs that affect you and your job. With taxes having long ago neared the breaking point,

it is just possible that unwise legislation for more spending and more taxes could upset the Nation.

The plight our Nation is in right now, because of a tax load that requires more than a quarter out of every dollar of national income, was apparent in the President's recent message. Mr. Truman stressed the need for high steel production and for expanded facilities. Steel output is hitting new all-time peaks—even better than wartime highs. "It would be the part of the Federal Government to build plants and produce steel, if private industry did not," Mr. Truman said. For this, who would put up the capital?

Contradiction?

Obviously, you would. By paying taxes. When government goes into business, the effect is to spend money, not make it. That has been proved too many times. But on the face of it, Mr. Truman's proposition—that the Government get into the steel business—is nothing more nor less than socialism pure and simple. Continuing, Mr. Truman said there must be $4,000,000,000 in new taxes, mostly from corporations. The contradiction of it all makes food for serious thought.

With one breath the Government thus orders business to plan for steady, vigorous expansion, and with the next proposes taxing policies that will make it impossible for industry to have funds for expansion. Despite already high taxes that make capital timid, the steel industry has somehow reached enormous production levels. But more taxes remain a dangerous threat. What Congress does about taxes this year may have great influence on the production of the future.

Incentive destroyer

Heavy taxes are a certain hindrance to production, and hence to prosperity and national well-being. More than any other one factor, taxes can smother initiative. They destroy incentives to get ahead, to save, and to invest. Taxes take at least half the total income of all persons with incomes of $5,000 a year or more. This group represents only one-tenth of America's families, but it is from this group that the bulk of risk capital must continually flow into new enterprises.

Unwise tax laws, which steal the fruits of labor from those who work, can cause stagnation in America just as they have done in Europe—in France, in Italy, and in England. That high taxes are now keeping funds away from business enterprise in America is a sobering fact. Figures will show that in the 8-year period from 1940 through 1947, individuals cut back their holdings of corporate investments by nearly a billion and one-third dollars. Taxes do prevent savings for investment.

A plague of taxes

Unfair taxes hinder our national well-being further by making it hard for business and industry to retain earnings for use in creating new job opportunities. All the way down the line, incentive is subject to tax penalties that put the damper on enterprise. We may well fear the future, if we permit taxes to plague us into a slump. Perhaps the worst feature of heavy taxation is that the whole Nation is weakened for the trying times that may lie ahead.

Be assured that if the Federal budget takes $42,000,000,000 from the people, the price of everything from bread to shoestrings will contain its share of that multibillion dollar figure. That is why Government spending must interest you. The more Government spends, the more it must collect. And Government has nothing, except what it gets from the people. Then when people say, incentive is in grave danger. The Gargantua that can overthrow America is Big Government. This destroyer feeds on taxes.

Would Cut Excise Taxes

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Fall River (Mass.) Herald-News of Tuesday, March 8, 1949, on excise-tax reduction:

WOULD CUT EXCISE TAX

Republican House Leader (JOE) MARTIN'S bill to reduce excise taxes generally to their prewar rates were unanimously endorsed by the House Republican policy committee last week, and Washington observers predict that it will also have the support of rebellious southern Democrats when it comes up for action.

Certainly the anti-excise-tax movement has the support of the vast number of consumers who find their wallets still assailed by high prices, and by the many businessmen who feel that business now needs a shot in the arm from increased consumer purchasing. Increased purchasing would be certain to follow the removal of wartime excise taxes, say the businessmen.

These taxes, commonly called luxury taxes, are levied on many articles hardly to be called luxuries: Light bulbs, 20 percent; telephone service, 15 percent; entertainment admissions, 20 percent; toilet articles, 20 percent; transportation tickets, 15 percent. The most productive of the excise taxes is that of a cent and a half a gallon on gasoline, which yielded the Federal Government $498,000,000 in 1948.

The 7-percent tax on automobiles produced $275,000,000; the 3 percent on freight, $339,000,000; the admissions tax, $387,000,000; the 20 percent on jewelry, $215,000,000. Light bulbs yielded $26,000,000; jewelry, $26,000,000; phonograph records, $7,000,000; sporting goods, $21,000,000. Excluding tobacco and liquor imposts, but including certain other minor miscellaneous taxes, the total take from excise taxes by the United States Treasury was almost $4,000,000,000 in 1948.

If the antiexcise movement is successful, this will be $4,000,000,000 that the Government must save by not spending, or that must be raised by other increased taxes. It appears, then, that coupled with the movement, there must be a spirited drive for Government economy. We are reminded that it was about $4,000,000,000 that Herbert Hoover said could be saved by a reorganization of the administrative division of the Federal Government.

Americans Without Citizenship

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of March 1, 1949:

AMERICANS WITHOUT CITIZENSHIP

Once again an attempt is being made in Congress to end a policy of disgraceful discrimination which prevents thousands of Americans from enjoying citizenship.

Five Members of the House have introduced a bill practically identical with the Judd bill of the Eightieth Congress. This would allow persons of Japanese ancestry who are legally entitled to permanent residence in the United States to become citizens—just as other legal immigrants can.

This is not now possible. American-born persons of Japanese ancestry now have American citizenship. But there are between 80,000 and 90,000 persons, mostly of Japanese extraction, presently barred from citizenship. This number includes persons who have lived nearly all their lives in the United States and many whose sons died on the battlefields for the United States.

All that is asked in the new Judd bill is to round out the immigration laws to remove the last remaining discrimination preventing citizenship for any permanent legally admitted residents. This discrimination was ended for Chinese, Filipinos, and (oriental) Indians several years ago.

The Judd bill was unanimously approved by a House subcommittee in the Eightieth Congress, but got caught in the closing rush and could not be brought up. It was, and again is, a bipartisan bill. It is an American bill to allow a group of Americans in fact to enjoy the citizenship that all their fellow residents enjoy.

Testimony on the Judd bill in the last Congress was overwhelmingly favorable. It should be speeded through now without much delay or controversy.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. CHARLES P. NELSON

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution received from the City Council of the City of Auburn, Maine:

Resolution memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as "General Pulaski's Memorial Day" for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in United States of America: Now, therefore, be it

Resolved by the City Council of the City of Auburn and State of Maine:

SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from Maine.

Presented to the council by Alton J. McFadden, councilman, ward IV.

A true copy.

Attest:

LEON H. COLE,
City Clerk of Auburn, Maine.

President Truman and the Special Interests

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer for February 26, 1949:

WHAT SPECIAL INTEREST?

During the course of his Jefferson-Jackson Day address, President Truman assailed on 10 separate occasions the special interests which he claimed are trying to wreck his program in Congress.

Seldom have the American people been treated to a display of such colossal impudence. The man who accused the special interests did not even make a pretense of concealing the fact that he was speaking in behalf of the most powerful special interest now seeking to influence Congress—the labor lobby which wants to repeal the Taft-Hartley Act and to restore the vicious, one-sided Wagner law.

Truman declared the Taft-Hartley Act was a device to make unions so weak they could not carry on effective collective bargaining. This is an amazing statement in view of the fact that during the period since the enactment of the Taft-Hartley Act labor unions have been able to negotiate the most favorable contracts they ever had.

But it is true that some restrictions have been imposed by the Taft-Hartley Act on labor union activities with which the Federal Government did not concern itself under the Wagner Act. An example of this kind was related in a dispatch from Washington Thursday concerning a ruling by the National Labor Relations Board that the CIO United Furniture Workers Union had violated the Taft-Hartley Act while attempting to organize employees of the Smith Cabinet Manufacturing Co., of Salem, Ind.

According to testimony before the Board, goon squads beat up nonstrikers, nails were strewn in the road to puncture automobile tires, bricks and clubs were wielded, automobiles were overturned, and executives were prevented by pickets from entering the plant.

Then there was the recent commando raid during which union strong-arm squads invaded and wrecked the plant of the Shakespeare Manufacturing Co. in Michigan.

Does the President of the United States have the effrontery to contend that labor unions should be allowed to engage in these nefarious practices in order to carry on effective collective bargaining?

We suggest it is not any special interests which are blocking the enactment of Truman's legislative program, but the conflicting interests which he, himself, invoked in the recent campaign and which he has since been attempting to appease.

The President must think the American people are a bunch of nincompoops to forget so quickly the fiasco which accompanied the introduction of his fair labor bill in the Senate. Secretary Tobin assured the Senate Labor Committee that the President needed no injunctive power to prevent strikes affecting the national health and safety. Public opinion would prevent such strikes, he said. When this conclusion was questioned, Attorney General Clark told the committee that the President had the inherent power to obtain such injunctions anyhow.

It is not likely the American people have forgotten how Truman bewailed the high cost of food during the campaign and denounced the Eightieth Congress for refusing to enact his price-control remedy, while at the same time he was telling the farmers they would be ingrates if they didn't reelect him because of the high prices they were getting for their products.

But what happened when grain prices took a nose dive recently? Secretary Brannan announced the Government would buy up every bushel of grain it could ship abroad in order to prevent lower prices, although only a year or so before Truman and former Secretary Anderson were assuring the people that there was no connection between high prices and the Government grain purchases.

The president's current difficulties with Congress arise from the fact that he made too many promises to too many people when he was campaigning for election, with the result that he cannot fulfill any of his pledges without offending large groups of people who are represented in Washington by congressmen having similar viewpoints.

Truman's petulant denunciation of special interests reflects an attitude that persons who disagree with him should not have representation in Congress. We hope he carries out his threat to get back aboard his campaign train to tell the people how their Government is getting on. Last year he sold a bill of goods when he was denouncing the Republican-controlled Eightieth Congress. A similar campaign against the Democratic-controlled Eighty-first Congress should produce enlivening results.

Selective Service System

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. GAVIN. Mr. Speaker, the subject matter I wish to discuss is selective service, and in view of the fact that I was unable to appear before the Independent Offices Subcommittee of the Appropriations Committee, I wish to call my remarks to the attention of my very good and able friend the distinguished gentleman from Texas [Mr. THOMAS].

The 1949 appropriation for the Office of Selective Service Records was $2,476,700, and for Selective Service System it was $25,000,000, or a total of $27,476,700.

This amount provided for 5,455 full-time positions and 500 man-years of part-time employment, and the induction of 210,000 registrants. Due to the curtailment of inductions, employment as of February 1, 1949, was only 4,825 full-time employees, including military personnel, and 474 man-months of part-time employment.

Now I understand the request for the 1950 appropriation for the Selective Service System is $16,700,000. This amount provides for 2,905 full-time positions and 1,515 man-years of part-time employment, but does not provide for inductions.

In view of the fact this organization is not functioning, why there should be a request for 2,905 full-time employees and 1,515 man-years of part-time employment, is beyond my comprehension. It is serving no purpose and under the present circumstances I cannot see any reason why an appropriation should be made other than to keep a stand-by, skeletonized force in existence.

Certainly here is one opportunity where we can save several millions of the American taxpayers' dollars, and I trust the Appropriations Committee will carefully examine this whole matter.

[From the Washington Sunday Star of February 20, 1949]

DRAFT SLOWED BY VOLUNTEERS—ARMY UNDERESTIMATED WHAT RECRUITING COULD ACHIEVE

(By Rowland Evans, Jr.)

The Army, a few short months ago crying for men and spending millions preparing to handle them, is now turning away volunters and cutting down its size.

And the Selective Service System, mobilized last June to supply the Army with as many as 30,000 men monthly, is now drafting no one.

Why?

Go back to last spring, just before Congress enacted the draft law and authorized an Army manpower ceiling of 837,000 men and officers plus 110,000 1-year volunteers. At that time the Army was down to a postwar low of 560,000.

Military intelligence foresaw a war possibility. Czechoslovakia had just been taken over by a Russian-dominated government. Our Army was dwindling.

President Truman and Congress said we should act fast to get our war fist cocked into position. The draft, rather than universal military training, was picked as the best way.

ARMY UNDERESTIMATED

On June 21 a highly placed Army official said the Army would probably call between 200,000 and 225,000 draftees during the first 12 months of the new draft.

No one knew just how much the draft would stimulate enlistments. As it turned out, the Army has drafted only 25,000 men and it may not have to draft any more at all.

The Army simply underestimated what its recruiting service could do with the draft as a selling point. Voluntary enlistments

more than doubled between May and July and they have stayed around the 35,000-a-month level ever since.

If this trend started so quickly why didn't the Army call off its draft plans at once?

For one thing, it wanted to get to the 700,000 mark fast and the draft would naturally help. (Actually, it only had money to support 700,000. Congress, although it authorized 837,000, did not appropriate money for that many.)

As early as October Army personnel officials saw a possibility that actual drafting might not be needed to get to full strength. But if they had announced this just before the November presidential election, it was felt even the deaf would have heard cries of playing politics.

PLAYED IT SAFE

And there was this paradox. Just 1 month after the draft act was passed President Truman told Defense Secretary Forrestal that he would recommend a budget ceiling for the defense establishment of $15,000,000,000 for the 12 months starting next July 1.

This was less than Mr. Forrestal wanted. The Army's share would not support it at a strength near the congressionally authorized 837,000.

It wasn't till after the election that Mr. Forrestal announced allocation of the $15,000,000,000 among the three services. The Army's cut will restrict it to a total of 677,000 for next fiscal year, even less than its present strength of about 700,000.

Today the Army has had to abolish 2-year enlistments and put a ceiling on the number of men who may enlist for 3-, 4-, 5-, and 6-year terms. Its reenlistment rate is running high (more than 40 percent) and a proposed pay raise won't discourage volunteers.

But if the voluntary enlistment curve should suddenly plummet the Army has the draft to fall back on.

Those Excise Taxes

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Pawtucket (R. I.) Times of Tuesday, March 8, 1949:

THOSE EXCISE TAXES

House Republicans headed by former Speaker JOSEPH W. MARTIN, of North Attleboro, may well expect popular support of their efforts to cut back excise taxes. Such taxes are accepted as a natural consequence during period of war, but their continuance in time of peace has little public support, especially when they are levied upon necessities.

The Republican bill would reduce to prewar level most excise taxes except that imposed on liquor and now set at $9 per gallon. It would cut excise taxes on jewelry, furs and admissions from 20 to 10 percent, on electric lights and bulbs from 20 to 5 percent, on cable, radio and leased wire messages and telephone tolls from 20 to 10 percent, on local telephone bills from 15 to 6 percent, on luggage from 20 percent, on retail sales to 10 percent, to 10 percent on manufacturers and upon toilet goods, from 10 percent on retail sales, to 11 percent on manufacturers.

A reading of the list of items on which Mr. MARTIN proposes a cut in taxes reveals that in most cases the cuts would help to reduce the cost of many items which are regarded as necessary to daily living, especially those imposed upon toilet goods, so necessary in infant care; and those Government taxes levied upon telephones, electric light bulbs, and upon admissions to various forms of public entertainment.

If, as has been claimed in Washington, the cut in excise taxes would cost the Government from $800,000,000 to more than $1,000,000,000 yearly, there is no reason why the American people should not expect relief from the emergency wartime taxes almost 4 years after the defeat of Germany. The pennies thus saved could be used to advantage elsewhere in family budgets at a time of high price levels.

The Republicans are on sound ground also at a time of rising unemployment when they declare a cut in excise taxes would help to provide jobs and encourage business, both of which would tend to offset any revenue loss to government, and which could be expected to increase total Federal revenues through other taxes. It is well enough for us to help to relieve other areas of the world where there is distress, but a little relief from nuisance taxes would be appreciated by the much abused American taxpayer.

Ten-Year Navajo Program

EXTENSION OF REMARKS

OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. PATTEN. Mr. Speaker, only through substantial improvement in their lot can any lasting benefits be given to the Navajo Indians. The 10-year program to build schools, to construct roads, to improve the lands of the Navajo Reservation, and to provide reservation businesses and encourage off-the-reservation employment and settlement is the first requirement. I join the President in pressing for hearings and favorable action on the Navajo program.

I include here the announcement by the Interior Department regarding the Navajo rehabilitation program:

DEPARTMENT OF THE INTERIOR,
INFORMATION SERVICE,
OFFICE OF THE SECRETARY.

10-YEAR NAVAJO PROGRAM RESUBMITTED TO CONGRESS

Acting on direction of President Truman, a 10-year program for the rehabilitation of the Navajo and Hopi Indian Tribes was resubmitted to Congress today by Secretary of the Interior J. A. Krug.

"The United States," President Truman wrote in his instructions to Secretary Krug, "which would live on Christian principles with all of the peoples of the world, cannot omit a fair deal for its own Indian citizens."

The program, similar to the one submitted to Congress last year and upon which no action was taken, except for a minor grant, calls for the expenditure of $90,000,000 for capital investments on the reservations.

"At my request," the President wrote, "you prepared and presented to the Congress on March 15, 1948, a proposed 10-year program for the rehabilitation of the Navajo and Hopi Indians of Arizona and New Mexico. Except for one small segment of this program, the Eightieth Congress failed to enact the necessary legislative authority to place it in motion.

"The needs of those Indians are as great today as they were a year ago. Indeed, the severe winter storms have emphasized the serious economic conditions prevailing among these tribes. The authorization of this long-range program is considered essential to enable these groups of Indians to become healthy, enlightened, and self-supporting. I hope you will continue to emphasize to the Congress the needs of the Navajos and Hopis."

A draft of a bill designed to accomplish the purpose of the long-range program is made part of the report sent to the Congress.

Similar in most respects to the 1948 program, except for wider benefits to the Hopis, the program provides for the expenditure of $25,000,000 for the construction of school buildings, the purchase of equipment and for other educational improvements on the reservation. An additional $20,000,000 is sought for the construction of roads and trails.

The Secretary's proposals for carrying out the program are summarized as follows:

Purpose of expenditure and amount needed	
1. Soil and water conservation and range improvement	$10,000,000
2. Completion and extension of existing irrigation projects	9,000,000
3. Surveys and studies of timber, coal, mineral, and other physical and human resources	800,000
4. Development of community enterprises and industries	1,500,000
5. Relocation and resettlement of Colorado River Indian Reservation	5,750,000
6. Development of opportunities for off-reservation employment and assistance in adjustments related to such employment	3,500,000
7. Hospital buildings and equipment and other health conservation measures	4,750,000
8. School buildings and equipment and other education measures	25,000,000
9. Establishment of a revolving loan fund	5,000,000
10. Construction of roads and trails	20,000,000
11. Construction of air transport facilities	1,000,000
12. Telephone and radio communication systems	500,000
13. Agency and institutional water supply and other service facilities	3,500,000
Total	90,000,000

The 1948 report was based on information secured over many years including four separate studies which were initiated by Secretary Krug in 1947 and 1948. These surveys made by Department of the Interior experts, prominent educators and representatives of the American Medical Association, cover most phases of the problem of the Indians.

The report declares that education is one of the important and probably the most difficult aspect of the entire problem.

The ultimate educational goal is to provide school facilities for all of the 24,000 Navajo children, between the ages of 6 and 18 years. At present there are facilities for only 7,500 children, of which 6,500 are accommodated in Government schools and 1,000 in mission schools. It is recommended that plans be immediately launched for the expansion and repair of eight existing reservation schools and that two additional boarding schools on the reservation will be built. Other improvements contemplated in the program are the conversion of 17 day schools to semiboarding schools and the enlargement or conversion of 33 day schools. Also recommended is the increased use by Navajos of existing off-reservation boarding schools and the use of the schools at the

Colorado River Indian Reservation. These measures will increase total school capacity to 13,290 seats.

Construction of 636 miles of primary and 633 miles of secondary roads is of fundamental importance to the program. The primary system will provide transportation service to the chief centers of population and to main school, hospital, and business locations. The primary roads will connect with State roads off the reservations. The secondary system will provide transportation to areas which cannot be served by the primary system.

Improvement and development of reservation resources, which include range, soil, and moisture conservation measures, are included in the program. Included also are extensions of irrigation systems, surveys of timber and minerals, development of arts and crafts and community enterprises and industries.

Resource development and utilization and off-reservation employment can be expected to contribute to the support of only 6,950 families out of the 12,000 families on the reservation. The remaining 5,050 families must find some other means of earning a living, the report points out. Some progress has been made in the off-reservation settlement, but it is proposed that 1,000 families resettle on the Colorado River reservation, which has excellent soil suitable for farming. Additional development on the Shiprock-San Juan irrigation project is designed to provide a living for an additional 2,600 families. However, the report points out that the balance of 1,450 families must look to off-reservation employment and resettlement.

The Shiprock-San Juan project, it is pointed out, will provide a livelihood for the greatest number of Navajo families. The proposed area recommended comprises 117,000 acres, of which 115,000 acres are tribal lands and approximately 2,000 acres non-Indian lands.

Health Insurance

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the California Federation of Labor Newsletter entitled "AMA Raises Huge Fund To Oppose Health Insurance":

AMA RAISES HUGE FUND TO OPPOSE HEALTH INSURANCE

SAN FRANCISCO (California Federation of Labor).—A grass-roots doctors' rebellion against the American Medical Association's plan to raise a $3,500,000 war chest to fight the Truman administration's proposed national health-insurance program has been predicted by Dr. Channing Frothingham, twice president of the Massachusetts State Medical Society, and chairman of the committee for the Nation's health.

President William Green is an honorary vice chairman of the committee for the Nation's Health, a national group of doctors and laymen spearheading the fight for national health insurance. Also active on the committee is Vice President Matthew Woll and director of social insurance activities, Nelson Cruikshank.

Dr. Frothingham commented, "It is particularly disturbing to note that although many physicians of the AMA's membership support national health insurance, the proposal to embark on a Nation-wide multimillion dollar campaign against it was not made known to the membership in advance of the closed session at which the decision was reached."

He further charged that the AMA's ruling body, the house of delegates, is not representative of its 140,000 members. "Whereas half of the country's active physicians are under 45," he pointed out, "only 5 percent of the delegates are below this age level. Half of our active doctors are general practitioners, but only 10 percent of the delegates fall within this category. The rest are specialists."

Dr. Frothingham criticized the house of delegates for pursuing a course unworthy of the medical profession and repugnant to the ethics of American doctors. He declared that AMA officers are failing to take the leadership in conjunction with the AFL, CIO, farm, business, and consumer organizations to work out a program to bring adequate medical care within the reach of all Americans.

The committee for the Nation's health, Dr. Frothingham announced, would support wholeheartedly the administration's proposals for national health insurance.

Let's Look at the Record

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mr. MULTER. Mr. Speaker, under date of January 31, 1949, the gentleman from Mississippi [Mr. RANKIN] inserted in the RECORD a speech he had previously inserted in the RECORD of February 13, 1947. Since the theme of the speech was an attack on FEPC as enacted and in operation in the State of New York, I forwarded a copy of the speech to the New York State Commission Against Discrimination and asked for their comments. I have just received a reply from the general counsel to the commission, the pertinent parts of which are as follows:

You enclose a copy of Mr. RANKIN's speech of February 13, 1947, and request an analysis of its accuracy as it applies to the New York State law against discrimination. My comments with respect thereto are as follows:

1. Mr. RANKIN states: "FEPC is the chief plank in the Communist platform. It is the most dangerous piece of communistic legislation with which this country has ever been threatened in all its history."

Comments: It is quite clear upon any reflection at all that the type of legislation exemplified by the New York State law against discrimination constitutes one of the most effective methods of combating communism. The New York State law simply seeks to afford every inhabitant of the State of New York, regardless of his race, creed, color, or national origin, an equal opportunity to obtain employment for which he is qualified by training and experience. The existence of artificial barriers against such equal opportunity permits the creation and stimulation of racial tensions which further communistic aims.

It should also be made clear that while the law against discrimination requires the elimination of discrimination in employment because of race, creed, color, or national origin, it does not in any sense whatsoever compel an employer to hire any person who is not qualified to perform the job for which he has applied.

As American citizens in a democratic state, we are all deeply concerned with the spread of the communistic ideology throughout the world. All too frequently, Americans abroad, seeking to impress the peoples there with American democratic ideals, are met by the inquiry, "What are you doing about your Negroes?" Words alone will not answer this question. Corrective measures will.

There are 15,000,000 colored people in this country—comprising one-tenth of the total population, as well as millions of people belonging to other minority groups. In fact, those who constitute a minority in one section of the State constitute a majority in another and vice versa. Many of these people were recently called upon to risk their lives for the democratic ideal on battlefields throughout the world. All that the law against discrimination provides is that these people shall now have the civil right to work regardless of the color of their skin, the place of their birth, or the manner of their worship—if they are qualified. If we deny them this basic democratic right, to what ideology will they turn for salvation?

2. Mr. RANKIN states: "This vicious measure was written into the laws of that State (New York) without consulting the people, suffering under it.

Comments: This remark contains a double-barrelled misstatement: (a) The people of the State of New York were consulted before the enactment of the law, and (b) the people of the State of New York are not "suffering" under it.

As to (a) the law was drafted by a statutory commission consisting of 29 members, of whom 15 were designated by the Governor and 14 by the legislature. Before submitting the proposed law to the legislature, the commission conducted six public hearings in the cities of Albany, Syracuse, Rochester, Buffalo, and New York. Representatives from leading trade, management, civic, religious, educational, union and veterans' associations and organizations appeared at these hearings and were afforded full opportunity to be heard. After the bill was introduced into the legislature, further public hearings were held before the New York State Senate Finance Committee and the New York State Assembly Ways and Means Committee.

At all the public hearings held on the bill, the predominant expression of opinion was in favor of the proposed legislation. When the bills were reported out of the committees and on to the floor of the senate and assembly, extended debates ensued. Thus, it was after full and open discussion, not only by the elected representatives of the people in the legislature, but by the chosen representatives of the various and numerous trade, management, civic, religious, educational, union and veterans' associations and organizations, with full opportunity afforded to all to be heard, that the proposed bill was passed by the legislature and subsequently signed by the Governor.

In an analysis of the history and development of the New York law entitled "Fair Employment Legislation in New York State," issued by the International Committee of Young Men's Christian Associations, it is said:

"What was achieved in New York State, in drafting principle into law, is itself an important signpost pointing forward on the road toward a more democratic way of life.

"Witness how the drafting was done, how the citizens of New York State made their opinion felt, how they participated in the actual process of legislation. This was by no means a minor episode in government of, by, and for the people. The history of the enactment of this legislation is one of the most signal and potent refutations of the many

cynical arguments that democracy will not work."

As to (b), after almost 4 years of experience under the New York law against discrimination, there is absolutely no evidence of any suffering by anyone in New York State as a result of the law's administration. On the contrary, the beneficial effects of the law's operations have been noteworthy. Witness the following remarks:

By a representative of the New York Council of Retail Merchants, Inc.:

"The manner in which the law has been administered by the competent commissioners appointed by Governor Dewey has been a model of fair-mindedness, efficiency, and good sense."

By Joseph Quinn, general chairman of the Dining Car Employees Union, Local 370, A. F. of L.:

"We feel we would be remiss in our duty as citizens of the sovereign State of New York if we did not let you and the world at large know of our appreciation and esteem for the marvelous work you are so unostentatiously accomplishing.

"Dining-car employees throughout our Nation join us in wishing you continued success and assuring you that we will everywhere spread the praise your Commission so richly deserves."

By Irwin Ross, in Tolerance by Law, Harper's magazine, November 1947:

"Two years of State FEPC's have done more to end job discrimination than 50 years of private agitation, good-will conferences, and educational campaigns."

By Royal Parkinson in Fair Employment Practices Legislation, Harvard Business Review, January 1948:

"It probably cannot be questioned that the administration of the antidiscrimination laws has and will have more to do with the kind of results achieved than the laws themselves. In turn, a large part of the administrative record will be determined by the type of personnel selected to administer the laws—their common sense, their patience, tolerance, and restraint, and their sense of justice, irrespective of politics and pressures. The four States which now have these laws have from the beginning been most fortunate in this respect."

By Yale Law Journal, May 1947:

"None of the predictions made by its original opponents has proved valid."

By Louis Coleridge Kesselman in the Social Politics of FEPC (1948), published by the University of North Carolina Press, Chapel Hill, N. C.:

"In the States having laws with teeth the record has been good. The much-feared controls over the employer's freedom to select his own workers have not produced the dangerous situations predicted by opponents. Employers have not had to hire incompetents or crackpots, nor have they had to dismiss white employees to make room for Negroes. The fact that no decision from any State commission has been appealed to the courts at the time of writing is a tribute to their skill in negotiating satisfactory adjustments of complaints at the conference level. Nearly all of the commissions have placed much emphasis upon educating employers rather than upon prosecuting them."

3. Mr. RANKIN states: "Somebody put a colored fellow up to come and apply for it (rent a house) and the court now says I must let him have it."

Comments: Neither the New York law against discrimination nor any other New York law requires an owner of a house to rent it to any person to whom he does not choose to rent it. There is, of course, no court decision such as the one referred to.

4. Mr. RANKIN states: "You simply destroy business with a measure like this. That is what the FEPC did here. Men have gone out of business all over the country in the last few years because of persecution that was carried on by this outfit here in Washington, the personnel of which I shall insert later on."

Comments: Prior to the New York law's enactment, opponents of the measure stated that if enacted into law businesses would leave the State in droves. After close to 4 years of administration of the law, quite the contrary has resulted. No business has left the State of New York as a result of the enactment or the administration of the law. In fact, the number of firms established and doing business in the State of New York has increased since the law's enactment. Witness the following figures, compiled by the New York State Department of Commerce, as to the estimated number of firms in New York State in August 1945 (the law became effective on July 1, 1945) and in January 1948:

Type of industry	August 1945	January 1948
Finance, insurance, and real estate	57, 590	64, 510
Service industries	89, 730	111, 410
Mining	530	600
Contract construction	19, 940	31, 420
Manufacturing	49, 540	63, 460
Transportation, communication, and other public utilities	25, 400	30, 310
Wholesale trade	21, 290	28, 290
Retail trade	172, 230	214, 000
Total number of firms:	436, 250	544, 000

As of December 1948 the total number of firms (which in January 1948 was 544,000) had increased further to 568,100.

5. Mr. RANKIN was asked by Mr. Mason: "What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?" Mr. RANKIN replied, "Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would have the Germans and so would every other enemy country."

Comments: These remarks overlook a very important provision of the New York law against discrimination, namely, the provision which permits employers to inquire as to an applicant's race, creed, color, or national origin if the inquiry is based on a bona fide occupational qualification. With respect to employment in work involving the national security, the commission has had a very clearly defined policy which in all respects safeguards the security of this country. Where an employer is required by reason of governmental regulation and national security to inquire into the nationality and place of birth of an applicant for employment, he may do so since the question is in such a case based on a bona fide occupational qualification.

Furthermore, it is permissible under the rulings of the New York State commission (but Mr. RANKIN fails to point this out) to inquire of an applicant for employment whether or not he is a citizen of the United States, whether or not he is a member of the Communist Party, or whether or not he is a member of the German-American Bund.

Thus, the suggestion of impairment of national security by reason of the New York rulings is utterly unfounded.

6. Mr. RANKIN states: "Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination."

Comments: This, too, is a misstatement of the commission's rulings. If a publisher of literature for a particular religious organization required personnel of that religious denomination by reason of a bona fide occupational qualification, he would be permitted, under the rulings of the commission, to inquire as to whether or not the applicant is an atheist.

7. Mr. RANKIN states: "Here is another unlawful practice: requirement that an applicant for employment annex a photograh. That would be an unlawful employment practice. You are not supposed to know how he looks."

Comments: The commission has made this ruling because photographs can disclose characteristics which are assumed to be indicative of race, creed, color, or national origin (sometimes correctly, sometimes incorrectly); and it is the commission's desire to prevent screening of applicants in advance of interviews on the basis of such characteristics. The commission is of course aware that a personal interview will in itself reveal the same characteristics as would a photograph, but the commission's intent is to assure an interview to the applicant and an opportunity for him to sell himself to the employer. The experience of the commission has shown that where business concerns have discontinued their former practice of requiring a photograph, they have found that no serious inconvenience resulted.

It is noteworthy that in 1934, John W. Bricker, then attorney general of the State of Ohio, rendered an official opinion (vol. I, 1934–35, opinion No. 2426) wherein he ruled that the Civil Service Commission of Ohio cannot lawfully require an applicant for a civil-service position to attach a photograph to his application. The opinion states in part:

"It could not ordinarily be said that the requirement that an applicant set forth his race or attach his photograph to his application has any relation to his fitness as a public servant, nor could it be said that the power to make such a requirement would be implied from the power expressly granted to require an applicant to set forth matters touching merit and fitness."

The Ohio attorney general's opinion is particularly significant because it was made in the absence of a law against discrimination.

8. Mr. RANKIN states: "Here is another unlawful practice in New York: Inquiry into the general military experience of an applicant for employment."

Comments: In answering an inquiry into his general military experience, an applicant for employment may reveal the fact that he served, for example, in the Italian, or French, or English army, thus revealing his national origin. The commission has ruled (although Mr. RANKIN does not mention this fact) that it is permissible in any case for an employer to inquire into an applicant's military experience in the armed forces of the United States or in a State militia. Further, if inquiry into all military service of the applicant is based on a bona fide occupational qualification in any particular situation, as for example, work on a contract affecting national security, it would be permissible.

The above comments relate to some of the salient points of Mr. RANKIN's speech. They do not cover all of his misconceptions.

A Commemorative Stamp for Greeneville, Tenn.

EXTENSION OF REMARKS

OF

HON. DAYTON E. PHILLIPS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. PHILLIPS of Tennessee. Mr. Speaker, I am asking the Post Office De-

partment to issue a special postage stamp in honor of Greeneville, Tenn. I am making this request on behalf of the civic and patriotic organizations of Greene County, Tenn.

This is not an ordinary request for a commemorative stamp to pay tribute to an American city. I know that it is not customary for the Post Office Department to issue stamps of this character because of the vast scope of the category. It has been the policy of Congress not to encourage a tremendous number of similar applications resulting in numerous issues which would be localized in the community so honored. For many years it has been the policy and purpose of the Congress to authorize and to direct the Postmaster General to issue commemorative stamps to mark historical events of great national importance, or for the payment of tribute to individuals whose careers have exerted some marked influence for good upon the national welfare.

Today I am introducing this bill by reason of the peculiar and national significance of Greeneville, Tenn. The bill provides that a special postage stamp of the denomination of 3 cents of the design to be determined by the Postmaster be issued, and that the stamp be issued during the year of 1949.

Greeneville, Tenn., qualifies for this high honor because it is the one time historically important capital of the Free State of Franklin, the home of America's most interesting political personalities—Andrew Johnson, seventeenth President of the United States, and Davy Crockett, hero of the Alamo—and is the location of the old tailor shop, home, and burial place of Andrew Johnson, which today is a national shrine of great public and historical and national significance.

Overlooking this beautiful little city is the Andrew Johnson National Cemetery. It may be of interest to my colleagues to know that Andrew Johnson holds the distinction of having been elected to practically every public office within the gift of his people. Andrew Johnson was elected to the following offices. justice of peace, alderman, mayor, State representative, State senator, governor, United States Representative, United States Senator, Vice President of the United States, and President of the United States. Andrew Johnson is a product of the American dream and opportunity. He was born in Raleigh, N. C., and moved to Tennessee, where, as a tailor boy, a beautiful and charming young school teacher taught him to read and write. Andrew Johnson was known as an honest, brave, and courageous debater, public servant, and statesman.

Not only does Greeneville, Tenn., enjoy the great pride and honor of having located within its boundaries the Andrew Johnson National Shrine, it is also the location of Tusculum College, the oldest chartered institution of higher learning west of the Allegheny Mountains. It is the location of the largest loose-leaf burley tobacco market in Tennessee, and the second largest in the world. On the way from our Nation's Capital down the Shenandoah Valley on into Tennessee, Greeneville is the western entrance to the great and beautiful Smoky Mountain National Park. It is a large diversified agricultural center, whose products consist of grain, livestock, dairy products, poultry, and tobacco. It is noted for its fine 4–H Club membership.

Greeneville is rich in civic culture. The Greeneville Lodge, No. 3, F. and A. M., is the only Masonic lodge in the United States to have had as members two Presidents of the United States—Andrew Johnson and Andrew Jackson.

Mr. Speaker, I feel that this little town in east Tennessee is of such national importance as to deserve the honor of having a commemorative stamp issued in tribute to its greatness and fine American tradition, and historical importance in the development of this great Republic.

The bill referred to follows:

A bill to provide for the issuance of a special postage stamp in honor of Greeneville, Tenn.

Be it enacted, etc., That the Postmaster General is hereby authorized and directed to issue a special postage stamp of the denomination of 3 cents, and of such design and for such period, during 1949, as he may determine, in honor of the town of Greeneville, Tenn., old capital of the historically important Free State of Franklin; home and burial place of Andrew Johnson, seventeenth President of the United States; home of Davy Crockett, frontiersman, former Representative in Congress, and hero of the Alamo; location of the Andrew Johnson tailor shop; and location of Tusculum College, oldest chartered institution of higher learning west of the Allegheny Mountains. Such special postage stamp shall be placed on sale in Greeneville, Tenn., one day before it is made available to the public elsewhere.

General Property Office

EXTENSION OF REMARKS
OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. RIEHLMAN. Mr. Speaker, I have today introduced a bill which will establish a General Property Office to exercise management control over the procurement, utilization, and disposal of Government property.

For your information, I introduced a similar bill in the last Congress which was not as comprehensive in scope but which was identical in approach.

We all are striving to cut the cost of government by improving administrative procedures and promoting efficiency throughout the Federal establishment. Pursuant to legislation of the Congress, a distinguished bipartisan commission was created, directed by the Honorable Herbert Hoover, to study the reorganization of the Government, and report to the Congress. Regardless of party, the Members of this Congress have eagerly awaited completion of the Commission's final report and recommendations.

As you know, the Commission has already recommended substantial improvements in the Government's supply organization. However, one important feature of the report may be overlooked as a result of the emphasis placed upon organizational improvements. That aspect of the problem is of utmost importance and it is fundamental. It is just this—efficient management control cannot be attained unless we repeal the maze of unrelated property laws and enact one uniform law for all executive agencies.

That is the purpose of my bill—to make the necessary organizational changes and provide a uniform law for all, thus to permit better coordination and more uniformity in procedures.

This bill conforms closely to the Commission's recommendations with respect to administrative organization and goes on to establish comprehensive and uniform policies and procedures with respect to property utilization, contract termination, surplus-property disposal, contractual claims and disputes, and civil and criminal liabilities relating to these matters.

Another important feature is that the bill would be inapplicable to the armed services. The armed services are presently concentrating on an intensified defense program. Unification has presented enough problems of interagency coordination and consolidation. To impose additional controls from another source would slow down unification and inhibit the defense program. The armed services can cooperate to the extent practicable considering defense needs, but they should not be burdened with any superimposed restrictions at this time. When unification has been completed, we can dispose of such coordination problems as may then remain.

In conclusion, this bill is offered in a nonpartisan spirit. It is comprehensive in scope and covers every aspect of the supply problem. I believe it warrants the active support of each and every Member of Congress.

Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorials from the Elmira (N. Y.) Star-Gazette of March 8, 1949, and from the Syracuse (N. Y.) Post-Standard of March 7, 1949, commenting on statements made by the Honorable KENNETH B. KEATING on the subject of social security:

[From the Elmira (N. Y.) Star-Gazette of March 8, 1949]

IS MORE PROMISE THAN FULFILLMENT

Representative KENNETH B. KEATING has put his finger on the weakness of the social-security system by calling attention to the fact that since the beginning of the system the Government has collected more than $12,000,000,000 in pay-roll taxes for the fund, most of which has been spent for other purposes.

Obviously, if that part of the fund which has been spent for other purposes were now available, there would be no need for increased pay-roll taxes to finance expanded payments for beneficiaries.

This weakness in the system was scored by careful economists when the plan was proposed back in 1936. The plan was sold to voters as a form of old-age insurance, in which, in return for stated payments, they would receive back modest old-age pensions.

Unlike private insurance plans, however, the rate was to increase over a period of years, because the Government, instead of setting the money aside in a separate fund,

intended to spend most of it and set up a reserve of Government bonds which would have no value except as promises to pay.

Returns from the pay-roll taxes have been greater than expected, largely because of wartime inflation. Two or three times Republicans in Congress have prevented the proposed increase in pay-roll taxes, the result being that taxpayers have not been required to pay more than the original 1 percent of pay rolls with which the program began.

Even with this rate, added to the 1 percent which employers also pay, the fund would be close to twelve billions if the Government had not spent most of it.

Workers now reaching retirement age and who have been contributing regularly to social security have every good reason to feel, says Representative KEATING, "that social security partakes more of the character of lofty promise than tangible fulfillment."

[From the Syracuse (N. Y.) Post-Standard of March 7, 1949]

ARE POLITICIANS ABOVE LAW?

At last the mismanagement of social-security funds is given recognition at Washington.

In the last 12 years, Government administrations have taken more than $12,000,000,000 in funds supposed to be used for retirement pensions and similar purposes and spent them as they wished.

Representative KENNETH B. KEATING described the irresponsible manner in which these moneys are being used at a committee hearing and charged that the methods employed are being kept secret from the people whose funds are misused in this manner.

These funds should be employed to reduce the national debt and for no other purpose. Thus the money of the people would be doubly protected and made more valuable by the increased confidence given business and agriculture and the reductions in prices made possible by lower debt requirements and taxes.

But in effect they are used to increase the debt. The money is spent as soon as it comes in and Government I O U's are placed in the social-security treasury. The policy under which they are handled is just the opposite of what it should be; the social-security laws should be amended to prevent it.

If any insurance company or other financial concern used the funds of its policy holders in this manner, the Government would immediately have it on the carpet and its officials would probably land in jail. But when the Government does it, that is a different matter. Or is it? Should not the Government be subjected to the same honesty that a private enterprise must observe?

Do we have a double standard of ethics in this country, one for businessmen and another for politicians? Are public officials in charge of the people's funds above the law?

Traitorous Agents

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article that appeared in the Daily Evening Item, Lynn, Mass., March 10, 1949:

The statement by two American Communist leaders that they would support Russia in the event of war is quite different from recent statements by Communist leaders in France and Italy. The words sound about the same, since Moscow announced the text. But the circumstances were not similar.

Thorez and Togliatti spoke in countries where Communists are more numerous than here. They spoke in countries which would be in real danger of speedy Russian occupation if war broke out. And they spoke to people still suffering from the horror, exhaustion, and destruction of the last war.

Their appeal was based on the assumption that many Frenchmen and Italians would prefer Soviet serfdom to battle. It was not, we believe, a safe or reasonable assumption. But at the time it was the best answer that Moscow had for the challenge of the North Atlantic alliance.

The statement of Foster and Dennis was only a faint echo of the others. These men were not silly enough to ask Americans to welcome the Soviet armies as liberators. They simply said that they would support Russia in any unjust, aggressive, imperialistic war brought on by Wall Street.

Well, everybody knows that's what they would do. They've said so before and they will probably say so again. But one would think that something new had been added.

A Presidential press conference made quite a big thing out of Mr. Truman's permitting a direct quote when he called these Communists traitors. Senator EASTLAND indignantly proclaimed that he would take legal provisions to curb these traitorous agents of a foreign power and to prevent sedition, espionage, and treason.

The president of the National Association of Manufacturers called on labor to cooperate with management in driving the Reds out of industry. William Green said the A. F. of L. would take no part in strikes to sabotage American defense. Even Henry Wallace got into the act by saying he was not in accord with the Communist statements.

Apropos all the flurry, General Eisenhower said something sensible—as is his custom—in a talk to the New York Bar Association. Speaking of the Russian-American relations generally, he said he deplored Americans' tendency to view the international situation with doubt, fear, and even hysteria.

"The 146,000,000 people in this great land," he said, "are the mightiest temporal power that ever existed. Let us look on our problems like a man who knows he is strong no matter how humble he is."

That is sound advice. The Communists in America are traitorous agents of a foreign power. Their aim is sedition, espionage, and treason. That is why their party leaders are now on trial. But the American people knew all that before two of those leaders made their latest public declaration of loyalty to Russia. So why all the excitement?

The greatest temporal power that ever existed can certainly cope with the danger of domestic communism, which is a real menace even with virtually no popular support. It can cope with communism as it has coped with other dangers and menaces—by action, not by fear and hysteria.

There has already been action against the Communists. But there has also been a lot of hollering, handwriting, and breast beating. There seems little point now in any more of it. The people are now fully aware of the basic facts. Shouted denunciation of the Reds simply wastes time and energy and doesn't hurt the Reds a bit.

But there is a need for action. And the most pressing need, it seems to us, is for a decision by the Government. Shall the Communist Party be outlawed, all its known officers arrested, and other strong measures taken? Or shall it be allowed to continue, under very close surveillance, as a disgusting but minor menace which is less dangerous in the open?

Many other positive measures depend on that decision. And whatever the decision may be, it can be carried out calmly, confidently, firmly, and without emotional fireworks.
